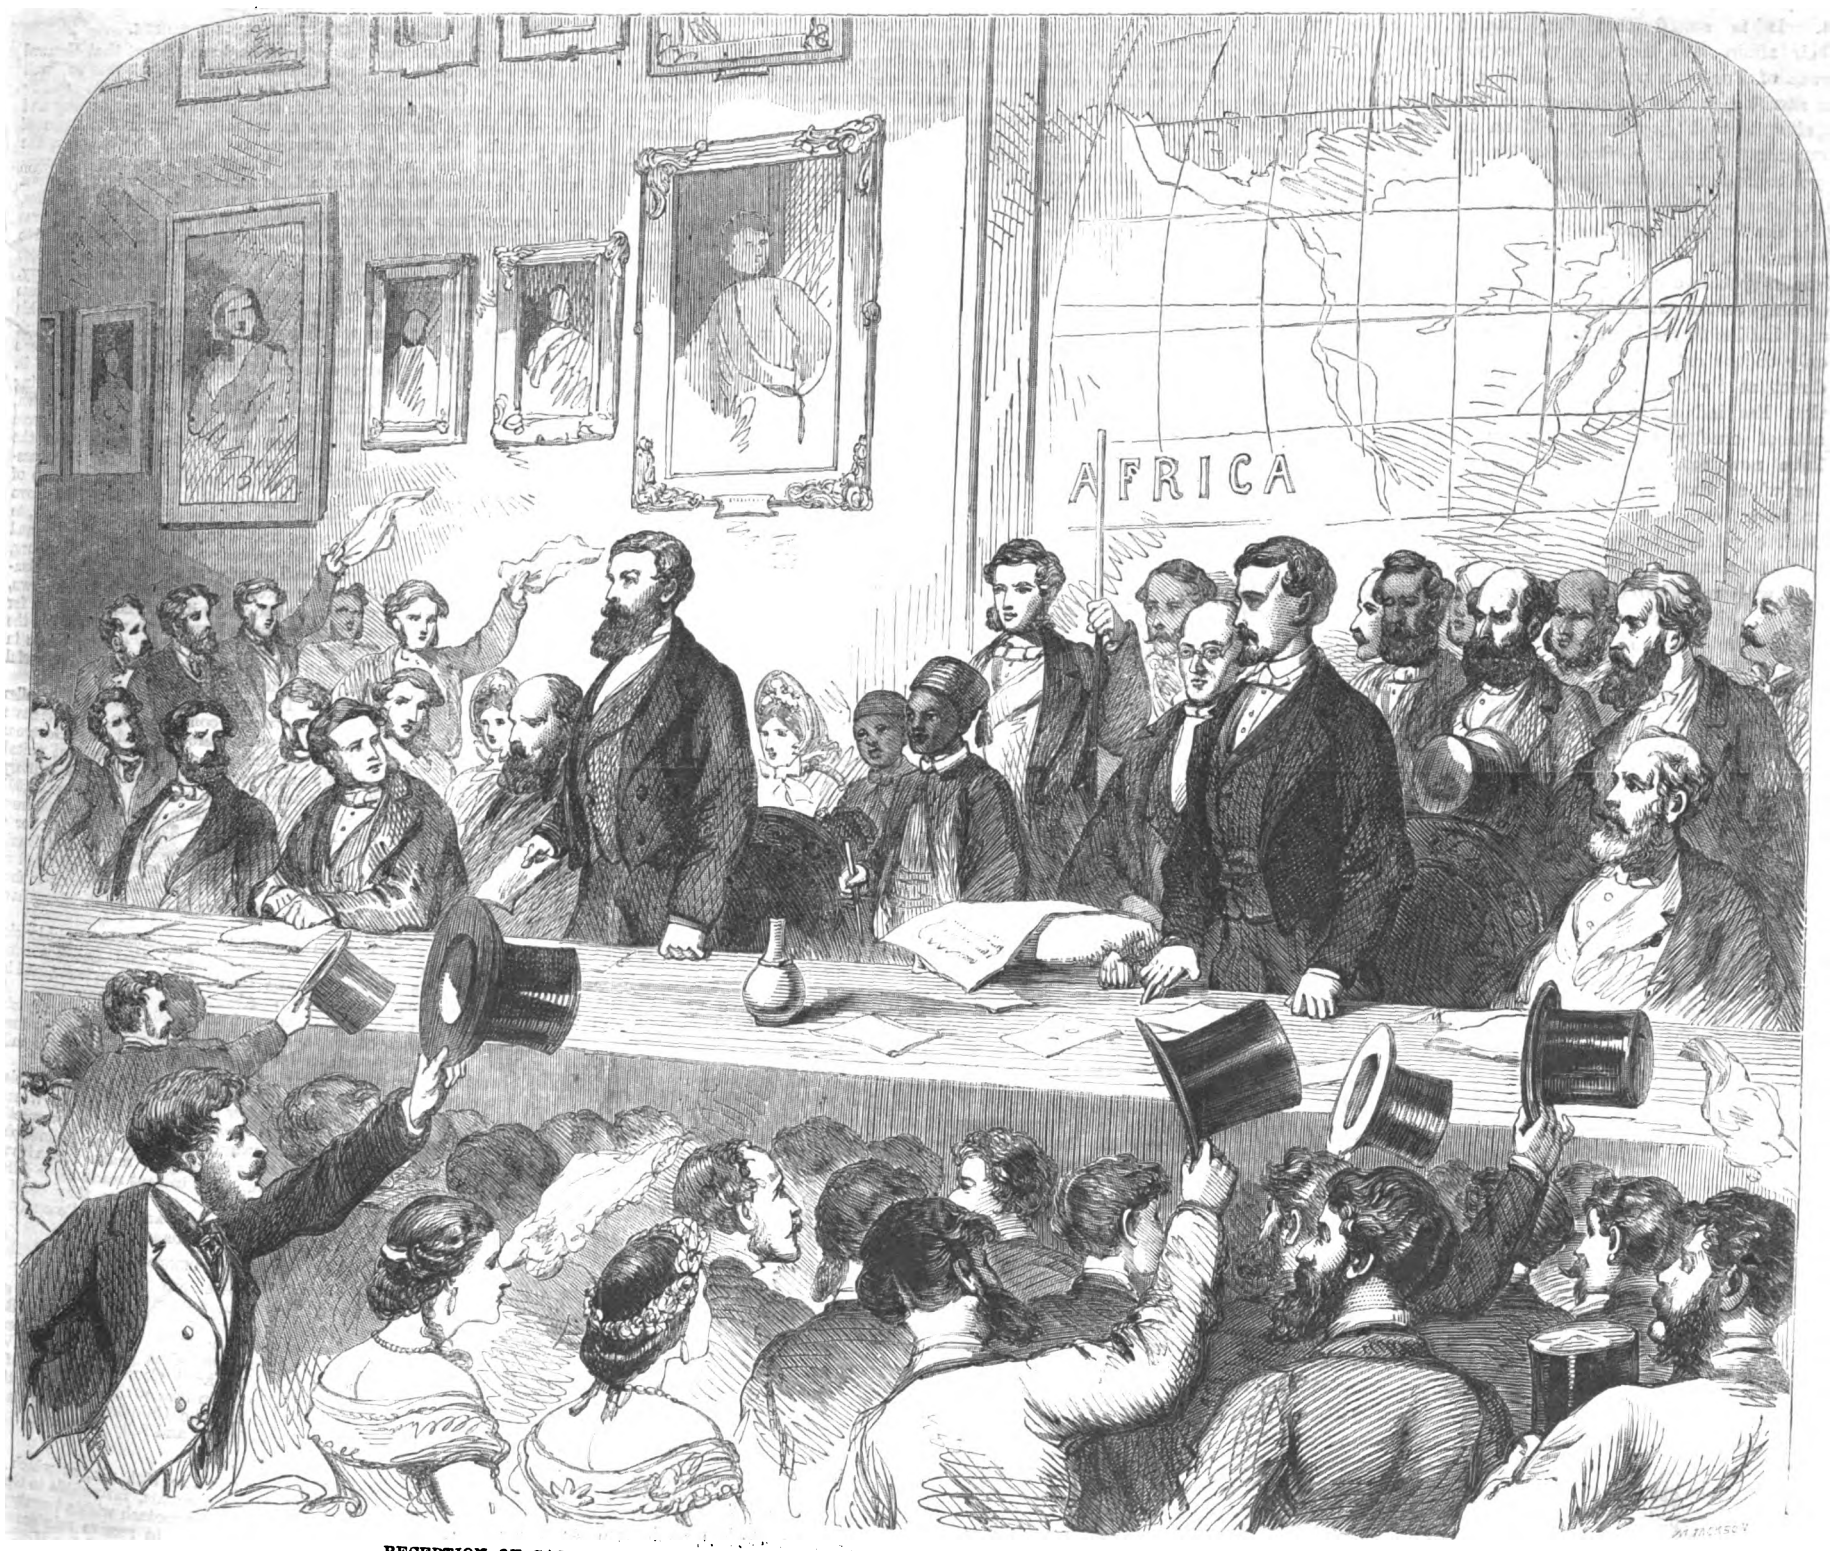
THE ILLUSTRATED LONDON NEWS.

No. 1211.—VOL. XLIII. SATURDAY, JULY 4, 1863 WITH A SUPPLEMENT, FIVEPENCE

WAR WITH JAPAN.

If a sarcastic enemy of this country were asked to define what was meant by the advancement of civilisation by England, he would probably reply the opening of new markets for trade at the point of the bayonet. Although, as good patriots, we may reject the sneer, as men of common sense we must accept the fact. Passing by other and less important, though, so far as the theory is concerned, not less significant instances, take that of China. For how many years did we offer civilisation in the shape of bales of goods for sale to a country so benighted as not to understand the symbol; and how long was it that we were kept on the threshold of a land, the exclusiveness of which gave it an air of enchantment to our eyes? But the urgency of our peculiar principle of civilising the barbarian was not to be denied; and, after a protracted series of mistakes in ravaging the coasts and destroying provincial peasants, who were of less account in the estimation of the ruling powers than so many pigs of the Emperor's own breed, in the course of a third or fourth Chinese war we found ourselves in Pekin; and at last we were understood. It was discovered at the fountain head of Chinese policy that the armed Englishman was only the precursor of the enterprising trader; and, so far as things have yet gone, there is every reason to believe that the Celestial Empire is at length opened to the commerce of Europe, with special advantages attaching to that of England. On the abstract question of general policy involved in the system of the invasion by the sword to make way for the invasion of commerce it is useless now to dilate; but, in reference to the conduct of the details of that policy, a useful lesson has been learnt from the course of events in our successive operations in China. It has been clearly demonstrated that little wars, even with Asiatics so unwarlike as the Chinese, are mistakes. When we left off something like buccaneering on the seaboard of China, and waged war as between Queen and Emperor, the difficulties were found to be less, and the results actual. As it has been with China, so it seems that it is likely to be with Japan. The latest accounts inform us that, ere this, war has been distinctly declared against Japan by England, France, and Holland, and the question arises how



RECEPTION OF CAPTAINS SPEKE AND GRANT BY THE ROYAL GEOGRAPHICAL SOCIETY.—SEE PAGE 17.

Digitized by Google

that war is to be conducted. Are we to follow the early or the latest precedent of our warfare with China? Assuming that warlike reprisals have become a necessity, is our long experience in dealing with a cognate nation to go for nothing?

We believe it was only because we feared that the United States would be beforehand with us in opening up Japan as a new outlet for its traffic that, in a moment of inspiration, Lord Elgin, after he had settled our differences with the Celestial Empire, made a diplomatic raid into the dominions of the Tycoon, and negotiated a treaty of commerce. There was a theory that Japan was still more exclusive, still more inaccessible, to the outer world than China; but, in reality, the first approaches of the European Plenipotentiaries were found to be more easy than was looked for. The area of operation was comparatively narrow, and something was gained by the circumstance that diplomacy had not to travel through such a length of provincial obstruction that it failed to reach the actual ruling influences. Those ruling influences are peculiar. A class exists in Japan which, under the name of Damios, is akin to the nobles of the feudal system. Each of these Damios is a potentate in himself, possessing special dominion, revenue, and a military force, which may be called an army, under his direct control. Whatever they may be as against each other, in the presence of the foreigner they present an allied front and act in strict combination. They constitute, in fact, an oligarchical Government before which the reigning Sovereigns count but as names. It is the particular business of these Damios to keep the people of Japan within the charmed circle of their own influence, and to repress by every means in their power the natural tendencies of the lower ranks towards an extension of their knowledge of men and things outside of and beyond their own country. There is nothing very surprising in the fact that in Japan this aristocracy should be everything and the people nothing. It was therefore with the Damios and no one else that the European Plenipotentiaries had to negotiate a treaty of commerce of sufficient liberality on the face of it, and this was effected owing to the happy accident that nearly the whole of the Damios were collected at Jeddo at the time of the visit of the diplomatists.

From all the accounts we have received it appears that the obligations accepted by the Japanese negotiators were conceived in treachery, and that from the very moment that the treaty was signed steps were taken to neutralise and nullify it. It is stated that the Damios have so arranged their affairs that they are no longer to be found within reach of European power at Jeddo, which they are prepared to sacrifice to any hostile movement which may be made against it; that they have raised an immense army, which is concentrated inland, while all the towns which had been thrown open to trade under the treaty have been fortified; and that, in short, every preparation made to make the country too hot to hold the European who has chosen to intrude within it. Such information as is before us leads to the belief that the Japanese leaders speculate on the probability that any aggressive proceedings on the part of England will be confined to the coasts, and that her forces in small numbers will continue to operate only on the extremities of the kingdom, instead of striking direct at its heart. It can only be a sense of security that has induced the Japanese leaders to instigate those acts of cruelty and treachery to our countrymen, which have now reached their culminating point, and redress for which has become, we fear, a necessity. There seems to have been an organisation amongst the Japanese chiefs for the systematic murder of Europeans from the time of their establishment in the country, and this object has been carried out with remarkable persistency. As we well know, things have reached such a point that no European has been safe from attack for a moment; and diplomatic agency has formally declared itself inadequate to their protection. The next step was of course inevitable. The naval squadrons of France and England have been moved down to Japan, and assumed an attitude which, though hostile, so far as we can learn, is not very alarming to the Damios. And so at the last intelligence matters stood—a formal declaration of war, as we have above stated, being imminent.

The time has passed for discussing the policy which has brought this country into collision with Japan. In the first place, in the whole matter we have not acted alone, but in strict alliance with France; and, even supposing that we were inclined to reverse all our traditionary policy towards Asiatics and to retire from a contest which, if we have not provoked we have incurred, good faith to our allies would forbid our doing so, unless in concert with them. In truth, nothing of this kind appears to be contemplated, and the sole question now is how the war which may be by this time actually upon us is to be carried on. At the risk of being accused of tedious repetition, we again urge that it should be undertaken on a comprehensive scale; that it should be conducted on a footing akin to that of European wars; that there should be no peddling, no dalliance with the emergency; but that everything should be done so as to make it sharp, short, and decisive. On the mere score of economy this course is the most advisable. An ascertained expense is an expense the most easily met. We had better spend our two millions or so in a lump and have done with it, than have that sum eventually doubled or trebled by long drawn out and dilatory operations. When the allied forces of France and England marched upon Pekin it was admitted that the expedition, on our part, was planned and executed in a manner as nearly approaching perfection as possible. The same means, probably many of the same agents, are still at our disposal; and they should be put into motion in the same spirit and with the same adaptation to the end in view as characterised our latest and most effective campaign in China. If we must have a Japanese war, let it be so conducted that it shall be at once the first and the last.

FOREIGN AND COLONIAL NEWS.

FRANCE

The Emperor went to Paris and presided at a council of Ministers on Monday, returning in the evening to Fontainebleau.

M. Rouland has been nominated first Vice-President of the Senate.

MM. Schneider and Vernier have been appointed Vice-Presidents of the Corps Législatif, and MM. Hebert and Romeuf questors.

M. Vaisse has received the Grand Cross of the Legion of Honour.

The prefects of the departments of Loiret and Upper Saône have been dismissed. A decree of the Emperor has been published, appointing two prefects, fifteen sub-prefects, and twelve councillors of prefecture.

An innovation in French journalism is announced. The *Moniteur*, which has hitherto been a morning paper, is henceforth, it is said, to appear in the evening, like the *Patrie*, the *Temps*, and the other papers.

The Paris papers are generally discussing the probabilities of war with Russia, and contain very little news.

An important and characteristic letter of the Emperor, addressed to the President of the Council of State, appears in Sunday's *Moniteur*. It is a complete onslaught against the evils of excessive centralisation, which, as the Emperor says, is often nothing but an impediment to the transaction of public affairs; as, for instance, where "a very simple piece of parish business requires two years at least to carry it through, and the intervention of eleven differently constituted authorities." The Emperor requires his Council of State to rid his Government of such a nuisance as this, and proposes to do it by an examination into a certain number of matters officially transacted in each State department, and the formalities enacted in the course of them, and then by striking out or modifying all such of the latter as shall be judged useless or unnecessary.

The Logic class at the Lyceum is to resume its former name of Class of Philosophy.

Wednesday's *Moniteur* contains a decree, signed by the Emperor, announcing that a universal exhibition of agricultural and industrial products is to take place in Paris from the 1st of May, 1867, to the 30th of the following September.

A decree of the Emperor proclaims entire freedom in the baking trade of Paris from September next. No limit is to be placed to the number of bakers, and all absolute restrictions are to be replaced by control sufficing to ensure fairness in the weight of bread and excellence of quality.

The *Patrie*, in an article signed by M. Delamarre, asserts that the new Minister of Public Works will undertake the task of establishing a complete network of internal navigation throughout the country, the use of which, as of the land roads, is to be based upon the principle of entire freedom of transit, without tolls.

The Paris correspondent of the *Guardian* says:—"The accounts published in the papers respecting the interview of Mr. Roebuck and Mr. Lindsay with the Emperor appear to have greatly exaggerated the importance of its results. If I may trust to what I have heard respecting it, the Emperor would seem simply to have informed those gentlemen, with his usual politeness of manner, that he was always ready to act with England in the matter in question whenever the British Government would allow him to do so."

An Imperial decree has been published creating the office of Superintendent-General of the Theatres. M. Baciocchi has been nominated to this post.

A serious fire occurred at Nantes on Tuesday, which destroyed fifteen large factories and an immense amount of property.

The new assembly-rooms and bathing establishment at Boulogne were formally opened on Monday night by a splendid banquet in the grand ballroom, which is fully as large as Middle Temple Hall. Upwards of 300 guests sat down to dinner. The Mayor, M. Gausselin, was in the chair. On Tuesday and Wednesday there were a concert and a ball. The building is handsome, and comprises ball and concert room, billiard and card rooms, and music-rooms. It has been erected at a cost said to have exceeded £40,000; and is surrounded by gardens and spacious terraces overlooking the sea. Attached to it are hot and cold seawater swimming and ordinary baths; and in connection with it is an improved service of bathing-machines on the beach.

Tuesday's *Moniteur* contains two reports from General Forey to the Minister of War, narrating the operations of the expeditionary army to May 20. The reports fill nearly five columns of the official journal, but they add little to the intelligence already published.

AUSTRIA.

The Reichsrath is occupied with replies to the Emperor's speech. The Upper House has voted its address according to the draught of the committee. During the discussion in the Lower Chamber, Count Rechberg stated that "the policy of the Government in all foreign questions was a policy of peace, combined with defence of the integrity of the empire."

The Lower Chamber have come to a resolution that there is no reason for the absence of the Czech members from the sittings of that body, and that they are to be summoned to make their appearance on pain of having their title to sit as members cancelled.

M. Thiers was received by the Emperor in private audience on Monday, and dined with his Majesty on Thursday at the Castle of Luxemburg.

SPAIN.

Several shocks of earthquake were felt on Monday in the province of Granada. Shocks continue in the district of Almeira.

A number of Bishops having demanded that the publication of "Les Misérables" should be stopped, the Council of State has requested them to point out what portions of the work they consider of a dangerous tendency.

PORTUGAL.

The Cortes were closed on Tuesday by the King in person. His Majesty's speech contained nothing of special importance.

The Portuguese railway to Badajoz has been opened amidst much popular enthusiasm.

PRUSSIA.

The chief of the Provincial Government of Prussia has published a letter of the Crown Prince expressing the thanks of the Prince and Princess for the many proofs of sincere affection and devotedness which have been shown to their Royal Highnesses during their recent journey.

During the tour of the Crown Prince and Crown Princess in the north and east of Prussia, they honoured the Count and Countess of Lehndorff with a visit of five days at their magnificent country seat, Steinort, near Rosengarten. The preparations at the château were upon a princely scale, and, although the invitations were necessarily limited, in consequence of their Royal Highnesses wishing to be released from anything like a State visit, all was done to render the time spent at this charming spot as agreeable as possible. Hunting, fishing, and shooting parties occupied the mornings, whilst the evenings were devoted to dancing or drives in the Forest of Oaks, for which Steinort is so justly celebrated, and which were splendidly illuminated during the Royal visit. Her Royal Highness the Crown Princess expressed herself particularly charmed with the water avenue, leading from the garden to the lake—a distance of half a mile—which was illumined its whole length by innumerable floating, coloured lamps, presenting a coup-d'œil which those who had the privilege of seeing it will not easily forget.

DENMARK.

The Hereditary Prince Frederick Ferdinand, heir to the Danish crown, born Nov. 22, 1792, died suddenly on Monday morning. The Prince was uncle to the King of Denmark, and great-uncle to her Royal Highness the Princess of Wales.

THE POLISH INSURRECTION.

According to the *Mémorial Diplomatique* of Paris, Russia will accept the preliminary bases of the notes of England, France, and Austria, although the Cabinet of St. Petersburg intends to demand in an explanatory note some modifications of the programme of the three Powers. Russia will, it is stated, also ask that the seat of the European conference on the Polish question should be at St. Petersburg. On the other hand, the three Powers, this journal asserts, have agreed to recommend Brussels as the seat of the conference, and it expresses a belief that Russia will accept this arrangement.

The Polish National Government have, it is stated, announced that an armistice could only be consented to on three conditions:—First, it must extend to the whole of Poland as before 1772, which is, no doubt, the meaning of the three great Powers; next, a plenipotentiary from Poland must be admitted to the conference; and, finally, a National Diet, composed of delegates from all Polish provinces, must meet under the guarantee of the national army already occupying the provinces. Unless these conditions are agreed to, so runs the report, the Poles will hold out to the last.

In further confirmation of the opinion that the Poles will not accept terms we have a manifesto of the Polish Committee at Paris, dated June 26. It says that the sons of Poland will not cease to fight for their liberty and independence "until they have conquered from their oppressors the original frontiers of 1772." The circular adds:—"The National Government has declared that Poland will repudiate all 'transactions' as a suicide, as treason. From the Vistula to the Dnieper the entire nation has made a vow to perish rather than remain under the dominion of the stranger."

The National Polish Committee of Paris has published an appeal to the friends of Poland affirming that the Muscovite despotism offers the spectacle of atrocities unknown and unequalled in the annals of barbarism. The Polish Committee ask "if Europe will any longer permit humanity to be outraged by the prolongation of a war of extermination? Nations of the West! listen to the cry of warning uttered by a martyred nation. Over the corpse of Poland Despotism seeks to cut a path into the heart of Civilisation. But God is with us; His justice will make us triumph."

Shocking narratives of cruelties ordered by Russian governors or practised by Russian soldiers in Poland continue to reach us. General Mouravieff's savage edicts are being carried out, if we can believe the accounts, with relentless severity at Wilna. This General is fast making for himself a name beside that of Haynau. The telegrams from Poland are full of accusations against him of atrocious cruelty. The *Czas* maintains the strict accuracy of Mouravieff's order against women in Lithuania. The fact is, that General Mouravieff has condemned women who wear mourning to a fine of from 25 to 100 roubles; but if they cannot pay they are flogged with rods. This order has provoked disturbances among the population of Wilna, in the suppression of which the troops have killed forty persons.

Telegrams are continually received containing accounts of engagements between the Russians and the Poles marked with much slaughter and cruelty. Notwithstanding many reverses, the spirit of the insurgents appears to be unbroken; and while these are contending in the field the National Government is quietly plotting and taking measures to undermine the Russian power throughout the whole of Poland.

A private letter received from Warsaw states that the Revolutionary National Government has appointed commissioners to be attached to every military command. It has further decreed that all Poles remaining in the service of the Russian army, within the frontiers of Poland as existing in 1772, after the 1st of August next, shall be exiled, deprived of their civil and political rights, and declared to have forfeited their honour as citizens.

The Polish National Government is said to have taken the bold step of prohibiting all traffic on the railways connecting Warsaw with St. Petersburg and with Prussia. All the officials, of whatever kind, connected with those lines, are ordered to leave their places immediately. If this order be genuine there will be a ready means furnished to test the real extent of the power which the National Government exercises.

AMERICA.

CONFEDERATE INVASION OF THE NORTH.

The rumours which had for some time been current that General Lee's army was about to act on the offensive were, it turns out, well founded. The Confederate General has advanced with great rapidity northwards, pushing a portion of his troops, consisting of cavalry and mounted infantry, far forward, so as actually to enter the State of Pennsylvania. General Lee's advance commenced on Saturday, the 13th ult., and the total force with which he is making his combinations is estimated to be but a little short of 100,000 men, of whom 30,000 are said to be cavalry. They were divided into three bodies, and seem to have made but slight work of the opposition that was offered to their advance. At Winchester General Milroy attempted to arrest their progress, but the outworks which he had constructed were stormed, and, after spiking his guns, he retired upon Harper's Ferry. An attempt was made to cut off his retreat, but this he seems to have surmounted with a loss of 2000 men, and eventually made good his way to Harper's Ferry, to which point the Federals at Martinsburg and Berryville also made their way in retreat. At one time Harper's Ferry was abandoned, but the Federals have resumed possession of it. All this was on the Saturday and Sunday, and on Monday morning the Confederates had crossed the Potomac, and were at Hagerstown, in Maryland, with a large force, of which it was said 15,000 were cavalry, divided into three columns of 5000 men each. On the Tuesday they advanced to Greencastle, and then to Chambersburg, in Pennsylvania, where, according to one account, a force of 2000 Confederates rested at twelve o'clock that night. The Nova Scotian brings a few hours' later news, to the evening of June 20, to the effect that the Confederates had advanced to Centreville and defeated the Federals there. Longstreet was threatening Leesburg, and Hill was at Dumfries. On Thursday night, the 18th, the Confederates transported their stores across the Potomac to Hagerstown, and it was said that they intended to make it their head-quarters for raids into Pennsylvania. One important rumour is mentioned in the news brought by the Nova Scotian. It is that the Unionists in Eastern Tennessee and Western North Carolina had raised a powerful force to hold that region against the Confederates.

At Harrisburg, the capital of Pennsylvania, distant but fifty miles from Chambersburg, there was naturally consternation, and the State archives and all public property of value were removed. The Governor issued his call for troops for State defence, and the President united in this by summoning 100,000 men to be mustered into the military service of the United States to serve for six months. Of these, 50,000 are called for from Pennsylvania, 30,000 from Ohio, and 10,000 from Maryland and West Virginia respectively. The volunteering for a short period has been generally warmly supported, but in Pennsylvania it has been necessary to assure the men that they were only called up to resist invasion. New York has raised fourteen regiments in four days for service in Pennsylvania, and Harrisburg and Pittsburg have both been strongly fortified.

Hooker meanwhile has abandoned his position opposite Fredericksburg, and is moving on a line parallel with that Lee has taken northwards. His base at Acquia Creek is also abandoned, and his supplies have been removed to Alexandria, his new base. At Warrenton, about the same distance from Washington as Fredericksburg, a little west of north of the latter place, he has his head-quarters. Lee is supposed to be at Front Royal, twenty-five miles north-west of Warrenton.

It is a moment as critical as any in the war. As to Lee's plans nothing, of course, is known—whether he will turn towards Western Pennsylvania, supposing he eludes Hooker's main forces, or whether he will direct his way eastward towards Baltimore or Philadelphia. Hooker divined the intention of his adversary to make this advance, and had for some time held his forces in instant readiness to follow. The Government, too, made such preparation as they could by creating two military departments for East and West Pennsylvania and appointing officers of high rank to command.

RICHMOND THREATENED.

On the Yorktown peninsula there are signs of Federal activity, as we learn from Richmond accounts. The Federal gunboats have pushed up the Chickahominy, within fifty miles of Richmond, and a considerable force is co-operating with them. General Keyes's command, which has for some time been posted at West Point, has lately advanced to New Kent Courthouse, about forty miles from the Virginian capital, and, in face of these demonstrations, the Confederates have retired behind the Chickahominy. It is said that Richmond is very strongly defended and fully garrisoned.

VICKSBURG.

From Vicksburg we have news to the 13th ult., at which time affairs were, according to Northern accounts, favourable to General Grant. The Federals had pushed their approach within twenty yards of the bastion, whilst Pemberton is said to receive reinforcements and supplies, during the night, from the other side of the Mississippi.

Digitized by Google

The Federals yet hold possession of Black River Bridge, and their opponents are declared to be at least thirty miles from the rear of Grant. One despatch stations a body of Confederates, to the number of 5000, at Jackson; another of 5000 at Yazoo City; and a third of 15,000 at Canton. The Richmond papers state that General Johnstone had cut his way through Grant's army, and that the siege would in consequence be raised. This report, however, was not credited. The besieged appear to be reduced to short rations.

GENERAL NEWS.

In Tennessee there are said to be signs of Confederate movement. Contrary to the general opinion, Bragg has been reinforced, whence is not stated, but he is believed to be about joining with Buckner to invade Kentucky.

The Indiana enrolment excitement continues. A general disinclination to submit to the draught is apparent all over the country.

A military board has been appointed to settle the claims of Generals Butler, Fremont, M'Clellan, Banks, and Dix for military precedence of rank.

President Lincoln had sent a reply to the committee who forwarded him the resolutions passed at the Albany Vallandigham meeting. The President says that the ordinary law courts are inadequate to the emergency. He continues:—"Military arrests and the suspension of the Habeas Corpus Act are constitutional wherever public safety demands it. Mr. Vallandigham was arrested by the military because he was warring against the military, by labouring to prevent the raising of troops and encouraging desertion." President Lincoln states that he does not know whether, in his own discretion, he would have arrested Mr. Vallandigham, but he thinks commanders in the field better judges of particular cases. He will discharge Mr. Vallandigham as soon as he can by any means believe that public safety will not suffer by it.

There are now about 30,000 coloured troops in the Federal army and 5000 coloured men in the Federal navy.

The *New York Herald* says:—"Since July, 1862, 57 steamers and 81 sailing-vessels left Nassau for the rebel ports. Fifty-one of the former and 45 of the latter landed their cargoes, affording immense aid to the rebels and realising vast sums for the speculators. Forty-four steamers and 45 sailing-vessels reached Nassau from the Confederacy during the same period."

The privateer Clarence, the tender of the Florida, has captured seven brigs and schooners off Virginia Cape. The captain of the Clarence transferred his guns to the barque Saxony, which he had captured, and burned the Clarence. Twenty-five Federal vessels have left Northern ports to capture the Saxony and the Coquette. The privateer Japan has captured the ship Dictator.

NAVAL AND MILITARY INTELLIGENCE.

The St. Helena Regiment and the Gold Coast Artillery have faded from the Army List, and a new 5th West India Regiment takes their place, the officers being transferred en masse.

The half-yearly inspection of the Royal Asylum Schools, at Greenwich Hospital, and the distribution of prizes by the Lords of the Admiralty, took place on Monday in the presence of a numerous assembly.

Sunday being the anniversary of her Majesty's coronation, the Royal standard was hoisted at the various dockyards, salutes fired, the ships in harbour decked out with parti-coloured bunting, and the other usual manifestations of rejoicing. The usual holiday to the workmen in the dockyards was given on Monday.

The hired troop-ship Cospatrick, James A. Elmslie, Com-mander, arrived at Spithead from Kurachee on Saturday, having on board 170 invalids and 106 time-expired men of her Majesty's 7th, 71st, 79th, 81st, 93rd, 98th, 7th Dragoon Guards, and Royal Artillery, 20 women, and 26 children. Five deaths and three births occurred on the passage. The officers on board consisted of Captain M'Donald, 79th Highlanders, in command of the troops; Captain Hamilton, 98th Regiment, wife, two children, and servant; Lieutenant Clay, 79th Highlanders; Lieutenant Harrison, 7th Fusiliers; Assistant Surgeon Cameron; Lieutenant Nixon, I.N., wife, and three children; Mrs. Major Campbell, Miss Campbell, and three Masters Campbell, and servant; and nine steerage passengers.

The Duke of Cambridge, as Field Marshal Commanding-in-Chief, accompanied by General the Hon. Sir James Y. Scarlett, the Adjutant-General, General Sir Richard Airey, Colonel the Hon. James Macdonald, Colonel Tyrwhitt, and a brilliant Staff attached to head-quarters was present at a field-day on Tuesday, at Wormwood Scrubbs, with the 1st and 2nd Regiments of the Life Guards and the 18th Hussars, together with the 2nd battalion of the Grenadier Guards, the 1st battalion of the Coldstream Guards, and the 1st battalion of the Scots Fusilier Guards. Colonel the Hon. Dudley de Ros was in command of the 1st Life Guards and Colonel Howard Vyse the 2nd Regiment, the 18th Hussars being commanded by Colonel Knox. The brigade of cavalry was under the command of Major-General J. Lawrenson, and the Foot Guards under the command of Major-General Lord Frederick Paulet, C.B., attached to the Foot Guards. On the ground were several other officers of rank. The different movements lasted an hour and a half, and at the conclusion the cavalry and infantry marched past in the three paces before his Royal Highness and Staff. The Field Marshal Commanding-in-Chief called the several officers in command in front, and, in complimentary terms, expressed his approbation at the creditable manner the troops had gone through the different movements; more particularly he noted the steady, soldier-like bearing of the Foot Guards.

THE MILITIA.

The Inverness-shire Highland Light Infantry, under the com-mand of the Hon. the Master of Lovat, were inspected on Wednesday week, at Fort George, by Colonel Hamilton, C.B., the inspecting field-officer of the northern district. Above 700 strong, their complete establishment, the appearance of the men, in full Highland uniform, excited universal admiration. At the conclusion of the inspection, which lasted four hours, Colonel Hamilton addressed the regiment in most flattering terms, and stated that their marching past could not have been surpassed by any regiment, and that their soldier-like appearance, steadiness under arms, precision in file and volley firing, and the manner in which the battalion executed the manœuvres, were exceedingly creditable.

THE VOLUNTEER MOVEMENT.

The 23rd Surrey Rifles (Rotherhithe) was officially inspected on Thursday week by Colonel Morris, C.B. The corps, having been put through various battalion movements by its commandant, Captain Payne, was addressed by Colonel Morris, who expressed his satisfaction at the steadiness with which the movements had been executed.

The London Scottish Volunteers were inspected on Saturday, in Regent's Park, by Colonel M'Murdo, who, after the inspection and the usual movements, addressed them in complimentary terms, expressing his gratification at being able to report so favourably of the efficiency of the corps. The corps was commanded by Lieut.-Colonel Lord Elcho, Major Sir David Baird, and Captain Pege, Adjutant.

A review and sham fight took place at Harwich on Monday, in which a considerable force was engaged. The corps present were the 1st and 2nd Essex Artillery, under the commands of Capts. Daniel and Wingfield Baker; the Ipswich Corps, Capt. Hayward; the 1st Essex Engineers, Capt. Barthall; the Chelmsford Corps, Capt. (Major) Bringhurst; the 3rd London, Major Richards; the 41st Middlesex (Stanford), Col. Wilkinson; the Witham Corps, Lieut. Blood; the Stour Valley, Lieut. Davy; the Tendring Corps, Capt. Cardinall; the Maldon Corps, Capt. Hamilton; the Colchester Corps, Capt. Bishop; and the 2nd Middlesex, Capt. Cook. One or two other companies comprised in the 1st and 2nd Essex Administrative battalions, which were represented by about 650 effectives, were also on the ground. The band-men of the various corps numbered about 120 men. Also 80 of the West Essex Yeomanry Cavalry were present, under the command of Col. Palmer; and a party of Royal Marines, under the command of Lieut. Morris, and a detachment of men from her Majesty's ship Pembroke, lying in the harbour, under the command of Capt. Johnson, R.N., also co-operated in the manœuvres, which were under the direction of Col. Gay, C.B., Commandant of the Camp at Colchester.

The South Middlesex Volunteers held their second annual fête at Beaufort House on Friday and Saturday last. The entertainment included a fancy fair and concert, as before; but there were numerous and original additions to the ordinary programme of such entertainments. These were a Richardson's show, in which "The Duke's Motto" was performed with surprising energy several times a day; a wonderful dwarf, and a giant tournament. This tournament was cleverly managed. There were lists, heralds, jesters, a Queen of Beauty, knights in armour, squires, and retainers. Lord Harolegh and Captain Hawkins, mounted upon horses of great spirit, fought desperately for the championship, to the great delight of the lookers-on, and to the benefit of the funds of the corps. The remainder of the corps worked very hard in their assumed characters. Sergeant Todd, with his organ and trained dog; the niggers, led by a veritable Punch in full costume; the Swiss maiden; the proprietor of Aunt Sally; and the clown, who urged the people to walk up and patronise the drama, were perfect in their way, and caused great amusement. The New Zealand chiefs, the three ladies of the party, and their attendants were present on Saturday. The pecuniary results of the fête are satisfactory.

NATIONAL RIFLE ASSOCIATION.

The following is the programme of the proceedings at the prize meeting of this association for 1863:—

Tuesday, July 7.—Shooting to commence at 1 p.m. Middlesex competition for National Rifle Association bronze medal. County matches: Gloucestershire, Lancashire, and Middlesex. Oxford and Cambridge competition for National Rifle Association bronze medal. Running deer. Pool and sighting targets.

Wednesday, July 8.—Shooting to commence on this and all other days at 9.30 a.m. First stage—Queen's (200 yards). First stage—House of Lords. Public schools' (Lord Ashburton's shield). Earl Spencer's cup. Enfield all comers at 4 p.m. Association cup. *Saturday Review* and Lord Vernon's. First series, extra prizes—any rifle. Second series, extra prizes—rifles carrying Government ammunition. Running man. Pool and sighting targets.

Thursday, July 9.—First stage—Queen's (600 yards). First stage—House of Lords. All comers. Enfield all comers. Association cup. *Saturday Review* and Lord Vernon's. First series, extra prizes—any rifle. Second series, extra prizes—rifles carrying Government ammunition. Running deer. Pool and sighting targets.

Friday, July 10.—First stage—Queen's prize (600 yards). First stage—House of Lords. All comers. Enfield all comers. Association cup. *Saturday Review* and Lord Vernon's. First series extra prizes—any rifle. Second series extra prizes—rifles carrying Government ammunition. Running man. Pool and sighting target.

Saturday, July 11.—Ties, first stage—Queen's. Parade in front of the council-tent at 9.30 a.m. Prince of Wales's. St. George's vase. First stage—House of Lords. All comers. Enfield all comers. Association cup. *Saturday Review* and Lord Vernon's. First series extra prizes—any rifle. Second series extra prizes—rifles carrying Government ammunition. Running deer. Pool and sighting. Fighting for second stage—Queen's.

Sunday, July 12.—Divine service will be held for those in camp.

Monday, July 13.—Ties for St. George's vase, and ties for first and second series extra prizes. Parade in front of the council-tent at 9.30 a.m. Match between Lords and Commons. The Alexandra prize. Match between Oxford and Cambridge. First stage—House of Lords. All comers. Association cup. *Saturday Review* and Lord Vernon's. Third series, extra prizes—any rifle. Fourth series extra prizes—rifles carrying Government ammunition. Running man. Pool and sighting targets. Sighting for second stage—Queen's.

Tuesday, July 14.—Second stage—Queen's. Parade in front of council-tent at 9.30 a.m. First stage—House of Lords. Duke of Wellington. Association cup. *Saturday Review* and Lord Vernon's. Third series extra prizes—any rifle. Fourth series, extra prize—rifle carrying Government ammunition. Running deer. Pool and sighting targets.

Wednesday, July 15.—The Albert prize. Parade in front of the council-tent at 9.30 a.m. Duke of Cambridge and Westley Richards. Duke of Wellington Rifle Derby. Rifle Oaks. First stage—House of Lords. Association cup. Third series, extra prizes any rifle. Fourth series, extra prizes—rifle carrying Government ammunition. *Saturday Review* and Lord Vernon's. Running man Pool and sighting targets. Sweepstakes.

Thursday, July 16.—Ties for Duke of Wellington and 3rd and 4th series extra prizes, and first stage—House of Lords. Parade in front of council tent at, 9.30 a.m. International match (Elcho shield). Parade in front of the council-tent at 9.30 a.m. Duke of Cambridge and Westley Richards. Second stage—House of Lords. Rifle Derby. Rifle Oaks. Association cup. Fifth series, extra prizes—any rifle. *Saturday Review* and Lord Vernon's. Running deer. Pool and sighting targets. Sweepstakes.

Friday, July 17.—Ties for the Duke of Cambridge. Council-tent parade at noon. Ties for association cup. Parade at council-tent at 10 a.m. Ties for rifle derby, rifle oaks, and fifth series, extra prizes. Parade at council-tent at 12 (noon). Ties for *Saturday Review* and Lord Vernon's. Parade at council-tent at 11 a.m. Earl Dudley's. Parade in front of council-tent at 2.30 p.m. Ladies' consolation prizes. Running man. Pool. Sweepstakes.

Saturday, July 18.—Review of the metropolitan and other volunteer corps.

Monday, July 20.—Distribution of prizes at the Crystal Palace.

An official notice just issued by the association states that "the minimum charge for a volunteer non-commissioned officer or private camping at Wimbledon will be *5s.*, which, on arrival, he will have to pay to the camp Adjutant. This payment will entitle him to remain in camp five nights without further charge, but for every night beyond five he will have to pay 1s.

CHURCH AND UNIVERSITIES.

The Dean and Chapter of St. Paul's Cathedral are establishing a one-guinea subscription fund in order to complete the internal decorations of the cathedral.

The Rev. H. J. Balchin has received from the parishioners of Merton, Surrey, a silver salver and an address; also, from the national school children a Bible, upon his resigning the curacy of Merton.

The last mail from Cape Town announces that the Bishop of Cape Town, acting as Metropolitan of South Africa, has cited Bishop Colenso to appear before him and answer for his heretical opinions.

The Peterborough Choral Festival, the great choral festival of the midland counties, was celebrated with all its accustomed splendour on Thursday week. It is the fifth annual meeting of the associated choirs in the cathedral church of the diocese.

A meeting was held yesterday week at the rooms of the Society for the Propagation of the Gospel in support of the movement for restoring Truro Cathedral. Mr. Beresford Hope presided, and the Lord Primate of Ireland was among the speakers.

The following will be the preachers at the special Sunday evening services in Westminster Abbey in July:—July 5 (to-morrow), the Bishop of Lincoln; 12, Archdeacon Denison. On July 12 the special services will close for the present year.

Preparations are being made for the immediate commence-ment of the restoration of Salisbury Cathedral, towards which the Ecclesiastical Commissioners for England and Wales made a grant of £10,000 some time ago. The restoration will, it is understood, be confined to the exterior.

The Bishop of London has got about £40,000 towards his great scheme of raising £1,000,000 within the next ten years for building and endowing churches within his diocese. The Bishop himself has contributed £20,000, while the Marquis of Westminster has promised £10,000. Lord Derby and Lord Egerton of Tatton are among the contributors.

The first annual festival of the Sheriff Hales district of the Lichfield Diocesan Choral Association took place in the beautiful Sutherland memorial church at St. George's, Shropshire, on Tuesday last. The members of the choirs from Albrighton, Blymhill, St. George's, Sheriff Hales, Tong and Weston, to the number of 135, very effectively and accurately rendered the morning and evening services, which were appropriately selected.

The annual meeting of the subscribers to the Friend of the Clergy Corporation was held on Tuesday afternoon at the offices, 4, St. Martin's-place. The report, which was adopted, stated that there were at present ninety-four ladies pensioners on the funds of the corporation, and the amount paid them during the past year had been £3355. The amount given to relieve the temporary distress of clergymen and their families had been £375.

The Bishop of London has appointed the following gentlemen to be the special morning preachers at St. Paul's Cathedral for the present month:—Sunday, July 5 (to-morrow), the Rev. William Josiah Irons, Vicar of Holy Trinity, Brompton; Sunday, July 12, the Rev. Benjamin Morgan Cowie, Vicar of St. Lawrence, Jewry; Sunday, July 19, the Rev. Thomas Jackson, Rector of Stoke Newington; Sunday, July 26, the Rev. J. E. Kempe, M.A., Rector of St. James's, Piccadilly.

The Bishop of Colombo, with the Archdeacon, lately visited the Malwatta Wihara, one of the principal Buddhist temples in Kandy. Some twenty priests assembled, and to them he explained the truths of Christianity in their own temple. A local journalist says:—"He stated it was his wish that they should still be the instructors of the people, but by the new way of the Gospel of Christ. It was a gratifying sight to see the Christian Bishop making confession of his faith in a Buddhist banna-room, with the yellow-robed priests for his auditors, earnestly calling on them to lay aside their errors, and to join with him in a crusade for the only religion—which is from God—against their own and all mere human systems."

The Bishop of Columbia arrived at Liverpool, on Wednesday week, by the Jura, from Quebec, having left Victoria, Vancouver, on the 7th of May. On Sunday, May 10, his Lordship preached twice in Grace Cathedral, San Francisco, delivering an ordination sermon in the morning. On June 5 he arrived, via Panama, at New York. He preached twice on Sunday, June 7, at Trinity Church, New York; and on the 11th took part in the annual meeting of the Church Society, at Toronto, Upper Canada. Previous to leaving his diocese the Bishop had been on a six weeks' cruise amongst the Indians of the northern coast of British Columbia, and in one place baptised seventy-one converts to Christianity.

The Convocation of the Province of Canterbury met again, after their recess, on Wednesday. The Upper House took up a report made by the Lower on the possibility of joint action between them and the Province of York, in which it was suggested that the two Convocations should appoint joint committees to deliberate together, and each would report the same to its own body. Their Lordships highly approved of this report. They also resolved that the Convocation should appoint a committee to meet a committee appointed by the General Episcopal Synod of the United States, to consider the propriety of opening intercommunion with the Russo-Greek Church. It was also agreed to memorialise the Queen on the propriety of dividing the diocese of Exeter. The members of the Lower House were occupied for the most part of the day debating Dr. M'Caul's resolution of last session—"That it is not expedient to relax the rule of subscription to the Act of Uniformity. Archdeacon Sandford moved as an amendment—"That the declaration required at ordination and on induction to a cure is sufficient for all clergymen." A lengthened discussion arose on the subject, at the close of which the House divided, when the amendment was declared to be carried by a majority of ten votes, forty-one having voted for the resolution and twenty-four against it. The address of the Upper House on the subject of the Cornish bishopric was adopted.

The re-opening of Hereford Cathedral, after the recent alterations and restorations of different parts of the edifice, took place on Tuesday with great ceremony. In 1786 the tower of the cathedral fell, and was rebuilt under the supervision of Mr. Wyatt. From evidences of insecurity which manifested themselves in 1840 Mr. Cottingham was called in to examine the structure, and he made a report which led to the commencement of the present restorations. Under his supervision the nave, aisles, the pillars supporting the tower, and the extreme eastern end were repaired and restored. Following him came Mr. G. G. Scott, and under his direction the north and south transepts, the fitting of the choir, the restoration of Bishop Booth's porch, Audley's and Stanbury's chapels, Bishops' and Vicars' cloisters, north and south walls of Lady Chapel, the lesser transepts, and the external stonework of the same aisles, have each been re-edified and restored. Thus the cathedral now stands in as substantial a condition as at any former period of its history. The restorations so far as they have gone, have cost more than £40,000. Towards this sum the Dean and Chapter of Hereford have raised £13,000 by mortgage on the fabric estate, and the cathedral body have subscribed about £10,000 in addition from their private resources. The public have contributed some few thousands more, and there is still an outstanding balance to a large amount.

PREFERMENTS AND APPOINTMENTS.—*Rectories:* The Rev. R. Duke to Addington Magna, Northamptonshire; Rev. W. Reece to Bremhill, Wilts; Rev. T. H. Roper to Puddlehinton, Dorsetshire; Rev. L. Thomas to Trevriw, Carnarvonshire. *Vicarages:* The Rev. J. Bird to Chirbury, Salop; Rev. W. Griffiths to St. Lytham's, Glamorganshire. *Perpetual Curacies:* The Rev. W. R. Burgess to Horton-cum-Piddington, near Northampton; Rev. C. S. Collingwood to Southwick, Durham; Rev. J. Gibbesdale to Cranbie, Stourton, Dorsetshire; Rev. J. R. Powell to Peters Marland. *Curacies:* The Rev. E. T. Baker to Symondsbury; Rev. J. K. Booker to South Brent; Rev. G. C. Bowles to Haydon; Rev. F. J. Buckley to Muston; Rev. S. R. Dingley to Bishopstone, Wilts; Rev. G. L. Farthing to Chalfield Magna; Rev. A. L. Gore to Ham, Wilts; Rev. Dr. Humble to Lenham, Kent; Rev. W. Mason to Stour Provost and Todbere; Rev. T. W. Hathwaite to Poxterne; Rev. A. J. C. Llewellyn to Wilcot and Oare.—*Guardian.*

THE UNIVERSITIES AND PUBLIC SCHOOLS.—The distribution of prizes and rewards to the students in medicine, general literature, and the applied sciences took place at King's College yesterday week. The office of chairman was filled by the Bishop of Lichfield, who was himself, in former years, one of the most esteemed and popular Principals of this well-known college. The large room was well filled, and the proceedings throughout were marked by a hearty freshness and geniality. Each student, as he advanced to receive the reward of his industry and talent, was warmly welcomed; and the enthusiasm with which the present Principal of the college, Dr. Jelf, was received was one of the most agreeable features of the proceedings.

The annual meeting for the distribution of prizes to students in the faculty of arts and laws at University College was held in the Botanical Theatre on Wednesday. The chair was taken by the Right Hon. R. Lowe, M.P. The annual report, which was read by Professor Key, stated that the number of students at present in the ordinary classes of the faculty of arts and laws was 213; corresponding number last year, 212; new students, 115. The evening classes in Latin, Greek, mathematics, and natural philosophy were attended by 22 students. The report contained an expression of the council's great regret that Mr. F. W. Newman, who had for seventeen years been Professor of Latin at the college, had determined upon resigning the post. At the same time the council congratulated themselves upon having secured as his successor Mr. J. R. Seeley, Fellow of Christ's College, Cambridge, and senior medallist in 1857.

The annual examination of the Clergy Orphan School, Canterbury, took place on the 23rd and 24th ult. Examiners—the Very Rev. the Dean of Canterbury; the Rev. Dr. Dyne, Head Master of Highgate School; and the Rev. G. Currey, preacher of the Charterhouse, who has succeeded the late Dr. Russell as treasurer of the Clergy Orphan Corporation. At the close of the examination, the Rev. D. Butler, Head Master, announced to the school the names of the successful candidates for Exhibitions, &c., and bore testimony to the general good conduct of the boys during the past year. The examiners expressed themselves well satisfied with their work as tested by the examination. The School Exhibition of £60 was awarded to H. H. Robinson; and a second Exhibition of £20, kindly provided by a friend, to Colson.

The annual public examination of the children belonging to the girls' school of the Clergy Orphan Corporation took place on Monday, at the school, St. John's-wood—the Archbishop of Canterbury in the chair. The result was in every respect highly creditable both to the children and to their preceptors. The chairman distributed the prizes, consisting of books, to the most deserving of the girls.

The examination of the scholars of King Edward VI.'s Grammar School, at Southampton, took place on Thursday week, for the first time in the fine lecture hall of the Hartley Institute in that town, before a large number of the inhabitants. The school was suspended for thirty years, and has only recently been revived. Owing to the accumulation of the school funds, and the liberality of the Southampton Town Council, this grammar school is now one of the cheapest in the kingdom, even to non-foundationists. The Mayor of the town has just added two scholarships to the foundation.

The Rev. John Espin, M.A., Merton, Oxford, late Second Master of St. John's Foundation School, Clapton, has been elected by the Dean and Chapter to the second mastership of the Cathedral Grammar School, Rochester.

The Rev. Albert Smith, M.A., Lincoln, Oxford, Head Master's assistant in King Edward's School, Birmingham, has been appointed to the head mastership of Sutton Coldfield Grammar School.

Letters received from the Caucasus state that eleven san-guinary combats have taken place between the Russians and the mountaineers.

Friday's *Gazette* notifies the transference of Sir Charles Darling from the governorship of Jamaica to that of Victoria, in Australia.

M. Felice Lombardi, director of the hospice situated on the summit of the St. Gothard, the highest point of the canton of Ticino, has just died, at the age of seventy-four.

The Swiss Federal Government has accorded to merchandise of British origin the same tariff privileges as those granted to Belgium under the recent commercial treaty.

The text of King Leopold's decision as arbitrator in the case of the officers of her Majesty's ship Forte and the Brazilian agents has been published. His Majesty, on reviewing the whole proceedings, is of opinion that there was "neither premeditation or offence, nor offence, to the British Navy."

The health of the Empress of Russia (says the *Nord*) is improving. Her Majesty has already been able to drive out in an open carriage in the park of Tzarskoe-Selo, and it is expected that her journey to the Crimea will take place about the middle of July.

PARIS FASHIONS FOR JULY.

In a recent article we announced the probable advent of uni-coloured toilets for the summer season; and now the mode is decidedly adopted, both at Fontainebleau, under the patronage of the Empress, and at Paris, where the young and graceful Princess de Metternich, riding in her carriage a few days since along the Boulevards, might be seen in a rich toilet all *couleur de cuir*, even to the parasol, but of a light and almost pleasant tint, so far as any tint worthy of that agreeable adjective can be found in the category of the present very fashionable leather colours.

Fortunately, this mode is not universal, and is principally confined to the recognised leaders of fashion and to the Court at Fontainebleau, where the most rigorous provisions are made with regard to the description of toilet to be worn on different occasions. So, descending one step lower on the ladder of fashion, let us continue by a few remarks on the *modes raisonnables et ordinaires*. The cannail, or circular cloak, in silk, cashmere, or lace, is the garment which divides public favour with the ever-popular burnous. The cannail in cashmere or in silk is usually trimmed with lace or braided, and the cannail in Chantilly lace may either be lined with white silk or be worn without lining. An illustration of a blue silk cannail, trimmed with guipure, will be found in the first figure of our Engraving.

The small chapeau Henry III., with bow and plumes, is the hat adopted for the country and for watering-places, but not at present in Paris, except for carriage wear or for very young ladies. As to the ordinary bonnet, of which the shape has made gone no modification worthy of mention, it is only necessary to signalise the dominant colours—black, white, and havane, the generic name employed by French modistes to designate the leather series of tints.

For those who are disposed to go through a few weeks' *villégiature*, the numerous light woollen stuffs now obtainable offer a varied choice for dresses; it would be useless to cite them all here; but the light alpaces, mohairs, and gazes de Chambéry may be recommended as affording light yet strong materials for a country, seaside or a sojourn by the seaside.

We may conclude these desultory remarks by observing that passementerie ornaments, of new and tasteful composition, are very fashionable; but the old designs have been set aside by the principal Parisian dressmakers.

THE ILLUSTRATIONS.

Fig. 1. *Walking Dress.*—Robe of mazarine blue foulard, without ornament. Cannail of the same colour and material, trimmed with deep guipure. Blue high-heeled *bottines à bouton*. Leghorn bonnet, ornamented on the top and in front with a bouquet of field flowers.

Fig. 2. *Country Toilet for a Young Lady.*—The skirt of this

WOMEN OF CAPTAIN SPEKE'S EXPEDITION.

dress is in mauve-coloured foulard, marked with narrow black stripes, and the waistband is pointed. The canezou is in muslin, and is composed of narrow plaits, running crosswise, and separated into rows by the introduction of embroidered insertion. Lace frill and cuffs.

Fig. 3. *Grand Toilet for Promenade.*—Robe of buff taffety, with a somewhat deep flounce carried up higher in front than behind. The mere flounce is surmounted with a rich passementerie edging, over which there is a graduating series of lozenge ornaments, also in passementerie, the entire ornamentation of this complicated skirt being completed by a deep chenille fringe. The sleeves are ornamented with passementerie on the shoulders and round the cuffs. All the trimmings of this costume are several shades deeper in colour than the buff of the dress.

SCENE FROM GOUNOD'S NEW OPERA, "FAUST."

OUR Engraving represents an incident in the scene of the kermesse, or fair, which forms the opening of the second act. While the jollity is at its height Mephistophiles suddenly appears in the midst of the revellers, and joins their festivity by singing the celebrated song in praise of gold, "Dio dell'or." He drinks with the group of students, and, exclaiming that the wine is poison, he strikes a cask with his wand, wine rushes out, and as it falls to the ground becomes liquid fire. The students, terrified, draw their swords; Mephistophiles does the same, drawing a circle round him with the point of his sword; the students, as they attempt to rush upon him, are stopped as if by an invisible barrier; and the sword of Valentine, who leads them, breaks in his hand. The demon being thus revealed the students drive him away by holding their swords towards him in the form of a cross. He retires, taking leave of them mockingly.

THE MASONIC BALL AT OXFORD.

AMONG the Illustrations which we gave last week of the Royal visit to Oxford was one showing the singular manner in which the Prince and Princess of Wales were received by the brethren of the Apollo University Lodge of Freemasons on the occasion of a ball given by them to their Royal Highnesses on the 16th ult., in the New Corn Exchange. We now give an Engraving of the ball itself, which was a very splendid affair. The Prince and Princess, accompanied by the Countess De Grey and Lieutenant-Colonel Keppel, arrived at eleven o'clock, and, passing under "an arch of steel," formed by the crossed swords of eight Knights Templar (illustrated in our last Number), were received on their entrance into the corridor by the Provincial Grand Master of Oxfordshire (Lieutenant-Colonel Atkins-Bowyer), the Worshipful Master of the Apollo Lodge (Rev. W. K. Riland Bedford), and the Directors of Ceremonies (Brothers Wyndham and Bruce-Gardyne). Their Royal Highnesses were conducted through the corridor, lined by the provincial officers, officers of the Lodge, and stewards, wearing the insignia of the craft, to a boudoir prepared for the occasion. Thence, after a short pause, the Prince and Princess proceeded to the raised dais in the centre of the hall, where two chairs of state had been placed for them.

As soon as a space had been cleared in front of the dais by the exertions of the stewards, the Provincial Grand Master opened the ball with the Princess, the Prince dancing with Miss Bowyer.

The Princess wore a mauve dress, spangled with silver, and festooned with wreaths of roses and shamrocks, and in her hair roses and shamrocks, interspersed with diamonds. Her Royal Highness only danced a few sets of quadrilles and lancers; but the Prince was indefatigable, and stood up in every set till twelve o'clock, when the supper-room was opened. Soon after one their Royal Highnesses took their departure; but the ball was prolonged with great spirit for some hours.

BRITISH ORPHAN ASYLUM.

THE new building at Slough for this asylum was formally opened by the Prince and Princess of Wales on Wednesday week, as fully described in this Journal last week. Our present Impression contains an Illustration of one of the most interesting incidents in the day's proceedings. Rather more than a hundred ladies advanced one by one to the table placed before the chairs of the Prince and Princess, and each deposited there a purse containing sums varying from five guineas to a hundred pounds, which had been collected by them individually as contributions to the charity. This proceeding caused a flutter amongst the assembly, and every eye was strained to watch the manner in which the ladies went through the trying process of proceeding singly from their places to the dais, making their obeisance to the Prince and Princess, and passing on their right to the portico. They one and all comported themselves admirably, it being evident that they were much more occupied by a desire to see the Princess than with any notion of how they themselves appeared in the eyes of the company. "God Save the Queen" was then sung by the ladies of the Royal Academy of Music, and the ceremonial proper concluded.

"Staith's Yorkshire," by S. P. Jackson, in the same Exhibition.
"The Shepherd of Jerusalem," by W. J. Webb, in the Exhibition of the Royal Academy.
"St. Peter," by T. J. Gullick, in the same Exhibition.
"Queen Mary quitting Stirling Castle," by Mrs. E. M. Ward, in the same Exhibition.
"A Ship in Distress Burning a Blue Light," by Edward Duncan, in the Exhibition of the Society of Painters in Water Colours.
"The Rest," by G. Chester, in the Exhibition of the Royal Academy.
"The Wanderer Returned," by Harrison Weir, in the Exhibition of the Institute of Painters in Water Colours.

The Number will also contain Engravings of the Guards' Ball in the International Exhibition Building, Trial of Steam Fire Engines at the Crystal Palace, the Royal Thames Yacht Club Match, H.M.S. Royal Oak, Opening of the new Baths at Boulogne, Portraits of the late Sir Joshua Jebb and Prince Ferdinand of Denmark, a Map of the Seat of War at Vicksburg, &c., &c.

Price of the Two Sheets, 5d.; Stamped, 6d.

Office, 198, Strand.

NOTICE TO ADVERTISERS.—Advertisements intended for the above Number must be sent in a day earlier than usual.

THE ILLUSTRATED LONDON NEWS.

LONDON: SATURDAY, JULY 4, 1863.

HAPPILY, in England we are not only at perfect freedom to make any comment upon the proceedings of our judicial tribunals, but, possibly for that very reason, we are very seldom called upon to make any. When a journalist has occasion to allude to a verdict or a judgment it is generally done in the way of congratulation to society that some bubble has been burst, that some honest man has got his rights, or that some scoundrel has met his deserts. Occasionally a foolish jury has vexed the logical soul of a Judge by finding a verdict prompted by spite, or more probably by stupidity, or because the glowing sophistries of an advocate (who was, of course, the first to jeer at the blockheads he had deluded) had told better upon the uneducated mind than the unadorned reasoning from the Bench. The remarks of the journalist upon a case like this are valuable, because they are leisurely perused by possible jurymen, and do much towards the prevention of such absurdities as he condemns. As a rule, the tribunals and the newspapers, the spoken and written common sense of the day, are in excellent accord.

There is, however, as it appears to us, an inclination on the part of the Bench towards a course by no means calculated to increase this harmony. It is needless for us to premise that we believe such inclination to be the result of a conscientious wish to do justice; and, luckily for our argument, the men who have manifested it are Judges of whom the nation is most proud, though this compliment is slighter than we could desire, from the remarkable absence of brilliant talent from the Bench. We observe that, upon several occasions where newspaper and other published comments have been made upon the conduct of individuals, Judges have been very emphatic in enforcing upon juries the consideration that a person who cannot be proved to have had a fraudulent motive has a right to complain of press castigation for his folly or misconduct. Juries are very ready to accept this hint; and—being mostly selected from a class which is very worthy and respectable, but which has somewhat inflated notions of dignity—they are easily induced to impose a heavy penalty upon what, in the favourite dialect of their favourite vestries, would be termed uncalled-for remarks upon individuals. Now, if we waited until unfavourable remarks upon men and their actions were "called for," we should abnegate our duty, which is that of being the first to speak where the interest of society demands it.

The last instance of this inclination on the part of the Bench was manifested the other day in a trial of which it is difficult to write with gravity. A person named Morrison, in a very inferior grade in the Navy, has persuaded himself, or says that he has done so, into a belief that he is an astrologer, and, under a signature which *Mr. Punch's* ridicule has made more widely known than the astrologer's puffs could do, has annually offered a series of predictions which, couched in the most general language and referring to the most probable events, could hardly fail sometimes to be nearly verified. These productions are almost too absurd for illustration; but if we were to announce that in September next the aspect of certain planets indicate that a great statesman would come to grief, we should have a tolerably ample chance of being right; and if in that month any leading member of the Cabinet or the Opposition had the gout our triumphant vindication of our prophetic skill would be akin to the self-glorification in which our sea prophet indulges when he comes to make up his accounts. There is no particular crime in such nonsense, or, if there is, the people who are idiots enough to buy such prophecies are at least as culpable as the person who puts them forth. But this gallant sailor-prophet (it was in counsel's statement, if not in evidence, that in early life he did his duty) had picked up at some curiosity shop a crystal ball, and in this, though he never saw anything wonderful, a boy and some others, including some specially silly women, believed that they beheld magic visions. A number of people went to see it—a distinguished author among them, who, of course, wished to study a new phase of human credulity—and the thing was talked about, which is quite enough in "this London." But then the ball, and its owner, and his prophecies got to be talked of a little more than quite enough, for they came under the slashing hand of a daily journalist; and another man of the sea, no less a person than Admiral Sir E. Belcher, published an indignant letter, in which he expounded his views of the prophet's character in a way that certainly admitted of no mistake. He also said that one of his reasons for being angry with the prophet was that, to Sir Edward's own knowledge, the former had received a considerable sum of money from a lady for pretending to give her magically-obtained tidings of her son, who was absent. Now this is just the kind of provocation calculated to enrage a British officer, and, possibly, had the prophet been within his reach, Sir Edward might have testified his indignation in a still more distinct manner. But attorneys were found to take up the prophet's case, and he sued, not the journal, but Sir Edward Belcher. The case ought to have been laughed out of court; but, in spite of a cross-examination which fully revealed the character of the plaintiff and the impudent absurdity of his preternatural pretensions, Sir Alexander Cockburn saw fit to tell the jury that as wilful fraud was not proved, the plaintiff's critic might not be justified in castigating him as had been done. The jury, moved by this hint, and, perhaps, by two medals which the plaintiff dangled before them, gave him a verdict and 20s. The Judge, however, refused a certificate for costs.

Now we are unable to see the justice of Sir Alexander Cockburn's view of the case. We are aware that a lawyer laughs at what is called the interests of society, and, perhaps, properly so. Let him work his machinery in the best way and he has done his duty, and if society finds that it is not satisfied, let it invent some new machinery for him, and bid him work that. We have no desire to introduce sentiment into a law court; but we hold that, by the ordinary and well-known rules of law, this was a case in which a plaintiff was put out of court. A hundred years ago or so he would have been put out of court and into prison; but we have no desire to see imposture dealt with except by exposure. The man who comes into court and admits that he studies the stars, and from their combinations predicts Lord Russell's catching the measles or Lord Granville's having his spoons stolen, ought certainly not to be put into prison, but he ought to be put into print in any way best calculated to shame the fools who buy his books. The man who avows a belief that his boy saw visions in a glass globe, and who is averred by a British officer to have taken money from a woman for imparting supernatural information, is not the man in whose favour an English Judge ought to say a single word. The press is more than ever necessary when the law is found ready to screen an impostor from a well-merited kick.

THE REVENUE.

THE COURT.

The Queen is expected to leave Windsor Castle for Osborne to-day (Saturday).

At the close of last week the Queen, in consideration of the great interest taken by the late Prince Consort in the Gravel-street and Golden-lane schools, established by the Rev. W. Rogers, which his Royal Highness opened in person, was graciously pleased to allow the children of these schools, 1500 in number, to pass in procession round the terraces of the castle. Her Majesty afterwards honoured Mr. Rogers with an interview. In the evening the children were formed upon the sides of the road leading from the Long Walk to the castle, and her Majesty, accompanied by the Queen of Prussia and Princess Louisa, drove slowly past them. The children then passed her Majesty and returned to London.

On Saturday last the Prince and Princess of Wales arrived at the castle.

On Sunday the Queen, the Queen of Prussia, the Prince and Princess of Wales, Princesses Helena and Louisa, and Prince Arthur, with the ladies and gentlemen in waiting, attended Divine service in the private chapel. The Rev. Dr. Stanley officiated.

On Monday the Queen, attended by the Hon. Mrs. Bruce, walked and drove in the grounds adjacent to the castle. The Prince and Princess of Wales left the castle for Marlborough House. The Queen of Prussia and Princess Helena drove out in a carriage and four. Princesses Louisa and Beatrice, with their attendants, went to the Ranger's Lodge, Greenwich Park. The Russian Ambassador and Baroness de Brunnow, and Earl Russell had audiences of her Majesty to-day.

On Tuesday the Queen, accompanied by Princess Helena, and attended by Lady Augusta Bruce, Lieutenant-General the Hon. C. Grey, and Major-General the Hon. A. N. Hood, went to London, and visited the South Kensington Museum, and inspected the new courts and the designs for the proposed decorations of them in mosaic and majolica; also the new galleries, with the national competition drawings of the Schools of Art of the United Kingdom. The Queen returned to Windsor at one o'clock. The Queen of Prussia, with her attendants, went to London in the morning and returned to the castle in the afternoon. The Duke and Duchess d'Aumale and the Duke de Montpensier visited her Majesty.

On Wednesday the Queen, accompanied by Princess Beatrice, and attended by Lady Augusta Bruce, walked and drove in the grounds. The Princesses Helena and Louisa, and the Queen of Prussia, with their attendants, went to London in the morning and visited the Horticultural Exhibition at Kensington. Their Royal Highnesses returned at half-past one o'clock. Count and Countess Bernstorff arrived at the castle and had the honour of an interview with her Majesty.

The health of Prince Leopold is, we regret to learn, not quite satisfactory.

The Queen of Prussia took her departure from the castle yesterday (Friday), and proceeded to the residence of the Prussian Embassy. Her Majesty will remain the guest of the Prussian Ambassador and the Countess Bernstorff until Monday next, when her Majesty will depart for Coblentz on her return to Berlin.

The Hon. Beatrice Byng has succeeded the Hon. Victoria Wortley as Maid of Honour in Waiting. Viscountess Jocelyn has succeeded the Countess of Gainsborough as Lady in Waiting; and Lord Alfred Paget and Col. the Hon. A. Hardinge have succeeded Major-General the Hon. B. N. Hood and Lieut.-Col. the Hon. D. De Ros as Equerries in Waiting.

THE PRINCE AND PRINCESS OF WALES.

On Monday morning the Prince and Princess returned to Marlborough House from Windsor Castle. In the afternoon their Royal Highnesses took a drive in an open carriage and four. In the evening the Prince and Princess gave an evening party and a dance, at Marlborough House, to a limited number of the aristocracy. The whole of the suite of the principal apartments was prepared for the occasion. The company began to arrive soon after ten o'clock. The Princess was attended by the Countess De Grey and Lord Harris. The Prince was attended by Earl Spencer, Earl of Mount-Edgcumbe, Lieut.-General Knollys, the Hon. R. K. Meade, and Lieut.-Colonel Keppel. The Princess wore a dress of white tulle over white glacé silk, veiled with spotted tulle and trimmed with flowers—the white rose and vinca pervinca. The ornaments were emeralds and diamonds. Her Royal Highness's headdress was composed of a wreath of flowers corresponding with the trimming of the dress, interspersed with diamond ornaments. Among those who had the honour of receiving invitations were the following:—The Duchess of Cambridge, Princess Mary, the Duke of Cambridge, the Prince of Orange, the Count de Paris, the Duke de Nemours and Princess Marguerite d'Orleans, Prince Edward of Saxe-Weimar and Countess Dornburg, Countess Gleichen, the Austrian Ambassador and Countess Apponyi, Prince and Princess Bandini.

On Tuesday the Prince rode on horseback, attended by Lieutenant-Colonel Keppel. The Princess, attended by the Marchioness of Carmarthen, took a drive. Princess Mary of Cambridge visited the Princess at Marlborough House.

On Wednesday the Prince went to Kew, and was present at a fête given by the Duchess of Cambridge at Cambridge Cottage. The unexpected demise of the Hereditary Prince of Denmark, a distant relative of the Princess, precluded the attendance of her Royal Highness upon the occasion.

The Marchioness of Winchester had an interview with the Princess at Marlborough House a few days since, and presented a bracelet of diamonds and rubies, the gift of the ladies of Hampshire. The Lady Mayoress of York and the Hon. Mrs. Smyth also had an interview with her Royal Highness, and presented a silver inkstand from the ladies of the city of York.

FASHIONABLE ENTERTAINMENTS.

On Saturday evening Viscountess Palmerston had an assembly at Cambridge House.

On Monday the Duchess d'Aumale gave a concert at Orleans House, Twickenham; and Mrs. Robert Gosling gave a concert at her residence in Portland-place.

On Tuesday the Hon. Mr. Richard Cavendish and Miss Cavendish gave a brilliant ball at their residence in Chesham-place; and Lady Blackett gave her first dancing-party this season at her residence in Portman-square.

Mrs. Gladstone gave an amateur musical party at the family residence in Carlton House-terrace on Wednesday; and Lady Goldsmid gave a grand ball at St. John's Lodge, Regent's Park.

The Duke and Duchess de Chartres returned on Tuesday to the Clarendon Hotel from Scotland. Their Royal Highnesses entertained at dinner the same evening the Count de Paris, the Prince and Princess de Joinville, the Duke and Duchess d'Aumale, the Duke de Montpensier, and Prince Philip of Wurtemberg, &c.

The Duchess Dowager of Sutherland has returned to her villa at Chiswick from visiting her Majesty at Windsor Castle.

The Duke of Rutland has gone on a yachting excursion.

The Earl and Countess of Durham have left town for Gope-land Castle, Durham.

Earl and Countess Howe will leave Curzon House this day for Gopsall Hall, Warwickshire.

Earl and Countess Amherst and family have arrived in Grosvenor-square from the Isle of Wight.

Earl and Countess of Craven and family purpose to pass several weeks at Coombe Abbey, the family seat in Warwickshire. It is some years since the noble Earl and Countess have resided there for any lengthened period.

Earl and Countess Delawarr leave town next week for Kissingen to pass a few weeks, the noble Earl having been recommended to take the waters.

The Earl and Countess of Clancarty and Viscount Dunlo have left town for their seat in Ireland.

Frances Countess of Albemarle and Colonel the Hon. Peregrine Cust will leave town on Monday for Ashridge.

Field Marshal Viscount and Viscountess Combermere have arrived at Buxton.

Major General J. N. Jackson is gazetted Colonel of the 99th Foot, and Major-General M. Barlow Colonel of the 3rd West India Regiment.

ECHOES OF THE WEEK.

We have eaten some very strange things in our time, to say nothing of the pock of dirt which all humanity is bound to consume ere Death cease to eat us up. We have eaten bear. We rather think it was in the Government of Tamboff and at the dinner-table of a Boyard. It was real bear, not in the form of ham, but in the guise of a steak, and very tough, glutinous, and unpleasantly aromatic it was. Horse we *may* have eaten, but we are not certain on the point of hippophagy. For cat, see *civet de lièvre* at a cheap French restaurant. We can aver from experience that snails (the orifices of the shells carefully closed with veal stuffing) are delicious. Snail soup we never tried. Of frogs, more anon. A friend who served in the Foreign Legion in Algeria once assured us that rat—barn-fed, not sewer-grown, mind, and steeped for a couple of days before cooking in a slight marinade of vinegar—was very nice indeed.

Do you like bear? Do you like frogs? If your tastes lie towards the alimental in gastronomy you should have dined on Wednesday last at St. James's Hall, when the Acclimatisation Society of Great Britain and Ireland held their anniversary festival—the Duke of Newcastle, president of the society, in the chair. What think you of a "jambon d'ours au vin de Madère?"—of "grenouilles à la poulette?" In addition to these newly-acclimatised viands, the bill of fare abounded in "exceptional" items, both edible and potable. "White soup of the Charred Islands"—a "cutty sark" is very white; "bouillabaisse;" "caller salmon;" "chaar;" "Lucioperca;" "pepper-pot;" a "*lamb roasted whole, stuffed with pistachio nuts, and served with pilaff and couscoussu*;" "fawn of fallow deer," "calf of red deer;" "ribs of beef, between buffalo and Kerry cow;" "Pallas sand-grouse." "Chinese yam," "*Pordets à l'émancipation des nègres*," "ostrich eggs," "Bourgoul from the Lebanon"—such were a few of the rarities in this astounding *menu*. We only missed "gumbo soup," "sterlet," and "sassina" from the Volga; "fried sharks' tail," "parrot pie," "kangaroo soup," and a few trifles of that description. Among the "exceptional" wines we met with the Greek Santorin, St. Elias, and Cyprus; the Hungarian Muscat, Badasconyer, Szamrsodny, and Tokay, and some Australian vintages. The acclimatisation dinner was a triumphant success, and much credit is due to the taste, skill, and energy as *ordonateurs* of Messrs. Frank Buckland and James Lowe, the secretaries—not forgetting that the Acclimatisation Society mean much more serious things than dining, and are rapidly revolutionising natural history as a practical science.

As we anticipated in our "Echoes" of last week Lord Raynham's well-meaning but impracticable bill for the propagation of the birch-tree has fallen through. The motion for the second reading was negatived, without a division, on Tuesday night, and the bill is lost. Lord Raynham urged that his measure was intended to restrain those (happily rare) schoolmasters of the "Squeers" type who delight in cruel and savage punishments; but Sir George Grey pointed out that any persons who inflicted excessive chastisement on children were already amenable to the law, and could be exemplarily punished. We should feel inclined to wish his Lordship better fortune were he, early next Session, to bring in a bill prohibiting corporal punishment in schools (not being penal reformatories) altogether. How is it that in France a thousand boys can be educated together without even so much as a box on the ears being administered? The Revolutionary Reign of Terror has much to answer for; yet it is to the colleagues of Robespierre and Marat that French children owe their emancipation from the rod and the thong. A decree of the Convention abolished corporal punishment in French schools, and the *exécuteur des hautes œuvres*, on whose barbarous functions Voltaire comments so strongly in his "Raison par Alphabet," was for ever deprived of his occupation.

While we are on the subject of those things which are so "much better managed in France," may we be permitted to ask a simple question. What is the reason that in Paris one never hears of milliners' or dressmakers' girls being kept at work all night, or worked to death? Paris is universally regarded as the metropolis of fashion. Balls and fêtes are more numerous in Paris than in any other capital in the world; and the French ladies are as elegant in their toilettes, and as capricious in their selection of dresses and bonnets, as their sisters in England; yet the plying of needle and thread in the work-room of a French *modiste* after eight o'clock at night would be considered more than phenomenal: it would be monstrous. If the police didn't interfere to abrogate such slavery, public opinion certainly would.

Lord Shaftesbury, the indefatigable pioneer in all good works, has been striving to induce the Government to issue a Royal Commission, to inquire into the physical and moral condition of milliners and dressmakers; and Lord Granville has consented that the subject shall be referred to the commission now taking evidence on the state of children and young persons employed in trades and manufactures not regulated by law. The prospect, however, of any permanent amelioration of the condition of this much-suffering class seems, at present, but discouraging. From any legislative enactments we can expect but slight benefit. The Countess of Ellesmere has acknowledged the failure of the Dressmakers' Association, established more than a dozen years since. Miss Marguerite Power, in a sensible letter to a contemporary, has hit the right nail on the head in stating that the whole subject is bound up with the more general topic of the employment of women. The fact is, that the milliners and dressmakers, like thousands more young females earning their livelihood by the sweat of their brow, are oppressed because they are devoid of that strength which results from mutual recognition and internal organisation. They are a feeble flock. The barmaids are much better off. The publicans admit and respect their rights, and many of them are under the protection of the admirable Licensed Victuallers' Association, in whose school they have been educated. But there is nobody to help the seamstresses. Their ranks are recruited from orphans and poor country girls, the waifs and strays of broken down gentility, or the daughters of small shopkeepers with large families. Worse than all, their own sex is against them. Next to taking away a dressmaker's life by hard work and insufficient wages, the easiest thing in the world is to take away her character by calumny. And, in fine, they are too numerous. For every dress that is to be made there are half-a-dozen young women ravenous to make it, for the dear bread's sake; while employment much more remunerative, much less laborious, and quite as fitted for females, is monopolised by sturdy and athletic men. Ah, if our fashionable dames would only form a ladies' league to patronise no shops where men lolled and grinned behind the counter; and if lawyers, brokers, and merchants would only satisfy themselves by experience of what neat, handy, and expeditious clerks women will make, after very moderate training!—But we are travelling into the country of Utopia. The more shame for us that common justice and common decency should be Utopian.

There has been a wonderful trial for libel, which we have treated at length in another place. Perhaps there never was such a libel case before. "Right reverend prelates," noblemen, "several Countesses," Sir Bulwer Lytton, and a host of other notabilities were examined as to what they had seen, and had not seen, in Zadkiel's "magic crystal." One lady of mature age swore point-blank that she had had ocular demonstration of a "man in armour" and a "lady in a pink dress" leaning on his shoulder. The supernatural ball, it appears, formerly belonged to the celebrated Countess of Blessington, and passed, after her death, into the possession of a curiosity dealer, from whom it was purchased by Lieut. Morrison. Does anybody know who is the proprietor of the ominous "bleeding diamond" on whose sanguinolent properties a story was written some time since in *All the Year Round*? And the "Lee Penny?" Has that talisman lost its virtue?

The "children seers," or "mediums," who seem to be specially privileged to behold the marvels of the "magic crystal," have a strange affinity to the little Cairo donkey-boys employed by modern Egyptian magicians to peer into the recesses of the pools of ink in their outstretched palms. The formula does not vary much. "What do you see?" "I see a man sweeping, and then a Frank, with a tall hat and a stick in his hand." A late Duke of Northumberland, when Lord Prudhoe, was considerably staggered when one of these boys accurately described the apparition of Horatio Viscount Nelson in a pool of ink; only the Frank Admiral appeared with the *left* sleeve of his coat empty and pinned to his breast. It was objected that the *right* arm was the one lost by Nelson; but the discrepancy was explained away by the magician, who said that the image in the pool was *a reflection*, and that the position of the vacant sleeve would consequently be reversed.

Does anybody—out of Bedlam—believe in these "magic crystals"? "How do we know?" We have seen the ghost at the Britannia and at the Adelphi, and are prepared to believe anything. Only, we hope it is not libellous to hint that "Zadkiel" may go on prophesying for fifty years, and that we shall never, if we live so long, lay out sixpence on his almanack.

Some of our readers may be old enough to remember the famous French fortune-teller, Mdlle. Le Normand, whom Napoleon the Great, even, did not disdain to consult. It is said that Joachim Murat, when King of Naples, and in the plenitude of his prosperity, went to her. The sorceress had a pack of cards, which she shuffled, and cut one to Murat. It was the "king of diamonds"—the terrible *Grand Pendu*—denoting that the person cut to was destined to die by the hand of the executioner. Murat had paid ten napoleons as a fee; he paid ten more to shuffle the cards again, and cut for himself. The *Grand Pendu* turned up again. Then he disbursed fifty napoleons, Mademoiselle shuffled, and he drew a card. It was again the *Grand Pendu*. It is reported that Joachim offered one hundred napoleons for a final shuffle; but that the fortune-teller, declaring that he was born to be hanged and nothing else, flung the cards at his head and turned him out of the room. Poor Murat was not hanged, but the next thing to it. He was shot in Calabria, as all the world knows, in 1815. A few years ago we should have been ashamed to tell this story, which we heard from an intimate friend of Mdlle. Le Normand; but in this age of "magic crystals," dancing tables, waltzing chairs, self-playing accordions, and floating spirit-rappers (what was it the old lady said of Jack Wilkes's head on the tavern sign, "swinging everywhere but where it should?") shame seems to be dead and gone, and common sense in a state of coma.

FINE ARTS.

CHURCH'S PICTURE OF ICEBERGS.

MR. CHURCH seems to have set himself to represent the most remarkable scenes of the Western Hemisphere. First we had "Niagara," the most extraordinary scene in North America; then the "Heart of the Andes," depicting the great mountain-chain—the very spine, as it were, of South America—with the endless panorama of tropical forests. Later, Mr. Church painted, though it has not yet been exhibited in this country, "Cotopaxi," the most tremendous volcano in the world. And now, in "The Icebergs," exhibiting at the German Gallery, New Bond-street, we have a picture representing the most striking characteristics of those stupendous masses of ice formed about the shores of Arctic America, and committed by glacier action and the alternation of the warm seasons to the currents of the Atlantic.

The great value of this present picture is its close fidelity to phenomena which few painters have attempted to represent. The quest of icebergs (to be sufficiently near for the painter's purpose) is a very dangerous pursuit, on account of the constantly changing form of the bergs, the frequent explosions, the sudden splitting off of large portions, and their more or less complete disintegration; changes which are always accompanied by oscillations in the principal mass, and sometimes its complete invertion. For these and many other reasons sailors give them "a wide berth." However, Mr. Church made a cruise expressly to study them closely off Labrador in the summer of 1859, and the chief incidents of the voyage have already been given to the world in the Rev. L. Noble's interesting, though spasmodically-written, "After Icebergs with a Painter."

It must be admitted that the first impression of Mr. Church's picture will probably be, to those who have never seen an iceberg, that it is somewhat scenic and unnatural. But this is to be expected in such an unfamiliar subject, and if the visitor will spend an hour or so before the work, as we have done, he will, especially if he has read Mr. Noble's book, certainly discover some of the secrets of nature's rarest marvels, and come away impressed with the painter's truthfulness. The great floating berg represented by Mr. Church presents all the aspect of being firmly moored in the ocean, and has structural characteristics not very unlike a real rocky island. The foreground consists of an irregular but not far from level surface, and a precipitous cliff to the left. On the lower portion there is the only trace of man—a mast and crosstree of a fishing-boat. The mast is partly imbedded, and curiously illustrates the force and changing form of the ice: the grain of the wood is, so to speak, untwisted into splinters. Other phenomena at once strike the eye in this nearer portion. The jagged, scarped ice to the left is, for instance, edged with yellow light, as if illumined by the direct rays of the sun, though this is impossible from the indications of the sun's position in the sky. On further examination we conclude that this is only the reflection of the sunlight from the principal mass, which, though far distant, falling on a melting surface is mirrored as if in glass. A band of purest azure will next arrest the eye, and this, we are told, must have been a great fissure or crevasse, in which the thawed water has again frozen, the purest blue being the well-known result of light passing into, as well as seen through, a limpid medium of great depth. Next, another crevasse will be noticed, not filled up, however, but emitting the loveliest emerald light. This, our Arctic friends will know, arises from the light being transmitted partly through and again reflected from the sea beneath, or the semi-transparent compacted snows and ice of the berg. Connecting this foreground with what we may call the mainland is a long isthmus, forming on one side a bay, into which from the dark violet-coloured sea the swell of the Atlantic marches in widely-opened fan-shaped ranks, till each curve suddenly breaks on the shallow shore into pale green foam, that flashes far out to sea with magical beauty and dazzling brilliancy. Near the end of this isthmus the sea has worn a cave, lighted from beneath with the most exquisite emerald hues—a fairy cave that should be haunted by mermaids or the daughters of old Poreas. On the arch that spans this cave is a monster block of red stone that the glacier has dragged or the avalanche has hurled from its primitive Greenland bed—a block to form a cromlech, or, in other ages, an altar of a Druid temple. Beyond gleams and glistens in the full western sun the great mass of the berg, its highest Alpine peaks lost in the mists of evaporation. Along its base are two long straight lines, as of stratification, forming now an acute angle with the sea, but indicating former water-lines before great subsequent changes of equipoise. This great central mass is broken into a thousand wonderful forms and colours, mostly rugged, angular, and precipitous; but in its centre is a portion preserving, probably, the sheer original slope formed by the sliding snows, and presenting a surface like white velvet, on which the rugged shadows from the neighbouring ridges and spines fall, half smothered in its downy embrace. By the side of this great crystalline mountain, splendid as a vision in the low sun that leaves the sea dark almost as night, the sky itself, charged with mist and vapour, looks opaque and heavy, like tarnished copper, only broken here and there, near the horizon, with the peaks of other or the same berg, flashing like fire-ships on the steel-blue waters.

We might extend our description; but we have perhaps said enough to indicate that this picture is well worth a visit. We will, therefore, conclude with expressing the belief that our American cousins bid fair to win as much distinction in landscape-painting as in sculpture and literature; and we will add the hope that mutual admiration for works of genius in the same mother tongue and in the same peaceful republic of art may conduce to a better understanding in matters political and social.

On Wednesday morning the continuation of the main line of the Metropolitan Extension of the London, Chatham, and Dover Railway, from Herne-hill to Beckenham, was opened. The new station in the Penge-road was also opened for the accommodation of visitors to the Crystal Palace, as the company will not in future use the Crystal Palace line.

The third and last great show of the season at the Royal Horticultural Gardens, South Kensington, took place on Wednesday, and there was a magnificent exhibition of fruit and flowers. Her Majesty the Queen of Prussia, attended by Countess Schulenburg, Countess Schwerin, and Prince Edward of Saxe-Weimar, and their Royal Highnesses Princess Helena and Princess Louisa were present.

An accident occurred on Thursday se'nnight to Valerio, the Italian rope-dancer, at Cremorne Gardens. He had advanced nearly to the point from which he usually returned backwards, when the wire rope gave way. He fell to the ground, a depth of forty feet, and died next day. Mr. E. T. Smith, the proprietor, writes to say he will not allow any more such performances to take place.

METROPOLITAN NEWS.

The public presentation of the medals of the Royal Society for the Protection of Life from Fire is to take place, on Tuesday next, at the Mansion House.

The anniversary festival of the Wanstead Infant Orphan Asylum was held on Thursday week. Upwards of 350 persons sat down to a déjeuner, and the amount collected was £2000.

On Wednesday the Lord Mayor and Lady Mayoress entertained at dinner in the Mansion House the Earl of Derby and the leading members of the Conservative party. The banquet was served in the Egyptian Hall, and the guests numbered 250.

The Coroner's inquest on the sufferers by the recent railway accident at Streatham was brought to a close on Wednesday. The jury returned a verdict of "Accidental death," coupling therewith a recommendation that the express-trains should be run at a less rate of speed.

The anniversary dinner of the National Conservative Registration Association was held yesterday week at Willis's Rooms, the Earl of Shrewsbury and Talbot, president of the society, in the chair. About 400 noblemen and gentlemen sat down to table.

On Monday evening the Lady Mayoress gave a ball at the Mansion House. The company, nearly 800 in number, was composed of many of the principal citizens, members of the Courts of Aldermen and Common Council, and the chief officers of the Corporation, with their families.

It is stated that the total sum expended by the Corporation in preparing for the reception of the Princess of Wales on the arrival of her Royal Highness in the metropolis, and the cost of the decorations, and the entertainment at Guildhall on the 8th of June, will not fall short of £100,000.

The annual meeting of the subscribers to the Printers' Almshouses, Wood-green, Tottenham, was held on Monday, at Anderton's Hotel. From the report, which was read by the secretary (Mr. Darkin), it appeared that the asylum had been fully maintained in its efficiency during the past year, the comfort of the inmates having been carefully studied, and various repairs and improvements effected. The receipts for the year amounted to £250, and the expenditure had been less that amount by £39.

Under the patronage of the Duchess of Sutherland, the Duchess of Inverness, the Duchess of Argyll, the Duchess of Manchester, Lady Constance Grosvenor, and many other ladies of distinction, a fancy bazaar was opened on Tuesday at St. James's Hall in aid of the funds of the London Surgical Home, Stanley-terrace, Notting-hill. The bazaar continued open until Thursday. The attendance was very fashionable and numerous, and the purchases made at the various stalls were extensive.

There was a large attendance at the meeting of the Royal Agricultural Council on Wednesday. Colonel Kingscote, M.P., was unanimously elected a member in the room of Mr. Stanhope, M.P., who retires. The final arrangements of Worcester were completed; and it was announced that the show of implements would be the largest on record, that the entry of cattle was exceedingly good, of horses not so large as was hoped, and of sheep extremely numerous. The Newcastle committee was appointed, and the names of ninety new members were read for election (at the present or an adjourned council on Wednesday next) just in time to take up their Worcester privileges.

Last week the births of 1959 children—1025 boys and 934 girls—were registered in London. In the ten corresponding weeks of the years 1853-62 the average number (corrected) was 1912.——In the week that ended on Saturday the deaths in London exhibited a further decrease, and were 1158. The average number of deaths in ten weeks of 1853-62, each corresponding with last week, is, with a correction for increase of population, 1236. It is satisfactory to observe that the mortality of smallpox does not make progress, but rather gives indication of decline. In the week there were forty-nine deaths from the disease; in each of the last two weeks of May there were sixty-eight. At the present time scarlatina is more fatal than any other zymotic disease. There were eighty-nine deaths from it last week. Five nonagenarians died in the week; their ages were 92, 93, 94, 96, and 99 years. All of them were women, except the eldest, who was a Chelsea pensioner.

The annual dinner of the Licensed Victuallers' Schools was held on Wednesday, in the Ashburnham Pavilion at Cremorne Gardens, and was attended by nearly 2000 persons. Captain Townshend, of the firm of Samuel Allsopp and Co., was in the chair. After the usual toasts were drunk, the toast of the evening, "Success to the schools," was proposed, and Mr. Emalley, the secretary, read the list of subscriptions, Messrs. Allsopp heading it with a donation of £1000. In proposing the healths of the officers of the institution, the chairman announced that the secretary, who was himself brought up in the schools, had just handed in a cheque for 1000 guineas, desiring thereby to evince his gratitude to the institution which had given him the means of making his first step in life. Nearly £4000 was subscribed during the evening towards the funds of this excellent charity. After the dinner a ball took place in the gardens, which was kept up to a late hour.

The Guards' ball to the Prince and Princess of Wales, which has excited extraordinary interest amongst the higher circles, took place yesterday se'nnight, in the picture-galleries of the International Exhibition building. The beautiful rooms were decorated in the most elegant manner. The Queen kindly placed at the service of the committee the whole of the temporary fittings used at Buckingham Palace on festive occasions. Emulating this Royal liberality, several members of the highest aristocracy contributed the wealth of their gold and silver plate without limitation; and the value of the plate and ornaments is stated at two millions sterling. The company, which was limited to 1400, commenced to arrive about nine o'clock, and the brilliant throng assembled in one of the galleries about ten o'clock to receive the Prince and Princess of Wales, who arrived shortly after. The ball was opened by a quadrille of sixteen—the Duke of Cambridge, as first among the gallant entertainers, leading forth the Princess of Wales, while the Prince danced with Princess Mary. Both the Prince and Princess seemed delighted with their reception, and the Princess, especially, was radiant with smiles and kindly recognitions of the fair faces around. Princess Mary also excited universal admiration. The supper-room presented a scene of almost regal magnificence. Not a minute did the Prince lose after his return in recommencing the festivities of the evening, and again figure after figure succeeded each other rapidly, the Prince, with his untiring vivacity and kind, genial humour, standing up in every set, and the Princess also dancing often, but not waltzing. It was getting well on to the grey of dawn before their Royal Highnesses had quitted the room, while many of the company remained till five or six o'clock.

LAW AND POLICE.—A most singular case was tried before the Court of Queen's Bench on Monday. The editor of "Zadkiel's Almanac," Lieutenant Morrison, sued Admiral Belcher for damages for libel, the alleged libel being contained in a letter written to a contemporary. In this letter Mr. Morrison was charged with obtaining money by a pretence that a boy could see persons in a ball of crystal. The evidence adduced on the part of the plaintiff was to the effect that persons and things had been seen in the crystal. Among the witnesses were Lady Harry Vane, the Bishop of Lichfield, Archdeacon Robinson, the Marchioness of Aylesbury, Sir E. L. Bulwer, and others who had gone to see the wondrous ball. They saw nothing in it; but a boy described to them what he saw. One witness was called, however, who declared she had actually seen persons in the crystal. It was put into her hands in court, and she was asked if she saw anything then. She declared, however, that it was much too solemn a thing to be taken up so profanely. A most amusing course of evidence ended in the jury finding a verdict for the plaintiff, with 20s. damages. The Lord Chief Justice refused a certificate for costs.

The judge of the London Sheriffs' Court has decided, on the authority of the Court of Exchequer, that, in the absence of a written agreement, it is not necessary for a weekly tenant to give a week's notice to quit apartments.

The action brought by Colonel Dickson against General Peel, Lord Combermere, and the Earl of Wilton, which occupied the Court of Queen's Bench nearly a fortnight, was brought to a close last Saturday. The jury, after a consultation of only a few minutes, returned a verdict for the defendants.

A curious case was decided before the Lords Justices of Appeal from the Master of the Rolls last Saturday. A gentleman agreed in the marriage settlements of his sons to pay or bequeath to them sums of £2500 each. He afterwards fell into reduced circumstances and his estates were considerably involved. The main question was, whether his sons, under the marriage settlements, were to be paid first, or whether they were only to rank with other creditors. The Master of the Rolls, and after him the Lords Justices, held that it was a special debt, and that the sons must be paid before the creditors; but, under the special circumstances of the case, they declined to give the costs of appeal.

A "cursing and swearing case" (Scott v. Lowndes) was decided in the Bail Court on Saturday last. The question was, whether, under the 19th Geo. II., chap. 21, any number of oaths uttered in one day might be included in one conviction, or whether a separate conviction and fine could be inflicted for each oath. The Act was passed for the purpose of preventing "profane cursing and swearing," and established a tariff of penalties, the offence being made more heinous in the case of a gentleman than a labourer; the former being subjected to a penalty of 5s. for each oath, and the latter, as well as sailors and soldiers, to a penalty of 1s. per oath. There was an intermediate class—persons below the degree of gentlemen—who were to forfeit 2s. for each oath. Scott belonged to the latter class, and he was convicted and fined 40s., being at the rate of 2s. each for twenty oaths. A rule was obtained some time since for the purpose of quashing the conviction, on the ground that there ought to have been a separate conviction for each oath, instead of one conviction embracing the twenty oaths. The Court held that the conviction was right.

Some informations were laid and decided at the Guildhall Police Court last Saturday, the hearing of which is important both to keepers of public-houses and to the public at large. Two persons were summoned for serving customers with liquor in glass measures which were more or less deficient in size, and which, therefore, did not contain the quantity asked for. The defendants pleaded that they had bought the glasses for full measures, and the magistrate admitted that they had erred unintentionally. Still, as the measures were in every case deficient, he must mark the illegality of the practice, and he fined them in the nominal penalty of ten shillings. The full penalty is £5

SKETCHES IN PARLIAMENT.

WAS it the anticipation of a very troublesome Parliamentary week which brought on the First Minister a Chatham-like fit of the gout; or was it his absence that made the Parliamentary week troublesome? Certain it is that the discussions seem to have been influenced by the "raging of the dogstar," if that star is as yet in season, about which we are not quite certain. Looking backwards to the time to which this chronicle extends, one recollects a hot encounter between Mr. Ferrand and Mr. Villiers; at least, if an encounter can be called hot in which one of the parties was very cool and sarcastic. Then comes a memory of an elongated discussion amongst the Scotch members on a purely Scotch question, in which Mr. Stirling impeached the Lord Advocate, and the Lord Advocate demolished Mr. Stirling; and this went on for several hours, while Mr. Bernal Osborne sat repressing his effervescent speech on the Irish Church. As the honourable gentleman sat with difficulty waiting while Scotch member after Scotch member rose, one could not help thinking of the spasmodic struggles to rise into the air of a balloon after it has been fully charged with its requisite gas. But, when he did go off, what a flight he took! We pass by his jokes, which were far better than usual, and which had the merit of going, each one of them, direct to the illustration of his subject, and which caught unusual force from the comic solemnity with which they were delivered, and venture to enunciate an opinion that there never was such a crushing mass of facts brought forward. As each phase of the case developed itself astonishment enlarged itself in the minds of the uninitiated, and one felt that, by all the rights of argument, the discussion ought to have terminated with Mr. Osborne's speech. There was a series of byplay between him and Sir Robert Peel, which led to the belief that the Secretary for Ireland would follow; but whoever was managing the Government that night judiciously interfered to prevent an evidently-approaching explosion; and the device of wet-blanketing the affair by the putting up of Mr. Cardwell was eminently successful. It did not need Mr. Cardwell to say that he would not treat the subject from a jocose point of view; two sentences from him and one glance at the expression of his face would have sufficed to remove any such fear or hope, as the case may be, if either existed.

When the subject was resumed a few days later it was felt that it had merged into the usual phase; for we will not be so impolite as to talk about sheep. The late hour at which the debate was resumed and the circumstance that Mr. Grant Duff took it up with a very curious *melange* of a speech, in which Cornelius Agrippa, the Prince of Darkness, Napoleon, and some recondite quotations were put into hotchpotch together, gave the cue to what was to follow. To be sure, Sir Hugh Cairns did elaborate special pleading into an ingenious defence for the Irish Church, and made a speech which might have been effective if the matter had been on a different stage; but it was reserved for Sir Robert Peel to whirl the subject far out of the region of reality. Surely there never was such a speech seriously delivered to any deliberative assembly. It seemed as if a mass of passionate declamation, tropes, and statistics had been gathered together, stirred up into hopeless confusion, and thus produced. There were jokes which were laughable principally because of their etymological blunders, and metaphors that were turned upside down, just as ships at sea appear inverted in a night telescope: there were arguments one way in one sentence and the other way in the next; there was an unconscious dealing with the question in a manner which it was evident was not expected from the Ministerial bench, relieved by flashes of recollection that the speaker was talking against his own case; and consequent attempts to unsay what had been said. But description fails to give any adequate idea of that speech as it was spoken. The effect on the hearers was like that which one supposes is experienced by the whirling dervishes, and one grows giddy even in recalling it to memory. After Mr. Hennessy had, with unabashed front, persisted in taking precedence of such a man as Mr. Henley—who was evidently charged with a keenly satirical summing-up of the debate, which must have sorely offended his characteristic common sense—the discussion went up to fever heat, and, at half-past two o'clock, after its requiem had been chanted by Mr. Scully to something very like a popular Irish air, it was literally snuffed out by a curt adjournment of the House. No more will probably be heard of it this year; but it is quite certain that, however absurd the cast the subject has assumed at present, owing to the mode in which it was treated, Mr. Bernal Osborne has planted a very flourishing annual motion.

Once more the absence of the Premier from the house operated to unrealise a discussion which has taken place. It was felt, when Mr. Roebuck's motion involving the recognition of the Southern States of America was brought on, that, however heavy the fire, there would be more of skirmishing than fighting in line of battle. Mr. Roebuck is one of the Parliamentary performers who always draws—he is the very Kean (Edmund, of course) of debates. He does so concentrate his sarcasm and bitterness—delivers his opinions with such an assertion of their being unanswerable—so utterly believes in himself, and has such a vast comprehension of the absurd inferiority of any one who is opposed to him—and is such a master of by-play and interjectional personal retort when he is speaking, that he never fails to interest, if he does not actually convince. This time his special characteristics were brought out in full relief. There never has been such a course taken by a member of Parliament as that in which he announced himself as the bearer of a message to the House of Commons from the Emperor of the French. The inference was obvious. Every one knew before that the Emperor was France: now every one knows that Mr. Roebuck is England, as he has often asserted that he is, and that he has been accepted in that character by Louis Napoleon. At present, the high contracting parties confine themselves to settling the affairs of America. No doubt, when that is disposed of, they will turn their attention to the arrangement of all other complications, European and Asiatic; and, as the *modus operandi* is simply the agreement between the member for Sheffield and the "great ruler of France," all vexed questions will be taken in their turn and finally settled. Looking to the time which the new managers of the world have taken about the American question, if they will set about their business with persistence and regularity, and meet from day to day, a political millennium may be expected to commence in about ten days. It was wise of Mr. Roebuck to go away during the time that Lord Robert Montagu was crushing him in an address which, from something that slipped from the noble Lord, was founded on a recent study of Canning's speeches, a circumstance which would probably not have been discovered in the absence of the revelation in question; but, to say the truth, Mr. Roebuck, for once, was in a state of agreement with almost everybody in the House, for almost everybody went away also while Lord Robert was speaking; but that is a manner they have.

Let us not be branded with heresy if we say that Mr. Gladstone was dull and ineffective, that Mr. W. E. Forster seemed to have lost his faculty of clearness and consequential reasoning, and to flounder in his speech, which presented a very different appearance to the clear, concise, argumentative addresses which have won him the position he holds in the House. Mr. Bright was delivered of an oration rather than of a Parliamentary speech. Nothing could be more effective than the calm, measured sarcasms on Mr. Roebuck in the first part of his speech, which dropped from his lips slowly, and as if they were undergoing a process of distillation into a strength far above proof. Then he grew impassioned, and next he became pathetic, as we believe, genuinely; but somehow this kind of thing does not take with a hard-hearted House of Commons, which has about it one of the elements of a club—inasmuch as it ignores as much as possible everything that smacks of the domestic, and of those hearths and homes from which our representative system hives so many truants, who are obliged to do the business of the country by night. But Mr. Bright's was a great manifestation of his great powers, and was accepted and appreciated from that point of view. If the debate is ever renewed it will be mainly because every one wishes to hear Mr. Lindsay's version of the interview between Mr. Roebuck and the Emperor of the French, at which he was present. Beyond this, we rather think the gist of the matter has evaporated.

An earthern pot, containing 24,000f. in louis d'or, has just been found in digging for the new street in prolongation of the Rue Lafayette, Paris. This treasure had apparently been buried about the latter part of the last century.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

The Royal assent was given by Commission to several bills.

The report on amendments made on the Officers of Royal Naval Reserve Bill was received.

The Metropolis Turnpike-roads Act Amendment Bill, the Local Government Supplemental (No. 2) Bill, and the District Parochial Churches (Ireland) Bill were read a second time.

The Waywardens Contracts Bill and the Inclosure (No. 2) Bill went through Committee.

The Leases and Sales of Settled Estates Acts Amendment Bill was read a third time and passed.

Lord Brougham withdrew the Suitors Conciliation Bill, in which he proposed to render county court Judges useful as arbitrators in suits by consent of parties, and introduced another measure for the establishment of "Courts of Conciliation."

Lord Lyttelton, in presenting a petition from New Zealand, alluded to the general question of our colonial defences. He contended that the New Zealand settlers ought to have had more support from the mother country than they had received. The Duke of Newcastle, while promising to the petition full consideration, said that the petitioners had themselves very much to blame for the evils they had sustained at the hands of the natives. After some further discussion the matter dropped.

The Marquis of Clanricarde, who had given notice of a motion on the affairs of Poland, withdrew it on the representation of Earl Russell that a discussion would be prejudicial to the public interests. The noble Earl said that the notes presented at St. Petersburg by the Ambassadors of England, France, and Austria were only forwarded to Prince Gortschakoff on Friday or Saturday last. Prince Gortchakoff said that he would take the orders of the Emperor with regard to them; but no opinion whatever had been given upon their contents. In the mean time there would be no action on the part of her Majesty's Government.

HOUSE OF COMMONS.—MONDAY.

On the report of the Committee on the Public Works Bill, Mr. Bentinck contended that the present distress was due to overtrading, while Mr. Busfeild Ferrand repeated his demand for an extensive scheme of emigration. Mr. Villiers said the real cause of the distress was not over-trading, but the stoppage of the supply of cotton from America, and as soon as the imports from that country were resumed there would be a revival of trade. With regard to the present bill, numerous applications for loans had already been received, and he had no doubt that a great number of operatives would find employment on the contemplated works. He added that the Government intended to propose a further continuance of the Act of last Session.—Some verbal amendments were made in the bill.

Mr. Layard stated that no reply had yet been received from Russia to the notes as to Poland. Mr. Horsman drew attention to the circumstance that at this moment this country was exactly in the same position, in reference to Russia, as it was in 1853. Now, as then, by the management of Austria, negotiations were protracted until after the close of the Session, so that no opportunity was given to the House to express its opinion upon a state of things which was drifting the country into war. He urged that now, as then, it was believed that Austria, while professedly acting with France and England, had a secret understanding with Russia. He pressed the necessity of a full development of the opinion of the House on this question with the least possible delay.

BRITISH TRADE WITH MATAMORAS.—Mr. PEACOCKE called attention to the seizure of British vessels bound for Matamoras.—The SOLICITOR-GENERAL said the law was clear enough that if cargoes were destined for Matamoras, and intended bonâ fide for the neutral State of Mexico, there was no ground for confiscation; but hitherto the Government had had no reason to complain of the decisions of the American Prize Courts.—Lord R. CECIL denounced the "Federal prejudices" of the Government, and said that it was only in consequence of the statements of the law officers of the Crown that the "*inefficient*" blockade of the Southern ports was tolerated.—Mr. COBDEN submitted that we were only suffering from a rigid application of one of our own most cherished principles. Referring to the case of the Alexandra, he contended that the doctrine laid down by the Lord Chief Baron would, if sustained by the Court above, prove most disastrous to our commerce in the event of a war.—Mr. S. FITZGERALD argued that the trade to Nassau and Matamoras was perfectly legitimate, and the subsequent passing of goods into the frontier of the Southern States did not illegitimatise it.

THE IRISH CHURCH ESTABLISHMENT.—The adjourned debate on the motion for a Select Committee to inquire into the Ecclesiastical Settlement of Ireland was resumed by Mr. G. DUFF, who supported the motion, which was directed against an intolerable grievance.—Mr. DAWSON refused to disturb the existing settlement of the Established Church in Ireland, or the alienation of the property belonging to it.—Sir R. PEEL contended that the feeling of the country had altered on this question, which had been dealt with and settled by legislation in 1833. He contended that any attempt on the Church of Ireland ought in consistency to be followed by the destruction and secularisation of the Church of England, and declared that he, under the guidance of Lord Palmerston, would always resist any such attempts.—M. HENNESSY sharply animadverted on the conduct of Sir R. Peel in having attended a meeting of the West Connaught Missionary Society, which he characterised as a religious imposture.—Sir H. CAIRNS, in an elaborate speech, defended the Irish Church.—Sir G. GREY, on the part of the Government, expressed their resolve to oppose the motion.—A division was taken on the question of the adjournment of the debate, which was negatived by 228 to 64.

HOUSE OF LORDS.—TUESDAY.

The Sheep and Cattle (Scotland) Bill, the Oaths Relief in Criminal Proceedings (Scotland) Bill, and the Postmaster-General (Sale of Land) Bill were read a second time.

The Sale of Mill Sites (Ireland) Bill, the Local Government Supplemental (No. 2) Bill, and the District Parochial Churches (Ireland) Bill passed through Committee.

The Waywardens Contract Bill and the Inclosure (No. 2) Bill were read a third time and passed.

The reports of amendments in the Volunteers and Regimental Debts Bills were brought up and received.

Earl Russell, in answer to the Earl of Shaftesbury, stated that General Mouraviéff had imposed a penalty on Polish ladies wearing mourning; that a rumour prevailed that women were subjected to flogging, in case of non-payment of the fine; and that a traveller had reported (although his Lordship did not vouch for the accuracy of the statement) that he had seen Russian soldiers engaged in the infliction of the penalty on the persons of females.

In answer to Lord Stratheden, Earl Russell said the French Ambassador had called upon him that afternoon, and informed him that there was no truth in the rumour that the French Government intended to make any communication to her Majesty's Government in reference to mediation between the Northern and Southern States of America.

The Earl of Derby drew attention to the cession of the Ionian Islands. In doing so he designated that cession as impolitic, and expressed strong doubts as to whether it was desired by the bulk of the Ionian Islanders. Earl Russell defended the policy of the Government.

HOUSE OF COMMONS.—TUESDAY.

The House had a morning sitting, at which some progress was made with the Irish Fisheries Bill.

At the evening sitting, in reply to Mr. Horsfall, Mr. Layard said that the clearance of the Gibraltar, alias the Sumter, at Liverpool for Nassau, had been stopped, because she was shipping guns of heavy calibre, which it was thought were intended to be used as an armament for her. It has since been ascertained that they could not be used for that purpose, and the clearance would now be granted.

Mr. Layard, in reply to Mr. Foster, stated that no communication had been received from the French Government since last autumn in reference to interference in the American war.

Lord Raynham's Corporal Punishment in Schools Bill was lost on the motion for its second reading.

The Lords' Amendments to the Prison Ministers Bill were agreed to, with a few exceptions.

The Poor Law Board Continuance Bill and the Loan Societies Bill were read a second time.

The Metropolitan Main Drainage (Guarantee of Repayment of Money) Bill, the object of which is to guarantee £1,200,000 in addition to the £3,000,000 already guaranteed, was passed through Committee.

The Public Works (Manufacturing Districts) Bill, the Howth Harbour, Newcastle-on-Tyne (St. Mary Magdalen Hospital), the Removal of Irish Poor, the Savings' Banks Acts Amendment, and the Courts of the Church of Scotland Bills were read a third time and passed.

PROPOSED RECOGNITION OF THE CONFEDERATE STATES.

Mr. ROEBUCK moved an address to the Crown, praying that her Majesty would be graciously pleased to enter into negotiations with the great Powers of Europe for the purpose of obtaining their co-operation in the recognition of the independence of the Confederate States of North America. He contended that the South, by their gallant defence, and even by their victory over the North, had earned a right to a recognition of their independence, and this on every ground of international polity. Those States ought to be acknowledged by England because it was their right, and also because it was to the interest of England to do so in reference to the supply of cotton, sugar, and tobacco to this country. The United States were becoming the bullies of the world, and he would rejoice to see the balance of power equalised on the American continent by the reconstruction of the Union. He urged that the time had come for recognition by France and England, which would put an end to the war. He stated that he was personally authorised by the ruler of France to express his feelings on this question, which were stronger than ever in favour of recognition of the South; and he was assured by the Emperor himself that he had desired Baron Gros to communicate that opinion to the English Government, although this communication was not formal. The Emperor stated his reason for not making a formal communication, because his despatch on the same subject on a former occasion had been sent by the English Government to the United States; but he authorised him (Mr. Roebuck) to state to the House that he was prepared to act in all things with England, and especially in the matter of the recognition of the Southern States. After this, what excuse could be made by her Majesty's Government for not taking that step?

Lord R. MONTAGU moved as an amendment that the House earnestly desires that an impartial neutrality should continue to be maintained by her Majesty's Government during the present unhappy contest in the States of North America.

Mr. CLIFFORD supported the amendment.

The CHANCELLOR of the EXCHEQUER objected to the motion in the first place because it put into the hands of the House a function of the executive Government; because it was at this moment especially inconvenient, looking to the military situation of America, while the speech of Mr. Roebuck, couched as it was in a spirit of partisanship for the South, was ill calculated to promote the object he had in view. Recognition would not relieve Lancashire, and it was ill-advised to lay down that as a doctrine when it was clear that this country, to produce such results as were implied by Mr. Roebuck, could not stop at recognition. Almost every man in England wished the war to come to a close, but he denied that recognition would promote that end. There was scarcely any case of recognition, pending a contest, which was not followed by war in order to carry it out. He contended that France and England, situated as they were in reference to the States of America, could not represent in the eyes of the world the principle of impartiality in any interference between the contending parties.

Mr. W. E. FORSTER, urged that the motion, if it meant anything, meant war—war to be waged for selfish consideration; war which would be productive of every possible disaster to the commerce and the welfare of this country. In reference to Mr. Roebuck's alleged communication to the House from the Emperor of the French, he (Mr. Forster) deprecated the policy of joint action with France, which inevitably led to war. A war with America, which might and probably would ensue upon our intervention, would be one against our kinsmen for slavery.

Lord R. CECIL argued that the conduct of the United States in cases of recognition precluded them from objecting to the adoption of that course; and he urged action in reference to the re-establishment of peace in the interests of a large population of our own, which was desolate, owing to the failure of the cotton supply.

Mr. BRIGHT said that the motion, taken in connection with Mr. Roebuck's character, his speech on this occasion, and speeches elsewhere, might be taken as an address to the Crown asking for a declaration of war, while he asked the House to accept the lead of the Emperor of the French in this matter, a potentate in whom not long ago he declared he had no faith. He contended that the feeling which dictated this motion rested on a mean jealousy or a base fear of America. He denied the power or the will of the United States to act aggressively towards England or any other European nation, and he protested against Mr. Roebuck raising a cry calculated to bring on hostilities between this country and a friendly nation, whilst he would seek alliance for his country in a slaveholding State.

Sir G. GREY, in reference to a statement by Mr. Roebuck of the readiness of the Emperor of the French to act in conjunction with this country for the recognition of the South, stated that no communication whatever on that point had been made to her Majesty's Government.

The debate was adjourned to Thursday.

HOUSE OF COMMONS.—WEDNESDAY.

Mr. Holland withdrew the Sheep, &c., Contagious Diseases Prevention Bill; and Mr. Bruce, on the part of the Government, undertook to bring in a bill to continue for another Session the powers of the existing statute to prevent the spread of contagious diseases in cattle.

The House went into Committee pro formâ on the Navy Prize Money Bill.

The *Nuisances* Removal Act (1855) Amendment Bill and the Militia Ballots Suspension Bill were read a second time.

The Stipendiary Magistrates Bill, the Poor-law Board Continuance Bill, and the Loan Societies Bill passed through Committee.

Mr. Villiers obtained leave to bring in a bill to extend for a further period the provisions of the Union Relief Aid Act. The bill was subsequently read a first time.

Mr. Stansfeld obtained leave to bring in a bill to enable provision to be made out of the funds of Greenwich Hospital for the widows of seamen slain, killed, or drowned in the sea service of the Crown. The bill was read a first time.

WEIGHTS AND MEASURES.—The House was occupied for the greater part of its sitting in the discussion of the second reading of a bill introduced by Mr. Ewart for the compulsory application of the metrical system to our weights and measures.—Mr. HENLEY and Mr. HUBBARD opposed the bill, on the ground that the inconveniences of such a measure would outweigh its advantages.—Mr. COBDEN felt humiliated at the inferiority of our system of weights and measures to that of the French, and strongly supported the bill.—Mr. Adderley, Sir M. Farquhar, Mr. M. Gibson, and others recommended that the bill should, in the first instance, be permissive only; and Mr. EWART expressed his willingness to adopt the suggestion. On that understanding the second reading of the bill was carried by a majority of 110 to 75.

HOUSE OF LORDS.—THURSDAY.

BRITISH COLUMBIA BOUNDARIES BILL.—The Duke of NEWCASTLE, in moving the second reading of this bill, combated an opinion held by some that Vancouver Island never had been, and never would be, in a prosperous condition. It was true that some depression had existed in this country in consequence of some obstructing influences that had existed, but since their removal the colony had prospered most rapidly. The exports of the year 1862 had doubled those of the year 1861, and the increase of the imports was still more extraordinary, for, while they amounted to 2,375,000 dols. in 1861, they had increased to 3,555,000 dols. in the year 1862, an advance of 1,220,000 dols. The revenue already amounted to £100,000 a year, and there was every reason to believe the future of the colony would be still more progressive. The expense of making the new road throughout that country would open up communication to the foot of the Rocky Mountains. The expense of making these roads would be paid off in five years. The great benefit that would result from this work was obvious.—After a long discussion, the bill was read a second time.

The following bills were read a third time and passed—viz., Officers of the Royal Naval Reserve, Sale of Mill Sites, &c. (Ireland), Volunteers, and Regimental Debts, &c., Bills.

HOUSE OF COMMONS.—THURSDAY.

POLAND.—Mr. HORSMAN gave notice that, unless anticipated by the hon. member for King's County, he should on Monday move that, in the opinion of this House, the arrangement made with regard to Poland by the Treaty of Vienna had failed to secure good government or the peace of Europe, and that any attempt to enforce the treaty would be calamitous to Poland and a cause of embarrassment to Europe. The right hon. gentleman asked the Under Secretary of State for Foreign Affairs on what day the English and French notes were received at St. Petersburg; on what day the Austrian note was received; and on what day the several notes were presented to the Russian Minister; and whether the British Ambassador was instructed to keep back the English note till the Austrian note arrived.—Mr. LAYARD said that the English note left London on the 17th of June; the Vienna note left Vienna on the 18th of June. The three notes arrived together on the evening of the 21st. A meeting of the representatives was called as to the course to be taken. That meeting took place on the 23rd, and a request was forwarded by the representatives to the Russian Minister of Foreign Affairs to appoint a day to receive them. On the 27th the three representatives waited upon Prince Gortschakoff and delivered the despatches. Prince Gortschakoff received those despatches, and said he would refer them to the Emperor for an answer. No instruction was given to the English Ambassador to wait until the arrival of the Austrian note, but he was instructed to come to an understanding with the Austrian Ambassador as to the mode of presenting the despatch.—Mr. HORSMAN inquired whether the English Government had received any further communication from St. Petersburg since these notes were delivered.—Mr. LAYARD said the Government had not yet received an answer from St. Petersburg, and he could not say when information would be received.

AMERICA.—Mr. W. E. FORSTER asked Mr. Layard whether he could inform the House if it was true that application was made some months ago that France should join England in mediation between the Federal and Confederate States of America.—Mr. LAYARD denied the statements made by Mr. Roebuck on a former evening, and said that no communication had been made by Lord Lyons to Mr. Seward on the subject.

SUPPLY.—THE EXHIBITION BUILDING.

The House went into Committee, and the CHANCELLOR of the EXCHEQUER moved a vote of £105,000 for the purchase of the Exhibition building and certain objects for which it is intended.

Lord ELCHO moved the rejection of the vote, and urged that it would be impossible to adapt the building to the purposes intended.

Mr. G. Bentinck and Mr. Tite also opposed the vote.

A similar view of the question was taken by Sir J. Shelley, Mr. C. Bentinck, Mr. Gregory, Mr. Henley, and others.

The vote, on the other hand, was supported by Mr. Cowper, Lord H. Lennox, and a few other members.

Amid considerable noise and interruption from all parts of the House, Sir S. NORTHCOTE moved an amendment to reduce the vote to £80,000, with a view, he said, of affording an opportunity to any hon. member to move the appointment of a Select Committee afterwards to inquire into the whole question.

Mr. HENLEY said he would vote both against the original vote and the amendment, as they would pledge the House to a useless expenditure of which they could not see the end.

At the suggestion of the CHANCELLOR of the EXCHEQUER Sir S. Northcote withdrew his amendment.

The Committee then divided upon the original proposition, when it was rejected by a majority of 287 against 121.

The greatest excitement prevailed in the house during the latter part of the discussion.

A grand banquet was given at Dublin by the Irish Freemasons, on Thursday se'nnight, to celebrate the fiftieth anniversary of the Duke of Leinster's election to the grand mastership of the order. An address was presented to his Grace on the occasion.

NATIONAL SPORTS.

THE reappearance of Lord Clifden in the St. Leger quotations at "8 to 1, taken freely," has excited but little interest except at Doncaster, which is fostering hopes of a Royal visit to Wentworth during the races. At Tattersall's the Tomato tempest still rages, and the committee are so utterly puzzled as to whether they should or should not reopen the question that they have sought counsel of Mr. O'Malley, the leader of the Norfolk circuit. The Rous men had it all their own way at first, and their hopes grew still stronger when Mr. Greville signed the resolution that the first committee was "incompetent," and that the question should be reopened; but Lord Exmouth gave them and their champion a broadside which they did not expect, and turned the tide of war altogether. The Admiral's conduct seems to have been as odd and impetuous in this case as it was in the Tarragona one. If he accepted Messrs. Onslow and Sturt as his colleagues in council he had no right to repudiate their decision because they chose to have an opinion of their own, and left him in a minority; if he did not accept them as such why go into council with them under the tree at all? If he styled the result of that council an "illegal decision" then, why call it a mere "desultory conversation" now? That he was right in saying that bets must, under any circumstances, follow the stakes no one can well doubt. Tomato had almost made a dead heat for second with Goldylocks in the Biennial the day before, whereas Hippolyta had only been a middling fifth in the Queen's Stand Plate, and hence those who backed the Baron's nomination got considerably longer odds than they were entitled to, because, from the No. 6 on the telegraph, the layers believed that they were laying against Hippolyta. Still, that was not, as it seems to us, a point for the trio to consider. If the stewards did not declare the race void, it was not for them to review their decision and virtually declare it void by declining to let the judge's fiat govern the bets. We have no sympathy with those who backed Tomato; but unless the rules of Tattersall's specially declare that the decision of arbiters is to be final, and not subject to review, it seems hard that it should not have a court of error within itself when a decision seems to be so directly in the teeth of racing law. Surely the committee might have settled this blue-silk matter by their own votes, without thrusting the responsibility of the Aye or No on to the black-silk division at Westminster. Be the decision what it may, the best monument which can be reared to this unfortunate race should assume the shape of a short telegraph rule which would knock over The Ban precedent and the Tomato one as well.

Custance has been wonderfully lucky for Mr. Longfield, &c., at the Curragh; and Bally Edmond won the Queen's Plates, both at Chelmsford and Ipswich, after a splendid struggle, in the latter instance with Oberon, while Millionaire was third again. Deerfoot was disqualified for a cross after his dead heat with Lady Derby; and his owner, nothing daunted by the fact that Sir Fitzroy Kelly signed the decision as steward, protested against it as being "contrary to evidence." At Carlisle the 9 lb. extra proved a regular stopper to Caller Ou in the Cumberland Plate; but, like Rapparee last year, she found no opponent for the Queen's Plate. The local spirit, which brought some seventeen or eighteen hunters to the post in 1862, has completely died out, and the one stake of that description did not even fill; but there were twenty-two racehorses against fourteen, which was more than a set-off, and a good augury for Mr. Daley, C.C.

Although all the sporting papers announced his death, we are glad to find that Captain Alleyne has only shared the fate of Sir Charles Monck, Captain White, Mr. Cookson, Asteroid, and Caractacus—slain by a *canard*.

The Newmarket July Meeting has nothing to interfere with it next week. John Scott's Derby favourite Claremont, Midnight Mass, Auricula (half sister to Bataplan and Stockwell), King John (premier of Mr. Blenkiron's sale last year), Scottish Chief, Cambuscan, Beloochee, and Calista colt are all in the July Stakes on Tuesday, and the five latter in the Chesterfield Stakes on Thursday as well.

The *Sporting Magazine* gives us Macaroni, a spirited sketch after Harry Hall, as its portrait of the month; and *Baily*, better late than never, has the Duke of Rutland in its sportsman's gallery. Apropos of the new Tattersall's, we learn from the former that there will be twenty boxes and a hundred and ten stalls, an increase of five and ten respectively over the present accommodation.

Sussex beat Kent by 95 runs, although Willsher fought hard, and carried out his bat with 59. In their bowling Lipscombe and Bennett were far more effective for Kent; and Ellis was in every way a tower of strength to Sussex, as well as Southerton, Wells, Mr. W. Hodson, Wisden, Mr. Hale, and Fillery. Quite a distribution of honours took place in the pavilion, and the Kentish 52 of Mr. Kelson was not forgotten. Yorkshire cracked up Nottingham with eight wickets to spare, but the bowling of Venables of Rugby was too much for Marlborough in their match, and they were beaten easily by 83. The United Eighteen of Rugby, Marlborough, and Cheltenham made a capital fight with Surrey, which won with 29 to spare. Caffyn, 19 and 45, scored best for his county, which would be very badly off without him; but Griffith's bowling was fatal to no less than twenty wickets. The peculiarity of the match was, that each side made 118 in their second innings. Of the 168 runs, 81 were made by Rugby, 59 by Marlborough, and 28 by Cheltenham. Willes, of Rugby made 35, the highest score; and Harbord, of Marlborough, was not out either innings. Reid was a good wicket-keeper, and Cotton, of Cheltenham, was A 1 among the bowlers (taking Caffyn's stumps once, and Julius Cæsar's twice). Fellowes, Taylor, and Harbord, of Marlborough, all bore their part with "the leather," while Rugby, in the absence of Mr. Venables, did not bowl at all, but furnished an excellent long stop in Mr. Ellis. It will thus be seen that the honours were very equitably distributed. The fifty-sixth Gentlemen v. Players match was won very easily by the latter, with eight wickets to spare. This is the fifteenth match in succession that the Gentlemen have lost since 1853, when Sir F. Bathurst's and Mr. Kempson's fine bowling pulled them through. T. Hayward (112, not out) was the great event of the match, and the bowling of Jackson and Tarrant was most masterly. Mr. V. E. Walker's innings of 30 was the highest on the Gentlemen's side; and Mr. E. M. Grace bowled finely, and made a magnificent one-handed catch off Bignall. The ground, as usual, was in a very rough state.

At Henley Regatta, last week, the Oxford University College boat carried all before it, beating Cambridge, Eton, and London boats, and winning the Grand Challenge Cup, the Ladies' Challenge Plate, and the Stewards' Challenge Cup. The first-class prize at the Royal Thames Yacht Club (of which Lord Alfred Paget is again the Commodore) has been won by Lord Londesborough's Albertine, 153 tons, beating the Galatea and the Gloriana, in spite of losing nearly two miles at the start.

MR. GLAISHER'S BALLOON ASCENT.

MR. GLAISHER'S account of his eleventh balloon ascent with Mr. Coxwell, made yesterday week from Wolverton, has just been published. The ascent was commenced at 1h. 3m. p.m., extreme height, four miles and a quarter, reached at 1h. 53m., and descent made at 2h. 28m. The wind was high, which caused them at starting to throw over five bags of sand in order to clear the adjoining houses, and their want of these bags was afterwards severely felt. After describing the variations in temperature during the voyage, Mr. Glaisher says:—

"We reached some clouds at 1h. 9m.; at 1h. 16m. we saw a very faint sun, and expected, as usual, its brilliancy would increase and that we should soon break into the clear sky. At this time we heard the sighing of the wind, or rather moaning, as preceding a storm; and this continued for some time, and was the first instance in which either Mr. Coxwell or myself had heard such a sound at the height of two miles; it was not owing to any movement in the cordage above, but seemed to be below, as from conflicting currents of air. At 1h. 17m. some fine rain fell; at 1h. 17½m. we could just see a river for a few seconds, when we entered the clouds; at 1h. 19m. we could just see the earth and the sun, both very faintly; at 1h. 25m. we were again enveloped in dry fog; at 1h. 29m. there were faint gleams of light for a short time, and then all was closed up again; at 1h. 35m. the fog was wetting; at 1h. 37m. we entered a dry fog; at 1h. 40m. the sun was just visible, but for the most part cut off by the balloon; at 1h. 41m. we were again in fog, and fog continued prevalent more or less till 1h. 53m., when we passed above four miles. At the highest point reached, above 4¼ miles, the sky was very much covered with cirrus clouds, and the sky as seen between them was of a very pale blue, as seen from below through a moist atmosphere. We were above clouds, but there were no fine views or forms—all was confused and dirty, no bright shining surfaces, or anything picturesque, and the view was exceedingly limited, owing to the thick and murky atmosphere.

"At 2h. 7m., on descending, we lost even the faint sun, and re-entered fog, and experienced a decline of temperature of 9 deg. in little more than a minute. At 2h. 6m. there were faint gleams of light: fog was both above and below, but none near us. At 2h. 7m. large drops of water fell from the balloon, covering my note-book. The next minute we were enveloped in fog, which became very thin at 2h. 14m. At 2h. 14½m. rain fell pattering on the balloon; this was shortly succeeded by snow, and for a space of nearly 4000 ft. we passed through a snowstorm. There were many spiculæ and cross spiculæ, with snow crystals small in size, but distinct. There were but few, if any, flakes. As we descended the snow seemed to rise above us. At 2h. 17m. we passed below the region of snow, and shortly afterwards we saw a canal, and then another, each being straight for miles, apparently. The state of the lower atmosphere was most remarkable. Mr. Coxwell has never seen it in so murky a state before when far from a town: it was of a brownish yellow tinge, and remarkably dull. No distance on land could be seen. When at the height of one mile we had no more sand, and simply became a falling body, checked somewhat by the balloon; we threw away leaden weights, &c., to help to check the rapidity of the descent. The ground wind was strong, and the descent somewhat rough: we rebounded from the earth three or four times, and finally the grapnel caught in a water-course."

Mr. Glaisher, after commending the "jockeying" of Mr. Coxwell, by which they got to the ground in safety, notices various particulars regarding the instruments he had with him, and adds:—"This ascent must rank amongst the most extraordinary ever made: the results were most unexpected. We met with at least three distinct layers of cloud on ascending, of different thicknesses, reaching to a height of four miles; when here the atmosphere, instead of being bright and clear, as it has always been in preceding ascents, was thick and misty. But perhaps the most extraordinary and unexpected result in the month of June was meeting with snow and crystals of ice floating in the atmosphere at the height of three miles, and nearly one mile in thickness."

COUNTRY NEWS.

Mr. Hamilton, for thirty-two years member for Dublin, and father of the present member, died on Monday, aged fifty-three.

Mr. M'Swiney has been nominated for the lord mayoralty of Dublin for the ensuing year.

Mr. Edward James, Q.C., has been appointed Attorney-General of the County Palatine of Lancaster, in the room of Mr. Bliss, Q.C.

Mr. Cargill, Conservative, has been returned for Berwick, the numbers at the close being—Cargill, 328; Mitchell, 310.

Sir W. Dunbar, M.P., is gazetted Keeper of the Great Seal of the Prince of Wales in Scotland.

Eight persons have been killed and many more injured by a boiler explosion at Leeds. Several miners have been injured and three killed by an explosion at the Park Colliery, Glamorganshire.

Colonel Blandy, of the 1st Royal Berks Militia, has been elected Chief Constable of Berkshire, in place of Colonel Fraser, who has been appointed Chief Commissioner of Police for the city of London.

The London and North-Western Railway Company has just opened another important section of its system between Wraleybridge and Buxton, and passengers are booked through without change of carriage between those places and Manchester.

The Great Eastern sailed from Liverpool on Tuesday morning for New York, under command of Captain Paton. She took out a large cargo, of which a considerable portion consisted of teas; she also took out between 600 and 700 passengers.

The Lisburn election terminated yesterday week in favour of the Conservative candidate, Mr. Verner, who polled ninety votes by ten o'clock, whilst Mr. Barbour had but two. The latter retired in favour of Mr. Richardson, the late member, who then started without being proposed, and polled 90 votes, whilst his adversary had 151.

The Mayor of Newcastle forwarded a communication to the Prince of Wales inviting his Royal Highness to take part in the approaching meeting of the British Association to be held in that town, but has received a reply from Lieutenant-General Knollys expressing the regret of his Royal Highness—anxious as he trusts he always will be to promote the interests of science—that it will not be in his power to attend the meeting of the British Association this year at Newcastle.

The Lord Lieutenant of Ireland presided on Tuesday at an interesting ceremony, which brought a large number of visitors from the Irish metropolis to a wild region of the county of Wicklow, near the village of Roundwood—namely, the ceremonial of turning the river Vartry from its old bed to the new channel which is to conduct it to Dublin, for the supply of the city with pure water. At the close of the ceremony his Excellency conferred the honour of knighthood on Dr. Gray, chairman of the waterworks committee and editor of the *Dublin Freeman*.

On Saturday the Judges of the First Division of the Court of Session in Scotland gave judgment on the petition of Charles William Campbell, Lieutenant Bengal Cavalry, for the appointment of a judicial factor on the Breadalbane estates pending the competition of the two claimants. Their Lordships, by three to one, refused the prayer of the petition, thus leaving the respondent, Mr. Campbell, of Glenfalloch, the titular Earl of Breadalbane, in possession of the estates. Leave was, however, reserved to the petitioner to apply again, "if circumstances should justify him in doing so." It is expected that an appeal will be made to the House of Lords against the decision.

The annual summer fête for the amusement of the inmates of the Asylum for Idiots, Earlswood, was celebrated on Monday at the Asylum. The amusements on the lawn were cricket, croquet, Aunt Sally, red, white, and blue, Punch and Judy, football, &c. At four o'clock there were racing and jumping matches for prizes, competed for by boys engaged in the various branches of industry. The lawns and the ornamental grounds were tastefully decorated with banners, &c., and the appearance of the children and the patients generally testified to the happy results of kind and gentle treatment. The matches at cricket were peculiarly interesting, from the fact that the patients not only batted fairly, but appeared to take the most lively interest in the game. Among the most striking incidents of the day was the procession formed for the purpose of exhibiting a model of a ship of war, constructed entirely by an inmate of the asylum (Pullen), complete in all respects, "coppered and fastened," according to scale, and rigged accordingly—the idea being taken from a pocket-handkerchief.

THE DISTRESS IN LANCASHIRE.

At the meeting of the Central Executive Relief Committee, on Monday, Mr. Farnall reported a further decrease of 1613 in the number of persons receiving parochial relief in the cotton districts. There are still, however, about 300,000 persons who are dependent upon the poor rates and the contributions of public benevolence. This number is something like 150,000 below the highest point of indigence reached during last winter; but it was urged by Sir James Kay-Shuttleworth, at the meeting on Monday, that this favourable change in the position of affairs arose from causes which would cease to operate as winter approached. The Honorary Secretary stated that during the week he had sent away two packages of clothing. The week's receipts had amounted to £1622, including upwards of £709 from Honolulu. The balance in the bank was £346,547. Several grants were made.

The Mansion House Relief Fund Committee held their fortnightly meeting yesterday week, Mr. Armitage in the chair. A deputation from the Manchester Emigration Aid Committee and the National and Colonial Emigration Society, consisting of several influential gentlemen, waited upon the committee, requesting a grant of £10,000 for general emigration, without any restrictions. Some discussion ensued, and the committee decided not to make any grants for emigration purposes contrary to the terms of their resolution, but said they would make a small grant to each committee upon the terms adopted in all other cases. The deputations afterwards retired, and a sub-committee of both societies subsequently waited upon the committee, who finally made the deputations a grant of £500 each. Several other grants, amounting to £1515, were also made. The financial statement showed the total amount received up to Thursday evening to be £501,244, of which £417,827 had been remitted to Lancashire. The amount of subscriptions which came to hand during the fortnight was £3125, of which £2982 was from colonial sources.

Mr. Thomas Evans, coxswain of the tubular life-boat belonging to the National Life-boat Institution stationed at New Brighton, reports the total wreck of the schooner Vigilant, of Kirkcaldy, on Taylor's Bank, on Saturday morning last. The crew were saved by the life-boat, which lay off the stranded vessel for three hours.

At a meeting of the Law Amendment Society, last Monday evening—Lord Brougham in the chair—a committee was appointed to consider the present state of the copyright law, with a view to its amendment. The committee is to consist of Mr. Serjeant Burke, Mr. Thomas Webster, F.R.S.; Dr. Zimmerman, LL.D.; Mr. Hawes, and other learned members of the society.

The official correspondence and the reports or opinions of the Ulster King-of-Arms and the Garter King-of-Arms are now, pursuant to an order of the House of Commons, published on the question as to the precedence of Edinburgh and Dublin. The opinions are conflicting. The Ulster King makes no doubt, after much argument, as to the precedency of Dublin; the Garter King inclines in favour of Edinburgh, but awaits further the opinion to be given of the Lord Lyon of Scotland.

REVOLUTION IN MADAGASCAR.—ASSASSINATION OF THE KING.—News has been received of the outbreak of a revolution in Madagascar on May 12. King Radama II. has been assassinated. His widow has been proclaimed Queen of Madagascar. The reign of King Radama II. has been declared null, and mourning has been prohibited. The treaties concluded with European Powers have been suspended. Religious liberty is still to be maintained. The Queen has signed a Constitution in conformity with the views of the old Ova party. Much discontent prevails throughout the kingdom, and fears are entertained of civil war.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

NOTWITHSTANDING that the accounts from nearly all parts of the United Kingdom, in reference to the crops, are very favourable; that the imports of the precious metals have been on an extensive scale, and that the foreign exchanges, almost generally, are in favour of this country, the account of business doing in National Securities has continued limited; nevertheless, the quotations have shown rather more firmness than in the previous week. The activity in the demand for money, and the somewhat high range in discounts—the lowest quotation for commercial paper in Lombard-street being now 4 per cent—have operated against increased investments. The rates for accommodation are now as follow:—

Thirty days' bills	4 per cent.	Four months' bills	4½ per cent.
Sixty days' bills	4 "	Six months' bills	4½ "
Three months' bills	4½ "		

In the Stock Exchange money is offered at 3½ per Cent.

Throughout the Continent, money is in fair request, at the annexed quotations:—

	Bank rate, per cent.	Open market, per cent.		Bank rate.	Open market.
Paris	4	3½	Amsterdam	3½	3½
Vienna	5	5	Turin	6	5
Berlin	4	3½	Brussels	3	2½
Frankfort	3	2½	Hamburg	—	4
			St. Petersburg	6½	7½

The Council for India have disposed of £400,000 in bills. The minimum price on Calcutta was 1s. 11½d., and on Bombay and Madras, 1s. 11¾d. per rupee. The applications within those limits were for £1,070,000.

Nearly £1,000,000 in bullion has arrived from various quarters. In this sum is included a large amount in silver from the Mexican ports. About £60,000 in gold has been withdrawn from the Bank of England; but about £200,000 has been sent in. We therefore continue to retain a portion of our bullion imports.

The International Financial Society have completed the purchase of the Hudson's Bay Company.

A prospectus has been issued of the Brazilian and Portuguese Bank, with a capital of £1,000,000, in shares of £20 each.

The following return shows the state of the note circulation in the United Kingdom during the four weeks ending May 30:—

Bank of England	£20,617,114
Private Banks	3,186,451
Joint-stock Banks	2,951,846
Scotland	4,473,966
Ireland	5,374,966
Total	£36,604,323

Compared with the four weeks ending May 31, 1862, the above figures show a decrease of £348,809 in the circulation of notes in England, and a decrease of £450,236 in the circulation of the United Kingdom.

On Monday Home Securities were firm, and a shade higher:—Consols for Money realised 92½; Ditto, for Account, 92½; Reduced and New Threes per Cents, 91½ ⅝; India Five per Cents, 108 to ½; Ditto Bonds, 10s. to 14s. prem.; Exchequer Bills, 4s. dis. to par. Bank Stock was 222 to 224; Rupee Paper, 106½ to 107, and 115 to ½.

The dealings on Tuesday were limited, and the quotations had a drooping tendency:—Consols, for Transfer, sold at 92 to ½; Ditto, for Time, 92½; Reduced and New Threes per Cents, 91¾; India Five per Cents, 108 to ½; Ditto Bonds, 10s. to 13s. prem.; Exchequer Bills, 3s. dis. to par. Bank Stock was 222 to 224; Rupee Paper, 106½ to 107, and 115 to ½. On the following day Consols, for Money, marked 9⅜½; Ditto, for Account, 92½; Reduced and New Threes per Cents, 91½ ⅝; Long Annuities, 14, 15, 16; India Five per Cents, 108½; Ditto Four per Cent Rupee Paper, 97½; Ditto Five per Cent, 106¾; Ditto Five-and-a-Half per Cent, 115; Ditto Debentures, 100½; Ditto Bonds, 12s. to 16s. prem.; Exchequer Bills, 4s. dis. to par. On Thursday the market was steady. Consols marked 92 to 92½ for Money, and 92½ to ¾ for Account. The Reduced and New Threes per Cents sold at 91½ to 92; and Exchequer Bills at 4 dis. to par. India Five per Cent Stock realised 108½ to ½.

The market for Foreign Bonds has shown more firmness, and prices have had an upward tendency. The leading changes are in Mexican, Spanish, and Turkish Securities. Venezuelan Stock, however, owing to unfavourable news from the country, has declined in value. Brazilian Five per Cents have marked 100½; Ecuador, 18½; Egyptian, 100¾; Greek, 33½; Ditto Coupons, 17½; Mexican Three per Cents, 37; New Grenada, 16; Portuguese Old Three per Cents, 49½; Ditto, 1856, 49½; Peruvian Four-and-a-Half per Cents, 1862, 89½; Sardinian Five per Cents, 86½; Russian Five per Cents, 1862, 93; Spanish Three per Cents, 51½ ex div.; Ditto, Passive, 34½; Ditto, Certificates, 12½; Turkish Old Six per Cents, 93½; Ditto, 1854, 70½; Ditto, 1862, 71½; Venezuela Six per Cents, 57½; Italian Five per Cents, 73½. Venezuela Scrip has sold at 2 to 1 dis.; and Turkish, ¼ to ½ prem.

The dealings in Joint-Stock Bank Shares have not been numerous, yet prices almost generally have ruled firm:—Alliance have been done at 35¾; Australasia, 74½; Ditto, New, 31½; Bank of Egypt, 27½; Bank of New Zealand, 11; Chartered of India, Australia, and China, 29; English, Scottish, and Australian Chartered, 22¾; Imperial, 22½; Imperial Ottoman, 18½; London Chartered of Australia, 27½; London and County, 44½; London and Northern, 95½; London and South African, 26½; Metropolitan and Provincial, 17½; National Provincial of England, 12½; Ditto, New, 3¾.

About an average business has been transacted in Colonial Government Securities:—Canada Six per Cents have marked 107½; Ditto, Five per Cents, 98½; Mauritius Six per Cents, 1878, 108½; New South Wales Five per Cents, 1888 to 1892, 101½; and Victoria Six per Cents, 111½.

Miscellaneous Securities have been in moderate request, as follows:—Crystal Palace, 7; Electric Telegraph, 105; English and Australian Copper, 1½; International Financial Society, 7½; Joint-Stock Discount, 4; London District Telegraph, 1¾; London Financial Association, 6¾; Madras Irrigation and Canal, 3¾, ex int.; National Discount, 9½; Royal Mail Steam, 64; South African Irrigation, 4¾; Berlin Waterworks, 6¾; London Docks, 65½; Victoria, 101; East London Waterworks, 131; West Middlesex, 114.

No change of importance has taken place in the value of railway shares, but the market has been in a sluggish state. The total "calls" for this month amount to £725,880, making a total called up this year of £4,804,179. Annexed are Thursday's official closing quotations:—

Ordinary Shares and Stocks.—Cornwall, 6½; Great Eastern, 53; Great Northern, A Stock, 130; Great Western, 65¾; Lancashire and Yorkshire, 112; London and Blackwall, 76½; London and Brighton, 119; London and North-Western, 103; London and South-Western, 106; Manchester, Sheffield, and Lincolnshire, 46½; Metropolitan, 124; North-Eastern—Berwick, 102; Ditto, Leeds, 59; Ditto, York, 89½; South-Eastern, 91½; West Midland—Oxford, 46; Ditto, Newport, 40.

Preference Shares.—Great Northern Five per Cent, 117½; Ditto Four-and-a-Half per Cent, 106; South Devon Annuities, 10½; South-Eastern, Fixed Four-and-a-Half per Cent, 104; South Yorkshire and River Dun, 90½.

Lines Leased at Fixed Rentals.—Birkenhead, 99; Northern and Eastern, 57; Shrewsbury and Hereford, 9½.

British Possessions.—Bombay, Baroda, and Central India, 107 ex int.; East Indian, 106½ ex int.; Great Indian Peninsula, 107½; Great Southern of India, 106½; Madras Five per Cents, 105½; Ditto Four-and-Three-Quarters per Cent, 100 ex int.

Foreign.—Rahia and San Francisco, 20½; Great Luxembourg, 14½; Sambre and Meuse, 10½; San Paulo, 9 ex int.; Ditto, 21½ ex int.

The return of the Bank of England for the week ending July 1 shows the following results, when compared with the preceding statement:—

An increase of circulation of	£1,215,001	An increase of other securities	£3,916,170
An increase of public deposits of	27,230	An increase of bullion of	54,153
An increase of other deposits of	2,464,753	An increase of rest of	32,085
A decrease of Govt securities of	201,116	A decrease of reserve of	1,090,097

The total circulation is £21,738,756. Public deposits amount to £10,356,371; and private deposits to £16,271,759. Securities are £36,190,515; and the stock of bullion is £13,099,871.

THE MARKETS.

CORN EXCHANGE, June 29.—The supply of English wheat on sale to-day was very moderate, but its condition was good. All kinds moved off slowly, and, in some instances, prices had a drooping tendency. The show of foreign wheat was rather extensive. Selected samples were mostly disposed of on former terms; but inferior samples were lower to purchase. Barley was in moderate supply and sluggish request, at about stationary prices. The malt trade was inactive, nevertheless the quotations ruled firm. Oats changed hands slowly, at barely previous rates. Both beans and peas were dull, and the sale for flour was heavy, at late currencies. Scarcely any transactions took place for export to the Continent.

July 1.—The attendance of buyers to-day was limited, and all kinds of produce moved off heavily, at about stationary prices.

English.—Wheat, Essex and Kent, red, 40s. to 51s.; ditto, white, 43s. to 52s.; Norfolk and Suffolk, red, 40s. to 51s.; rye, 34s. to 38s.; grinding barley, 25s. to 27s.; distilling ditto, 22s. to 24s.; malting ditto, 33s. to 40s.; Lincoln and Norfolk malt, 60s. to 66s.; brown ditto, 50s. to 57s.; Kingston and Ware, 60s. to 66s.; Chevalier, 66s to 68s.; Yorkshire and Lincolnshire feed oats, 18s. to 22s.; potato ditto, 22s. to 26s.; Youghal and Cork, black, 16s. to 21s.; ditto, white, 16s. to 22s.; tick beans, 30s. to 33s.; grey peas, 35s. to 36s.; maple, 36s. to 38s.; white, 36s. to 37s.; boilers, 37s. to 39s. per quarter. Town-made flour, 40s. to 47s.; town households, 34s. to 36s.; country marks, 29s. to 33s. per 280lb.; American, 21s. to 24s. per barrel. French, 38s. to 42s. per sack.

Arrivals.—English and Scotch: wheat, 600; barley, 40; malt, 1110; flour, 340. Foreign: wheat, 2960; oats, 10,720; flour, 140 sacks, 2950 barrels.

Seeds.—Linseed and rapeseed are in fair request, at about stationary prices. Otherwise the seed trade is heavy, on former terms. In cakes very little is doing.

Linseed, English, crushing, 62s. to 63s.; Calcutta, 66s. to 67s.; hempseed, 44s. to 46s. per quarter; coriander, 14s. to 16s. per cwt.; brown mustard seed, 8s. to 10s.; white ditto, 7s. to 9s.; tares, 7s. to 8s. per bushel; English rapeseed 60s. to 61s. per quarter. Linseed cakes, English, £9 10s. to £10 10s.; ditto, foreign, £9 10s. to £11; rape cakes, £5 10s. to £6 per ton; canary, 46s. to 52s. per quarter; red clover seed, 38s. to 60s.; white ditto, 64s. to 72s. per cwt.

Bread.—The prices of wheaten bread in the metropolis are from 7½d. to 8d.; of household ditto, 5½d. to 7d. per 4lb. loaf.

Imperial Weekly Averages.—Wheat, 46s. 5d.; barley, 31s. 2d.; oats, 22s. 10d.; rye, 35s. 9d.; beans, 38s. 8d.; peas, 36s. 2d.

The Six Weeks' Averages.—Wheat, 46s. 8d.; barley, 32s. 3d.; oats, 22s. 9d.; rye, 35s.; beans, 38s. 6d.; peas, 36s. 7d.

English Grain Sold Last Week.—Wheat, 77,345; barley, 908; oats, 4481; rye, 26; beans, 2423; peas, 215 quarters.

Tea.—Nearly all kinds move off slowly; nevertheless, prices are supported. The supply on offer is large.

Sugar.—Fine qualities command previous rates; but low and damp parcels are rather lower. Barbadoes has realised 53s. to 56s.; Tobago, 30s. to 31s.; and Demerara, 36s. to 38s. per cwt. Refined goods move off slowly, at 47s. per cwt. for common brown lumps. The stock consists of 97,187 tons, against 75,820 tons last year.

Coffee.—Native kinds are somewhat drooping; but superior qualities rule steady. Stock, 9578 tons, against 7560 tons in 1862.

Rice.—The market is somewhat heavy, at about previous currencies. Stock, 45,000 tons, against 41,000 ditto.

Provisions.—Most kinds of butter are a slow inquiry, at about previous quotations. Bacon and hams support late rates. All other provisions are a dull inquiry.

Tallow.—The demand has fallen off, and P.Y.C., on the spot, has sold at 43s. 3d. to 43s. 6d. per cwt. Stock 36,217 casks, against 24,561 ditto last year. Rough fat, 2s. 1½d. per 8lb.

Oils.—Linseed oil is quiet at 44s. 9d. to 45s. per cwt. Rape moves off slowly, at £46 to £49; olive, £51 10s. to £59 10s.; cocoanut, £44 to £48; and fine palm, £46. French turpentine, 42s.; American, 38s. to 40s. per cwt.

Spirits.—Rum moves off slowly, at 1s. 5d. per gallon for proof Leewards, and 1s. 4d. for East India. Brandy is offering at from 3s. to 11s. 6d.; English spirit, grain, 1s. 9d. to 1s. 10d.; ditto, nips, 1s. 4d. to 1s. 5d.; and English gin for export, proof, 2s. 9d. to 3s. per gallon.

Coals.—In at house coals, 16s. 3d. to 17s.; accounts, 14s. to 15s.; Hartley's, 14s. to 16s.; and manufacturers', 13s. to 15s. per ton.

Hops.—The demand for all kinds is somewhat restricted. Prices, however, are supported. The plantation accounts are somewhat favourable.

Wool.—Most descriptions are inactive, at about last week's currency.

Potatoes.—New qualities are in good supply and moderate request, at from 6s. to 10s per cwt.

Hay and Straw.—Old meadow hay, £3 10s. to £4 10s.; new ditto, £3 to £4; old clover £4 10s. to £6 6s.; and straw, £1 5s. to £1 16s. per load.

Metropolitan Cattle Market (Thursday, July 2).—To-day's market was fairly supplied with beasts as to number; but their general quality was by no means first rate. Selected breeds ruled steady, at full prices; but inferior stock was dull, at late rates. The best Scots commanded 5s. 2d. per 8lb. Sheep—the show of which was moderately good—were in fair request, and prices were well supported. The best Downs realised 5s. 2d. per 8lb. We have to report a slow sale for lambs, at from 5s. 4d. to 6s. 4d. per 8lb. The veal trade was in a sluggish state, at Monday's decline. Prices ranged from 3s. 8d. to 4s. 8d. per 8lb. The pork trade was heavy, on former terms. Milch cows were a slow inquiry. Per 8lb. to sink the offal:—Coarse and inferior beasts, 3s. 4d. to 3s. 8d.; second quality ditto, 3s. 10d. to 4s. 4d.; prime large oxen, 4s. 6d. to 4s. 10d.; prime Scots, &c., 5s. to 5s. 2d.; coarse and inferior sheep, 3s. 8d. to 4s. 2d.; second quality ditto, 4s. 4d. to 4s. 8d.; prime coarse-woolled sheep, 4s. 10d. to 5s.; prime Southdown ditto, 5s. to 5s. 2d.; large coarse calves, 3s. 8d. to 4s. 2d.; prime small ditto, 4s. 4d. to 4s. 8d.; large hogs, 3s. 6d. to 4s.; neat small porkers, 4s. 2d. to 4s. 6d.; lambs, 5s. 4d. to 6s. 4d.; suckling calves, 12s. to 21s.; and quarter-old store pigs, 28s. to 37s. each. Total supply:—Beasts, 1050; cows, 135; sheep and lambs, 9800; calves, 420; pigs, 310. Foreign: Beasts, 370; sheep and lambs, 2199; calves, 30.

Newgate and Leadenhall.—The supplies of meat are moderate, and the trade is inactive, as follows: Beef, from 3s. to 4s. 4d.; mutton, 3s. 8d. to 4s. 8d.; lamb, 5s. to 6s.; veal, 4s. to 4s. 8d.; and pork, 3s. 4d. to 4s. 8d. per 8lb. by the carcase.

INDIGESTION.—MORSON'S PEPSINE WINE, containing the digestive principle prepared from fresh calves' stomachs, combined with a rich stomachic wine, is a perfectly palatable form for administering this popular remedy for weak digestion.
Manufactured by T. Morson and Son, 19 and 46, Southampton-row, Russell-square, W.C., in bottles at 3s., 5s., and 10s. each.

EVERY ARTICLE of FOOD for INVALIDS and INFANTS FREE from ADULTERATION. Jellies, Soups and Broths made to order. Gluten Bread, Chocolate, and Sandals for Consumption, Diabetes, and General Debility.—VAN ABBOTT and CO., Dietetic Depot, 5, Princes-street, Cavendish-square, W.

J. S. FRY AND SONS have had the honour to be appointed MANUFACTURERS OF CHOCOLATE TO THE PRINCE OF WALES. J. S. Fry and Sons are the only English houses in the trade to whom the Prize Medal was awarded in 1862.

GLYCERINE, which very simple tests show to be impure, is being sold on the statement that it is in every respect "equal to Price's." Most medical men prescribe "PRICE'S Glycerine" when pure, which is of unsurpassed purity. Patients can ensure by desiring to have their glycerine in their original S, 4, or 20z. bottles, with capsules over the cork, marked "Price's Patent."
Belmont, Vauxhall.

GLENFIELD PATENT STARCH, used in the Royal Laundry, and awarded the Prize Medal for its Superiority.

CARSONS' ORIGINAL ANTI-CORROSION PAINT, for outdoor work, as iron, wood, stones, brick, compo, greenhouses, &c. Can be applied by any person. Five cwt. free to most parts of the realm. White and stone colours, 3½ per cwt.; oaks, reds, chocolate, royal colour, and black, 2½; greens and blues, 4½. Patterns and testimonials upon application to Walter Carson and Sons, 9, Great Winchester-street, London, E.C.

The Executive Committee earnestly request attention to the following statement:—

During the last sixty years the population of London has trebled itself. It is now nearly 3,000,000, with an annual increase of about 44,000. Of this vast population multitudes are living in utter neglect of the worship of God and of their eternal welfare. It has been ascertained that in many of our large parishes more than one half of the people attend no place of worship whatever, and many are living in the utmost degradation both of body and soul. This deplorable state of things is in no small degree owing to the deficiency of means for making known the truths of the Gospel. It appears from the recent charge of the Bishop of London, that in the metropolis there are three parishes each with a population exceeding 20,000 to one church; eleven with between 20,000 and 30,000; fourteen with from 15,000 to 20,000; and nine-and-twenty with from 10,000 to 15,000. In twenty-eight large parishes there is an average population of over 60,000, with only one clergyman to more than 6,000 persons.

It will be evident from these statements that, notwithstanding the valuable aid rendered to the Clergy by their own Scripture Readers and Mission Women, and after making full allowance for the efforts of other religious communities to provide for their own members, as well as the labours of those not specially connected with the Church, such as City Missionaries and Bible Women, there still remains an alarming want, which it will be impossible to supply without largely increasing the existing very poor provision for parochial agency.

The most pressing and most urgent want is undoubtedly that of living agents, men and women, who, by personal intercourse with these multitudes, may rouse them to some concern for their immortal souls. In the Bishop's Pastoral Letter the most prominent places therefore have been given to Missionary Clergy, Additional Curates, Scripture

"RECONNOITERER" GLASS, 9s. 6d.! Weighs 8 oz., is achromatic, and so strong that ships, houses, trees, &c., ten miles off; Jupiter's Moons, &c., are distinctly seen by it; and when used as a landscape glass is valuable on a twenty-five mile radius. "I think the Reconnoiterer very good."—The Marquis of Carmarthen. "I never before met an article that so completely answered its maker's recommendation."—F. H. Fawkes, Esq., Farnley Abbey. "Rewarding their purchasers, as supplied by Messrs. Salom, I am well pleased with them."—From a report by the Hon. Committee of the Manchester Free Library. "The testimony of both is most positive as to power of efficiency. We have carefully tried it on an ordinary mile-range against the glasses possessed by two members of the corps, and find it fully equal to any, although they had cost us more than ten times its price."—The Field. Post free, 10s. 10d. The Hythe Glass throws eight inches at 1500 yards. 31s. 6d. These Glasses are only to be had direct from SALOM and CO., 98, Princes-street, Edinburgh, who have no agents.

CHAPPELL and CO., 50, New Bond-street.

CHAPPELL'S FOREIGN PIANINO
(the only Pianino to which the Prize Medal was awarded).—A very elegant Pianoforte of small size, the full compass, check action, and most perfect touch admirably adapted to small rooms, yachts, bondoirs, &c. Warranted to keep in tune, and to be the best and cheapest Pianoforte, with check action and all the latest improvements.
Price, in mahogany, rosewood, or walnut, 25 and 26 guineas. A great variety may be seen at
Chappell and Co.'s, 50, New Bond-street.

CHAPPELL and CO.'S ENGLISH MODEL
COTTAGE PIANOFORTE.—To amateurs preferring the pure English tone of the Broadwood or Collard quality, the English Model will be found the most perfectly satisfactory instrument, at a moderate price. The action is of the same simple description as the above makers', and therefore especially adapted to the country, where the more complicated actions are objectionable to many of the tuners. In elegant rosewood case, with full fret, similar in every respect to other instruments at 30 guineas, price 35 guineas; in walnut, 40 guineas.
Chappell and Co., 50, New Bond-street.

CHAPPELL'S FOREIGN MODEL
PIANOFORTE, price 50 guineas in rosewood; or in walnut, 60 guineas. This instrument has Three strings and the fullest grand compass of Seven Octaves. It is strengthened by every possible means to endure the greatest amount of wear, and to stand perfectly in any climate. The workmanship is of the best description; the tone is round, full, and rich; and the power equal to that of a Bichord Grand. The touch is elastic and the repetition very rapid. No pianoforte, in all respects comparable, has hitherto been made in England at the same price. Every instrument will be warranted, and (if desired) exchanged within six months of the purchase.
Chappell and Co., 50, New Bond-street.

BROADWOOD, COLLARD, and ERARD.
The best Pianofortes of every description, including all the newest kinds by these celebrated makers, may be tried side by side (and hired with option of purchase) at the new showrooms of
CHAPPELL and CO., 50, New Bond-street.

CHAPPELL'S NEW TWENTY-GUINEA
PIANOFORTE, with check action, in French mahogany case, and full compass. This Instrument has only just been brought to perfection as a foreign factory, expressly built with the view of making a really superior Instrument at the lowest price possible. It has the very best check action, the full compass; is made in a hard and durable wood; and is in all respects a nice piece of furniture as well as a perfectly satisfactory pianoforte. Messrs. Chappell and Co. strongly recommend this Pianoforte as superior in all respects to secondhand or other cheap instruments. The advantage to pupils in practising on a good pianotorte, with a perfect touch will be found inestimable; and the price is so low as only to be attainable by the best manufactory in a part of France where skilled labour is plentiful and cheap.
Chappell and Co., 50, New Bond-street.

ERARD'S NEW BOUDOIR GRAND
PIANOFORTES, at 130 guineas having been now brought to perfection, can be hired, with the option of purchase, at
CHAPPELL and CO.'S, 50, New Bond-street.

SECONDHAND PIANOFORTES.
CHAPPELL and CO. have a large Stock of SECONDHAND PIANOFORTES for Sale, by BROADWOOD, COLLARD, ERARD, &c., &c., at very reduced prices. Also, new Instruments of every description.—Chappell and Co., 50, New Bond-street.

PIANOFORTES at CHAPPELL'S.—The largest Stock in London, by Broadwood, Collard, Erard, &c., for Sale or Hire.—50, New Bond-street.

ALEXANDRE'S DRAWING-ROOM
MODEL HARMONIUM, the best that can be made, price 60 guineas; other varieties at 25 and 35 guineas. Illustrated Catalogues of Pianofortes and Harmoniums upon application to
CHAPPELL and CO., 50, New Bond-street.

SIX-GUINEA HARMONIUM by ALEXANDRE, with five octaves, two footboards, and in oak case. These instruments are lower in price and superior to all other cheap harmoniums. Descriptive lists on application to
CHAPPELL and CO., 50, New Bond-street.

SECONDHAND HARMONIUMS,
by ALEXANDRE, nearly (if not quite) as good as new, at greatly-reduced prices, at CHAPPELL'S, 50, New Bond-street.

ALEXANDRE'S PRIZE EXHIBITION
MODEL HARMONIUM, for the CHURCH, 13 stops, 4 rows of vibrators, and Venetian swell worked by the heel of the right foot, in oak case, 31 guineas. A large assortment may be always seen at CHAPPELL and CO.'S, 50, New Bond-street.

ÆOLIAN HARPS.—Numerous experiments having been made with a view of improving the tone of these enchanting instruments, Messrs. KEITH, PROWSE, and CO. beg to recommend to purchasers their new MODEL HARP, the tones of which will be found of singular beauty and volume, and vibrating with the slightest breeze. Price 26s.; the old model from 12s. to 21s.—48, Cheapside, E.C.

MUSICAL BOX DEPOT, 48, Cheapside, London.—Messrs. KEITH, PROWSE, and CO., Importers, have just received from Messrs. Nicole Frères another assortment of their newest boxes, some of which are with flute, bell and drum accompaniments, the expressive effects of which upon the ear are exceedingly novel and beautiful. The ordinary boxes, 4 to 12 airs, at one guinea each air. Merchants and shippers are placed on the most favourable terms.

CRAMER, BEALE, and WOOD, 201, Regent-street.

CRAMER'S PIANOFORTE GALLERY
offers peculiar advantages for the choice of a first-rate Pianoforte. There is a profusion of every description, from the smallest Pianette to the largest and finest Grand, and by all the eminent makers of England and the Continent. Nothing but the very best instruments are selected from the factories, all that are deficient in tone being carefully avoided. Purchasers from CRAMER and CO. may therefore rely on having placed in their hands whatever may be reasonably expected from a selection made with competent practical skill.
Cash purchasers will receive the usual discount.
Every Instrument fully guaranteed.
Cramer and Co. deliver their Pianofortes at any railway station in the kingdom without risk to the purchaser, and at a very trifling cost.
Cramer and Co.'s Pianoforte Gallery (the largest in Europe), 207 and 209, Regent-street.

CRAMER'S ENGLISH PIANETTE,
23 guineas. Cramer and Co. manufacture this capital small instrument. It has all the requisites of the best Pianoforte—check action, solid touch, agreeable tone. The case is of polished ash or pine. In practising on this Pianoforte the fingers of the player will be strengthened much more rapidly than on an old instrument, loose in the key and worn in the hammer. In rosewood, 25 guineas; in walnut, 26 guineas.
Purchasers are particularly requested to observe that this instrument has not the common or single action, but the double or check action; and that Cramer and Co. are the only manufacturers of it in England.—207 and 209, Regent-street.

CRAMER'S VICARAGE PIANETTE, in dark Walnut Mediæval design, 26 guineas.
207 and 209, Regent-street.

CRAMER'S INDIAN PIANETTE, in solid Mahogany, for warm climates. The most portable Pianoforte yet made. The packing-case forms a dressing-table for an officer's quarters. Price 35 guineas; with case complete, 40 guineas.
207 and 209, Regent-street.

THALBERG'S GRAND PIANOFORTES.
These magnificent instruments, manufactured by Messrs J. and P. Erard, and selected by M. Thalberg for his London concerts, have been purchased by CRAMER and CO., and are universally admitted to be the most exquisite Pianofortes ever finished by these distinguished manufacturers, combining in an extraordinary degree all their peculiar excellence—the tone has great volume, together with a charmingly vocal quality. The cases are in walnut and rosewood. Prices, 220 and 240 guineas.—207 and 209, Regent-street.

ERARD'S GRAND PIANOFORTES.—Only the very best and choicest instruments are to be had at CRAMER and CO.'S Pianoforte Gallery (the largest in Europe), 209, Regent-street.

CRAMER'S CONCERTINAS—PRIZE MEDAL. Prices, 2, 3, 4, 5, 6, 8, 10, 12, 16, and 18 guineas.
201, Regent-street.

CRAMER'S CORNETS, manufactured by F. BESSON, the receiver of twenty-three medals. Cramer and Co. are now the sole Agents in London for the sale of F. Besson's well-known Brass Instruments. Estimates for Bands furnished.
Mr Boulenois, the celebrated cornet-player, attends daily to try instruments and give private lessons. 201 Regent-street.

BUTLER'S MILITARY BAND
INSTRUMENTS.—Important to the officers of her Majesty's Army and Navy and Leaders of Bands.—G. Butler manufactures on the premises CORNETS, Saxhorns, Circular Vibrating Horns, Drums, Flutes, and every requisite for Bands at half the prices charged by other English houses. Cornets, warranted to stand the strictest test, from £2 to £5. A written guarantee given with every instrument. Estimates for bands, and price-lists, with drawings, sent post-free.
Manufactory—39, Haymarket, London.

BOOSEYS' MINIATURE PIANOFORTE,
price 17 guineas, in walnut or mahogany.—"We have had occasion to examine a new description of Pianoforte manufactured by Boosey and Sons, which combines quality and cheapness in a degree which has not previously been ever attempted. When heard it creates such surprise as would be caused by a child discoursing most eloquent music with the voice of a full-grown man. It has a rich, brilliant tone, quite strong enough to fill the largest drawing-room; and the whole mechanism of the instrument seems to be firm and durable. No piano at so small a price has ever before been presented to the public."—Vide ILLUSTRATED LONDON NEWS, Feb. 28, 1863. This Piano is well adapted for the cabin of a ship, or an extreme climate.—Boosey and Sons, 24, Holles-street, London.

ENGLISH CONCERTINAS, by LACHENAL, Full Compass, with all the latest Improvements, warranted for Hot Climates, and to keep well in Tune, from Two guineas, with Case, Lock and Key, &c.
HOPWOOD and CREW, 42, New Bond-street.

NEW MUSIC.

HERR SCHACHNER'S ORATORIO,

ISRAEL'S RETURN FROM BABYLON.
BOOSEY and SONS have much pleasure in announcing that they have purchased the copyright of Herr Schachner's Grand Oratorio, "Israel's Return from Babylon," which was performed with such eminent success a short time since at Exeter Hall, with the aid of Mdlle. Titiens and Mr. Sims Reeves. It is about to be reproduced at the Worcester Festival on a scale of very great magnificence, and the publishers are glad to announce that the complete work will be ready for sale in time for this important performance. The Pianoforte Score will be published in a handsome volume, complete, price One Guinea, several hundred copies having already been subscribed for. The separate Vocal Pieces will also be published at the usual prices. With the view of assisting the numerous choral societies in the production of a work that cannot fail to attain a high and permanent position in the grandest school of sacred music, the publishers have determined to publish the Orchestral Score, and the separate Orchestral and Vocal Parts, at the lowest possible prices. These will shortly be ready for delivery, and orders may at once be forwarded to the publishers for copies.
The "Book of Words" (also the property of Boosey and Sons) may be had on moderate terms for public performances.

THE SEASIDE MUSIC BOOK.
A Collection of new Pianofortes, Dance and Vocal Music, especially recommended to Tourists and Travellers, as containing in a small compass and at a low price sufficient music for an evening's amusement. In an elegant volume, large size, beautifully illustrated, price 2s. 6d.

DISCOVERY OF THE SOURCE OF THE NILE.

CAPTAIN SPEKE.

CAPTAIN GRANT.

By the courtesy of Captains Speke and Grant we have been favoured with some interesting Sketches illustrative of their travels from Zanzibar to the source of the Nile. We have already paid our homage to the skill, courage, and enterprise which have, in the nineteenth century, solved a problem of which Homer speaks, concerning which Herodotus offered ingenious speculations in which will be found strange germs of fact; which baffled Alexander, and gave Nero occupation.

We cannot offer our readers a better description of our Engravings than that which will be found in Captains Speke and Grant's accounts of their journey from Zanzibar, as told by them at the meetings of the Royal Geographical Society, held at Burlington House, on the 22nd inst., and of the Ethnological Society on the evening of the 30th inst. We have engraved a scene from the former meeting (first page), which was crowded to excess, a great number of ladies being present. The chair was taken by Sir Roderick Murchison, and Captains Speke and Grant had the utmost difficulty in making their way to the platform. On being recognised they were greeted with hearty and reiterated cheers. They were accompanied by two negro boys from the interior of Africa, of whom we shall have more to say hereafter. Our plan of a portion of the explorers' route from the island of Zanzibar to Gondokoro (page 22), which will be found of great use to the reader in following Captains Speke and Grant's description of their travels, has been, with the kind permission of Mr. Stanford, of Charing-cross, taken from a very useful map prepared by Captain Speke and published by Mr. Stanford. We give first Captain Speke's statement:—

In attempting to describe the extent and character of this great river—the Nile—compared with its tributaries, within the limits of actual inspection by myself, I will first treat of its head, the Victoria Nyanza, from its southern extremity, which I found by astronomical observation in 1858 to be close on 3 deg. south of the equator, and gradually bring it down to its point of debouchure in the Mediterranean Sea, 31 deg. north of the equator, by which it will be seen the Nile represents, considering it lies almost in one direct line from south to north, a total, in round numbers, of 2000 miles (geographical rectilinear) in length, and is therefore nearly 1-10th the circumference of the globe. It must be borne in mind, however, that my observations respecting this great river are not the result of one expedition, but of two; that I have not actually followed its banks from head to foot, but have tracked it down, occasionally touching on it, and even navigating it as occasion offered, for the barbarous nature of the African forbids the traveller doing as he likes; therefore, to give full weight to any inferences I may draw, deduced from what I have only seen in part, I will blend native information with my own experiences, and in doing so shall hope to teach others what I know, and, beyond that, what I believe myself. In the year 1858, when I discovered the Victoria Lake, which is the great reservoir of the Nile, I found it a large sheet of sweet water lying on the main level, or from 3000 to 4000 ft. above the sea level of the great interior plateau of equatorial Africa, looking for all the world like the source of some great river; so much so, indeed, that I at once felt certain in my own mind it was the source of the Nile, and noted it accordingly. To add to this impression the natives, who there only know it by the name of Nyanza, which equally means lake, pond, and river, described its extension in this confused manner to the northward as being boundless, whilst its breadth really—in fact its circumference—was enormous; greater, if anything, on the east than on its western side, for the negro informants knew the names of all the countries surrounding the lake, and must, had they understood the value of geographical definitions, have been able to separate the River Nile from the Nyanza, and to reduce their explorations to any common understanding. Other informants—Arab merchants and their slaves, residents of Zanzibar, who penetrate Africa in quest of ivory, who had completed the whole circuit of the Nyanza, not individually but separately, some on one side and some on the other—assured me the Nyanza was the source of some great river. They knew not what, though they had heard confused accounts from the natives living on the equator of the European ivory merchants who frequented the Nile in vessels at 5 deg. north latitude, and had further heard through the same channel that with the rising of the Nile, and consequently the violence of its waters, islands were floated down its surface, which really is the case, not composed of earth and stone, but tangled roots of trees, rush, and grass, with even sometimes huts upon them, which, otherwise undisturbed, are torn away by the violence of the stream, and carried down perfect floating islands. Then, again, these men described the territory between the Nile and Asua rivers as an island on the one side and the land comprising the ancient kingdom of Kittara, according to their acceptation of the word, as an island, also being nearly circumscribed by the Kitangulé and Luta Nzigé rivers, in conjunction with the Lake Nyanza and the Nile. No merchants, however, had crossed the first parallel of north latitude; none understood geography. They heard what the natives said, but could not fully comprehend them; and thus it was that a doubt still existed in everybody's mind but my own as to the origin of the Nile, which no one would believe until I went again and turned the river down from head to mouth. Had I been all alone in this first expedition I should have settled the Nile in 1859 by travelling from Unyanyembi to Uganda with an Indian merchant, Musor Mzuri, who was prepared to go there; but, my proposal having been negatived by the chief of the expedition, who was sick at the time and tired with the journey, I returned to England, and, to my inexpressible delight, the very first day after my arrival here, found in Sir Roderick Impey Murchison a warm advocate and proposer to the Royal Geographical Society to complete what I had before begun, and, as may be imagined, I could not rest satisfied until the world accepted my own views, happily now verified by indisputable means of actual inspection and astronomical observation, that the Victoria Nyanza is the great reservoir of the Nile. Suffice it now to say, after returning to Unyanyembi (the old point), three degrees south of the lake, in 1861, I struck upon a new route, which I imagined, from the unsophisticated depositions of the ivory merchants, would lead me to a creek on the westerly flank of the Nyanza, situated on the southern boundary of Karaguvé. Geographical definitions were here again found wanting; for, instead of a creek to the great lake appearing, a new lake was found, called Luero (white), or Lake of Urigi, which formerly appeared to have contained a considerable amount of water, but is now fast drying up. Its head lies in Urundi, and, circling round the south and east flanks of Karaguvé, in form of a mountain valley, is subsequently drained by the Kitangulé River into the Nyanza, but not in sufficient quantity to make any sensible impression on the perennial contents of the Nyanza basin. It is to the west and north of Karaguvé that the lake receives its greatest terrestrial supply of water, through the medium of the Kitangulé River, which, in draining the aforesaid Luero-lo-Urigi, drains off the superfluous waters of many minor lakes, as the Akenyard, in Urundi; the Luckurow, which is the second of a chain with the Akenyard; the Ingerzi and Karaguvé; and the little Windermere, which, in Karaguvé, lies below the capital on its south-eastern corner. None of these lakes are large—mere puddles in comparison to the great Victoria Nyanza; but still the Kitangulé River, after receiving all their contributions, is a noble river, low sunk like a huge canal, about eighty yards across, with a velocity of about four miles an hour, which appears equal to the Nile itself as soon as it issues from the lake by the Ripon Falls. The question naturally suggests itself, what forms these lakes? whence originate their waters? It is simply this: the Mountains of the Moon, in which they lie, encircling the northern end, and the Tanganyika Lake, are exposed to the

CURRENT LITERATURE.

Austin Elliot. By Henry Kingsley. (2 vols. Macmillan and Co.) Yonder, over the bridge at Eton, go three bonnie lads with arms thrown friendlily over one another's shoulder; they are Austin Elliot, Lord Charles Barty, and Robert Hilton. The first two are to become as Telephus, generous as Proculeius, and clever as Mr. K[illegible]y; the nature of the last has a taint, which breaks out in the form of kleptomania at school, cheating in the army, and forgery after dismissal from her Majesty's service. For the sin of George Hilton, who made a fortune dishonourably, is visited upon his son, and is expiated, if you will believe Captain Hertford, a blackleg, a bully, and a duellist, by that son's suicide. So Eleanor Hilton, at her father's death, inherits nine thousand a year. Now Eleanor and Austin from early days have been to one another as brother and sister; at least, so thinks Austin; but Eleanor pines in secret to know that she is not loved after another fashion. How that fashion is at length obtained; how the little brown fairy of the gossamer order of Queen Mab is wooed and won as she wished to be; how, nevertheless, she imposes upon Austin a long delay to the marriage ceremony; how she further tries his confidence by hints of a secret which embitters her life, but which he must forbear from seeking to fathom; how she writhes under the tyranny of an Aunt Maria, a maniac or a drunkard, or both at first, and, undoubtedly, the former at last; how she endured her fate patiently, watchfully, prayerfully; how dear old Robin, the dog of dogs, is the means of clearing up mystery and doubt; how the pride of the M'Tavish is humbled in the dust till he condescends to sell his island for money; and how Austin and Eleanor, and blind Lord Edward and Gil Macdonald, and Robin the dog all settle for life in Ronaldsay, the reader must learn from Mr. Kingsley himself. We must go back to Captain Hertford and the great event of Austin's career. Eleanor was not by any means smitten with the gallant Captain, but the Captain was desperately with her nine thousand a year, and, having Aunt Martha on his side, was not without hopes could Austin be removed, of possessing this lady with nine thousand charms. Now, it seems a singular way of recommending yourself to the good graces of a lady to shoot her lover through the heart; still as Count Commilfaut, an intimate friend of Hertford, observed, one has "heard of that succeeding;" and, besides, the pistol was the social weapon which the Captain handled best. However, the author so manages matters that, though the Captain relinquishes this plan, it becomes necessary, according to the code of honour (as explained by Mr. Kingsley) eighteen years ago, for Elliot to board Hertford in some public place. Lord Charles Barty, with more than the love of David for Jonathan, foreseeing what is likely to be the result, determines to sacrifice himself for his friend, forestalls Austin, and gives the fighting Captain the lie direct. The "world of honour" having expected this attention to proceed from Elliott take it charitably for granted that he has allowed his friend to adopt his quarrel, so that Austin finds himself in a very unpleasant predicament. His friend is shot dead upon the spot; he, as his friend's second, is an accessory (very improperly admitted to bail), and his reputation is blown upon. Taking advantage of the interval which elapses before he is called upon to answer to his bail he tracks Captain Hertford (who with his second escaped abroad), comes up with him, fights him, and gets hit in the leg, and that wound, on the homœopathic principle, is supposed to heal the wound in his honour. He then returns to England, stands his trial, and is sentenced to a year's imprisonment, which (for the author's convenience, no doubt) he undergoes at Millbank. Thence he is released before his time, with another convict, who is closely connected with Eleanor's secret. Mr. Kingsley is a fierce anti-duellist, and he has evidently in his story had very much in his mind the desire to throw odium upon the practice of the duello. But the subject is in our day too stale and flat; we require rather to be shown that its obsoleteness has led to more courtesy, more dignity, more temper, more guarded language; for there are many who are by no means inclined to think so, but to believe that insolence triumphs in its indemnity. Nor can Mr. Kingsley be complimented upon his method, for exceptional and unreasonable cases form no basis for generalisation. Besides, for consistency's sake, Lord Charles should have been more jealous for the honour than for the life of his friend; and he must have known that even his own death under the circumstances was more likely to tarnish still further than to clear it. Let us not be supposed to advocate duelling; but let it be condemned on general grounds. Mr. Kingsley shines most in the subordinate parts of his story. There is a tinge of poetry in his descriptions of nature; there are causticity and pungency in his remarks upon social and political matters; there is great humour in the scenes with the cabman who is told to "go to Putney," with the dog-fancier, and with other persons belonging to what it is the fashion to call "the lower stratum of society;" and his style is characterised throughout by vigour and dash. Some persons might call it slightly dogmatical, flippant, and slangy; and there might be a germ of truth in what they said. The tone of conversation and correspondence between Austin and his father is certainly very objectionable, after the worst fashion of "young England;" it is as foolish as it is disrespectful. Surely respect is compatible with the most candid intercourse and the closest affection. There are symptoms of carelessness, too, in matters of detail, both of construction and language; for instance, we learn from page 14 of the first volume, that Austin's father is forty years of age in 1808, and, from page 15, that Austin is born when his father is forty-nine, that is, in 1817. He takes his degree at Oxford in 1845 (p. 184), that is, when he is twenty-eight; this is unusually late for a man who has been at Eton; but at page 95 of the second volume, he is said to be only twenty-three, so that we are reduced to the explanation of misprints. And several other trivialities there are which are perhaps beneath the notice of popular writers, but an attention to which would add finish to their works, and would have enhanced the pleasure, not small as it is, with which we have read Mr. Kingsley's book.

The Battles of England. By C. Sanderson, L.C.P. (Bradbury and Evans.) This is likely to be a useful little book, not only for schools, for which it has been "compiled expressly," but for any person who wishes to have at hand a not at all complicated book of reference for the date, cause, and issue of the principal English battles from 1066 to the end of the Crimean War. The division into periods of English history, and into houses of English Sovereigns, which is prefixed to the chief matter, adds to the usefulness of the compilation; and the list of Sovereigns of England, with corresponding tables of those of France and Scotland, is an additional advantage.

Chesterford and Some of Its People. By the Author of a "Bad Beginning." (Three vols. Smith, Elder, and Co.) Individual portraiture is the most striking characteristic of this pleasant book. From Katharine Lyndon, the pearl of Chesterford, to Tom and his two pretty kittens, jumping for cheese at the end of a string, it is evident that the pencil has been guided by a skilful hand. And this skill is foreshadowed even in the opening chapter, where the interview between the pretty, graceful, romantic, weakminded wife, sighing for a love which she sacrificed to gain a commonplace but wealthy husband, and the plain, awkward, mean, fussy, impertinent, vulgar, strong-minded wife is described with a truthfulness which bears witness to keen powers of observation. It is the daughter of the latter who for a while threatens to wreck for ever the happiness of Katharine Lyndon and her lover. Without disclosing the means whereby this catastrophe is averted, it will be enough to relate that Harriet Thompson, whose cold impassive exterior covered a very volcano of passion, and who would fain have interrupted altogether that course of true love which never runs too smooth, was condemned to penal matrimony and the arms of a senile Baronet. The hero will probably be considered to have been, as heroes very often are, more fortunate than meritorious. It is true his eyes were expressive; and it is equally true that he was six feet high without his shoes. Nor can it be denied that the Fates treated him hardly in the matter of his landed property; but these advantages and this misfortune scarcely compensate for his morbid suspiciousness. Not even the misogyny which was early instilled into him, backed by the intrigue of Harriet Thompson, can reconcile us entirely to his course of conduct. Still we may trace even here the art of the writer; for if it had not been for the misogynist's strangeness, coquettish Katharine would not have known how she loved him. Of the other characters Polly Peacock shall stand first. Her vanity was grievous, but it was grievously punished. The golden-haired little vixen is delineated to the life; her thirst for admiration and her vulgar fine-ladyism were the natural results of her breeding and education, but her depth of love, her warmth of heart, and her courageous spirit were more than enough to redeem her faults. Brave, honest, fervent Ned Alston seemed almost too good for her till the dreadful day when she rowed her lone boat down the dangerous stream and sought and found—what she feared to find. And now let her father step on to the stage. He is by no means a pleasant figure, and he is a surly, pompous, prosperous bully; but, nevertheless, he is well described, as are his victim, Mrs. Draper, and his abomination, Miss Dobbles. It cannot be denied, however, that he had some ground for grumbling at the summary manner in which he was relieved of his daughter. The elder Mr. Alston, again, is well depicted; it is but little we see of him, but that little is characteristic of a sturdy English yeoman who loves his son and can manage a farm, but in matters of evidence is a trifle obtuse. Mr. Severn Sparks is clearly a great favourite with the author, but it is not always that reader and author are agreed upon the subject of favourites; and it must be confessed that all his kind-heartedness, and dauntlessness, and energy, and other qualities which are attributed to him, cannot convince us that the expression "conceited old prig" was unjustly applied to him. Peter, the driver of donkeys, of whom Mr. Sparks says, "that old fellow's a lesson to us all," is more to our fancy. And so, with a farewell bow to the snobby-genteel Misses Minns, let us leave our author to the attention of the public.

Low's Shilling Guide to the Charities of London. By Sampson Low, jun. (Sampson Low, Son, and Co.) Mr. Low's carefully-compiled little book upon the charities of London in 1861 is tolerably well and favourably known; and this present is a sort of supplement to that, as well as, so far as the purposes of a guide are concerned, a repetition, matters of detail only being omitted. This omission, however, does not apply to such cases as the Smith Charity and the Jones Charity, lately alluded to by the Chancellor of the Exchequer in his remarkable speech upon the exemption of charities from income tax; they are described at considerable length; and here only, we believe, is to be found any account of them available to the public generally. And the public generally must have been very much at a loss to know to what the Chancellor of the Exchequer was alluding. Self-defence against the appropriation of his former diligent labours by a rival compiler seems to have been one of Mr. Low's objects in the present issue.

Adventures and Researches among the Andaman Islanders. By Frederic J. Mouat. (Hurst and Blackett.) The frightful Indian mutiny is to some extent the cause of this work, for it was supposed that some of the mutineers whose hands had not been actually embrued in blood might be removed with advantage to the Andaman Islands. Hence it was that Dr. Mouat was sent from Calcutta in charge of an expedition; and we have here an account of what the members of that expedition saw, heard, achieved, and endured. Dr. Mouat's pleasant, lively style makes still more readable a narrative which circumstances invest with more than ordinary interest. It is accompanied by some graphic illustrations and a map of the Great Andaman and adjacent islands.

MUSIC.

Gounod's "Faust" is still the great object of attraction at HER MAJESTY'S THEATRE; and now, we presume, this most popular opera will prove equally attractive at the rival house. It was produced there on Thursday last (instead of Tuesday, as originally announced), and our account of its performance must therefore be reserved for next week.

The most interesting article of operatic intelligence is that Weber's "Oberon" is about to be produced at Her Majesty's Theatre, Sims Reeves being engaged to appear in the character of Sir Huon. The cast will be immensely strengthened by the appearance of Alboni as Fatima.

Mr. Nugent, the well-known and much-respected keeper of the box-office at Her Majesty's Theatre, is to take a benefit on Monday next—the first he has ever had during his connection of a quarter of a century with the theatre. In all the changes and vicissitudes of that long period Mr. Nugent has been always at his post; and the attention, punctuality, and uniform courtesy and desire to oblige with which he has discharged his laborious duties have been felt and appreciated by the opera-going public. His bill of fare is ample and attractive, embracing the principal portions of the "Ballo in Maschera," the "Barbière di Siviglia," and the "Figlia del Reggimento," performed by the whole strength of the company.

The PHILHARMONIC SOCIETY'S Eighth Concert (the last of its fifty-first season) took place at the Hanover-square Rooms on Monday evening last. It was also the last great concert of this season, all the serial performances of the various societies, and also the most remarkable benefit concerts given by individuals, having already taken place. The programme of the Philharmonic Concert was as follows:—

PART I.

Sinfonia in C, No. 1	Mozart.
Aria, "Pietà, Signore," Signor Delle-Sedie	Stradella.
Fantasia Appassionata, Violoncello, Signor Piatti (first time of performance)	J. Rietz.
Aria, Mdlle. Desirée Artôt, "Deh, vieni" (Nozze di Figaro)	Mozart.
Overture (A Midsummer Night's Dream)	Mendelssohn

PART II.

Sinfonia Eroica	Beethoven.
Duetto, Mdlle. Desirée Artôt and Signor Delle-Sedie (La Favorita)	Donizetti.
Sonata Pastorale, Violoncello, Signor Piatti (first time of performance), accompanied on the Pianoforte by Mr. Cusins	Tartini.
Overture (Guillaume Tell)	Rossini.

Conductor—Professor Sterndale Bennett, Mus. D.

This programme will make the musical reader as well acquainted with the character of the concert as any description could do. It was a genuine Philharmonic concert, constructed according to the plan adhered to by the society for more than half a century. The society was established chiefly for the cultivation of orchestral music by the study and performance of the symphonic works of the greatest masters; its purpose being to make the public acquainted with the highest productions of the musical art by means of the best possible execution. The soundness of the principle on which the society was originally formed, and which has been steadily adhered to for so long a period, is proved by the best of all evidence—the evidence of success. The fall of the Philharmonic Society has often been predicted, and in many instances "the wish has been father to the thought." But all such prophecies have been completely falsified. Notwithstanding the formation of new and rival societies—notwithstanding the temptation of comparative cheapness—notwithstanding all the efforts of opposition and rivalry, the Philharmonic Society stands unshaken: more firm, healthy, and vigorous in its "green old age" than it has been at any former period of its life.

Mr. BENEDICT'S Annual Morning Concert, on Monday week, at St. James's Hall, might, considering its amplitude, have almost been called a "monster concert;" but then it was not, as monster concerts usually are, a confused jumble of good, bad, and indifferent. The selection of music was as refined, classical, and recherché as if it had been for a chamber concert, with an audience of amateurs. The programme did not contain a single piece that could be deemed commonplace or trivial. It was exceedingly varied, but the variety was variety of excellence. The performers were worthy of the audience. Without enumerating their names, we may say that they were a body of the most distinguished artists now in London. The public showed their appreciation of Mr. Benedict's merits by crowding St. James's Hall almost to suffocation, and by applauding him with the utmost enthusiasm.

The Rev. J. E. Cox has been unanimously elected Honorary Chaplain to the Royal Society of Musicians of Great Britain.

Miss GRACE LINDO'S Morning Concert at the Dudley Gallery, Egyptian Hall, on Tuesday last, was one of the most elegant entertainments of the season. Miss Lindo is a highly-accomplished vocalist. During her recent stay in Paris her talents were much admired by the public, and by one whose suffrage was perhaps still more valuable—Rossini, who was warm in his expressions of approbation and pleasure. On Tuesday she sang five pieces in very different styles—Handel's "Lascia ch'io panga;" Donizetti's cavatina, "L'amor suo;" Lachner's "Waldvoglein" (with violoncello accompaniment by M. Leboue); Ferrari's song, "Vieni, vieni;" and Balfe's "I'm not in love, remember:" and in all of them was equally at home, singing with a beautiful voice, pure taste, and true expression. Mdlle. Liebhart, Miss Wilkinson, Herr Reichardt, and Mr. Allan Irving sang favourite vocal pieces; and solos on the piano and harp were played by Mr. Aguilar and Herr Oberthur. The various performances, especially those of Miss Lindo herself, were most warmly applauded by a crowded and fashionable audience.

THE THEATRES.

PRINCESS'.—The greatest love-tragedy in the world, Shakspeare's "Romeo and Juliet," has been revived at this theatre under circumstances which have secured some attention. That this drama depends more upon the heroine than on Romeo there can be no doubt. It is even so with the subject as Shakspeare left it; but in the alteration now placed on the stage by Mr. George Vining, Juliet has a final scene, which, though far from improving the play, gives the balance decidedly in her favour. She has an entire situation which brings down the curtain with anticipated applause. This alteration, we all know, was due to Garrick, and was one instance of the manner in which that great actor deteriorated the Shakspearean plays in order to adapt them to his notions of stage effect. We regret that the manager should have placed such a mutilated and interpolated version of the tragedy on these boards. But all such considerations appear to have been subordinated to the one purpose—that of introducing to the public a foreign artiste in the character of Juliet, Mdlle. Stella Colas, a young actress from the Théâtre Français and the Imperial French plays at St. Petersburg. It appears that the young lady has been for some months a pupil of Mr. Ryder, by whom she has been instructed in English declamation. We think that it would have been more to her interest to have deferred her début until she had become less imperfect in our pronunciation. Her performance might then have been more equal than was possible under the actual circumstances, while contending with the difficulties which ought to have been mastered in the closet and not left for correction on the stage. The burlesque element might then have been altogether avoided, which manifestly offended many auditors on the night of her appearing. Mdlle. Stella Colas is evidently young and pretty, and, as a French actress, has many attractions. Some of these, however, unfitted her for the part of Juliet, who, as represented by her, in the balcony and other scenes, has too much of the finesse belonging to the fascinating coquette and too little of the headlong passion proper to the Italian maid. This fault is due, no doubt, to the constitutional temperament of the actress, and has but little to do with her art, in which she nevertheless is an evident proficient. Many beauties of her delivery were also owing to the same cause, and were rather accidents of intonation than designed emphases. Much of all this will be necessarily modified when Mdlle. Stella Colas shall have gained a proper command and control of the language. As an actress, she must have been carefully educated, and she possesses many resources not common to the English artiste. She makes considerable use of the furniture of the stage, and of the sofas and chairs with which some of the scenes are provided, and is skilful in the use of such aids to effective acting, and which, we may add, are too frequently neglected by English performers. But Nature has also done much for the actress in a flexible person and a forcible utterance. Notwithstanding the grievous defects of enunciation, her declamation, as in the scenes with Friar Lawrence, was frequently powerful; and in the chamber scene it was effective beyond all precedent. It is true that in her frantic recognition of the fancied ghosts she went to such extreme as to "hover on the verge of all we hate;" yet she stopped short of the perilous brink, and skilfully maintained her position. The audience were fairly taken by surprise and "frighted from their propriety;" for they called the actress to the front after she had disposed her body on the bed. The play was, on the whole, effectively acted. Mr. Walter Montgomery, as Romeo, was not only equal to the character but looked and spoke it with peculiar aptitude, and confirmed the previous good opinion of the house that we have in him an actor fully eligible for metropolitan business. Mr. George Vining was too boisterous; but, in other respects, revived the ancient manner of performing Mercutio, and in the Queen Mab speech represented graphically the different descriptions. In portions of the business, too, he adopted many of the points of the late Mr. Charles Kemble. The Nurse of Mrs. Marston was perfect; and Friar Lawrence, in the person of Mr. Marston, was the veritable "holy man" whom Juliet was justified in trusting to the uttermost. The small part of the apothecary was made a great, though all too brief, one by Mr. Belmore. Nor should we omit to say that Mr. Fitzjames obtained a round of applause in the testy Capulet. The scenery, accessories, and appointments of the stage were efficient, and we are justified in hoping that now for some weeks the poetic drama will maintain the ascendant. The success would have been more satisfactory if the opportunity had been confided to a competent English actress—and we certainly have one, if not more, whose Juliet would do honour to the metropolitan boards. But the ways of managers are mysterious, and defy logic as much as they ignore fact.

HER MAJESTY'S.—On Friday Mdme. Ristori appeared in a new drama, called "Deborah," an Italian version of a German play by Mosenthal, the scene of which is laid in Styria. Deborah is a Jewess, and suffers from the persecution that besets her tribe, being deserted by her Christian husband, the son of the village Mayor—who, yielding to a momentary fascination, had married the popularly-abhorred Hebrew maiden. She has in her the spirit of an Israelitish prophetess, and is, in the first instance, lavish of her maledictions. But restoration comes, and in her re-established prosperity she changes the theme of her song, and utters blessings even on her lover and his new wife, whose child she solemnly recognises and commends to Heaven. She then departs, and is seen no more. Mdme. Ristori was solemn and grand in both phases of the character. The part is altogether worthy of the actress, and deserves to establish a place in her repertoire.

DRURY LANE.—The long-announced performance at this theatre, under the direction of Mr. Adolphus Francis, the well-known Shakspearean reader, took place on Tuesday evening, and was attended by a large and fashionable audience. The entertainment consisted of a number of select scenes from Shakspeare's dramas, which were acted by about sixty artistes, some of them of great eminence. Foremost of these was Miss Helen Faucit, in the character of Rosalind, who played her very best on the occasion. Some members of the foreign stage also appeared, as representatives of the reverence with which Shakspeare is received by Continental performers. Of Germany, for instance, Herr Krueger was the representative on the occasion, and enacted Hamlet in a sensible manner and with considerable effect. He was assisted by Miss Edith Heraud, who supported the part of the Queen with her wonted grace and force. The stage business in this scene was arranged after the Continental type, and differed much from the usual combinations of it in this country, and thus the foreign reference intended by it was further indicated. The profits of the representation are to be given in aid of the funds about to be collected for a national monument to Shakspeare; a project now under consideration with more than one committee, in addition to the one with which this performance originated. The orchestra was superintended by Mr. Isaacson.

ST. JAMES'S HALL.—Mr. and Mrs. Charles Kean delivered some readings and recitations in this noble apartment yesterday week in aid of the Shakspeare Fund, and as their last public exhibition previous to their departure for Australia. These eminent tragedians had already in various places during their recent provincial tour displayed their talent in poetic and dramatic readings, and the local reports were enthusiastic in commendation. We are now enabled to endorse the decision and to add our testimony to the excellence of the performance. We are at a loss whether to give our preference to the dramatic or poetic readings of Mr. and Mrs. Kean; both, however, are at the highest mark of merit, and we know not where we may meet with anything to equal their double attraction. The play selected for reading was the Shakspearean historical tragedy of "King John," in which, in addition to the female characters, Mrs. Kean supported the part of Prince Arthur. There is a dignity in the subject and diction of this tragedy well calculated to sustain a public reading at a most effective point; and Mr. and Mrs. Kean not only reached this point but culminated at one far beyond, realising the transcendental and moral altitude to which the play slowly climbs, enforcing a lesson as nationally interesting as it is dramatically sublime. The recitations consisted of Professor Aytoun's "Execution of Montrose" and Lord Macaulay's "Horatius Cocles," which were given by Mr. Kean; and of Hood's

Digitized by Google

"Bridge of Sighs," which was very poetically interpreted by Mrs. Kean. Mr. Kean was eminently graphic in his delineation of the particulars that accompanied the death of the loyal Marquis, and identified himself thoroughly with the devoted Cameron who tells the story. Especially did he paint the indignation of his hearers at Argyle and the lairds who had betrayed the noble martyr to an obsolete political creed. The ballad of "Horatius Cocles" gave still further room to graphic display. We shared in the danger of the warrior and the triumph of the swimmer, directed by the voice, hand, and eye of the eloquent narrator. Dramatic power, also, was brought in aid of the incidents, and the characters of Sextus and Lars Porsena stood out in a distinctness of portraiture not a little surprising, when we consider the paucity of words that go to compose the picture. We regret to lose the opportunity of frequently hearing Mr. and Mrs. Kean in these Readings and Recitations, the novelty as well as merit of which would have drawn together large audiences in England. But professional considerations lead these eminent artists to Australia, where we wish them every success; but at the same time hope the statement may be verified that their absence from us will not exceed more than a twelvemonth's duration.

SCIENTIFIC NEWS.

COAL-TAR COLOURS.—Dr. Hofmann is still continuing his important researches on this interesting subject. In a recent communication to the French Academy he states that he has found that a mixture of pure aniline and toluidine, heated with a mercurial or stannic chloride, or with arsenious acid, produces instantly a most magnificent red of intense dyeing power. He states also that he has discovered a mode of preparing pure toluidine in considerable quantity. Having an abundance of materials to work upon, he hopes soon to obtain valuable results.

THE FIRST COCOONS OF THE OAK SILKWORM, and silk produced from them, have been laid before the French Academy of Sciences by M. Guérin-Méneville. This silkworm is a species introduced from Japan by Dr. Pompe de Meer de Woort, by whom some eggs were given to the Colonial Minister of Holland, who remitted them to the French Government. The silkworms were reared by the Imperial Society of Acclimatisation, and are stated to have been perfectly healthy. When first hatched, the worms were quite black; now they are of a fine green, with orange and blue tubercles.

THE REFRACTION, DISPERSION, AND SENSITIVENESS OF LIQUIDS has been the subject of researches conducted by Dr. J. H. Gladstone and the Rev. T. P. Dale, in the laboratory of the former, on methyl, ethyl, butyl, and a large number of other chemical compounds lent by Professors Hofmann, Williamson, Frankland, and other eminent chemists. The results are given in the new number of the *Proceedings of the Royal Society*. With regard to the relation between the change of refraction (sensitiveness) and the change of the volume by heat, the uniform testimony of about ninety liquids examined was, that both refraction and dispersion diminish as the temperature increases. The experiments on substitution sufficed to show, as the examination of isomeric bodies had done, that the special influence exerted on the rays of light by the elements of a compound is greatly dependent on the manner of their combination. The following is given as a generalisation approximately if not absolutely true:—Every liquid has a specific refractive energy composed of the specific refractive energies of its component elements, modified by the manner of combination, and which is unaffected by change of temperature, and this refractive energy accompanies it when mixed with other liquids.

A NEW FORM OF DANIELL'S PILE has been constructed by M. Minotto, of Turin. It consists (1) of a cylindrical or rectangular vase of glass, earthenware, or any other insulating insoluble substance not acted on by acids; (2) a copper disc placed at the bottom of the vase, and nearly of the same diameter (and as thin as may be, because its thickness will increase by use), soldered to a copper wire varnished or covered by gutta-percha; (3) on the disc is placed a layer of sulphate of copper reduced to a fine powder, and half filling the vase; upon this is put (4) a layer of fine siliceous sand not acted on by sulphuric acid; (5) a piece of zinc large enough to last some time, and pure enough not to need amalgamation, and soldered to a helix of fine wire, which permits the zinc to sink as the sand sinks; and (6) of a layer of water poured gently on the sand in sufficient quantities to last as long as the pile, the evaporation being diminished by covering the vase. The action of this pile is said to be more powerful than that of Daniell. Amongst its advantages are reckoned the suppression of porous vases or diaphragms, the small consumption of copper, and a diminution of labour in its preparation.

BLACK OF ANILINE.—In the *Répertoire de Chimie* is given a specimen of cotton dyed with this black, obtained by the action of oxydising substances on aniline. It is said to resist the action of light, boiling soap-suds, chlorine, acids, and alkalies.

A PROCESS FOR BLEACHING GUTTA-PERCHA.—Dissolve it in twenty times its weight of boiling benzoline, and add to the solution some plaster of very good quality, stirring the mixture from time to time. At the expiration of several days the plaster is precipated, having drawn down with it all the insoluble impurities in the benzoin. The limpid liquor is then decanted and introduced by small portions into a vase containing twice its volume of alcohol at 90 deg. cent., and continually agitated. During this operation the gutta-percha is precipitated in the form of a pasty mass, perfectly white. Its desiccation, thus purified, requires several weeks' exposure to the air; but it may be much accelerated by trituration in a mortar, and removing the water thus separated.

A NEW METHOD OF SILVERING GLASS has been invented by M. A. Martin, and laid before the French Academy of Sciences by M. Le Verrier. M. Martin states that, after having carefully studied and experimented upon all the known methods of silvering (in which aldehyde, sugar of milk, glucosate of lime, &c., are employed), he has obtained a process which seems to him to possess all the requisite conditions in its easiness of application and in the adhesion and durability of the layer of silver deposited. M. Martin begins by preparing—1, A solution of 10 grammes of nitrate of silver in 100 grammes of distilled water; 2, an aqueous solution of pure ammonia, marking 13 degs. to the areometer of Cartier; 3, a solution of 20 grammes of pure caustic soda in 500 grammes of distilled water; and 4, a solution of 25 grammes of ordinary white sugar in 200 grammes of distilled water; pouring into it 1 cubic centimetre of nitric acid (at 36 degs.), and causing it to boil twenty minutes in order to complete the process. The volume is raised to 500 cubic centimetres by the addition of distilled water and 50 cubic centimetres of alcohol (at 36 degs.). Having obtained these solutions, M. Martin proceeds to the preparation of the silvering liquid. He pours into a flask 12 cubic centimetres of the solution of nitrate of silver; then 8 cubic centimetres of ammonia (at 13 degs.); next 20 cubic centimetres of the solution of soda; completing the volume of 100 cubic centimetres by adding 60 cubic centimetres of distilled water. If these proportions have been well observed, M. Martin states that the liquid will remain limpid, and a drop of a solution of nitrate of silver in it will produce a permanent precipitate. However, the liquid should be permitted to stand twenty-four hours, after which it may be used with perfect security. The surface to be silvered should be well cleaned with a lump of cotton impregnated with some drops of nitric acid (at 36 degs.), then washed with distilled water, and afterwards drained and placed on wedges on the surface of a bath comprised of the silvering liquor described above, to which from a tenth to a twelfth part of the preparation of sugar has been added. Under the influence of diffused light, the liquid in which the surface to be silvered is bathed will become yellow, then brown, and at the expiration of from two to five minutes the silver will invade the whole of the surface of the glass. After ten to fifteen minutes the layer will have attained the thickness desired, and the glass may then be washed—first, with common water, and next with distilled water, and, finally, be placed in the open air to dry. The dried surface will be perfectly polished, but covered with a light, whitish veil. At the slightest rubbing of a ball of chamois leather powdered with polishing rouge the veil will disappear, leaving on the glass a brilliant surface, the physical constitution of which renders it eminently suitable for the optical purposes for which it is destined.

BOTANY OF MADAGASCAR.—In the new number of the *Journal of the Linnean Society* will be found Dr. C. Meller's "Journal of his Observations during the Expedition to the Coast and Capital of Madagascar, in the Suite of the late Mission to King Radama." We select a few notices:—The copal gum-tree is very abundant along the sea, and for seventy miles of their way inland, being lost after this (the last tree seen being at about 800 ft. to 1000 ft. above the sea level). It grows to a large size. One found by the lakes (about twenty-nine miles from Tamatave) measured 28 ft. in circumference, had an enormous spread, and was full of fruit. Very little gum is collected. The natives incise the bark, and fix bamboos to receive the gum. To procure indiarubber they are less careful, merely making incisions and allowing the sap to flow into a hole at the foot of the tree. The Tanghinia venefica, Voan tangan of the Malagasy (the ordeal poison-tree), grows along the coast. It was in full flower and fruit as the travellers passed. It was one of the most beautiful trees seen by them, and very abundant. From one of the Christians at Antananarivo, who went through the ordeal during the days of persecution in the late Queen's reign, Dr. Meller learnt the mode of its administration. The fruit was taken, bruised, and boiled whole; a fowl was boiled and the broth set aside; three pieces of the skin of the fowl were cut and put into the broth. A cupful of the poison was first administered, followed by another of the broth containing the three pieces of skin. If vomiting did not speedily set in, the poison soon killed; but if it did, it was kept up by constant exhibition of the broth and warm water, until the three pieces of skin were ejected. Should these obstinately remain it was held as evidence of guilt, and another dose of the poison was administered. Hanging from the fork of a tree by one of the lakes Dr. Meller found a pendent ribbon-like fern (Ophioglossum pendulum), the roots of which were fixed in a mass of earth and decomposed leaves, collected in the hollow of the tree. Each ribbon fell to a distance of from 3 ft. to 5 ft., then bi or tri fuscated, and from the under part sent down a sporecase, which, when ripe, contained a mass of yellow granular matter. The primary divisions fell from 1 ft. to 3 ft. more, then subdivided, and beneath each subdivision was a sporecase, connected with a diverticulum. Some of these bands measured 12 ft. Dr. Meller also saw specimens of the ravenala, or traveller's tree, 40 ft. high. It extends from the coast inland for above 130 miles.

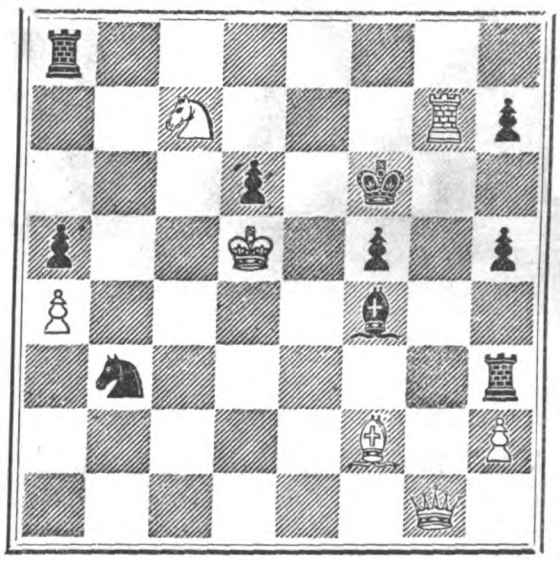
PROBLEM NO. 1010.

By Mr. I. A. MILES.

BLACK.



WHITE.

White, playing first, gives mate in four moves.

BLINDFOLD CHESS-PLAYING AT MANCHESTER.

Mr. Blackburne, whose fame as a player of chess without the aid of a chess-board and men is now European, has recently capped all his previous performances in blindfold chess by playing *twelve* games simultaneously against as many players. The exhibition took place before a large assemblage of spectators at Manchester, Mr. Blackburne winning six games, losing four, and drawing two. Of these games the following affords a good example of the clearness and precision of Mr. Blackburne's combinations under circumstances of such appalling difficulty as conducting a dozen different *parties* with nothing before him but the bare walls of the chamber he sits in.

(*King's Gambit declined.*)

BLACK (Mr. Blackburne.)	WHITE (Mr. Butterfield.)	BLACK (Mr. Blackburne.)	WHITE (Mr. Butterfield.)
1. P to K 4th	P to K 4th	16. K R to K Kt sq	Kt to K Kt 3rd
2. P to K B 4th	B to Q B 4th	17. P to K B 4th	P to K B 4th
3. Kt to K B 3rd	P to Q 3rd	18. P to K 5th	Q Kt to K 2nd
4. P to Q B 3rd	B to K Kt 5th	19. B to K 6th	P takes P
5. B to Q B 4th	B takes Kt	20. Q P takes P	R to Q sq
6. Q takes B	Kt to Q B 3rd	21. Q R to Q sq	R takes R
7. P to Q Kt 4th	B to Q Kt 3rd	22. R takes R	Kt to Q B 3rd
8. P to Q R 4th	P to Q R 3rd	23. Kt to Q B 4th	K to K 2nd
9. Kt to Q R 3rd	Q to K B 3rd	24. Kt takes B	K takes B
10. P to Q 3rd	P takes K B P	25. Kt to Q 7th	R to Q sq
11. P to Q 4th	K Kt to K 2nd	26. Kt to Q B 5th (ch)	K to B 2nd
12. Q B takes P	Kt to K Kt 3rd	27. R takes R	Kt takes R
13. B to K 3rd	Q takes Q	28. P to Q R 5th	Kt to K 2nd
(As a rule, a blindfolded player encourages the exchange of pieces, because the clearer the field the less arduous are his mental labours.)		29. P to Q Kt 5th	Kt to Q 4th
14. P takes Q	Kt to K R 5th	30. Kt takes Q Kt P	
15. K to K 2nd	R to K B sq	(Very well played. If White capture the Kt then Black takes Pawn with Pawn, and must make a Queen, do what his adversary can.)	
(White acts prudently in not Castling on the K's side in the face of the threatened attack on his K Kt Pawn by the adverse Rooks.)		30.	Kt takes P (ch)
		31. K to K sq	

And White resigns

CHESS BY CORRESPONDENCE.

The following Game, played by correspondence between Dr. LINDEHN, a Swedish amateur of note, and the members of the STOCKHOLM CHESS CLUB, merits attention.

White to play, and give mate in four moves.

OBITUARY OF EMINENT PERSONS.

THE HEREDITARY PRINCE OF DENMARK.

His Royal Highness Frederick Ferdinand, Hereditary Prince of Denmark, a General in the Danish army, and Commander-General of Zealand and the Isles, and a member of the King's Privy Council, was the second son of Frederick, Crown Prince of Denmark, and was the grandson of Frederick V., King of Denmark, and the uncle of Frederick VII., the present King. He was born the 22nd of November, 1792, and married, the 1st of August, 1829, the Princess Caroline (who survives him), the daughter of Frederick VI., King of Denmark, Knight of the Garter, and the grandniece of George III., King of Great Britain, but had no issue. Prince Frederick Ferdinand's sister, the Princess Charlotte Louisa, the Consort of William, Landgrave of Hesse Cassel, brother of the Duchess of Cambridge, is the mother of Louisa, Consort of Christian, Prince of Denmark, and the grandmother of the Princess of Wales and of George, King of Greece. Prince Frederick Ferdinand died at Copenhagen on the 29th ult. By his Royal Highness's demise, Prince Christian, the father of the Princess of Wales, becomes Hereditary Prince, and heir-presumptive to the throne of Denmark.

ADMIRAL THE HON. SIR G. ELLIOTT, K.C.B.

The Hon. Sir George Elliott, K.C.B., an Admiral in the Royal Navy, who died on the 24th ult., at his town house, 24, Princes-terrace, Kensington, was the second son of Sir Gilbert Elliott, first Earl of Minto, by his wife, Anna Maria, eldest daughter of Sir George Amyand, Bart., and was brother of Gilbert, late, and uncle of William Hugh, third and present, Earl of Minto. He was born at Swanage, Dorset, Aug. 1, 1784, and entered the Royal Navy, in 1794, as a first-class volunteer, on board H.M.S. George, bearing the flag of Admiral Sir Hyde Parker. He was present in Lord Hotham's actions in March and July, 1795, and was on board the Goliah when that ship led the British fleet into action on the 15th of August, 1798. For some time he was on board the San Joseph and St. George (flagships of Lord Nelson and Sir Charles M. Pole), in the latter of which, under the gallant Captain Masterman Hardy, he was present at the action off Copenhagen in April, 1801. After various services afloat, and after seriously chastising the pirates of Sambas, in Borneo, and assisting Colonel Macgregor in reinstalling the Sultan of Palanbang, Elliott returned home, and was, in 1827, appointed to the Victory, guard-ship at Portsmouth. He was made naval Aide-de-Camp to William IV. in 1830; he was a Lord of the Admiralty from 1835 to 1837. In 1837 he obtained his flag rank, and was made Commander-in-Chief at the Cape of Good Hope. In February, 1840, he took the command of the fleet in China, where, in the additional capacity of joint Plenipotentiary with Captain Chas. Elliott, R.N., he superintended the earlier operations of the war from July to November. He returned home in 1841 in ill health, from the combined effects of the climate and over exertion in the discharge of the onerous duties attached to his command. He became a Vice-Admiral in 1847, and an Admiral in 1853. He was made a K.C.B. in 1862. Sir George Elliott married, in May, 1810, Eliza Cecilia, youngest daughter of James Ness, Esq., of Osgodvie, Yorkshire, by whom, who died May 23, 1848, he had seven sons and five daughters; of these three sons and four daughters survive him. His eldest son is Rear-Admiral George Elliott. His eldest daughter is the present Countess of Northesk; his second daughter is Lady William Compton; and his third daughter, Catherine, is the wife of Captain the Hon. James Robert Drummond, C.B., one of the Lords of the Admiralty.

SIR JOSHUA JEBB, K.C.B.

Major-General Sir Joshua Jebb, K.C.B., Surveyor-General of Convict Prisons, and Inspector-General of Military Prisons, whose awfully sudden death occurred on the 26th ult., was the eldest son of Joshua Jebb, Esq., of Walton, in the county of Derby, by his wife Dorothy, daughter of General Henry Gladwin, of Stubbing Court, in the same county. He was born on the 8th of May, 1793, and was educated at the Royal Military Academy, Woolwich. He received his commission in the Royal Engineers in 1812. He served with that distinguished corps in America in 1812-13, but does not appear to have been subsequently engaged in military matters beyond those of ordinary routine. He became a Lieutenant-Colonel in 1847; a Colonel in 1854; and a Major-General on July 6, 1860. He was made a K.C.B. (for civil services) on March 25, 1859. In 1838 Jebb, then a Major in his corps, turned his mind to civil pursuits; and, after rendering much service to the Home Office, became chairman of the Directors of Convict Prisons, Inspector-General of Military Prisons, and Surveyor-General of Convict Prisons. Of late years Surveyor-General Sir Joshua Jebb has exercised vast influence over our penal system. The ticket-of-leave plan, latterly so much complained of, was adopted before his administration, and Sir Joshua, finding it in existence, but not altogether approving of it, laboured hard to make the most of it, and to mould it into, if not a perfect, at least a useful system. The late frequency, however, of the crime of garotting created much public alarm, and was attributed to criminals who had too easily obtained tickets of leave. Hence the debates on the subject in Parliament resulting in the Government granting a Commission—which is now sitting—to inquire into the whole system of secondary punishments. Sir Joshua was examined before this commission, but his evidence has not yet been made public. Among Sir Joshua's various publications may be mentioned, "Notes on the Theory and Practice of Sinking Artesians;" "A Flying Shot at Fergusson and his 'Perils of Portsmouth;'" "A Manual for the Militia;" and a pamphlet on the defence of London. Sir Joshua Jebb married, first, on the 14th of June, 1830, Mary Legh, daughter of William Burtinshaw Thomas, Esq., of Highfield, Derbyshire, by whom (who died in 1850) he had a son, Joshua Gladwyn, and three daughters. He married, secondly, on the 5th of September, 1854, Lady Amelia Rose Pelham, daughter of Thomas, second Earl of Chichester, and sister to Henry Thomas, third and present Earl of Chichester. The family of Jebb, of which that to which Sir Joshua Jebb belonged is a branch, was of very ancient standing at Woodborough, in Notts, and counted among its kindred by marriage the famous Grand Pensionary, John de Witt. Sir Richard Jebb, M.D., of this line (son of the learned Dr. Jebb, editor of "Roger Bacon" and "Aristides"), was physician to George III., and one of the eminent practitioners of his day: he was created a Baronet in 1778. One of his first cousins, the son of the Dean of Cashel, was the learned Dr. John Jebb, Fellow of Peterhouse, Cambridge; and another cousin was Mrs. Radcliffe, the famed author of "The Mysteries of Udolpho." Latterly, the main branch of the family settled in Ireland, and was highly distinguished there, its late representative being the eminent Judge of the Irish Court of King's Bench, Mr. Justice Richard Jebb, whose brother was the no less eminent Dr. John Jebb, Bishop of Limerick, and whose second son is the learned Mr. Richard Jebb, a barrister of Lincoln's Inn, late one of the Jersey Commissioners, and now Vicar-General to the Bishop of Sodor and Man.

ADAM BRUCE.

This venerable gentleman, who held rank among the Swedish nobility, was one of the few remaining veterans who in their youth made the Court of Gustavus III. one of the most brilliant of the eighteenth century. Adam Bruce died at Stockholm on the 12th ult., at the age of ninety-two. He descended from a family of the Royal blood of Scotland. His grandfather became a member of the Swedish house of nobility during the seventeenth century, since which time the Bruce family, intermarrying with the oldest Swedish nobility, has become itself thoroughly Swedish. Adam Bruce, as Chamberlain to Gustavus III., assisted at the fatal bal masqué in 1792, when that Monarch was assassinated by Ankerstrom. Ever since the accession of the Bernadotte dynasty to the Swedish throne, Adam Bruce lived retired from Court and public affairs. He has had ten children, of whom his eldest son, James, who succeeds him in his Swedish honours, is a General in the Brazilian army; and one of his daughters is married to his Excellency Baron Brunnow, Russian Ambassador at the Court of St. James's.

Sir William Massey Stanley died in Paris on Monday, aged fifty-six, and, having no children, is succeeded by his brother, who has assumed the name of Errington, and is now the eleventh Baronet.

M. Gilbert de Voisins, husband of the celebrated dancer Mdlle. Taglioni, has just died at Figuiera, in Spain, where he filled the post of Vice-Consul.

A general exhibition of the Fine Arts is to open at Brussels on the 1st of August and to close on the 30th of September. The works of living artists of all nations will be admitted.

The Committee of Privy Council for Trade have received from the Secretary of State for Foreign Affairs a copy of a French Imperial decree fixing the customs import duties on a variety of articles, and the document is published in Tuesday's *Gazette*.

The Madrid journals mention that the barley harvest had generally been commenced in Spain, and that the cutting of wheat would begin in a few days. Both crops will be most abundant.

Rival companies of Americans and Italians have settled on Farralone Island, in the Pacific, thirty miles west of San Francisco, for the purpose of collecting valuable birds' eggs there. A desperate fight recently took place between the rivals, in which many were mortally wounded.

The marriage is announced of Princess Anna Murat with the young Duke de Mouchy, a descendant of the Counts d'Armagnac, the heads of one of the rival factions in France at the time when the kingdom was divided between Charles VII. and our own Henry VI. The *Presse* announces that the bridegroom elect is twenty-two years old, and enjoys a fortune of about £24,000 a year. The Princess is the grand-daughter of *the* Murat.

A tablet has been erected to the memory of Sir Henry Lawrence in the Aboo Church, on which these words are engraved—"As a gallant soldier, distinguished statesman, and a true Christian philanthropist, his memory needs no record. He was a warm friend to the British soldier, for whose orphans and children in India he founded schools at Sunawar and Mount Aboo. Like institutions at Murree and Ootacamund have been raised to his memory by private subscription. In his last hour he dictated this epitaph—'Here lies Henry Lawrence, who tried to do his duty.'"

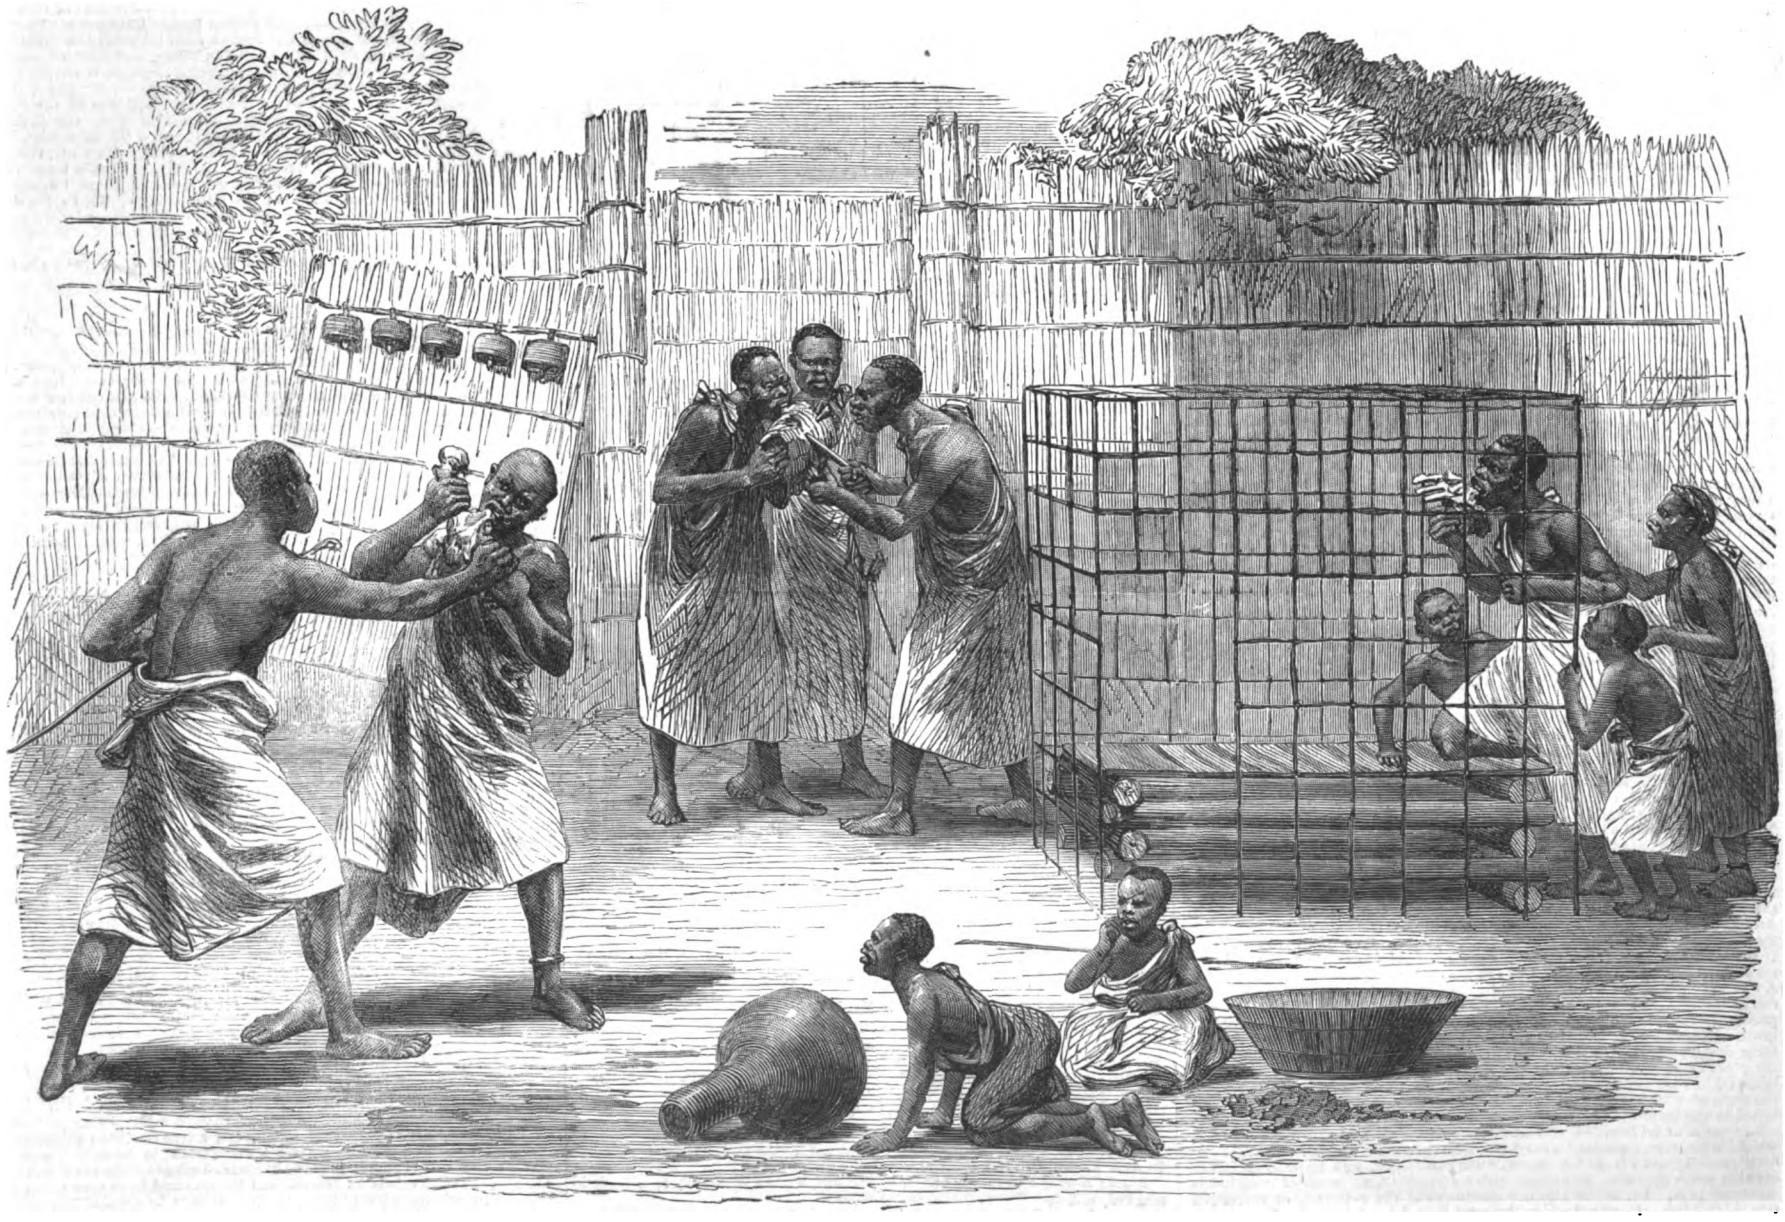
(*Continued from page* 17.)

influences of the rainy zone, where I observed, in 1862, no less than 233 days out of the year were more or less wet days. Mashondé, in the Uddu portion of Uganda, is the first place where, in this second expedition, I obtained a view of the Victoria Lake, called in these more northern countries Luern white—(lo-of)—Luta (dead) Nzige (locust), in consequence of the reputed fact that flights of locu-ts, in endeavouring to cross these waters, have dropped down from fatigue, unable to accomplish such an extended journey on wing, and, perishing in the lake, have been found dead in dense masses by the boatmen. But, like the word Nyanza, it is also applied to the Nile and its tributaries, confounding all inquiry. For instance, the Waganda—who know of the Nile and the Little Luta Nzige, a semi lake tributary to it, flanking the northern boundary of Ungoro, that being the extent as to the instances of the dead locusts—say at once Uganda, conjoined with Ungoro, is an island, so that a man may walk for months and never see the end of it. The whole is likewise called Nyanza there; for, as might be expected in countries where no literature is known, nor knowledge sought beyond the actual requirements of domestic life, the people are satisfied with local names, never troubling their heads with general specific ones. This is the explorer's greatest difficulty in endeavouring to put together the information which he hears, though it may be overcome by close questioning, even better with the natives than with the Arabs; for whilst the former regard all rivers flowing, as we do, from head to mouth, the Arab invariably says it goes from mouth to head. In a southerly direction the Waganda boatmen go as far as the Island Ukerewé, which I saw on my first journey to Muanzaat, the southern extremity of the lake; and to the eastward beyond the escape of the Nile, to the north-eastern corner of Victoria Lake, where by a strait they gain the access to another lake in quest of salt, possibly the Baringo of Dr. Kraph, which he, from information gained through the natives, called Salt Lake, most likely because there are salt islands in it; which reasoning I deduce from the fact that on my former expedition, when the Arabs first spoke to me of the Little Luta Nzige, they described it as a salt lake belonging to the Great Nyanza; yet not belonging to it, when further pressed upon the subject. The Great Nyanza waters were purely fresh and sweet. They (the Arabs), like Dr. Kraph, merely narrated what they heard. As salt islands were visited by the natives in search of that mineral, the surrounding waters naturally were considered salt by them, deprived as they were of those connecting links, which included the whole area of ground under consideration within the limits of the drainage system of the Nile. The Arabs, it is now very clear, had heard of everything in connection with the Nile; but from not being cognisant with the science of philosophical geography were unable to connect what they had gleaned in detached fragments from it. Dr. Kraph further tells us of a river trending from the River Nowey by Mount Kœnio towards the Nile. If such is the case it must be a feeder to the Baringo, whose waters pass off by the Asua River into the Nile, for the whole country immediately on the eastern side of the Victoria Nyanza is said by the Arabs, who have traversed it for ivory, to be covered with low, rolling hills, intersected only by small streams and nullahs from this point in Muanza to the side stream, which is situated on the equator on the northern boundary of the Victoria Nyanza. Turning now again to Mas-horde, and proceeding north along the bending coast of Nyanza to the valley of Kalonga, which, being situated on the equator, the lake is constantly in view. The land above the lake is beautiful, composed of low sandstone hills, secured down by small streams, the effect of constant rains, grown all over by gigantic grass, except where the numerous villagers have supplanted it by cultivation, or on the deltas where mighty trees, tall and straight as the blue gums of Australia, usurp the right of vegetation. The bed of the Nyanza has shrunk from its original dimensions, as we saw in the case of the Urigi Lake; and the moorlands immediately surrounding are covered with a network of large rush drains, with boggy bottoms, as many as one to every mile, even counting from the Kitanquia, which of itself was obviously at one period a much fuller stream than at the present day, when the old bed was on the level of the present surface of the water, and its breadth was double that which now exists. The Mountains of the Moon are wearing down, and so is Africa. Crossing the equator, altogether the conformation of the land appeared much the same, but increased in beauty; the drainage system was found the opposite, clearly showing we were on the north slope of Africa. One stream, the Mwèrango, of moderate dimensions, said to arise in the lake, flowed north and joined the Nile in the kingdom of Unigoro, where its name is changed to Kafu; or another stream, the Luagevri, followed its example; and then, still further on from the centre of the coast of Lake Nyanza, issued the parent stream of the Nile, flowing over rocks of igneous character, twelve feet high, which, as the natives, and also some Arabs, simply designate by the simple name of stones, I have done myself the honour to christen it the Ripon Falls, after his Lordship, who was the president of the Royal Geographical Society when the expedition was set on foot. The escape of the Nyanza waters, twenty miles north of the equator, is the only one accurately inspected, owing to the barbarous restrictions placed on visitors by the King of Uganda for the supposed maintenance of his dignity; but it mattered not, as by following the Nile we saw the junction of both the Kafu and Asua rivers, and crossed Luagevri immediately before its place of junction. Now proceeding down the Nile from the Ripon Falls, the river first bisects the sandstone continued hills, which extend into Usuoga above the coast-line of the lake, and rushes along north with mountain-torrent beauty, and then, having passed these hills, of no great extent, it turned through long flats more like a lake than a river, where, in Ungyoso, it was increased by the contribution of the Kafu and the Luagevri, and continued in this navigable form to the Karina Falls in Chopi, where again, the land dropping suddenly to the westward, we saw the river rushing along with boisterous violence, but would not follow it owing to the war which lay upon the track. It was indeed a pity, for not sixty miles from where we stood, by common report, the Little Luta Mzigé, which I had taken so much trouble in tracing down its course from the Lunæ Montes with its salt islands in it, joined the Nile. The old river was next met with in the Madi country, due north of the Karina Falls, where it still bore the unmistakable character of the Nile—long flats, long rapids. The southern half of the Madi was a flat extending, we believe, to the junction of the Little Luta Mzigé, the north, a rapid extending down to the navigable Nile—that is to say, the Nile which is navigable its entire length during the period of its flooding; and here it was the Asua River, of which we had heard, draining from the north-east corner of Victoria Lake, joins—in a rainy season an important feeder, but when low fordable. The rest of the Nile, considering it is navigated, really ought to be well known; but it is not so; as no one has yet taken the trouble to place millometers on its various branches by which we might know the perennial amount of water drained away by each every year, and from want of which it appears to me—who



GUARDS IN THE PALACE GATEWAY, UGANDA.—FROM A SKETCH BY CAPTAIN GRANT.

Digitized by Google

have seen them all in their dry season, the best time for judging their various degrees of magnitude—great misconceptions have taken place. To these branches, then, more particularly, I wish to draw attention. Noticing only that the Nile—the White River, as it is called—in its south bearings, carries the palm with it in all instances, and its branching throughout has been so often described, especially to the junction of the Blue River. The first great affluent, which, indeed, is the only one worthy of remark on the left of the Nile, is the Bakr el Ghazal. It joins on with the appearance of a diminutive lake at the sharp elbow of the Nile, without any visible stream of its own, whilst the great river winds round with considerable velocity, carrying, as I have said, the palm with it. The second affluent in order of position, which with all the others is on the right of the Nile, is the Geraffee River, swirling with considerable stream and graceful round into the parent Nile. Its magnitude and general appearance is like that of a first-class canal, inferior to the Kllangulé River, although not so much as equal in quality of fluid to one third of the Nile at its point of junction. It is navigable to a great distance south, but where it comes from nobody knows. It cannot be called a mountain river, as we found it full of rosets floating on its surface as in the Nile, evidently showing that both the trunk and the branch are subjugated to the same effects of sluggish flats and rapids. Indeed, its character suggests the possibility of its emanating in the Victoria Nyanza, although it most surely is fed to a considerable extent by minor branches from the Great Eastern mountain chain. The third is the Southern Sobat River which was full and navigable—in breadth it is greater than the Geraffee River, but less in rapidity, so that we may infer their perennial contents are much the same. Unfortunately, the Northern Sobat was passed without our knowledge, which, also being navigable, would make the Upper Sobat, that is to say, the Sobat above the Delta, of far greater magnitude than the Geraffee, unless, indeed, the three streams may be one river still further south, when, in its combination the comparison would have to be drawn with the Nile above, it would be very nearly equal; for the Nile, with these additions, has scarcely doubled its importance, considered as it was seen from above, entering the Bakr el Ghazal. The Blue River was long assumed to be the Nile only because the perennial powers were never tested. It appears it is a mountain stream, emanating in the country without the rainy zone, but subject to the influence of tropical rains and droughts, at one time full, and empty at another, so shallow as to be fordable. The suspicion, therefore, that it was the Nile must of itself appear absurd, for its waters, during the droughty seasons, would be absorbed long before they reached the sea. But, apart from this feature of the amount of the Blue River, the Nile runs like a sluice in its wonted course; whilst the Blue River, conjoining with the Geraffee and Sobat, describes a graceful sweep. The Alhara, which is the last, is in all respects like the Blue, only smaller. With one more remark I will conclude. In the height of the dry season in the White River the Blue is freely navigated, owing to the great accessions of the Geraffee and Sobat rivers; but below the Blue and Alhara rivers to the sea the sandbanks obstruct further passage. There is one thing that I have left unstated, and that is the fact that, on my return, the first Englishman I met was Mr. Baker, with whose name you were already acquainted, come up for the purpose of helping us out of a scrape if we had got into one. Mr. Baker, hearing that there was one branch of the river that I had not explored, went on for the purpose of searching for it; and I trust that before another year is out we shall see him back to tell us all about it. Another remarkable event was, that three ladies came up to meet me; but, one having been taken ill, Miss Tinney and her mother went up the river to satisfy their desire for geographical knowledge. I endeavoured to persuade them to return, and subsequently wrote them a letter entreating them to give up their journey, with what result remains to be shown. If the remaining branch is not explored by these parties, why, I shall have to do the work myself.

DISCOVERY OF THE SOURCE OF THE NILE: NEGRO BOYS OF CENTRAL AFRICA.

In continuation of the subject, at the request of the meeting, Captain Speke further said:—

In compliance with the suggestion of the president he proceeded to give some of the more interesting details connected with his journey. These statements he prefaced by a few general remarks respecting the physical geography, the flora, and fauna, and the natural history of the vast African continent. In a very clear and lucid manner he described a few of the interesting events in his journey from Zanzibar through Uzaramo, Usagara, Ucoco, M'Gunda, Unyamwezi, and Uzinza. Those portions of his narrative in which the greatest interest was displayed were those which referred to the negro territories bordering close upon the great lake which had been so successfully tracked as the source of the Nile. Describing his adventures in Ugunda, he said there was great difficulty in getting persons to accompany him. Of two men who had travelled with them some time, one expressed himself willing to go and the other was jealous at his companion having anything like superiority over him. All these men have their feelings of pride; they have their own standing and rank just as we have among ourselves. At last he decided to take Barakko with him, because he had hitherto found him a faithful and reliable servant; but after a short distance only had been got over he found, to his great surprise, that the native would accompany him no further, and he was compelled to return to Sorombo, which is a part of the kingdom of Uzina. There was no resource left but to reorganise the expedition, but this was no easy matter. The Arabs in this part had a great dislike to him, and were suspicious of his real intentions; but at last he succeeded in finding one black man who expressed his willingness to aid him in his journey. The natives of these parts are tall and gaunt, and are certainly very superior to the common negro. The travellers were looked upon by the natives in this part as magicians. It happened while he was there that the King of Uganda had received some officers who had come on a mission from a neighbouring King to solicit the hand of his daughter for their master. These plenipotentiaries told the King that their master was one of the mightiest of all the Kings on earth, and if his prayer were not granted a dire and terrible vengeance would he take. The King of Uganda did more for the exploring party than any other King in the country. His influence was so great that it did not, in fact, leave them until they got to Lake Nyanza itself. After leaving this kingdom, Captains Speke and Grant came to the delightful Mountains of the Moon, within the territory of the King of Nuanda. One of these hills he estimated to be at least 10,000 ft. high, judging from the immense altitude which they appeared to be at the great distance where he saw them towering in the clouds above everything else. The country was indeed a land of pleasure. He had come through a land of persecution, and now heartily appreciated the change. The country was marvellously fine, and he could not have believed that there was anything like it in the heart of Africa. Captain Grant and myself received at the hand of the King every possible consideration, who, when he first heard of our intention to go northward, was, however, much opposed, and endeavoured to dissuade us from it by every argument in his power. The King was a most intelligent and inquiring man. His Majesty asked questions about the geography of the world, and especially about the north, and was astonished to hear of the land surrounded by water. He asked about the stars and sun, and what became of the old suns and moons. His anxious desire was to obtain knowledge upon every topic which came under his notice. The King had heard of the extraordinary power of the white people, and wished to know from us whether it was not so great that, if we chose, we could blow up Africa. Scarcely a day passed while in this kingdom without going to pay a visit to the King; and many strange stories were told which he could not now remember. This amiable King gave him much valuable information, including all that about the system of lakes and rivers draining into the Nile, and others rising in the Mountains of the Moon and in Uganda. Indeed, from this information he was enabled to send home a map very nearly as good as that which he had since been able to prepare after his journey to the Nyanza. We went out shooting together, and sometimes his sons accompanied him, and they always acted in the most courteous and, he would say, gentlemanly manner. If he shot a rhinoceros they would come up and congratulate him on his success, shaking him heartily by the hand. When about to resume his journey the King sent an officer to the King of Uganda, informing him of his wish to visit the country, and praying his brother potentate to afford every facility in his power. But he still did not wish him to pass to the northward. His conduct in this respect seemed very strange, and was the only thing, in fact, that was not agreeable during his stay in this part of the country. The gallant speaker referred to the illness which had overtaken his fellow-traveller, Captain Grant, at this stage of the journey, and proceeded to give some interesting accounts of his visit to and reception by another sable monarch in the territory adjoining. Here he was surprised at the neatness and tidiness of the people, the manner in which they deported themselves, and the style of the native dress, which, he said, would not disgrace a fashionable promenade in London. These people of Uganda were a

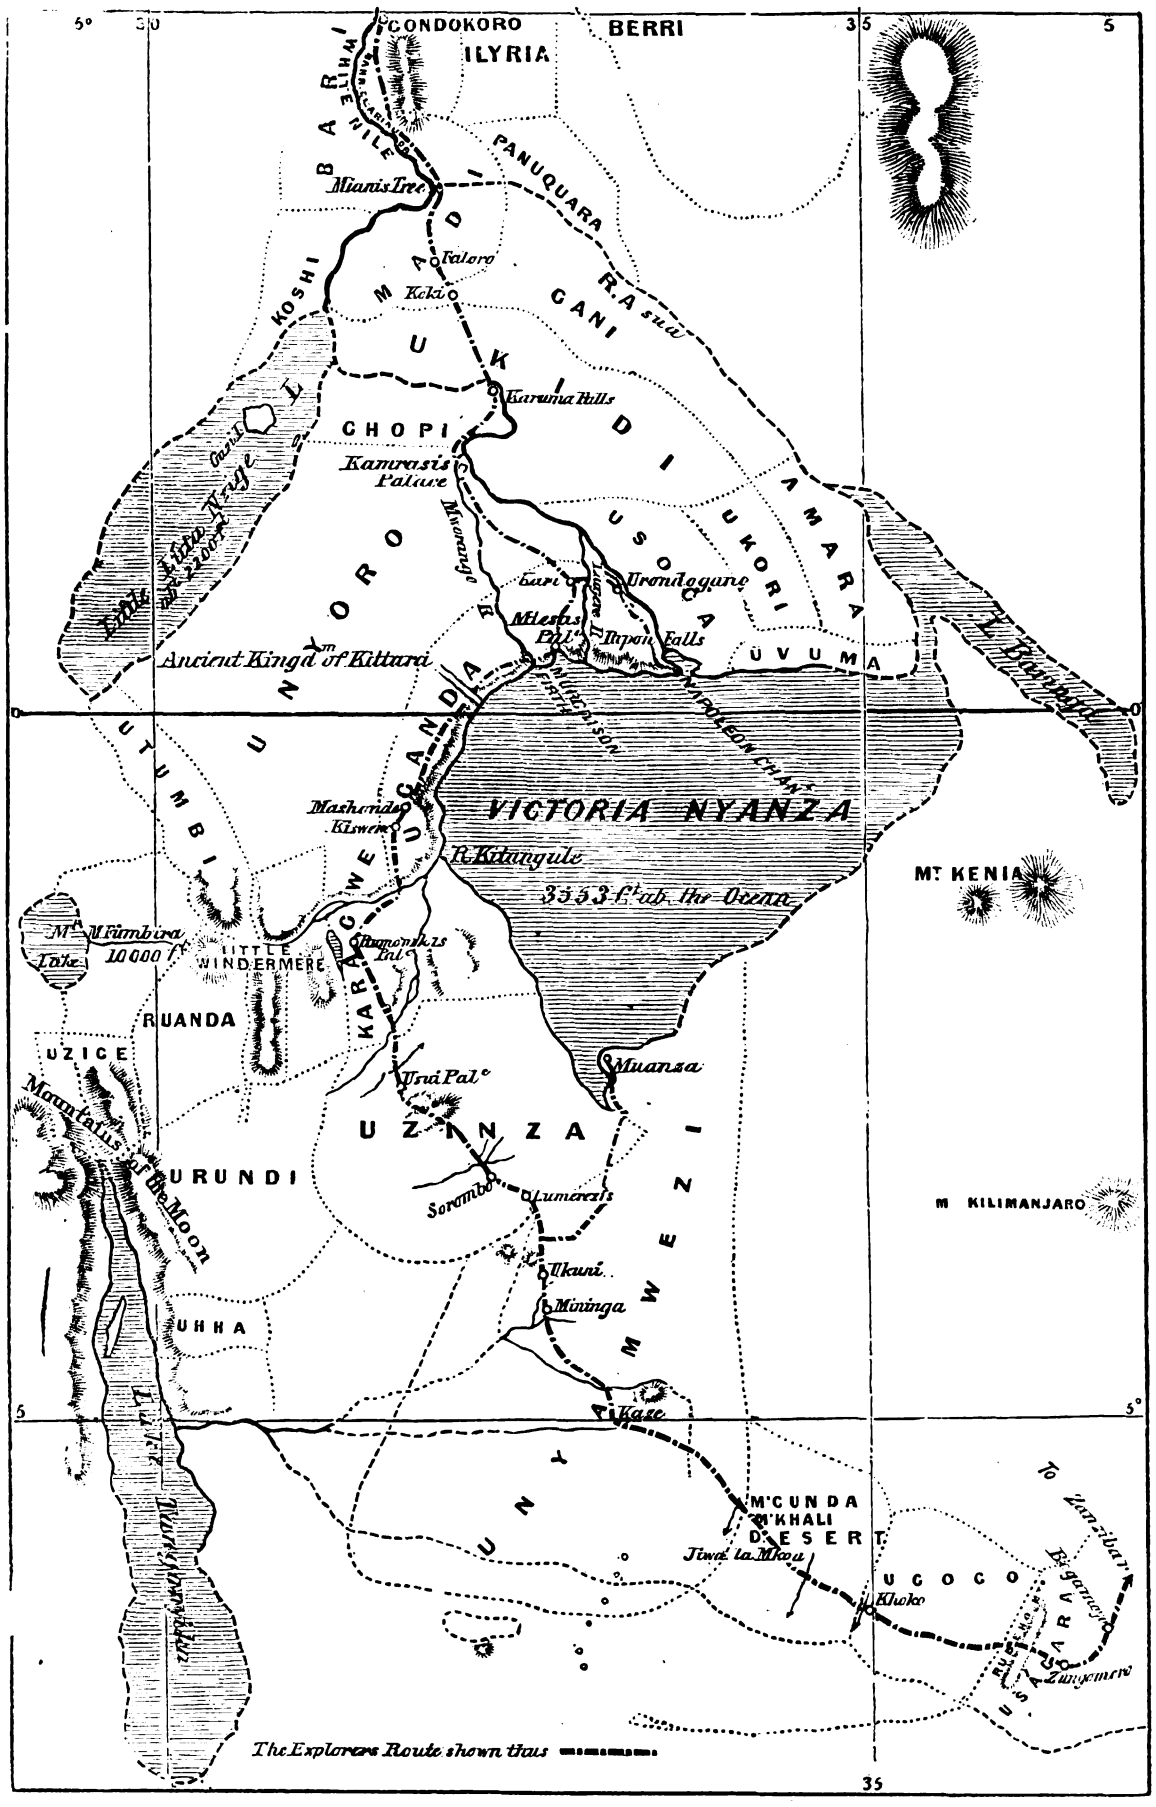
most superior set. The King had prepared a grand reception for him. On arriving at the place indicated he found the palace filled with men and women; cattle were being led about the approaches to the palace; there were bands of musicians, and a great display of public rejoicing. When he reached the front of the palace the King had not arrived, and he was requested to sit upon the ground and wait the King's leisure, for his Majesty was dressing. This, however, he declined to do, and walked back to his camp. The reason he did not sit down upon the ground was that he was anxious to assert a high position, and to obtain influence among the people which might be useful to him in his future travels. When the King arrived and found that the Englishman had gone, he sent an officer to summon him back, and when he returned he explained to the King that he did not like to sit upon the ground, and that it was little better than an insult to ask him to do so. In Uganda no one had ever sat upon a chair or stool in the presence of the King, but he was allowed to sit upon a stool, so that he was the first person who had ever enjoyed the honour of thus sitting in the presence of the ruler of that nation. The King was seated on a throne of brass, beautifully dressed, and carried his shield and spear, and his warriors round him were also armed with spears. The officers squatted around the King, and with these a general conversation was kept up. Wearied with sitting so long in the sun, he (Captain Speke) put up his umbrella, to the intense wonder of the Court and its Sovereign. At last the courtiers and warriors left, and while in full stare at him, the King said, "Have you seen me?" He replied that he had had that pleasure, and, looking at his watch, found that he had enjoyed that gratification for exactly half an hour, and hoped his Majesty was quite well. The King then went into the palace, to which he also had the honour of being invited. When he arrived there he found, to his great surprise, that the King was sitting, not with men, as he had been just before, but in the midst of his wives—at least two or three hundred in number. Here, again, the same gazing at each other ensued, and at the end of about half an hour the King again inquired if he (Captain Speke) had seen him? In addition to this the King asked him where he had come from, and said he should like very much to see him again. He replied that he should be happy to be favoured with the opportunity of visiting his Majesty, and added that, as was always the custom with him on approaching men of rank, he had brought with him, and begged his Majesty's acceptance of, some small presents. The King said, "Let me see them." The first of the presents shown him was a revolver pistol. This the King took up and played with in the most ridiculous manner, for he had no idea of its use. At the end of our interview he said, "It is now getting dark; would you like some liquor? What will you take?" and said that he would send something to-morrow. He appointed the following day for a second visit, but subsequently said, "Oh no, that day won't do, because I am going to show all these pretty things that you have given me to my mother the Queen Dowager and all my officers." The following day was accordingly fixed. He visited the King not only upon that but upon almost every other day during his stay. The King took a great fancy to shooting, and several shooting parties were arranged, the King having practised beforehand by shooting the cows in his yard. The shooting parties pleased the King amazingly; they were accompanied by bands of musicians—and very good bands too they were—by officers, and by many of his wives. The arrangement of the procession was a somewhat difficult affair, and it was arranged that the Englishman should go before the King. To this, however, he (Captain Speke) objected, on the ground that he never went before royalty. The King was in some difficulty, because, by placing him after him, he would be between his Majesty and his wives. The point, however, was conceded, and he found that the best place in the procession, for the women were as amiable as amiable could be. Whenever any vulture or other bird flew up the King shouted out, "Now, then, shoot that," and he was kept firing as fast as he could, and each time that a bird was knocked over the King and his officers and his ladies clapped their hands and shouted and danced in the most extraordinary and ridiculous manner. The speaker next referred to his visit to Murchison Creek—a beautiful piece of water on the north side of the Lake Nyanza, one of the most lovely spots which he had met with in all Africa, and which he had named after the man who had been the first to take him in hand in the matter of the expedition. At this spot he found as many as fifty boats, all well made and well manned. It was his wish to go northwards, and make his way thence for the lake, following the whole course of the Nile. Everybody was, however, opposed to this plan; and the Queen Mother, who was greatly attached to him, and was a very good sort of creature in her way, sought to dissuade him on the ground of some great festivities that were to come off on the coronation of her son—for as yet he was but the Prince Elect. Some very mysterious things take place at the coronation of a King. As each Sovereign has so many wives there is a large number of children, and on the accession of a new King all his brothers and sisters are killed off, with the exception of two, who are kindly reserved against any contingency that may happen. The King was willing to allow him to proceed northward, for he said the "Englishmen live in the north, and it is from the north that Africa must be opened up." Starting on his journey, Captain Speke told the meeting how he was opposed by the natives of Usoca, how boats filled with armed men threatened to impede their progress, and how a complete victory was gained by the discharge of one or two rifles, the effect of which spread the utmost consternation among the native warriors. The lateness of the hour prevented the gallant Captain from detailing any more of the interesting incidents of his journey, and he resumed his seat amid much cheering.

Captain Grant's most interesting statement made at the meeting of the Ethnological Society possesses as much geographical importance as his companion's. By the aid of this description and our Map, the reader may follow the route of the explorers almost step by step. Dividing the country traversed into districts marked by obvious physical peculiarities, and following the divisions previously laid down by Captain Speke, Captain Grant proceeded to describe it as consisting of—

1. The tract from the seashore to the hills, called Uzaramo.
2. The hills and elevated valleys flanking the interior plateau, called Usagara.
3. The flat, half-desert country of Ugogo.
4. The fertile, rolling country of Unyamwezi, whose rises are covered with forest (free from underwood), and the valleys with grass. It is partly pastoral, partly agricultural.
5. Uzinza, much more wild and broken, not less populous than the last country, and equally pastoral and agricultural.
6. Karagweh, a land of grassy, treeless hills, moulded in graceful sweeps, reminding one of the English lakes, especially the hills about Grasmere.
7. Uganda is a garden, eminently productive, intersected by miry dells, that bear a mass of nearly impenetrable thickets, and dotted with low table-topped hills. Here the rainfall extends over the whole year.
8. Unyoro is a sad falling off from Uganda. It is flat, except that conical hills are occasionally seen, and is covered either by forests, uninteresting grassy plateaus, or dreary marshes. The north-east part, which we alone saw, was comparatively little populated.
9. The country between Unyoro and the Aswa River consists of alternations of "down" forest, marsh, and grassy plains; here and there are outlines of granite rocks. It is deficient in any marked feature.
10. Aswa to the neighbourhood of Gondokoro, including Madi and Bari, consisting of broken hill and cultivation.
11. Gondokoro onwards is one vast, uninteresting plain.

Uzaramo embraces from the seashore to Usagara an elevation of probably 300 ft., scarcely perceptible from the gentle undulations of the ground; one third is under cultivation, the rest is of wood and forest of a moderate growth, parklike, with glades for deer, or plains. Rivulets supply excellent iron-tinted water, and the green valleys and hills, with herds of well-formed cattle, reminded the Hottentots we had with us of the country where they had fought against the Kaffirs. The third country of Ogogo is flat, plateau, and desert-looking, quite an ostrich country, about twenty odd marches from east to west, with an elevation of 3000 ft. to 4000 ft. above the sea-level. Rich crops and interesting verdure are produced if the periodical rains are abundant. Next comes the beautiful fertile rolling country of the land of the moon, Unyamwezi, with plenty of water and supplies abundant. The heights and ridges generally end in abrupt bursts of rock, or rounded masses, lying one on the top of the other. The broad valleys yield sweet pasture for the plump cattle, which are seen in herds of 200 to 300. Zebra and variety of antelope wander over the Unyamwezi forest, which has innumerable varieties of tall thin-trunked trees and shrubs, all having their uses, no brushwood, and scanty grazing. I thought the flora presented a decided change in this country; and, for Africa, the people seemed to adopt a tidy, capital system of farming. Karagweh, a delightful country of hills, with a beautiful lake on its western border, and a climate throughout the year equal to the summer of England. Strange to say, no trees clothe its hills; all are desolate and naked, so that their graceful forms and swells can be traced by the eye to perfection. Grasses three feet high cover their tops and sides, but hardly sufficiently high to hide the mountain antelope seen on the heights. A few stunted acacia and splintered rock show here and there. It is so hilly that camping ground can only be had after a search for level ground. Generally speaking, a banana or plantain garden was our shelter for the day. During the march, along the often rough and rocky path which winds with the valleys, or climbs over low green grassy ranges, one is often refreshed by abundance of sweet water from rapid-running rivulets. Cattle are never seen upon the hills, which all seem capable of profitable cultivation—they are trotted down hill from the King's palace to low valley ground, where the pasture is richer. The flora is extensive and interesting—the products English peas, beans, sugar-cane, banana, tomato, tobacco, &c., all abundant but extravagant—the country and its Royal family one looks back to with delight. Uganda one cannot mention but with enthusiasm. It is the garden of Equatorial Africa; continually being watered, its tropical, perpetual luxuriance is most marvellous; there is nothing that will not grow. The most noble of trees are in the dark dells; acres upon acres of the banana, which is the staple food of the inhabitants; coffee (chewed as a stimulant) to any amount; the date grows wild; while, although the King is cruel, despotic, and harsh, people feel and take a pride in their country, as they can have food and delicious wine in any quantity by possessing a small garden. There is a great peculiarity about the Uganda hills. Stand on any one of them, all around you is a sea of table-topped molehills 300 ft. or 400 ft. above the valleys, whose watercourses below are concealed by the densest, sombre tree foliage, which sweeps up the gulleys and valleys. Outside this impenetrable thicket, on the hill slopes, are the dwellings, plantain groves, and cultivations of the people, sometimes miles apart. Above, the hillsides are acantily dotted with trees, occasional red clay antheaps, and boulders; while the skyline vegetation is of three or four feet waving grasses. Towards the north, adjoining, is the next country of Unyoro. The white hornless cattle were quite a sight, browsing in hundreds on the beautiful meadow pasture, all looking so sleek and satisfied. Unyoro presents a great contrast to Uganda; it is of immense size. We merely crossed a corner of it which was thinly inhabited with a spiritless, ill-dressed people, who paid little or no attention to the cultivation of the banana, subsisting chiefly on grain and the sweet potato. Scarcely a hill is to be seen. You pass through interminable forests of trees and grasses, where it is almost impossible to get a shot, and which are often tall enough to hide the elephant. You do not meet with dwellings except every four and seven miles, where the ground and forest are partly cleared, and plots of beans, sweet potato, or a few bananas appear round the little unfenced huts. On one occasion a dreary ten-mile long plateau of grass without a tree, and having marshes lying on its cold soil, was crossed on approaching the King's head-quarters. Nothing could be more cheerless, and we were right glad to leave the country of Unyoro. We shall club the 9th, 10th, and 11th districts together, and mention them briefly as the countries between Unyoro and Gondokoro. Here an entirely new language was met with, and the races—all naked—consisted of the Kidi, Gani, Nadi, and Bari. Below the wild falls of Karuma, the White Nile—a noble stream, reminding one of some of our rockiest Scotch rivers, only twice the size—was ferried over in rickety canoes. Our cattle (for provision) were swum across to the right bank with difficulty in twos and fours by having a rope tied to their heads. Having an escort of forty spearsmen from Unyoro, we entered upon the uninhabited forest of Kidi, escaped attack, and took seven days, over treeless downs, along pathways and gutters hidden by grasses 8ft. high, to reach the habitations of Gani. Leaving this, after two days we made for De Bono's ivory dépôt, in sight some twenty-five miles away. The country on the way was populous, and our loads were carried by the people from village to village. Beer and milk were constantly presented; more, probably, from fear than love. We were now in the Madi country. From this, with many delays on the way, caused by being obliged to march in a strong body, from the hostile feelings of the Bari people, we marched along with the Turks (having 200 loads of ivory with them, all carried by the inhabitants) through the Bari people to Gondokoro. The country was beautiful; green undulating parks, dotted with gracefully-shaped tamarind and other trees, intersected by rocky rivulets the whole way. It



THE ROUTE EXPLORED BY CAPTAINS SPEKE AND GRANT, SHOWING THE OUTFALL OF THE NILE FROM THE VICTORIA NYANZA LAKE.—FROM A MAP PUBLISHED BY MR. STANFORD, OF CHARING-CROSS.

was only on sighting Gondokoro, down in a boundless plain of light soil and euphorbia bush, that we entered upon an ugly country, our whole journey having been full of interest, with rare exceptions. Looking back on the many tribes we had passed through, one apparently identical race of negro overspread the entire land from the coast to Gondokoro, and onwards down the Nile—that is to say, if you leave out their tribal marks, their dress and their dialect, it would, I believe, be impossible to distinguish the natives of one part from those of another. As regards the general populousness of the countries we have passed through, I may state that throughout the whole journey there were but three or four places where we had to carry our provisions for more than six days; we almost invariably got provisions from day to day. The country was too populous to admit of any large amount of game. Those mixtures of species and herds, as seen by Dr. Livingstone and other South African travellers, were seldom or never seen, and in many forests we might range from morn till noon and only see two or three antelopes. The largest herd of elephants we came across (say 300 in Unyoro) were all browsing and amusing themselves like cows in a park. Firing did not alarm them in the least till after some were wounded. Guns had never before been used against them, the natives using pitfalls to secure their ivories. Lions were constantly heard; but chiefly in the countries where many cattle were grazing. They and different species of leopard are trapped by crushing them under logs of wood. Zebra, giraffe, and buffalo, and a variety of antelope were shot; also hare, partridge, floriken, &c. We now proceed to notice the cultivation of the countries traversed. Each head of an ordinary negro family cultivates holcus, sweet potato, pulse, Indian corn, and other tropical products for his own family's consumption only. No plough or beast of burden is in the country. A horse once reached Karagweh. Everything is done, after the rains have softened the soil, by means of a long or short handled hoe. Women are oftener seen at this work than men, whose duty it is, in the Land of the Moon, to thrash the corn with long rackets. The Wahuma (and a sub-tribe, Watusi) are purely pastoral, subsisting chiefly on milk, covering themselves, with butter, dressing in cows'-skins, seldom touching any grain; but they drink and get noisy on the banana wine, while meat some amongst them will merely suck, never swallowing it. They smoke tobacco universally, Wahuma and all. There is no law in the land between the coast and the great Wahuma kingdoms. The sultans and head men appointed by them over their villages settle all witchcraft and any crime cases where they can. Culprits are speared, have their throats cut, bound, tortured, put in the stocks, or fined. Crime, such as theft, is rarer than in England. Never had we a look on one of our boxes or goods. The Wahuma Kings have bands and musical instruments in many varieties, more remarkable for noise than harmony. The song of the Unyamwezi rings in the woods as he carries his load along. Their choruses by moonlight have almost an operatic effect. As shooters with bows and arrows they can put an arrow into a leaf at 30 or 40 yards, and they can send an arrow to a distance of 150 yards. The bows of Karagweh are six feet high and very beautiful, strung with the hock sinew of a cow. All are good archers, as they practise with bolts at little birds from their youth. Iron is found all over the country, copper from the southern end of the Tanganika. Brass is brought from the coast. These three metals are welded into necklets by the Waganda, making each metal appear separately. Smelting and all ironwork is done outside the villages. Three or four bellows, worked with both hands by a little boy, all pointing to a common centre, soon, with charcoal, fuse the material. Wire they can draw out to any degree of fineness. This they convert, with giraffe or cow tails' hair inside, into anklets for both men and women. Weaving is very backward; one loom in every eighth village was all that was observed in the lower provinces. The clothes made are of the coarsest and heaviest material, all of cotton. Bark cloths and deerskins, sewn so beautifully together in the kingdom countries, are prized very much more. The needles used are of iron, but differently made to ours. Silver and gold, coal and limestone, are unknown in the countries traversed. Pottery is made by the hand, the potter's wheel being unknown. Some races, as the Wangow, can glaze the ware. Wicker, grass, or bamboo baskets, trays, drinking-cups, &c., are made everywhere over the country, the patterns varying. Stools are made out of a solid piece of the

Digitized by Google

lignum vitæ. Mortars, drums, quivers, canoes, &c., are roughly cut out of a solid log of softer wood. A large quantity of coarse, dark-coloured salt is obtained by the people of the Land of the Moon by burning certain flag rushes or plants to ashes and then extracting it by evaporation. Others take it from the soil. Nowhere did we ever procure it good or clean till reaching Ungoro.

We have been further favoured by Captain Speke with the following description of the sketches, made by Captain Grant, from which our Engravings have been taken. "The View (page 9) of the Little Windermere," he writes, "was taken close to Rumanikas Palace, in Karagwé, on a spur of the Mountains of the Moon, 55,000 ft. above the sea level, and at a time when the sky was clear enough to show the high Infumbiro cones in Ruanda, estimated at 10,000 ft., and supposed to be the most northern part of the water-parting which separates the northern from the southern rivers in Africa." Of the other Engraving (p. 8) Captain Speke writes:—"At the Ripon falls, which separate Uganda from Ugogo, the Nile takes its rise in the Victoria Nyanza, led off from the great basin of the lake by the Napoleon Channel. The falls are one hundred and fifty yards across and twelve feet deep, full of fish, which the Waganda and Wasoga kill both with hook and spear."

Speaking of those of his native retinue who were photographed at Cairo (p. 5), Captain Speke remarks:—"They are the residue of 120 negroes who took service with me to go through the journey from Zanzibar to Egypt. They have been sent back viâ Aden to Zanzibar, where they will each receive a free man's garden to live upon, dowry money to marry on, and one year's additional pay to set themselves up in life; while the deserters have been sentenced to transportation on an island of the Victoria Nyanza until such time as I may return again to Uganda to release them."

Bombay, the Captain of the "Faithfuls," and Mabruk, his brother, accompanied me as servants during the whole time I was engaged in Africa, when I first discovered the Victoria Nyanza, and had they not then gained confidence in me I believe I should have been deserted by every man on this occasion.

Captain Grant also, at the Ethnological Society, gave the following general description of the retinue of which they formed part:—

The men we travelled with were freed men from Zanzibar. These men are chiefly born in central Equatorial Africa, where they are captured, as children or in manhood, during village fights, after which they, by sale or barter, become the property of the Arabs of Zanzibar, whose bazaars are full of them and their brethren who may have been freed from slavery by the death of their masters. Generally speaking, their complexion was a coffee-brown, with teeth and skin markings according to the taste and fancy of the clan or sub-clan they belonged to. No general description can be given of their features, though the receding forehead, prominent muzzle, thick lip, bridgeless nose, well-shaped dark eye, were common to most—exceptions showed viciously thrown back ears, enormous gapes, diminutive eyes, fleshy breasts and buttocks; some with even the busts of women, and others, with a remarkable mobility of the upper lip, like a monkey when excited. Their average height is 5 ft. 6 in. or 7 in. When in full condition they are hulking, thick-set, strong, frank, intelligent-looking fellows, with a manly bearing; but, when sitting, adopt the laziest and most lolling of attitudes. Notwithstanding their healthy look, they are liable to fever, ophthalmia, and other native complaints, die off earlier at a greater ratio, I believe, from desertion in old age, and want of proper care and treatment. In dress or cleanliness they are not particular. Starting from Zanzibar as Arab "foe's," their fineries soon became rags, and they wore whatever they could pick up. Not content with the Tower rifle, to satisfy their caprice they would burden themselves with spears, bows and arrows, &c., decked in red rags. Never were there more joyous, noisy, likeable, laughing creatures for three months or so, but after this they gave one all kinds of annoyances, becoming sulky, capricious, and full of childish complaints, taking duty just or not as they pleased, refusing to march from fear, want of ammunition, or laziness; halting in the middle of a march because they thought they had done enough; stealing your property to buy themselves provisions, when master had little or none; fighting and quarrelling in your presence; listening to no remonstrance on your part; disobedience of orders, falsehood, &c. On the other hand, no men in the world are better suited for such a journey; they carried loads, arms, cut roads, made huts, gathered firewood, were our cooks (such as they were), ate anything, literally; mended your coat, kept the camp in an uproar with drums, bells, guitars, dances, and shouts. Such jacks-of-all-trades make bad servants and valets—they soon destroy your property. Everything they jumble into one bag; and, truly African-like, if nothing better is at hand, they'll make a lever of your best rifle to carry their loads. Another peculiarity of the negro, in distinction to the Indian, is, that one's shoes are always placed reversed before you; your umbrella always rests on its handle; he eats with your spoons, cooks in your pots, beats the drum on them, drinks water out of your teapot spout; also, in your very presence, he squirts away at tobacco, mimics you, or good-humouredly serenades you with complimentary songs, perhaps only the very moment after he's got into mischief. One in fifty could read and write in Arabic and the Kiswahili language; the others kept count by knots tied in a string, or nicks cut in a stick. None were regular mechanics, though all had a high idea of their own capabilities. A few could build a house—said they could mend a gun, or tailor; others had been to sea, which they are passionately fond of. Sixteen out of fifty were married, having left their wives behind during the journey, and originally purchased them of their father. Polygamy is the rule amongst them. Religion they have none, knowing nothing of a future state. They believe in transmigration of souls. Although converted when young by their Arab masters to Islamism, all they ever learn of it is to repeat an Arabic exclamation on sneezing, &c., killing a cow, goat, or fowl, or repeating portions of prayer in Arabic, snatches of songs, numerals, &c., which they learn from one another by rhyming them at night over the fire, or while lounging in bed.

The women represented in our Engraving (p. 5) are the wives of Bombay and Frij, who accompanied the expedition.

Music (p. 17), Captain Speke writes, has ever been a constant pastime in the Courts of Uganda. King Intesa of Uganda excels both on the drum and whistle-flute. Our Engraving of the King of Uganda (page 20) represents his sable Majesty attended by one of his pages, and the fashion in which he is approached by his subjects.

With reference to the Palace Guards (p. 20), we are informed on the same authority that they serve one month at a time, and are fed on beef and plantain squash brought to them by the King's pages, and that the scene which we have engraved is of daily occurrence.

The negro boys (whose portraits we give on page 21, from photographs by Mayall) have been brought from Zanzibar by Colonel Rigby, H.B.M. Consul, with a view to their being educated in England. They belong to the Wahujow tribe, the most docile and intelligent of all the negroes of Eastern Africa. We have been favoured with an account of them from Colonel Rigby, from which we learn that the elder has been christened George Francis Tembo, and belongs to the great Irahow tribe, which occupies a vast extent of country between Lake Nyassa and the coast; the younger, who has not yet been baptised, retains the name, conferred upon him at his emancipation from slavery, of "Tippoo Sultan." He comes from the Marina or coast tribes. Both these boys were rescued from slavery at Zanzibar, by Colonel Rigby's interposition, about four years ago.

Little known as Zanzibar is to the world at large, it has become remarkable, we learn from Colonel Rigby, not only as the general starting-point for travellers about to explore Central Africa, but as a great dépôt of trade. The city has rapidly increased of late years, and contains now 60,000 inhabitants. The island bearing the same name is of extreme fertility and picturesqueness. The port is the chief mart in the world for ivory, gum, copal, and cloves. Consuls from Great Britain, France, and the United States, and the Hanseatic Republics are stationed there; and its trade amounts to nearly two millions per annum. The clove-tree was introduced into the island from the Mauritius about thirty years ago, and has thriven so well that the annual production reaches five million pounds, representing a money value of £60,000. The gum copal is dug up near the coast of the mainland, nearly a million pounds of this valuable gum being annually exported, the value of which is about £40,000. Although this trade has now been carried on for some years, its production is still a vexed question. It is generally supposed to be the fossil gum of a tree; but the natives of the country and the Indian merchants contend that it is a resinous deposit of the soil, and, in proof of their theory, represent that it is chiefly found after heavy rains, and that fresh deposits are often discovered in small pits that have already been cleared out. On the island of Zanzibar, where it is found, barren spots are selected and a number of small pits dug. After heavy rains the loose earth in them is turned over, and the copal found in small pieces.

Of the ivory, which is brought from all parts of the interior of Africa, as many as half a million pounds are exported annually from Zanzibar, the value of which is £150,000 sterling. A curious trade which has lately sprung up at Zanzibar is the export of cowrie shells, which are used as a circulating medium by the tribes on the west coast of Africa; about eight million pounds, of the value of £50,000 sterling, leaving the port annually.

But Zanzibar is unfortunately famous for exports of a far more obnoxious kind. The traffic in slaves is carried on there to a fearful extent. From twenty to twenty-five thousand poor creatures of both sexes, the majority little children, are brought annually from the interior of Africa and sold by public auction in the slave markets of Zanzibar. The average price is £2 for a boy or girl, and £3 10s. for an adult, male or female.

Their value in the interior, whence they are brought, is of course far less, so many are the difficulties of their transport and so great is the rate of mortality. Last year slaves were bought readily in the interior at the rate of ten for one bullock, being about 5 dols., or 22s., so that human beings of an intelligent, industrious race were actually purchased for 2s. 2½d. each. Many are brought from so far (for as the districts nearer the coast become depopulated the slave hunts extend each year further inland) that their journey to the coast occupies from three to six months. The arrival of boatloads of them is the most pitiable sight imaginable. Naked, packed as close as possible in a squatting posture in open boats, exposed to wind and rain, and with just sufficient coarse uncooked millet given them to make existence possible, many die on the way or drop dead from exhaustion on being landed at their journey's end. It is estimated that for every slave that reaches Zanzibar alive three die upon the journey; and, when it is considered that from ten to fifteen thousand slaves are annually exported from the east coast of Africa to the Arabian coast and the Persian Gulf, to say nothing of those shipped to Cuba and the French colonies, some idea may be formed of the misery and loss of life caused by this infamous traffic.

Our Portrait of Captain Speke is taken from a photograph by Williams; that of Captain Grant from a photograph by Mayall.

NICE.

(From a Correspondent.)

ON the completion of the railroad the journey from Paris to Nice by express will occupy twenty-one hours. The increased facilities of access, together with a fuller appreciation of its advantages, have caused Nice to overflow with visitors from various countries during the last two or three seasons, of which circumstance hotel and lodging-house keepers have not been slow to avail themselves. Hence the complaints of excessive charge on their part which have been so justly made. New quarters have, however, arisen of late, and much building is in progress, which, together with the additional hotel accommodation in prospect, will, doubtless, go far towards meeting the requirements of visitors for lodging at a less exorbitant rate, the price of apartments having nearly doubled since the annexation to France.

For persons requiring a mild climate, who wish to avoid the dulness of small places, or, on the other hand, the movement and excitement of a capital, no place of winter resort presents, in the opinion of the writer, fewer drawbacks or more attractions than Nice. Situate on the shore of a beautiful bay, the adjacent plain, abounding in orange and fruit gardens, and dotted here and there with palm-trees, with a delightful country in the background, bounded by a semicircle of olive-clad hills, intersected by richly-wooded valleys, enjoying moreover, as the rule, sunshine and an almost cloudless sky, Nice offers every inducement, both to people in health and to valetudinarians, for being much in the open air; though, as the transitions of temperature to which all sunny localities are subject on passing from places exposed to the sun's influence to the shade are sudden and sometimes very considerable, ordinary precaution is required to guard against the inconveniences that may result therefrom. Relatively cold and high winds do occasionally prevail in spring, and the dust is then felt to be a serious inconvenience; but they are mostly restricted to the coast line, and may almost always be avoided by making excursions into the interior of the country, which offers many sufficiently sheltered situations for invalids. There are, moreover, abundant social recreative resources—much evening society, an Italian Opera, a theatre, two clubs, frequent concerts given by artists of repute, well-supplied libraries, &c. But these are to be met with at all much-frequented places, and the chief attractions of Nice consist in the beauty and rich vegetation of its environs, and its bracing inspiriting atmosphere. It is seldom that contemplated excursions are prevented by the occurrence of bad weather, the rain mostly falling at stated seasons (autumn and spring). According to the tables in Dr. Lee's work, "Nice and its Climate," the average number of days on which rain falls in the winter season is only twenty-five, being less than half that presented by some other frequented winter places—viz., Madeira, fifty-five; Rome, fifty-eight; Palermo, sixty-five; Florence, fifty-seven. The winter temperature is somewhat higher than that of either Rome or Naples, notwithstanding that Nice lies so much more to the north than those cities. It is, however, more completely sheltered by hills, and has a direct exposure to the south.

Though dearer as a residence Nice has greatly improved since the annexation. More attention is paid to matters of hygiene; the streets are clean and well lighted, the police is well regulated, the crowd of beggars that formerly infested the place has disappeared, new roads have been made, the Promenade des Anglais is now one of the finest marine parades in Europe, and other material improvements are contemplated.

WILLS AND BEQUESTS.

The will of the Right Hon. Jane Elizabeth, Dowager Viscountess Andover, was proved in the London Court on the 2nd inst. Her Ladyship was the relict of Admiral Sir Henry Digby, G.C.B., who died in 1842. Her first husband, to whom she was married in 1796, was Charles Viscount Andover (eldest son of the Earl of Suffolk), who died in 1800. Her Ladyship was the daughter of the first Earl of Leicester. The will bears date Feb. 18, 1861, wherein she appoints her son, the Right Hon. Edward St. Vincent, Lord Digby, sole executor, to whom probate was granted, the personal property being sworn under £16,000. The testatrix appoints her son, Lord Digby, residuary legatee. His Lordship succeeded to the barony on the death of his father's cousin, the late Earl of Digby, in 1856. Viscountess Andover, the testatrix, has bequeathed her property amongst her children, leaving to her daughter Jane, in addition to £3000 under settlement, a further sum of £2000, and to her two younger sons legacies of £8000, appointing Lord Digby residuary legatee.

The will of the Most Noble Henry Fitzroy, Duke of Grafton, of Wakefield Lodge, Northamptonshire; Euston Hall, Thetford, Suffolk; and of Clarges-street, Piccadilly, was proved in her Majesty's Court of Probate by the executors—the Most Noble William Henry, Duke of Grafton, the son; and George Fitzroy, Esq., of Grafton Regis, Northamptonshire. The personalty was sworn under £160,000. His Grace executed his will in 1853, and added a codicil thereto in 1857; and died in March last, at the age of seventy-three. A provision of £4000 is made for his Duchess, also annuities for his daughter, Lady Mary Phipps, wife of the Hon. and Rev. Augustus Phipps, Chaplain in Ordinary to the Queen and Rector of Euston with Barnham, and his daughter Lady Maria Louisa, wife of Colonel the Hon. Edward G. D. Pennant, and sums of £10,000 and £8000 are left to their children. To his younger sons he has bequeathed pecuniary legacies. His real estate and the residue of his personal estate he leaves to his eldest son, the present Duke of Grafton, heretofore Earl of Euston.

The will of John Gully, Esq., formerly of Marwell Hall, Southampton; afterwards of Cocken Hall, Durham; and late of The Bailey, in the city of Durham, was proved, in the London Court, under £70,000 personalty—the executors nominated being Mrs. Mary Gully, his relict; Henry Hill, Esq., of Eaton-terrace, Pimlico; Thomas Belk, Esq., of Hartlepool (the testator's son-in-law); and William Armstrong, Esq., of Erngate Grange, Durham. The will bears date 1860, and a codicil February, 1862. The dispositions are confined to the members of his family. Amongst the specific bequests is one of a piece of plate presented to the testator by the burgesses of the borough of Pontefract, which he bequeaths to his son Richard. Besides other provision made for his wife, he secures to her an annuity of £560, and bequeaths to her an immediate legacy of £600, the selection of twenty dozen of wine, as well as some furniture and a carriage. To his daughter Eve he leaves a table inlaid with wood, from India and China. There are small annuities to a brother and sister. His real estate and the residue of the personalty he bequeaths equally amongst all his children.

The *Salut Public* of Lyons congratulates the fair sex on the pearl-fishery being this year exceedingly productive, a million and a half of pearls having been found in nine millions of oysters.

The Peerless, 1005 tons, belonging to Messrs. Thompson and Co., London, sailed from Birkenhead, on the 23rd ult., for Sydney, New South Wales with the following emigrants:—30 married couples, 132 single men, 131 single women, and 53 children—in all 376 souls, under the care of Charles H. Graham, Esq., M.D., assisted by Miss Dickson, matron.

The Academy of Sciences of Berlin, through the official intervention of the King, has conferred upon Sir Charles Lyell the honour of Chevalier of the Order of Merit in Science and Art. The number of foreign knights of this order is limited to thirty; and among our countrymen, previously elected, are Sir Charles Lyell, Sir John Herschel, Professor Faraday, Professor Owen, Sir David Brewster, Sir Henry Rawlinson, and General Sabine.

COLUMN FOR THE CURIOUS.

The miscalled "restoration" of the Tower of London, by which many of its archæological features have been obliterated, has long been a subject of general regret; but, from the recent visit of a party of members of the Ecclesiological Society to the citadel, we are happy to find that more attention has lately been paid than hitherto to its architectural characteristics. The Norman chapel in the White Tower has been restored carefully: it has a semicircular apse and a large triforium without a clerestory, and is vaulted with stone; it was begun by Bishop Gundulph in 1078, and it is pointed, to show that Norman architecture was not then in a very advanced state, the joints being somewhat large, and the openings without mouldings; the cushion capitals show the tau as an ornament in the centre; one capital on each side, at the square end of the chapel, has a little ornamentation; a new pavement has been laid of cream-coloured tile, with incised ornament. This restoration has been ably conducted by Mr. Salvin. The new Armouries in the White Tower were recently engraved in our Journal. One of the most ingenious arrangements of the arms, says the *Builder*, is shown in the facia of an opening in the ceiling, wherein the gunlocks and bent ramrods are so used as to produce all the effect of a piece of hammered iron scrollwork. It is many years since the Armoury absurdities at the Tower were first exposed. Much reform has been made, yet more remains to be done; the collection should not be a mere show, but should furnish methodical instruction. The Beauchamp Tower is altogether the most satisfactory work: it has been restored both inside and outside. It is a curious specimen of the military architecture of the twelfth and thirteenth centuries; the inscriptions, memorials, and devices cut on the walls of the several rooms and cells have been cleared of whitewash, and can now be read and deciphered. This is also the work of Mr. Salvin; and lithographed copies of the records in stone were published by W. R. Dick, in 1854. Some time after, little care was taken of the records themselves, but they are now open to visitors; Sir Walter Raleigh's prison-lodging is thought to have been the second and third stories of this tower. The Lieutenant's lodgings, with their picturesque gables, remain, though disfigured by modern mending; but the Church of St. Peter, nearly opposite the door of which is the place of execution, denoted by a large oval of dark flints, is in a perilous state of neglect; yet, of all the burial-places in England, this is the most interesting historical depositary. Nor do we admire the new barracks, or the memorial statue, or the new Jewel Office, neither of which accords with the place. The Salt (petre) Tower has been rebuilt in the original form, supposed to have been of the reign of William Rufus. Hereabout was the Royal Palace; the site is now occupied by ordnance wharves and stores. It is said that no view exists of this ancient home of our Sovereigns to the time of Charles II. The quiet gloom of the Traitors' Gate is now broken by the blatant noise of steam machinery for hoisting and packing war weapons; but the old grim archway and its portcullis remain. These are but a few notes of the recent visit of inspection; the Ecclesiological Society's report will, doubtless, give the proceedings in detail. Notwithstanding the numerous landmarks of our history, which have been swept away within the Tower walls, here and there ancient features remain to keep in memory the many innocent victims murdered here in times of despotism and tyranny, and which "pass like dark phantoms before the wind."

St. Mary Woolnoth, the best of Hawksmoor's churches, is saved, although it had been some time *priced* for sale. At the recent vestry meeting, the Lord Mayor, as a parishioner by his tenancy of the Mansion House, ably supported the opposition to the "amalgamation" scheme, and an amendment rejecting it was carried unanimously. This spot has been the site of a Christian church from a very early period, and previously of a Pagan temple. The church was rebuilt early in the fifteenth century; it was much injured in the Great Fire, and rebuilt, as we now see it, in 1716. The interior is on the model of a Roman atrium, and is well arranged and ornamented; it has one of Schmydt's organs. The Rev. John Newton, the friend of Cowper, was twenty-eight years Rector of this church, and is buried here; and, under the present ministration, it has one of the best congregations in the City. In the Report of the Ecclesiological Society, just issued, the committee "fear that the scheme of destroying some of the City churches is not unlikely to be put into operation, in spite of all opposition; but it is satisfactory to have to record that, within the last few days, the parishioners have successfully resisted a scheme put forward under the auspices of the Bishop of London's Act for the demolition of the remarkable church of St. Mary Woolnoth (Hawkmoor's chef-d'œuvre), which it was proposed to destroy for the convenience of the General Post Office."

The ecclesiastical custom of a new Rector "tolling himself in," or, legally speaking, taking up "the livery of possession," was performed on the 26th ult., by the Rev. William Rogers, M.A., recently appointed to the rectory of St. Botolph, Bishopsgate. This custom is exceedingly ancient. Before the Reformation, no layman was allowed to be a "ringer," and, it is said, the ecclesiastics were obliged to perform the office in their surplices. The form of the ceremony is as follows:—The Rector is met at the door of the church by the trustees of the church property belonging to the parish, and the parochial guardians, the churchwardens. Having obtained possession of the keys of the church, the new Rector unlocks the doors, and then, having closed them, he proceeds alone to the belfry, and for a few minutes tolls one of the bells, thus complying with the custom imposed by the ordinances of the Church, by announcing to the parishioners at large his acceptance of the rectorship and his possession of the church property. The "reading himself in" took place on the following Sunday. The above induction custom seems to imply the general authority of the Rector over the peal of bells; and there is an old saying, that the number of strokes given on the occasion will correspond with the years the incumbent is to hold the living.

Leicester and Richard III. are associated in traditional history, which the Corporation are about to hand down with a newly-built bridge, in two inscriptions:—1. "This bridge was erected by the Corporation of Leicester, in the mayoralty of S. Viccars, Esq., A.D. 1862, on the site of the ancient Bow Bridge, over which King Richard III. passed, at the head of his army, to the Battle of Bosworth Field. August, 1485. Joseph Whetstone, chairman of Highway Committee; S. Stone, Town Clerk; E. S. Stephens, Borough Surveyor." The plate on the opposite side will bear the legend in verse, according to Speed's "History of Great Britain":—

Upon this bridge [as tradition hath
Delivered] stood a stone of some height,
Against which King Richard, as he passed
Towards Bosworth, by chance struck his spur,
And against the same stone, as he was brought
Back, hanging by the horse's side, his head
Was dashed and broken, as a wise woman
[Forsooth] had *foretold*, who, before Richard's
Going to battle, being asked as to his success,
Said that where his spur struck, his head
Should be broken.

Lady Llanover, in her piquant notes to the "Autobiography, &c., of Mrs. Delany," lately published, thus notices two old localities. The first is—"*Blacklands* is in the Marlborough-road, Chelsea, formerly called Blacklands-lane. Bowack, in his 'Antiquities of Middlesex' (1700), says:—'William Lord Cheyne, Viscount Newhaven in Scotland, has two good seats in Chelsea. The first is the mansion-house, where Queen Elizabeth was nursed, east end of the town, near the Thames. The other some distance north of the town, called Blacklands House, both (1705) let to French boarding-schools.' It is now (1860) a lunatic asylum, and adjoins the old manor-house at Chelsea, which forms part of the premises of Messrs. Scott and Cuthbertson (paper-manufacturers), called 'Whitelands.' Blacklands has still a good garden and old iron gates; and the centre of the house is evidently part of the original structure."

The *City Press* of the 27th ult. points attention to this interesting fact:—"The very spot upon which now stand, in Earl-street, Blackfriars, the premises of the British and Foreign Bible Society, is the exact site of the premises in which the committee of six of the forty-seven "distinguished scholars" ordered by James I. to furnish our present translation of the Bible used to meet, in the early part of the seventeenth century, to review the whole work, and which was finally revised there by Dr. Smith and Dr. Bilson, Bishop of Winchester, then approved of by the King—himself no mean scholar—and printed in the year 1611.

STRAWBERRY-HILL.
A BAZAAR
will be held, by the kind permission of
FRANCES, COUNTESS OF WALDEGRAVE,
in the GARDENS of STRAWBERRY-HILL, on WEDNESDAY, the 15th, and THURSDAY, the 16th of JULY, in aid of the Fund for the enlargement of
HOLY TRINITY CHURCH, TWICKENHAM.
LIST OF PATRONESSES.

Maria, Marchioness of Ailesbury,	The Lady Agnes Jolliffe,
The Countess of Shaftesbury,	The Lady Mary Ashwright,
Frances, Countess of Waldegrave,	The Lady Churchill,
Countess Dowager Spencer,	The Lady Auckland,
The Countess of Bamborough,	The Lady Mayoress,
The Countess of Strafford,	Lady Clay,
The Countess Russell,	Mrs. Donnithorne,
The Lady Alice Peel,	Mrs. Young,
The Viscountess Torrington,	Mrs T. Twining,
The Viscountess Sydney,	Mrs. Franks,
The Viscountess Enfield,	

The following Ladies have kindly consented to hold stalls:—

The Viscountess Enfield,	Mrs. Donnithorne,
The Lady Mary Arkwright,	Mrs. T. Twining,
The Lady Churchill,	and other ladies.

Frances, Countess of Waldegrave, will preside at the Refreshment Stall.
Military Bands will be in attendance each day.
Tickets of admission may be had of the principal Musicsellers in London; and of the following members of the committee:—
Colonel Wise, Orchard Lodge, Twickenham; E. H. Donnithorne, Esq., Colne Lodge, Twickenham; Geo. Roffey, Esq., Twickenham; F. H. De la Motte, Esq., 8, Belmont Villas; G. H. Bohn, Esq., Northend House, Twickenham; John May, Esq., Twickenham. Persons coming from Richmond by water can land at the Boathouse. The Gardens will be open from Two till Seven o'clock each day. Admission—First day, Five Shillings; and Second day, Half-a-Crown.

MIDLAND RAILWAY.
TOURIST TICKETS at Cheap Fares, available for One Calendar Month, are ISSUED at the Midland Booking Office, King's-cross, and other principal stations, to
SCOTLAND—Edinburgh, Glasgow, Stirling, Perth, Aberdeen, &c.
IRELAND—Belfast, Portrush, for Giant's Causeway.
LAKE DISTRICT—Windermere, Furness Abbey, Ulverstone, Coniston, Penrith, Morecambe, Ingleton, &c.
SEASIDE and BATHING-PLACES—Scarborough, Whitby, Filey, Bridlington, Harrogate, Matlock, Buxton, &c.
Programmes and full particulars may be obtained at all the Company's Stations and Receiving Offices.
Inquire at King's-cross for Tickets via Midland Railway.
Derby, 1863. JAMES ALLPORT, General Manager.

ISLE OF MAN.—HILL'S ROYAL HOTEL,
DOUGLAS. Board, Lodging, and Attendance, 5s. 6d. per day. Inclose a stamp for an interesting Guide and Map of the Island.

HIGHLAND SHOOTING-QUARTERS
economically and expeditiously furnished with every necessary article of (new and used) Furniture suitable for any size of lodge or residence. One of the largest stocks in Great Britain to select from at T. and F. SMITH'S immense Furnishing Warehouses, 10 to 24, Great Clyde-street, Glasgow.

MONEY ADVANCED by Mr. LUXMOORE, Silversmith, &c., of 92, St. Martin's-lane, W.C. (opposite Newst., Covent-garden), on plate and jewellery, at much less interest than is usually charged.—N.B. Jewels and plate bought.

To be had at most Fancy Repositories. Wholesale—JACQUES and SON, Manufacturers, 102, Hatton-garden.

KEYZOR and BENDON'S TWO-GUINEA BINOCULAR FIELD, RIFLE, or OPERA GLASS.—The extraordinary power of this instrument renders it adapted to define objects distinctly at ten miles' distance—suitable for the theatre, racecourse, target practice, sportsmen, tourists, and general outdoor observation. Illustrated Price Lists of Optical Instruments for 2 stamps.—50, High Holborn, London.

THE PLANETS and DOUBLE STARS seen distinctly by a New Telescope for £5, which will also distinguish the face of a sheep and the features of a man four miles, the signboard of a public-house five miles, shot marks upon a target two miles, and time by a church clock ten miles. This instrument is guaranteed in writing to perform the whole of the above, and to be equal in the most important respects to telescopes costing £70. It has a 3 in. superior achromatic object-glass, two eyepieces, &c., with portable metal tripod and pillar stand with jointed claw feet.—S. and B. SOLOMONS, Sole Inventors, 39, Albemarle-street, Piccadilly. N.B. Persons are invited to apply for a diagram with full particulars, sent free. Powerful small pocket telescopes.

OPERA GLASSES.—Just brought out, an Opera, Race, Field, and general outdoor day and night RECONNOITRING and RIFLE GLASS, for the waistcoat pocket, containing 12 lenses. Will show a person to know him 2½, and an object from 10 to 12 miles. They are found to be invaluable for Deerstalking, Sportsmen, and Tourists. Also the cheap six-glass, at 30s., 35s., 30s., and 35s.—SOLOMON, No. 39, Albemarle-st., Piccadilly.

SPECTACLES.—The PATENT TINTED SPECTACLES are patronised by the majority of the nobility, including Viscount Palmerston. They give extraordinary relief by day and night to weak, dim, and defective vision. The adaptation of spectacles to imperfect vision by experienced persons is, indeed, of vital importance. One of the Firm who has had great experience and practice attends to this branch only.—S. and B. SOLOMONS, 39, Albemarle-street, Piccadilly. Opposite the York Hotel.

DEAFNESS.—The SOUND MAGNIFIER and INVISIBLE VOICE CONDUCTOR, a newly-invented instrument for cases of Deafness. It fits into the ear not perceptible; removes singing noises in the head, and enables deaf persons to hear distinctly at church and at public assemblies.—S. and B. SOLOMONS, 39, Albemarle-street, Piccadilly (opposite the York Hotel).

LADIES NURSING.—NEW NIPPLE SHIELDS, giving instantaneous and permanent relief, 4s. 6d., by post 6d. extra.—ELAM, 196, Oxford-street. Prepared Fuller's Eardrop, 1s. the Box.

ARTIFICIAL TEETH, exquisitely enamelled to nature, detection impossible, purest materials and best work, on Mr. EKKELL'S patented and painless plan of self-adhesion. (See New Edition of his Treatise, just published, free for seven stamps).—8, Grosvenor-street, Bond-street, W. Consultations free.

DINNEFORD'S FLUID MAGNESIA is an excellent remedy for Acidity of the Stomach, Heartburn, Headache, Gout, and Indigestion, and as a mild aperient for delicate constitutions. 172, New Bond-street, London; and all Chemists.

SAUCE.
LEA and PERRINS'
WORCESTERSHIRE SAUCE,
Pronounced by Connoisseurs
"THE ONLY GOOD SAUCE."
None genuine without name on wrapper, label, bottle, and stopper.
Sold by CROSSE and BLACKWELL; Barclay and Sons; and by Grocers and Oilmen universally.

LETTERS PATENT 1838. PRIZE MEDAL 1862.
ROBINSON'S PATENT GROATS is the most valuable preparation for making pure and delicate Gruel. Modern chemistry has shown that this food is easy of digestion and rich in nutriment.
ROBINSON'S PATENT BARLEY makes a delicious custard pudding, directions for which have been given by Mons. C. E. Francatelli. It is appreciated as a non-inflammatory drink, is excellent for mothers nursing, and has been used with great success for rearing children by hand.
KEEN, ROBINSON, BELLVILLE and CO.
Garlick-hill, London.

KEEN'S GENUINE MUSTARD,
There are many qualities of Mustard sold.
Obtain Keen's Genuine Mustard and full approval is guaranteed.
FIRST MANUFACTURED, 1742.
Sold by the Trade from the Cask, and in 1 lb. and ½ lb. canisters.
KEEN, ROBINSON, BELLVILLE, and CO.,
Garlick-hill, Cannon-street, London.

OSWEGO
PREPARED CORN,
for
Puddings, Custards, Blanc-Mange, &c.
Manufactured and Perfected by
T. KINGSFORD and SON,
of Oswego, State of New York.
It is the original preparation from the farina of maize, established 1848, commands the highest price from the trade, and offers the best value to the consumer.
It is a quarter stronger than any of the imitations, has a finer grain, and is more delicate.
The Oswego has the natural golden tinge, and not the chalk white produced by artificial process.
KEEN, ROBINSON, BELLVILLE, and CO.,
Garlick Hill, London.

BROWN and POLSON'S
PATENT CORN FLOUR.
Packets 6d.
Its superiority to all other kinds is well known.
The second quality is confidently recommended, and is labelled
INDIAN CORN FLOUR,
which may be obtained as cheap as the American qualities, none of which are sold in America for more than 6d.

MAIZENA, of all competing articles, obtained Two, and the only, Prize Medals in its Class, with the superlative recommendation of the jury, "Exceedingly excellent for food." Maizena forms not only a cheap and substantial diet for the strong, but a most nourishing regimen for the sick. Dr. Lankester says, "I can confidently recommend maizena as an article of diet for children and invalids." Obtainable of all first-class Grocers, with directions for making a score of exquisite dishes. 1 lb. 8d., ½ lb. 4d.

YEAST SUPERSEDED and INDIGESTION AVOIDED
by using BORWICK'S BAKING POWDER,
for Bread, Puddings, and Pastry.
Sold everywhere.

GLENFIELD PATENT STARCH,
used in the Royal Laundry,
and awarded the Prize Medal.
Sold by all Grocers, Chandlers, &c.

VICTORIA PARK LAUNDRY SOAP, or WASHING STRIPS—being strips of soap to be so used as almost entirely to save the labour of washing.
Sold in packets of 3d. and 6d. each, and may be had also in bars by weight.
Besides the saving in labour, this soap goes twice as far as the common sort: it does not destroy the linen nor injure coloured goods, and is particularly applicable where washing machines are used.
Sold by all Grocers and other venders of soap, and of PALMER and CO., Sutton-street, Clerkenwell, sole manufacturers.

COALS.—COCKERELL'S COALS, price 23s., cash. Central Office, No. 13, Cornhill, E.C.

MESSRS. THE ILLUSTRATED LONDON NEWS.

No. 1212.—VOL. XLIII. SATURDAY, JULY 11, 1863. TWO SHEETS, FIVEPENCE

THE REVOLUTION IN MADAGASCAR.

WE were in hopes that the startling news which reached this country, by a telegram from Alexandria towards the end of last week, of the assassination of Radama II., King of Madagascar, the execution of his Ministers, and the forced acceptance by the Royal widow of a Constitution drawn up and insisted upon by the Hovas, would have been explained by written details from the Mauritius or elsewhere before it became necessary for us to comment upon events so unexpected but so full of present interest and importance. Although we have been disappointed in this expectation, our readers will probably accept with readiness such information as may help them to appreciate the bearings of this mournful tragedy, and the more so as it is not altogether devoid of political significance, touching, as it will be found to do, European affairs at more than one point.

DUCHESS D'AUMALE. PRINCESS MARY, PRINCESS OF WALES. DUCHESS OF CAMBRIDGE, PRINCE OF WALES.

THE GUARDS' BALL IN THE INTERNATIONAL EXHIBITION BUILDING: THE ROYAL PARTY IN THE SUPPER-ROOM.—SEE PAGE 42.

Radama II. was the son of Ranavalona, the most energetic of the twelve widows left behind him in 1828 by Radama I. The last-named Sovereign had assumed previously to his death a right to dominion over all the Malagasy tribes, although his actual subjugation of them had been by no means complete. He was a man of broad and enlightened views, considering his origin and *entourage*, and may be said to have been the first ruler in Madagascar who brought the island into friendly communication with European States. During his reign commercial relations with England and France were established, Christian missions were founded with remarkable promise of success, the oral tongue was reduced to a written language, schools were set on foot, a printing-press was introduced, and the Bible was translated into the vernacular. The King rather favoured than opposed these innovations, distasteful as some of them were to the Hovas, to which tribe he belonged, and of which he was chief; and, as a natural consequence, Christianity, as subsequent events abundantly proved, gained a firm footing in the island before his death. Ranavalona, having seized the sceptre of her departed husband, hesitated for some time to give full effect to her own retrogressive policy. But about seven years after her accession to the throne she resolved upon extirpating the Christian faith from the island and upon sealing up the country against all the influences of European civilisation. The missionaries were banished, the ports were closed, and Madagascar, during the rest of her thirty-three years' reign, was as isolated from foreign contact as Japan. The Queen's internal policy was as fierce and bigoted as her external policy, if she can be said to have had one, was narrow. She hunted down the native Christians with all the cruelty of a Nero. Thousands of them met their death at her hands, were starved, were stoned, were cast headlong from the rocks, were burnt at the stake, were cut to pieces, were sawn asunder, were crucified. But Christianity was not thereby extirpated. On the contrary, it grew, and, while no single instance of apostacy during this weary period of persecution has been placed on record, it is known that at the death of Ranavalona the number of converts was fully as great as at her accession, and that among them was her son, Radama II., for whom she had cherished more than a mother's fondness.

It was in 1861 that this Sovereign succeeded Ranavalona on the throne of Madagascar. The event was hailed as the rising of the sun after a long, dark night. The native Christians came forth from their hiding-places, missionaries were again invited to visit the island, and commercial relations were established by treaty between it and European States. Embassies were sent from England and France to be present at the coronation of the King; and, although momentary opposition had been exhibited by a part of the Hova nobles, it was easily suppressed, and appeared to have died away. It is now clear, however, that open resistance was only exchanged for secret machinations, and that conspiracy has done what revolt would not have succeeded in accomplishing. The King was generous and confiding, even to the point of weakness, and his enemies seem to have taken advantage of his lenity. He was strangled on the 12th of May last, and his Queen, having signed the Constitution submitted to her by the Hovas, was raised to the throne in his stead.

The first thought which occurred to most Englishmen on reading the telegrams from Alexandria probably was that this tragic counter-revolution must have had its origin in religious causes. Subsequent intelligence *may* confirm this conjecture, even before our present impression is in the hands of our readers; but, pending its arrival, we venture to doubt it. It is plain that the blow struck by the conspirators was levelled against a system of policy supposed to be specially represented and guaranteed by the King and his Ministers; for the acts of his reign are declared to be null and void, and the Queen regnant has been compelled to sign some instrument, by which the Hovas evidently intended to secure their rights. We are expressly told that liberty of conscience is not to be interrupted, and, we believe we may add, that neither the missionaries nor the native Christians have been threatened with molestation. Nor is it at all certain that freedom of commerce is to be permanently prohibited, the telegram stating merely that they are held in suspense. The object of the conspiracy appears to have been to get rid, by those rough and ready means most familiar to a semi-barbarous nation, of concessions said to have been made by the King to M. Lambert, a French colonist, which compromised the national independence of Madagascar, and which, being carried into effect, would have made it a mere appanage of France.

The policy to which we are about to advert, and which will shed a ray of light, perhaps, upon this mystery of blood, cannot fairly be designated Imperial policy, inasmuch as it seems to have originated in the ambition of colonial adventurers in the island of Reunion, to have been ostensibly, and perhaps really, discouraged by the home authorities in France, and to have gained its point at last only by a series of misrepresentations which have misled Napoleon III. As soon as the Queen Ranavalona was dead the journals at Reunion began to broach and to discuss claims, on the part of France, to the sovereignty of Madagascar, which, besides being urged in a tone extremely offensive to England, as calculated to limit and cripple her maritime power in the Pacific, must have awakened some alarm in the capital of Madagascar, and have excited suspicion in the minds of the nobles at Tananarive. In very early times (such was the claim put forth by the Reunionists, and backed by a portion at least of the Paris press) the flag of France was planted upon precisely that region of Madagascar now occupied by the Hovas, as a sign of a primary and sovereign occupation of the island. Some of the coastal tribes, it was averred, had accepted French protection; with some, treaties of commerce had been concluded. Portions of territory had been ceded to the colonists of Reunion, ports had been opened, and rights had been recognised. All this preparation for getting ultimate possession of Madagascar had been swept away, it is true, in 1845, but the title of France to the sovereignty of Madagascar was still held valid in theory. M. Lambert seems to have been indefatigable in working upon this somewhat loose and questionable foundation. Having rendered Radama II., before he had ascended the throne, an essential service by helping him out of an affair which might have cost him his life, he established an extraordinary influence over the Prince, and by means of it obtained from him a "concession," putting all the mineral wealth of Madagascar under his exclusive control. It will turn out, we suspect, that the concession thus obtained has carried with it political consequences to which the Hovas were disinclined to submit—consequences which would have placed the island under the domination of France, but which appeared to them to be bound up with the life and policy of Radama II. Hence the conspiracy to get rid of him and his Ministers. Hence, probably, the Constitution, as it is called, which the Queen was forced to sign—an instrument, we conjecture, framed to guard the independence of the island, rather than to settle the form of government which shall have force there; and hence the special distrust exhibited by the Hovas towards M. Lambert—a price, it is reported, having been set upon his head.

The attempt now being made by some of the less scrupulous and respectable organs of the Paris press to connect this conspiracy with missionary intrigues, and to charge upon England the crime of aiming to neutralise French influence at Tananarive by a dynastic revolution, lend some countenance to our anticipatory guesses; while the talk at Paris of the necessity of France stepping forward in the interests of civilisation and establishing a Protectorate over Madagascar indicates pretty distinctly, we apprehend, the object and drift of the concession which M. Lambert obtained from the hapless King. We believe the Emperor will not endanger his amicable relations with this country by any such policy as that which has been recommended to him by irresponsible advisers. The Government of the United Kingdom, indeed, is not likely to be actuated, either in consequence of what has occurred or of what may occur in connection with Madagascar, by any design of promoting the establishment there of this or that form of the Christian religion; at least, we should hope not. The interest, however, which France takes in Madagascar is not mainly religious. The position of the island, close upon the highway of English commerce to India and China, its importance as a naval station for a Pacific squadron in case of war, the number of its admirable ports, and the mineral wealth which lies buried beneath its soil—these are the features which invest Madagascar with the charms which it has long presented to ambitious Frenchmen. And these advantages cannot be seized without threatening England in some of her most cherished interests. She wants not the country for herself. She asks for no exclusive, for no preponderant, influence there. To accuse her of suggesting or conniving at the late revolution for the purpose of paralysing the influence of France is utterly absurd on the face of it. But, should the Emperor be lured on by evil counsels to put forth his power for the purpose of annexing Madagascar to his dominions, he knows beforchand that the same ends which commend the enterprise to French ambition would, in this instance, of necessity, excite the gravest disapprobation on the part of his Western ally.

FOREIGN AND COLONIAL NEWS.

FRANCE.

A Council of all the Ministers, over which the Emperor presided, was held at Fontainebleau on Monday. His Majesty left for Vichy on Tuesday, unaccompanied by the Empress and Prince Imperial, who take up their abode at St. Cloud. In the Emperor's absence M. Billault will preside at the Council of Ministers.

Prince and Princess Napoleon have returned to Paris from their journeyings in Egypt and Syria.

M. Drouyn de Lhuys had a long interview with Mr. Slidell yesterday week, and on the next day went to Fontainebleau to see the Emperor.

Sunday's *Moniteur* has a paragraph explanatory of the circumstances that gave rise to the statement of Mr. Roebuck that the Emperor had made a fresh offer of mediation in the American war to the English Government. According to the official journal, in the interview between the Emperor and Messrs. Roebuck and Lindsay, his Majesty expressed his desire to see peace re-established in America, though he was unwilling to make a fresh offer of mediation without the certainty of its acceptance; but said that, nevertheless, his Ambassador should receive instructions to sound the English Cabinet on the subject, giving it to understand that, if England thought the recognition of the South would put an end to the war, the Emperor was disposed to follow her in that course. "These explanations (continues the *Moniteur*) will demonstrate that the Emperor has not attempted, as certain publications pretend, to influence the British Parliament by the medium of two of its members. All that took place was a frank interchange of opinions in an interview which the Emperor saw no reason to refuse."

La France publishes an article headed "Rome and Carthage," which concludes as follows:—"France and England, the two great rivals, have a magnificent destiny. They represent progress and liberty. Separated, they would be a scourge and a firebrand in Europe; united, they would form a model, and their alliance would enable them to secure a pacific solution of all questions."

A report to the Emperor by M. Rouher, the President of the Council of State, and the approval of its object by his Majesty, have been published. The report dwells upon the necessity of developing professional instruction, and recommends the establishment of a commission to discuss the most effectual means of attaining this result.

The *France* says an Imperial decree will shortly appear, organising the fortified places of France upon a new basis.

The Emperor has sent 10,000 francs for the relief of the sufferers by the great fire at Nantes.

In consideration of the eminent services rendered, especially in Mexico, by the commanding officers of the army, General Forey, the chief of the expeditionary corps, has been appointed a Marshal of France, and General Bazaine will receive the Grand Cross of the Legion of Honour. Accounts from the city of Mexico to the 24th ult., telegraphed from San Francisco, state that General Comonfort had resigned the command of the Mexican forces, in consequence of the strong feeling prevailing against him for not relieving the garrison at Puebla and saving the city, and that President Juarez has personally assumed the command. General Forey had put 300 Mexican prisoners at work on the Vera Cruz Railway, and 200 were employed in destroying the fortifications erected by the Mexicans for the defence of Puebla.

ITALY.

On the 4th inst., after a discussion which lasted four days, the Chamber adopted the proposal of a tax on movable property, which it is expected will produce thirty millions.

PRUSSIA.

It is stated that the Crown Prince, who has gone to Putbus, on the Baltic, yielding to the advice of his relatives, has drawn up a written defence in reply to the formal accusation of the Ministry on account of his Dantzic speech. The defence is, in fact, an elaborate attack upon the Ministry.

Disturbances prevailed during the greater part of last week in the suburbs of Berlin. They were continued with increased violence on Saturday last. Several thousands of the lower classes set the police authorities at defiance, breaking up the streets and erecting barricades, from which they pelted the police officers. At length the latter charged the mob with drawn swords, wounded several, and arrested 150 individuals. By two o'clock in the morning tranquillity was restored. As yet those disturbances can hardly be said to have a political significance, though it is difficult to say in what direction they may tend. At present the rioters are said to be exclusively of the lowest class, and the whole affair appears to have originated in a public-house disturbance.

DENMARK.

The Government has ordered an extraordinary levy of two years' service men, the whole of whom are ordered to be under arms on the 1st of August next.

Advices from Copenhagen state that King George will start for Greece soon after the 7th of September.

THE INSURRECTION IN POLAND.

If reliance is to be placed on the *Czas* of Cracow, a devoted adherent to the Polish cause, the National Government has declared that the six points proposed in the notes of the three Powers cannot be accepted by the country, and that the struggle for independence will be continued. The *Czas* has an article pointing out the disadvantages which would arise to the Poles from the adoption of an armistice.

The undiminished activity and influence of the National Government are shown by the fact that the treasurer of the General Post Office of Warsaw has absconded with 45,000 roubles, leaving a declaration behind him that he had given up the treasury by order of the National Government. It is reported also that the said Goverament has organised six detachments of infantry and one of cavalry to operate in each palatinate. According to Cracow telegrams trains have ceased to run upon the St. Petersburg and Warsaw Railway, in consequence of the decree issued by the National Government.

The telegrams continue to announce encounters, attended with varying success, between Russian and Polish troops, and the appearance of new bands of insurgents.

GREECE.

There have been some serious disturbances at Athens. A part of the army has mutinied, and several contests have taken place. The bank was attacked by the rioters, and fifty persons killed and wounded. The building seems only to have been preserved by the arrival of a large body of marines from the French, English, and Russian vessels in the harbour, who now defend the place. Previous to the outbreak there had been stormy scenes in the National Assembly, owing to attacks of the party of M. Bulgaris upon the Ministry. The resignation of the latter is expected. The National Assembly intends to declare King George of age. By the latest accounts from Athens we learn that the National Assembly has obtained the simultaneous removal of the troops of the two parties from Athens, and that the city is again restored to tranquillity.

AMERICA.

THE CONFEDERATE INVASION OF THE NORTH.

We have reports—not, however, very precise—of the movements of General Lee to the 27th ult. This much seems certain, that a large portion of the Confederate forces had passed into Pennsylvania and Maryland, and that General Lee was endeavouring to isolate Washington from the north and east as well as from the west. Thus far General Lee has been enabled to carry out his plans without receiving any material check. One division of General Lee's army is said to be advancing to Budd's Ferry, fifteen miles below Washington, where, with the aid of the pontoons the Confederates have carried with them, the passage of the Potomac can, it is stated, easily be effected. This division would probably march upon Fort Washington and re-establish the batteries which formerly commanded the Lower Potomac and affected the sea communications of the Federals. Another body of Confederates first proceeded to Martinsburg, a town distant only a few miles from Harper's Ferry, and thence they proceeded along the Baltimore and Ohio Railroad as far west as Cumberland, a part of Maryland which almost unites Pennsylvania and Virginia, and is at the same time brought near to Ohio by the great railway system of the Middle and Western States. According to the Baltimore correspondent of the *New York Herald* General Lee was in strong force at Frederick City, Maryland, on the 25th of June, and thence would either move on Washington or Baltimore, or pass to the railroad between Washington and Baltimore. General Hooker was also moving, and the right wing of his army was said to be at Hagerstown.

So imminent is the peril that is supposed to menace Baltimore that the most urgent appeals are made to the people by the Government, the Mayor of the city, the councils of the military authorities, and the newspapers, to turn out to work on the intrenchments which are being hastily erected for the defence of the city, and to enlist in the various military organisations.

The despatches complain that there is universal indifference among the people of Pennsylvania regarding the invasion. The *New York Herald* says that "the inhabitants seem to have lost all spirit, and either retreat rapidly at the approach of the Confederates or exhibit a strange apathy. Even the troops from New York or New Jersey are not received with cordiality or enthusiasm, but the inhabitants endeavour only to profit pecuniarily by their presence."

Immense mischief seems to have been done to the Northern cause by the defeat and retreat of General Milroy from Winchester, that key of the Shenandoah Valley which has so often changed owners during the last three years. The Southerners claim to have captured from Milroy 6500 prisoners, 2800 horses, 500 waggons, and stores to the value of 2,000,000 dols.

The Washington correspondent of the *New York Herald* gives the following summary of the Confederate strength and movements:—

General Lee, for a week previous to moving from Culpepper in his last mysterious movement, gave orders, which were stringently enforced, that no person, soldier or citizen, should be allowed to enter or leave his lines. It is said that his army commenced to move on Saturday, and continued to pass through Culpepper during all the intervening period up to Thursday of the succeeding week. His force is said to have consisted of Ewell's corps of 35,000 men, who marched out first, Longstreet's corps of 42,000 men, and Hill's corps of 28,000 men, who brought up the rear. General Stuart's cavalry, 18,000 strong, protected the flank and rear, while Jenkins, with 3000 men, accompanied Ewell into Maryland, the destination of the main portion of the army. The artillery is said to be in superb condition and very numerous. Stuart's command is said to consist of six divisions of two brigades each, three regiments to a brigade, and 500 men the average maximum number to a regiment. The 4th Virginia, the largest of all, on a recent review, numbered 714, but every man that could be obtained was present on this occasion.

The following are other fragments of news telegraphed on the dates given:—

New York, June 26.—The Confederates under General Jones, with cavalry and artillery, have, after a severe skirmish, driven the Federals under Milroy out of Macconnellsburg and occupied that place. The Federals have evacuated Carlisle, and fallen back to Harrisburg. The Confederate advance in Pennsylvania is said to be 10,000 strong. The Governor of Pennsylvania has called for 50,000 militia for defence for three months. The Governor of Illinois has offered 10,000 men to resist the invasion.

June 27, Morning.—General Ewell entered Chambersburg on Wednesday, and issued an order forbidding the inhabitants to sell liquor to the soldiers; also admonishing persons not in military service to abstain from acts of hostility, stating that acquiescence in the demands of the military authorities would lessen the rigours of war. General Ewell's main force is believed to have halted in the rear of Chambersburg, holding all the roads and passes in the vicinity, and awaiting reinforcements. General Early's division of Longstreet's corps, consisting of ten regiments of infantry, with cavalry and artillery, occupied Gettysburg yesterday. It is supposed that General Early will strike the Northern Central Railroad at Hanover Junction or Fork, thirty miles distant.

Digitized by Google

The Confederates hold all the passes of South Mountain. They are also in close proximity to Carlisle, but have not yet occupied the place. The Federal General Smith commands the defences of the Susquehannah. Colonel Pierce supersedes General Milroy at Bloody Run. General Dana commands the defences of Philadelphia. The *New York Herald* says that two days ago half General Lee's army was in Maryland and Pennsylvania; the other half, immediately under the eye of Lee, was thirty miles south of the Potomac, in the Shenandoah Valley. General Lee's whole army may be described, in a military sense, as being in the same valley, extending thirty miles from Winchester to the Potomac, and thence fifty miles northward to Chambersburg. The *New York Herald* does not anticipate a collision between Generals Lee and Hooker for several days, and says—"It is probable that the first serious hostilities will take place at Harper's Ferry, for that point, with Lee's advance beyond the Potomac, is essential to Lee's communication with the Shenandoah Valley and Richmond. Lee's siege trains will, therefore, probably be first used against the Maryland Heights, in conjunction with an assault by the reserved column of General Longstreet."

GENERAL WAR NEWS.

Vicksburg still defies the attempts of General Grant, and the Confederates have entire possession of Milliken's Bend, above the city. Telegrams published in the *Richmond Despatch* state that a desperate fight took place at Port Hudson on the 12th ult. The Confederates left their fortifications, charged upon the Federals, drove them from their intrenchments, and spiked their siege guns. Northern despatches add that General Banks ordered an assault on the place at daylight on the 14th, and at eleven o'clock on the same morning retreated to his intrenchments, having been disastrously repulsed at all points, with the loss of 700 to 1000 men. [This attack is fully described in another column.] It was supposed that another assault would be made on the 17th ult., Colonel Dudley having volunteered to lead a storming column of 4000 picked men. The Confederates were reported to be concentrating in General Banks's rear to prevent his retreat to Baton Rouge. General Johnston continues to accumulate troops on the eastern side of the Big Black River, and, according to the latest accounts, some skirmishing had taken place between the Confederate cavalry and the outposts of the Federal army at the bridge by which this river is crossed by the Vicksburg and Jackson Railway.

A body of negro troops under Colonel Montgomery has pillaged and burned the town of Darien, in Georgia; and a body of 1000 Texans has been repulsed at Lake Providence by negro troops.

Confederate General Jackson commands the department of East Tennessee, and has under him General Pegram, with 8000 to 10,000 men, which, together with the force in the Cumberland Gap region, is expected to move into Kentucky. Colonel Saunders, recently sent by General Burnside upon a bridge-burning expedition into Eastern Tennessee, returned to Boston, Kentucky, on the 23rd. He reports that he destroyed three important bridges on the East Tennessee and Virginia Railway and great quantities of stores; also, that he captured 500 prisoners, three pieces of artillery, 200 cases of ammunition, and 1000 stand of small arms.

Richmond is defended by the corps of D. H. Hill, 21,000 strong, on the south side; by Major-General French on the north, or near the city, with about 17,000 men; while the heavy brigade, under General Wise, is on the York River Railroad. General Corse, with two brigades, occupies Hanover Junction, assisted by 3500 mounted Texans taken prisoners at Arkansas Port and exchanged. This force is to be drawn close around and concentrated near the capital in case the Federal army should advance.

The Confederates have lost two of their ironclads, one was captured by the Federals at Savannah, and the other blew up in the Apalachicola River. Several steamers had been sunk by the blockading squadron at Charleston, and it is announced that hereafter the squadron will sink all blockade runners. Sixteen Mobile adventurers have captured the Federal steamer Boston at the mouth of the Mississippi, afterwards burning two barques, and taking the steamer into Mobile. The Confederate iron-clad steamer Atlanta, formerly the Finlay, steamed out of Savannah and was captured by two Federal ironclads, after thirty minutes' fighting. The Confederate cruisers are growing more daring. At the mouth of the Bay of Fundy, and in that neighbourhood, they had destroyed numerous Federal vessels. Admiral Dahlgren will succeed Admiral Dupont in the command of the South Atlantic squadron. Mr. Vallandigham has run the blockade in a vessel bound to Nassau.

CANADA.

The returns of the election for members of the Parliament, up to June 23, show that forty-one Ministerial candidates have been chosen, against forty-five Opposition and thirteen Independent.

CHINA AND JAPAN.

News has been received from China to the 26th of May, according to which a complete understanding existed between the Chinese Government and the representatives of England and France. The insurgents had not recommenced hostilities.

News has been received from Japan stating that the Government manifested tendencies which gave reason to hope that it would give the satisfaction which the English Admiral had been ordered to obtain by force.

AUSTRALIA.

The screw steam-ship Great Britain arrived at Liverpool yesterday week from Melbourne, after a rapid passage of sixty-one days. She brings 600 passengers, 63,726 oz. of gold, and a large and valuable cargo.

The penal-settlement question was causing much excitement in Sydney, and the *Empire*, one of the most influential papers in the colony, recommends Horne's Island as a penal settlement.

The *Melbourne Age* of the 2nd of May says: "A bill to abolish the capitation tax on the Chinese was introduced to the Legislative Assembly yesterday evening by Mr. Anderson, the Commissioner of Trade and Customs. It was read a first time, and Friday next was appointed for the second reading. The introduction of the bill was supported by the Government.

The gold-diggings at Coromandel, New Zealand, were proving very productive.

The State apartments of Windsor Castle are opened to the public, under the usual regulations.

The examination of candidates for admission to the Royal Military Academy, Woolwich, before Major-General F. W. Hamilton, C.B., vice-president, and the other members of the Council of Military Education commenced, on Thursday week, at the Royal Hospital, Chelsea, as usual, with the medical examination. The examinations extend over fifteen days. There are upwards of 140 candidates on this occasion.

The first annual meeting of the board of managers, committee, and members of the Soldiers' Institute, formed at Chatham garrison, was held on Thursday week, under the presidency of Major-General Eyre, commanding the district. The annual report stated that the institute, which had been opened exactly twelve months, had proved a complete success. After the payment of all expenses in the refreshment and every department, there was a clear balance profit of £99 to the 31st of March last, and the profit for the whole year was £124, showing that a sum of £1000 had been paid into the institute by the troops during the past year. The bazaar held last year under the patronage of the Duchess of Cumbridge and other ladies of distinction realised a clear profit of £379. There is still a debt of about £480 owing on the building, which the committee are desirous of liquidating at once; and therefore they earnestly appeal for assistance to enable them to do so. The cash account showed that the sum of £5119 had been received in donations, including grants from the War Department and Admiralty, the whole of which had been expended in building, furnishing, and fitting up the building. The meeting was addressed by the Rev. Dr. Griffiths, Canon of Rochester, Colonel Newdigate, and Captain Fanshawe, Superintendent of Chatham Dockyard.

The subjoined general order has been promulgated from the Horse Guards by the Adjutant-General, Sir James Yorke Scarlett, K.C.B., in reference to exchanges:—"His Royal Highness the Field Marshal Commanding-in-Chief is pleased, with the concurrence of the Right Hon. the Secretary of State for India in Council, to announce that exchanges will be permitted between officers who have entered the new line regiments from the general lists, or from the cadres of European regiments of the Indian army, and officers of infantry and cavalry respectively, of corresponding rank, now of the Indian army, without reference to the presidency to which they may belong. Officers of the new line regiments of the classes above described wishing to revert to their former positions in the Indian service will submit their application to the Adjutant-General of their respective presidencies on or before the 12th of October, 1863, after which date no application will be received and no exchange will be permitted. These applications, if supported by the Commander-in-Chief in India, will be entertained according to seniority and to the numbers and rank of officers of the Indian army desirous of joining the new line regiments whose names may be received from the Secretary of State for India. Officers of the new line regiments permitted to exchange under this order will revert to the positions which their names still occupy in the lists of the Indian army. Officers of the Indian army will enter the new line regiments under this order as the junior of their grades in each case."

THE LAST ASSAULT ON PORT HUDSON.

The Correspondent of the *New York Herald*, writing from Port Hudson, June 17, gives a long account of Banks's assault on Sunday, the 14th, which proved very disastrous to the attacking force.

THE FEDERAL POSITION.

Since the previous assault the position had been somewhat changed. We now have no centre, but only a right and left, which, joined together, form a nearly a right angle, completely inclosing the rebel stronghold on the east bank of the river. General Grover's division is now on the upper side of Port Hudson, extending a distance of nearly four miles from the river to the interior, to a point within supporting distance of General Auger's division, which is on the west side of the rebel fortifications, and extends a distance of about three miles in the direction of the river to within hailing distance of our fleet.

THE CONFEDERATE POSITION.

Before proceeding to give the detail, the correspondent gives the following account of the rebel position derived from observations "from a high tree within less than one hundred rods of the first line of rebel defences":—

Looking from the extreme north-easterly range of rebel rifle-pits towards the river on the upper side of Port Hudson, a long line of earthworks can be seen glistening with bayonets and protected by a ditch nearly 12 ft. in width, and, for the purpose for which it was built, unusually deep. Within short musket range enfilading breastworks command every possible approach to the enemy's position.

As I have before indicated in speaking of the conjunction of our right and left, the rebel defences form nearly a right angle, both the lines of which extend to the river, inclosing a sharp bend in the stream, by which our gunboats found it so difficult to pass. The most accessible approach apparently to the rebel earthworks is over a clear field about 600 yards in width, and which, at first sight, presents the appearance of an almost perfect level. This spot, however, since our last assault has been determined to be, although the most inviting, the most treacherous, place along the entire line of rebel defences. Our soldiers in their charge found it to be filled with deep, narrow gullies, too small to cover a large body of troops, and too large to make a passage over them, even for infantry, barely possible. Horses are out of the question, and were not used at this point. These artificial ravines are completely covered with fallen trees and vines, which are so arranged as to nearly obscure them from sight, and make an advance over them a matter of extreme difficulty. In our charge upon the enemy's lines at this spot it was impossible for our soldiers to keep in regular order of battle. Frequently whole squads of men would sink out of sight, only to be rescued by the assistance of their comrades. Down the right line of the enemy's works all approach to the fortifications is made exceedingly difficult by high bluffs and deep irregular gullies. The enemy's rifle-pits are, although bearing the appearance of very wide constructions, built upon the most approved modern engineering skill. Here again fallen trees have been so arranged as to make it impossible to move artillery or troops in line of battle. The entire distance of rebel works presented for our reduction are nearly eight miles in extent.

THE PLAN OF ATTACK.

Last Saturday evening the order of attack was determined upon at headquarters, and communicated to the Generals who were to command the assaulting columns.

The point of attack was the extreme north-easterly angle of the enemy's breastworks, and the plan of the assault was briefly as follows:—The 75th New York, under command of Captain Cray, and the 12th Connecticut, led by Lieutenant-Colonel Peck, were detailed as skirmishers, forming a separate command under Lieutenant-Colonel Babcock, of the 75th New York. The 91st New York, Colonel Van Zandt commanding—each soldier carrying a five-pound hand-grenade, with his musket thrown over his shoulder—followed next in order. The skirmishers were to creep up and lie on the exterior slope of the enemy's breastworks, while the regiment carrying the grenades were to come up to the same position and throw over the grenades into the enemy's lines, with a view to rout them and drive them from behind their works. The 24th Connecticut, Colonel Mansfield, with their arms in like manner to the grenade regiment, followed, carrying sandbags filled with cotton, which were to be used to fill up the ditch in front of the enemy's breastworks, to enable the assaulting party the more easily to scale them and charge upon the rebels. Following these regiments came, properly speaking, the balance of General Weitzel's whole brigade, under the command of Colonel Smith, of the 114th New York. Next came Colonel Kimble's and Colonel Morgan's brigades, the last of which, with another brigade, was under the general command of Colonel Birge. This force was held to support the assaulting column, which was under the immediate command of General Weitzel, who made the attack on the right. General Emory's old division moved in conjunction with General Weitzel on the left, forming a separate column. The two divisions (General Weitzel's and General Paine's) were under the command of General Grover, who planned the assault after General Banks's order. General Weitzel's division was expected to make a lodgment inside the enemy's works, and in that manner prepare the way for General Paine's division. After the inside of the enemy's fortifications had been reached skirmishers were to push forward and clear the way, while both columns were to be deployed in line of battle, and move towards the town of Port Hudson, where a grand citadel, which forms the last means of rebel defence, is situated.

THE ATTACK COMMENCED.

About daylight the 75th New York, which had been slowly advancing, approached the enemy's works sufficiently near to see his fire. Previously the columns of the main body of General Grover's command were formed in the woods skirting the enemy's breastworks. The 12th Connecticut, during the night, had lost its way in the woods, and the 91st New York was ordered by General Weitzel to take the place that had been assigned to it, and follow immediately in the rear of the 75th New York. After the advance of the 75th and 91st Regiments, General Weitzel's entire command commenced moving forward. Several days previous our army engineers had been preparing a covered way, which extended from the woods where our troops lay to within about one hundred and fifty yards of the enemy's position. Through this covered way our troops marched in single file up to the point where the first line of battle was formed. The covered way was relied upon as being sufficiently deep to afford protection to our soldiers; but it turned out to be of no considerable consequence, owing to some fault in its construction. After the advance had arrived at the end of the covered way, they began slowly to push over the innumerable barriers that had been planted by the rebels to obstruct their march. The difficulties I have before spoken of concerning the open field immediately facing the enemy's works were here experienced. The deep gullies covered over by brush and creeping vines were completely obscured from sight, and were only known to exist after our soldiers had plunged into them. Part of our skirmishers deployed to the right while suffering severely from the enemy's fire, and a portion of the advance took up a position on the left of the point to be attacked. They were immediately followed by General Weitzel's column. General Paine in the meantime advanced towards the enemy's works with his command further on the left. Our troops, as soon as they had left the cover of the woods, which were scarcely 300 yards from the enemy's breastworks, were subject to the constant fire of the rebel infantry. A portion of our artillery, which was planted some distance in the rear of our advancing forces, kept up a continuous fire on the rebel works, and served very much to protect our troops as they were advancing to the attack.

THE ATTACK.

After our skirmishers had picked their way up to within about thirty yards of the enemy's works they sprang into the ditch, expecting to be able to shelter themselves under the cover of the rebel fortifications, and keep the enemy down while the regiment, with the hand-grenades, should advance and perform their part of the work in driving the rebels from their position. The portion of the 75th which succeeded in reaching the ditch were immediately repulsed, and nearly all of them were killed or wounded. The ditch was so enfiladed that it was impossible for men to live under the murderous fire of the enemy.

In consequence of the repulse of the portion of the 75th that succeeded in reaching the ditch the hand-grenades could accomplish but little. In fact, although they made many desperate and gallant attempts to be of service, they rather damaged than benefited our chances of success, for, as they threw their grenades over the rebel breastworks, the rebels actually caught them and hurled them back upon us. In the meantime, while the skirmishers were nobly endeavouring to sustain themselves in their position, Weitzel's column moved up as rapidly as possible, and made a series of desperate assaults on the enemy's works, for which, for bravery and daring, the history of war can hardly furnish a parallel. At this time, the sun having fairly risen, the fight became general; a fog, which had partially obscured the contending armies, lifted and revealed their respective positions. The enemy were fully prepared for us, and they lined every part of their fortifications with heavy bodies of infantry. The battle had begun in earnest, and General Paine's column as well as General Weitzel's was actively engaged. Under the general plan of attack, as directed by General Banks, Generals Angur and Dwight were to make feints on the extreme left of General Grover's position, to distract the attention of the enemy from the main assault. Accordingly, before the engagement became general between General Grover's command and the enemy, Generals Angur Dwight had attacked the enemy.

THE REPULSE.

The fight, however, though only intended as a feint, was, on the part of General Dwight's command, exceedingly severe, and scarcely less so with General Grover's. General Dwight's loss in killed and wounded will probably exceed two hundred. General Angur's loss will fall considerably short of that number. Under General Grover's command, probably the most desperate fighting was done by General Weitzel's old brigade. Colonel Smith, leading these veterans, fell early in the action, mortally wounded. The charges made on the rebel works by our brave soldiers showed a determination to carry them at all hazards; but human bravery on this occasion was not adequate to the accomplishment of their object. The most formidable obstacle that presented itself as a barrier to our success was the rebel glacis, which at the point attacked had been constructed in such a manner as to make every bullet tell that was fired from the rebel breastworks while our troops were endeavouring to make the ascent. In fact, the great natural advantages and engineering ability at Port Hudson have been rather under than over rated. Immediately upon the fall of Colonel Smith, Lieut.-Colonel Von Petten, of the 160th New York, took command of the brigade, and gallantly led the charge until all further hope of driving the rebels from their position was gone. Brigade after brigade followed in rapid succession, storming the rebel works until compelled to fall back with great slaughter under the terrible fire of the enemy.

The fighting ceased at eleven o'clock in the morning. We having been repulsed in every assault, our soldiers, under command of their officers, laid themselves down under the shelter of the gullies, trees, covered way—in fact, everything that could afford them protection—and waited for the day to pass and darkness come on. Many of our wounded who were accessible were carried from the field by squads detailed for that purpose. It is a shameful reflection on humanity that a large number of our soldiers, carrying the wounded and dying from the field on stretchers, were shot down by the enemy, and in several instances the wounded were killed while being borne from the field. At nightfall, however, we commenced the burial of our dead, and succeeded before the morning in carrying most of our wounded from the battle-ground.

THE LOSSES.

I have no time to give you further details, as we have not yet entirely recovered from the confusion of the battle, and a courier is about leaving with despatches. Our total lose, however, in this last attack upon Port Hudson, will probably not fall much short of 1000. It is rumoured, just as I am closing this letter, that we are to attack the enemy again to-night.

A letter from the Hague states that the two Chambers of the States have voted a bill granting a credit to the Minister of Marine for transforming a part of the Dutch fleet into iron-clad vessels. The two Chambers have also adopted a literary convention between Holland and Spain, similar to those which have been concluded by France with different countries.

"The scientific commission which accompanies the French expedition in Mexico," says the *Nation*, "will have an opportunity to make some interesting researches, in consequence of the recent discovery, in the midst of the forests, of ruins of majestic appearance and great antiquity. The buildings are supposed to have been erected by a civilised nation, existing at least seven centuries before the discovery of Christopher Columbus. The most probable suppositions attribute their construction to an emigrant people who, after having crossed Behring Straits, occupied Mexico, then advanced as far as Peru, where Cyclopean monuments are still found, and afterwards, being driven back from the south, attained their highest degree of civilisation in the peninsula of Yucatan, where the most remarkable palaces are now to be seen. Among the French travellers whose relations have thrown light on the past of the new world, the most recent are those of M. Brasseur de Bourbourg, and M. Désiré Charnay. The latter, who is a distinguished artist and literary man, was deterred by no difficulty. He proceeded to those antiquities buried in the depths of virgin forests, in contempt of Indian balls, and the thousands of serpents which now take shelter among the ruins. He brought back valuable notes of his journey, and an album of photographic drawings are now being published under the patronage of the Emperor."

MADAGASCAR.—Accounts from Port Louis (Mauritius) of May 29 state that the Queen intends to maintain the treaties concluded with European Powers, as well as freedom of worship and of commerce. There has been drawn up a new Constitution, to which the new Sovereign has sworn obedience. The first article is something new in the history of Constitutions. It is, simply, "The Queen shall drink no strong liquors." A letter has been received by the London Missionary Society from the Rev. W. Ellis, and he and the missionaries are safe and well. Mr. Ellis is very sanguine that the work of the missionaries will not in any way be interfered with. The report of the French Consul at Tamatave, Madagascar, dated May 15, has reached Paris, and explains that the cause of the political revolution was the rivalry between the nobles and the Nemamasso—the young men who, at the accession of King Radama, took power, monopolised all favours, and suggested to the King measures disapproved of by the people. They were accused of injustice, of being open to corruption, and of great immorality. Under their influence the King published a law authorising duels, and even combats of tribe against tribe and village against village, without any other formality than the consent of the two parties, thus proclaiming civil war and furnishing a pretext for hostilities. The King refused to listen to the representations of the officers and principal inhabitants, who then entered into conspiracies against him and his Ministers, which ended in his and their assassination and the election of the Queen.

THE SIEGE OF VICKSBURG.

In a contest conducted upon so stupendous a scale as the war now waging between the rival Confederacies of America it must often happen that operations of the greatest import to those concerned in them and to the ultimate issue of the struggle become for a time neglected in the interest excited by still more stirring events occurring elsewhere. Thus, while with the keenest interest we were following the army of the Potomac, as, broken and breathless, it recrossed the Rappahannock after its last advance on Richmond, our attention was diverted to the masterly and successful march of General Grant to the very threshold of Vicksburg. And, again, while we were looking anxiously for news which should tell that the fall of this city of the Mississippi had rewarded the efforts of the one Federal General who seems to combine skill in action with boldness at the council-table, or that the Confederates had succeeded in raising the siege, we are diverted by the intelligence of Lee's invasion of the North; and the fate of Vicksburg, which at one time seemed likely even to influence the issue of the war, becomes at once of secondary importance. Satisfied, however, that before long the operations having for their object the possession of the Mississippi will once again assume the importance which they deserve, we do not hesitate, while we are busy preparing a map that shall illustrate General Lee's present movements, to lay before our readers a plan of Vicksburg which may explain the operations by which General Grant brought his forces to the gates of the town, and help them to comprehend the news which any mail may bring of further events affecting his position.

Before relating the movements of the opposing armies a short space may advantageously be devoted to a description of the arena to which their struggles have been confined. We will ask our readers, then, to imagine a wide, deep canal 1000 miles long, extending from, say Birmingham, through France and Austria, to the Black Sea. Let them further fancy England at war with France, Austria, and the Swiss Confederacy for the possession of such a canal, and picture upon the map of Europe, which it would intersect, two powerful fortified positions upon bluffs overlooking and commanding its passage, situated say in the heart of France and garrisoned by French soldiers. Such a condition represents fairly the Mississippi River, having Pittsburg, the Federal Birmingham, on one of its branches, running for 1000 miles through hostile peoples with its free navigation which is one great object of the Federal party to secure, impeded by the strong positions of Vicksburg and Port Hudson. To gain this end, and acquire the free navigation of this noble river, no sacrifice of life and means has been spared by the North.

To begin with, it will be remembered that Columbus, Island No. 10, Memphis, New Orleans, and Baton Rouge were all taken at a great outlay of men, money, and material of war. So much being secured, it was projected to render the position of Vicksburg harmless by cutting an enormous canal into which the water of the Mississippi might be diverted and Vicksburg avoided. The work was begun, and a cutting made across the heel of the horse-shoe bend of the river indicated in our Map. The work was completed, the river rose and fell, but the Mississippi refused to accommodate itself to the new channel prepared for its waters, and remained obstinately "seceesh."

General Grant next ordered the Admiral in charge of the Federal fleet above Vicksburg to force some of his transports and gunboats past the town at every hazard, and to meet him below the point of confluence of the Big Black and Mississippi rivers, for the purpose of conveying his army across the latter river at Grand Gulf. This movement was effected with remarkable skill and success on the 10th of May. Several valuable vessels were lost in the attempt, but those that succeeded in making the passage were quickly repaired, and were found sufficient to carry out General Grant's purpose. Following up this success by rapid marches, in pursuance of a singularly skilful strategic plan, General Grant at once sought the rear of Vicksburg.

He was first met and his way disputed at Thompson's Mill, near Jackson, by a small body of men under General Bowen. Grant's army numbered 70,000 men, not all of whom were, however, available for action in the field. The fleet which he had at his command may fairly be regarded as a contribution equal to 25,000 more. But it was only available at such points of his march when he came upon the river, where it not only furnished him with artillery, but brought him stores and kept open his long line of supply and, if need were, retreat. General Bowen had only two brigades under his command. They fought well; but after contesting his passage for twelve hours, gave way, and Grant, unable in his haste to give due care to his dead and wounded, hurried on. The difficulties of his advance, and the sufferings of his army under a sultry sun, in a tropical climate, with short supplies and forced marches may easily be imagined. Upon his way to Jackson he was next met at Raymond, where General Gregg, with 4000 men, disputed his passage for three hours; and

MAP OF VICKSBURG.

again, in the vicinity of Jackson, he was held in check by General Johnson, who fought to gain time, which was spent in sending provisions into Vicksburg, and by General Pemberton there in completing the defences of the town.

Jackson having been occupied, Grant moved towards Vicksburg. At the bridges that crossed the Big Black River he was met, on the 16th of May, by Pemberton, with a much inferior force, by whom he was fought on that day and on the next at Big Black River Bridge. General Pemberton effectually checked Grant's progress; but was compelled to fall back, in consequence of being outflanked by a division of Grant's army, thrown across the river higher up, some eight miles. Forced to retire, and exhausted with the unequal strife, General Pemberton found so much difficulty in carrying his artillery from the field that he spiked many pieces, and, having transported his forces over the river, burnt the bridges behind him. At this time, too, Haines Bluff was abandoned by the Confederates.

On the 18th of May Grant, having rebuilt the bridges destroyed by Pemberton, found himself in communication with the Federal fleet upon the Yazoo River, which had previously been commanded by Haines Bluff. On the same night General Pemberton, in anticipation of the strait to which he might soon be reduced, sent from Vicksburg all his spare horses and mules, which, after many perils, succeeded in running the gauntlet of the Federal lines. No time was lost, and, on the 18th, the Federal fleet was directed to shell and bombard the town from the river, while Grant attempted to carry it by a coup de main. The assault, however, was repulsed with terrible slaughter. In three other attempts, made with equal gallantry, the Federal troops met with the same dogged resistance, and were beaten back. In narrating these events it is difficult to know whether to award the greater praise to the skill, endurance, and gallantry with which the Federal army overcame the vast difficulties which lay between the landing at Grand Gulf and their position before Vicksburg, or the indomitable gallantry with which the Confederate forces contested their march and hold them now in check.

But, meanwhile, a cloud somewhat larger than a man's hand gathers on the rear of Grant's position. General Joseph E. Johnson, known to be one of the most skilful, experienced, and prudent of the Confederate chiefs, has been busy collecting an army at Jackson, and only waits for sufficient artillery to advance upon Grant's position. Artillery is being conveyed to him as fast as the railroads can carry it, while General Lee threatens the source of his supplies from the upper rivers; and, in all probability, before these words are read, a blow of some decisive kind to one or other of the combatants will have been struck.

When General Grant advanced on Vicksburg General Banks was directed to attack Port Hudson, in order to detain at or near that place such of the Confederate forces as might otherwise be made available for the relief of Vicksburg. Accordingly, about the 26th of May, General Banks invested the works at Port Hudson by land and water with an army which was amply provided with the military resources which the Federals possess in such abundance. As in the case of Vicksburg, the fleet poured upon the garrison a continuous and heavy fire, after which, on the 27th, General Banks ordered the assault to be made. It was upon this occasion that the experiment was first tried of using the new levies of negroes, with such dire results to them, that out of 900 who went under fire but 200 returned alive. The slaughter of the Federals generally was fearful, as again and again General Banks threw his gallant and unfortunate army upon the Confederate lines of defence, until it became but too evident that the place could only be reduced by the slow operations of a siege.

Such, then, are the relative positions of the combatants upon this part of the banks of the Mississippi. It would be premature as yet to speculate upon the news which must soon reach us; but time, which is all, probably, that the Confederate Generals require to complete the plans which are in progress to raise the siege of Vicksburg, must be telling seriously upon the Federal army, operating at a great distance, from their supplies, in an unhealthy season, and hemmed in on all sides by watchful guerrillas who lurk about their camps and along the water-courses. What its present condition is it is impossible to say; but it has been stated that General Grant's forces, which on landing at Grand Gulf amounted to 70,000 men, had been reduced on the way to Vicksburg to 45,000.

The disposition of the Federal forces around Vicksburg are so plainly indicated in the Map that no verbal description is necessary. It will be remembered that during the determined assaults upon the tower, in the earlier stage of the siege, General Sherman met his death.

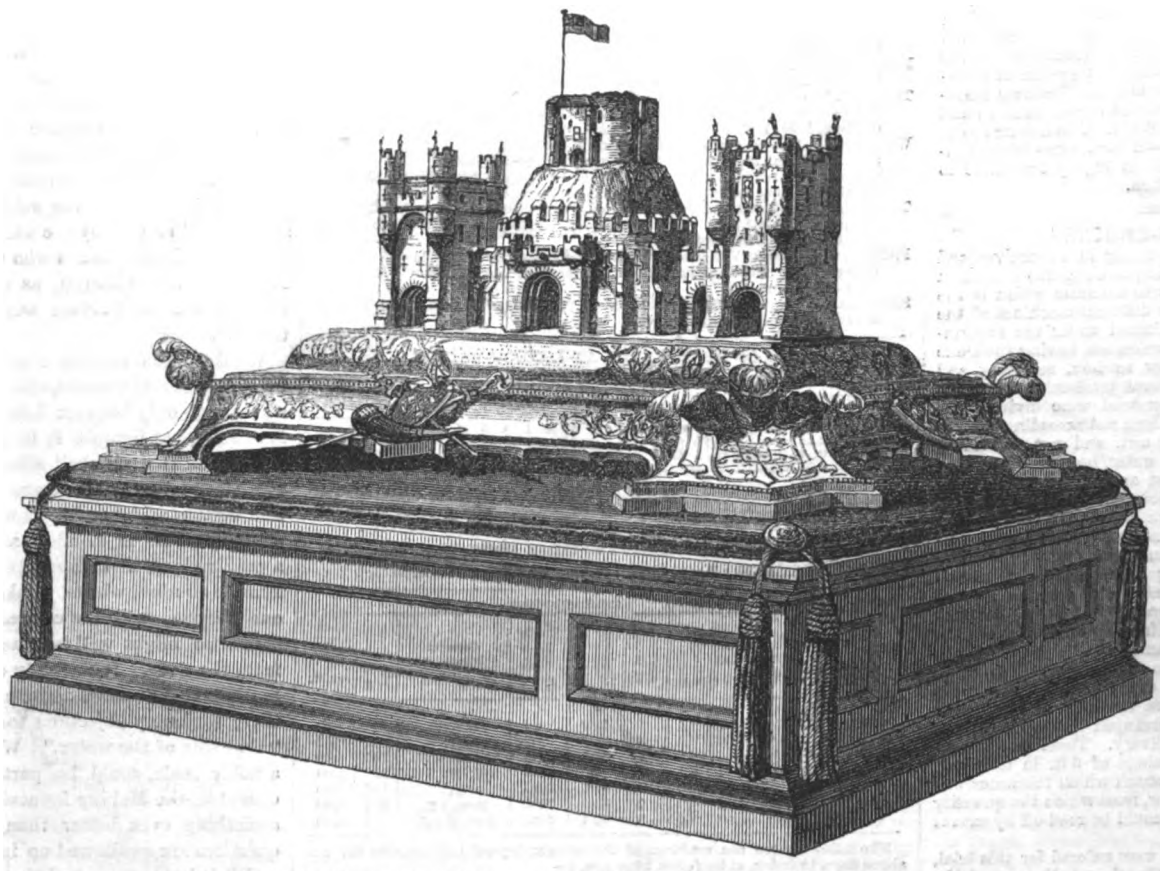
GIFT BY THE LADIES OF YORK TO THE PRINCESS OF WALES.

THE Lady Mayoress of York (Mrs. W. Fox Clarke) and the Hon. Mrs. Smyth had an interview recently with the Princess of Wales, at Marlborough House, for the purpose of presenting to her Royal Highness an inkstand of gold and silver, the gift of the ladies of York and its vicinity. The stand is in the Renaissance style, with beaded borders and shaped corners, and chasings of the rose, thistle, and shamrock. At the angles are the coats of arms of the Princess as Princess of Wales and of Denmark, overshadowed by the Prince of Wales's feathers in dead gold. In the front are the arms of the archbishopric of York (of gold, and enamelled in colours), with the mitre, crosier, cross, and a model of the celebrated horn of Ulphus. The opposite group is in enamel and gold—arms of the city of York, with the cap of maintenance, city mace, and sword. The arms of the Minster, in gold and enamel, occupy the shield at each end. The roll of the raised centre of the stand is ornamented by a frieze of repoussée work, in which are introduced in frosted silver (relieved by the gold ground), the white roses of York. Spaces in this frieze also bear the inscriptions recording the presentation. In the centre, on a burnished plate, is inscribed:—"To her Royal Highness the Princess of Wales, presented by the Lady Mayoress and other ladies of the city of York and its vicinity as a token of their cordial welcome and of their loyal and most respectful affection." At the back of the inkstand is this inscription—"In the time of the Right Hon. William Fox Clarke, Lord Mayor of the city of York, A.D. 1862 and 1863." The centre group is composed of models of the following interesting antiquities of York, so fitted up and arranged as to form ink vases, wafer and stamp receptacles, &c.:—The Clifford's Tower, the City Walls and Embattlements, the former Barbicans of Micklegate and Monk Bars, Micklegate Bar, and Monk Bar. The pedestal on which the plate is placed is made of oak from the Minster, rescued from the fire in 1840. The making of this work of art was intrusted to Mr. John Bell, goldsmith, of York, who carried out the wishes of the subscribers most satisfactorily; and her Royal Highness the Princess of Wales expressed to Mr. Bell personally her great admiration of the inkstand.



INKSTAND PRESENTED TO THE PRINCESS OF WALES BY THE LADIES OF THE CITY OF YORK.

Accompanying the presentation of the inkstand was an address, beautifully written and embellished on vellum, to which the Princess made the following gracious reply:—"My Lady Mayoress,—I accept with great gratification this proof of the loyalty and attachment of the ladies of York. I fully appreciate the kind expressions employed in your address. I request you will accept my best acknowledgments for this beautiful offering, which will remind me at the same time of the bounty of your ancient city and of the cordial welcome received from its inhabitants."

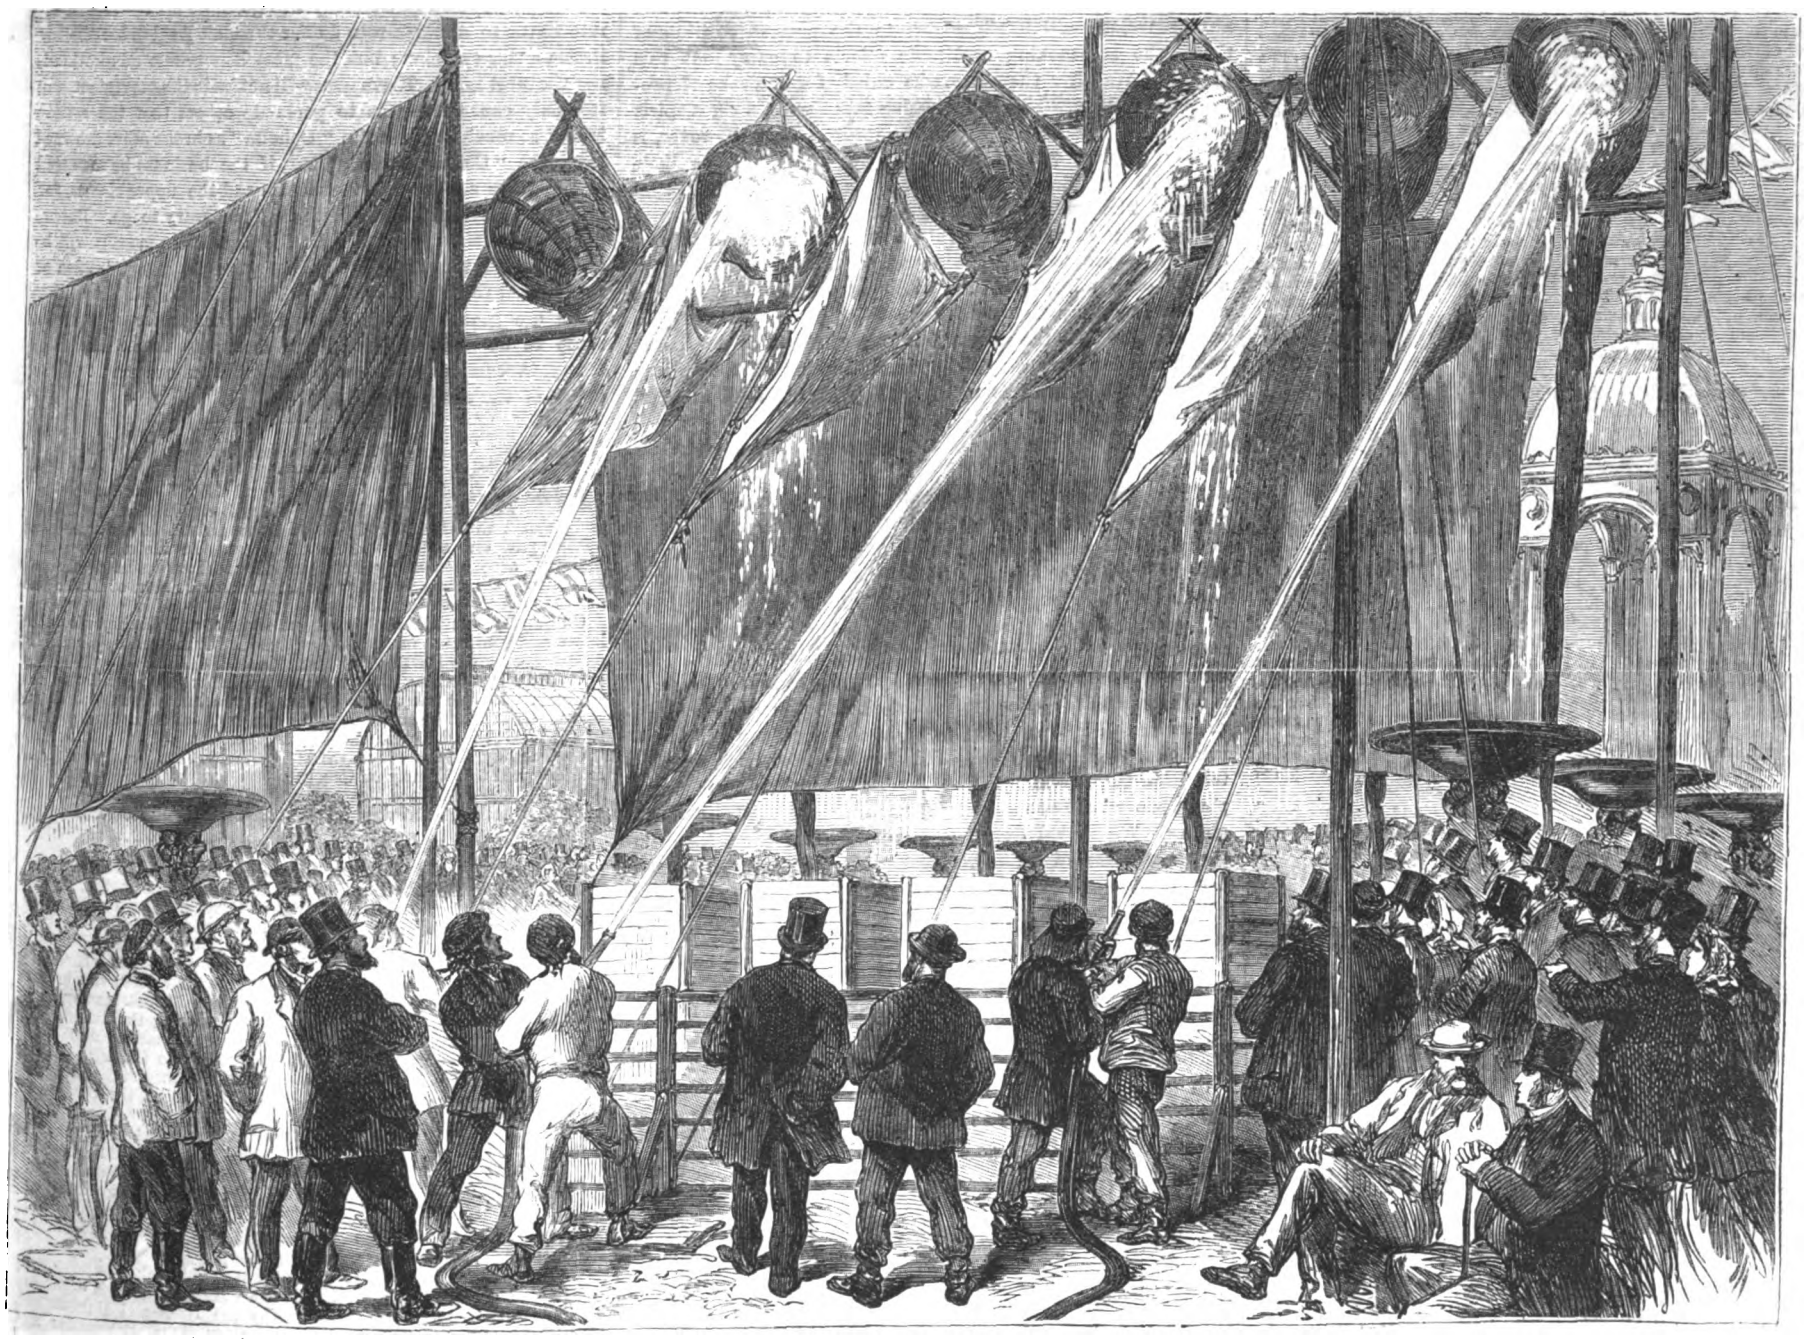
Our Engraving is from a photograph by W. T. and R. Gowland, Ogleforth, York.

H.M. STEAM-FRIGATE, ROYAL OAK.

THIS magnificent addition to our new fleet of ironclads has made her official trial-trips and joined the squadron at Portland. The Royal Oak, Captain Campbell, is the first completed of a class of wooden fighting ships, covered from stem to stern with 4½-inch armour-plates, which descend to six feet below the load line; her length between perpendiculars is 273 ft.; extreme breadth, 58 ft. 5 in.; draught of water, 23 ft. 8 in. forward, and 25 ft. 7 in. aft; displacement of hull, 7400 tons; and speed of ship, 12·528 knots.

The straight squat form of the hull, absence of cutwater, and ugly rig tend to render the Royal Oak one of the most unsightly vessels in the Royal Navy; but at the same time there is little doubt but that she is by far the most perfect and effective ship of war in the world, her armament consisting of twenty-four 95 cwt. 68-pounder solid shot guns, and eight 110-pounder Armstrongs, the latter placed on the bows and quarters, and a full complement of boat-guns and fieldpieces. Just abaft the mainmast is the "pilot-house," at present without its armour, and close to the wheel is Gisborne's patent electric telegraph signalling apparatus. This deck, being above her line of armour, is unprotected except by her wooden bulwarks and hammock nettings. The main deck, which is protected all round by the ship's external coating of armour, and therefore has no armour-plate bulkheads built across it forward and aft, presents to the view a continuous battery of 95 cwt. 68-pounders and Armstrong 110-pounder breech-loaders. The ports are closer together than those of the iron ships, but there is abundance of room to work the guns, and a sufficient height between decks for every necessary purpose and to assist ventilation. The crew of the ship mess on the lower deck, and the main deck is thus kept clear of all mess-tables and utensils, which gives it a much more showy and imposing appearance than is the case with the main decks of the iron frigates where the men mess between the guns.

The engines of the ship are of 800-horse power, nominal, by Messrs. Maudslay, Field, and Son; and are from the same patterns, with the exception of some minor improvements in their detail, as those of her Majesty's ship Marlborough. They are on the firm's horizontal principle, with direct action, and have cylinders of 82 in. diameter with a 4 ft. length of stroke. The firegrate surface is 565 square feet, the heating surfaces in furnaces and flue is 2400 square feet, and the heating surface of the tubes is 13,300 square feet. The weight of the engines is 186 tons; of boilers, 206 tons; and of water, in boilers, when filled, 118 tons. The coalboxes have a measurement of 24,480 cubic feet, and stow 600 tons of coals—seven days' consumption. The propeller is a Maudslay-Griffiths, weighing 11 tons 11 cwt. It is 19 ft. in diameter, with a length of 3 ft. 10½ in., and is set at a pitch of 27 ft. 6 in. It has a varying pitch down to 22 ft., but to alter the pitch at any time the ship must be placed in dock, as the screw has been made a fixture, in this following the example of the French Imperial Marine. The stowage of the vessel below in her holds and storerooms is as near perfection as anything of the kind can possibly be. The water-tanks are fitted on the plan of Mr. Moore, of Portsmouth Dockyard Tide Gauge Office, and by which means each tank is filled from the condensers, without the trouble of pumping by hand, as is ordinarily



TRIAL OF STEAM FIRE-ENGINES AT THE CRYSTAL PALACE.—SEE NEXT PAGE.

the case. The steering of the ship is managed by a simple reversion to the old gunroom tiller—i.e., a long straight tiller projecting from the rudder-head into the after cabin, in a line with the keel, and the manner in which the ship answered her helm on Monday satisfied all on board that the resumption of the old description of tiller has given back to our ships some considerable portion at least of their old power of answering their helm, even before the introduction of the screw. She has also the advantage of an excellent system of ventilation, the invention of Mr. Baker, chief engineer of Chatham Dockyard, under whose superintendence a comprehensive system of up and down cast air-tubing and shafting has been fitted. This is stated to be quite sufficient for the ship's ventilation—in fact, everything connected with the vessel and her equipment is highly creditable to Chatham and all concerned in her construction.

TRIAL OF STEAM FIRE-ENGINES.

LAST week a series of experiments, interesting in themselves and likely to be in their result of the highest importance, was carried on in the Crystal Palace grounds, with a view to ascertain which is the best description of steam fire-engine of the different machines of the kind now made. These trials were conducted under the superintendence of a committee of noblemen and gentlemen, having the Duke of Sutherland for chairman, Captain Shaw as hon. secretary, and including among its members the most eminent mechanical engineers in the kingdom. The engines produced for trial were divided into two classes—the small class, consisting of those not exceeding 30 cwt.; and the large class, those exceeding 30 cwt. and not exceeding 60 cwt.; those weights not including coal, water, hose, or other gear. The premiums were £250 for the best engine, and £100 for the second best in each class. The chief points to which the committee directed their attention, in addition to the consideration of cost and weight, were those which relate to the general efficiency of the machines as fire-engines, combining, among other points of excellence, rapidity in raising and generating steam, facility of drawing water, the large volume thrown, the distance to which it can be projected with the least amount of loss, and simplicity, accessibility, and durability of parts. In order to carry out these trials with perfect uniformity and fairness, the committee provided the fuel (Welsh coal) and the nozzles—all of one pattern. One of the principal objects to be ascertained being to define the quantity of water which each could project through the atmosphere to certain heights and distances, the committee had prepared a set of water-targets and tanks, arranged in such a manner that the water could be measured after delivery. These targets consisted of canvas hoods with circular openings of 6 ft. in diameter, having attached to each a tail or shoot, through which the water was conducted into a gauged tank standing below, from which the quantity delivered within the opening of the target could be read off by means of a graduated index.

A great many engines of different kinds were entered for this trial, which took place on Wednesday, Messrs. Shand and Mason and Mr. Merryweather being the principal English competitors against the American machines, of which two competed. To the chief of these, the Manhattan, an accident occurred on Tuesday, by which it was partially disabled. On going down a steep hill, the men who guided it with ropes lost all control over it, and it fell on one side, injuring one workman fatally and destroying its chances of competition. In its place, however, another American engine entered the lists, and worked well. The muster of the fire-engines and the firemen, in various costumes, near the lower basin of the fountains, was a very pretty and animated sight, and we give an Engraving of the scene. As far as the trials went on Wednesday, the superiority rested with the engines of Messrs. Shand and Mason. They were the first to get up steam from cold water and be in full work, accomplishing this task within eight minutes, the others taking nearly ten. They were the first to throw through their target their allotted quota of 1000 gallons of water, and the distance to which they projected their massive column of water vertically into the air clearly overtopped the rather feathery shoots of their antagonists.

The trials of the machines were continued on Thursday. The tests were on this occasion devised to put the strength and durability of each machine to the most arduous proof. For this purpose each engine had to work by itself for two hours without stopping, drawing its supply of water up into the engine from a depth of 18 ft., and delivering it through a hose no less than 400 ft. long, the hose being laid from the lower basin of the fountains up the steep incline, along the bed of the cascades, into the water temples at the top. To raise its water up from a depth of 18 ft., to deliver it up a very steep hill through a 400-ft. length of hose, and, finally, to project it from the nose-pipe a distance of 56 ft. through the atmosphere at an angle of 45 deg. from the horison, requires the most powerful and perfect engines. The weather was unfavourable for the trial, especially in the early part of the day, when the high wind scattered a great deal of the water as it came from the hose. The engine of Messrs. Shand and Mason, which was tried first, was exposed to great disadvantages from this cause, from 10 to 15 per cent of the quantity of its jet being blown away before it could pass through the aperture of the target in the water temple. The American engine was unable to go through this ordeal, not being able to keep up steam enough for the great force required to raise and propel the water. On the whole, the honours of this day remained with Mr. Merryweather, his powerful three-hose engine accomplishing its two hours' task with great ease, notwithstanding that the hose burst twice under the great pressure of the water.

The trials with the fire-engines were brought to a close on Friday, after each machine had been put through every conceivable form of ordeal, some of which were so severe that one—an American engine—broke down completely. His Royal Highness the Prince of Wales, accompanied by Lord Caithness and attended by Captain Grey, came on the ground soon after ten o'clock to witness the experiments. The Manhattan, which was seriously injured by turning over when being brought upon the ground on Tuesday, was tried in the presence of his Royal Highness. It was scarcely fair to try this engine at all, but the American gentlemen themselves wished it, and steam was got up accordingly. Before it had pumped long, however, it was found to be too much injured to work with safety, and a crack which its flywheel had received when it fell over began to spread so fast that the machine had to be stopped at once. The Prince took great interest in the working of the machines, the different merits of which were pointed out to him by the Duke of Sutherland and Captain Shaw. The most important experiments made on this day with the engines took place just under the north water tower, to test them as to their power in throwing a vertical jet high into the air. For this purpose the nozzles of the hose of the four competing machines were fixed upright side by side in a frame about 10 ft. high. The diameter of the nose-pipe used by Mr. Merryweather was 26-16ths of an inch, or more than an inch and a half. Messrs. Shand and Mason used a nozzle of 22-16ths of an inch, the American engine one of 21-16ths of an inch, and Mr. Roberts's engine one of 14-16ths of an inch. The latter, for such a small engine (only 30 cwt.), threw a steady and high jet, at times quite as high as 140 ft., into the air. All, however, were eclipsed in height by the jets thrown by Mr. Merryweather's and Messrs. Shand and Mason's, which reached a height of 180 ft. The American engine was literally nowhere, and, except during an occasional spurt, 50 ft. was about its maximum. As the jets were kept close and parallel with the tower, and only distant from it a couple of feet, it was quite easy, by a comparison with the stories of the tower itself, each of which is 20 ft. high, to estimate almost to a foot the height each jet was thrown. The united efforts of all the nozzles of course came down in a perfect cataract of water. This last effort, which was exceedingly beautiful to witness, brought the trials to a close.

At a meeting of the committee on Wednesday evening—his Grace the Duke of Sutherland in the chair—the following official award of prizes was made:—The patent steam fire-engine by Messrs. Merryweather and Sons, of Long-acre (large size), was awarded the first prize of £250. The £100 prize was awarded to Messrs. Shand, Mason, and Co., of Blackfriars-road, for the next large engine. Only two prizes could be given, but Robert's engine was, by formal resolution of the committee, highly commended. It should be stated that this engine was over 30 cwt. and under 60 cwt., and that a quantity of shavings got by some means into the suction-pipe of the engine at first trial. Amongst the small land-steamers the prize of £250 was awarded to Messrs. Shand, Mason, and Co. The £100 prize was awarded to Messrs. Lee and Co.'s small engine.

CALENDAR FOR THE WEEK ENDING JULY 18.

SUNDAY, July 12.—Sixth Sunday after Trinity. Acre taken by the Crusaders under Richard I. of England and Philip Augustus of France, 1191. Battle of Aughrim; the adherents of James II. defeated by General Ginkell, 1691. Peace concluded between Austria, France, and Sardinia, at Villafranca, 1859.

MONDAY, 13.—The Parliamentarians under Waller defeated near Devizes, 1643. Cook returned from his first voyage round the world, 1771.

TUESDAY, 14.—Destruction of the Bastille, and beginning of the French Revolution, 1789. French National Confederation celebrated at the Champ de Mars, 1790, 1791, 1792. Marat killed by Charlotte Corday, 1793.

WEDNESDAY, 15.—St. Swithin (Bishop of Winchester, 852). Pope Pius VII. and Napoleon Bonaparte by a concordat re-established the Catholic religion in France, 1801. Napoleon I. surrenders himself to Captain Maitland, of the Bellerophon, 1815. New moon, 10h. 51m. p.m.

THURSDAY, 16.—Great victory of the Gauls, under Brennus, over the Romans at the Allia, 389 B.C. Anne Askew, an accomplished Protestant lady, burnt in Smithfield, London, 1546.

FRIDAY, 17.—Charles VII. crowned King of France, through the aid of Joan of Arc, 1429. Death of Earl Grey, the head of the "Reform" Ministry, aged eighty-one, 1845.

SATURDAY, 18.—Death of the great Italian poet Petrarch, 1374. The French invasion of Sussex repelled, 1543.

NOTICE.—The Titlepage and Index of Vol. XLII. will be given in next week's Number.

THE ILLUSTRATED LONDON NEWS.

LONDON: SATURDAY, JULY 11, 1863.

HAVING already called attention to the movements that are being made for celebrating the tercentenary of the birth of Shakspeare, we will briefly advert to the present position of those who are making creditable efforts to carry out this purpose. We offer these remarks chiefly for the sake of promoting the cause, which is now being taken up in a right spirit and with a reasonable prospect of success. Time, however, is rapidly passing, and in another month there will be little chance of obtaining active co-operation from the influential classes. The Premier has intimated that Parliament has no inclination to sit much after July, and when the season is over the Shakspeare movement will stagnate unless energetic steps are at once taken to rouse public attention. It would be affectation to say that we believe that the people will join with eagerness in the demonstration, or that it is not one in which the leadership of the educated classes must be given earnestly if the result is to be worthy the name of the poet and of the nation.

We are glad to learn that the amalgamation of the associations that have taken the matter in hand either has been effected or will at once be arranged. A united effort alone can accomplish the object, and we rejoice to believe that there is a strong desire on the part of those really interested in the scheme to pull together. The question which the public will, of course, put is, "What is proposed?" If a definite answer, embodying a practical aim, be given, we do not see why the movement should not be very successful; but all depends upon this. We confess that we adhere to all that we have hitherto advanced in reference to the question, and that we believe the doom of the scheme will be pronounced by the issue of any announcement that shall make it impossible for the non-theatrical world to join in the tribute to the poet whose poems take the form of plays, but whose dramatic faculty was among the least of his glories. We should desire to eliminate from the scheme all that appertains to the mere playhouse. William Cowper has been dead many years, but we have not forgotten the satire in which he immortalised the antics performed by Garrick at his celebration in honour of Shakspeare and himself:—

> The mulberry-tree was hung with blooming wreaths,
> The mulberry-tree stood centre of the dance,
> The mulberry-tree was hymned with dulcet airs,
> For Garrick was a worshipper himself.
> He drew the liturgy, and framed the rites
> And solemn ceremonial of the day.

We are happy to believe that the age has advanced, and that any mummery of the kind that pleased the age of Garrick would now be scouted. That money might be obtained by the announcement of a procession at Stratford is very likely, when we know that the vulgarities of the Godiva show draw thousands, and that even the May-Day chimney-sweeps get a good deal by their masque; but it would be an insult to the memory of the poet to buy him a statue with coin so gained. On the other hand, there is no reason why Shakspearean performances should not take place on the night of the birthday, for those curiously-constituted persons who believe that the Shakspearean drama can be decently represented by any talent now upon the boards. But these performances should have no connection with the national scheme. If they succeed, and produce money, it may be added to the fund, but it is not the National Committee that should seek to raise supplies by such means. If the actors like to abandon sensation dramas and slang burlesques for a single night, and speak the language of Shakspeare, the virtuous effort will deserve all plaudit, and this is not an age when under-praise is in vogue; but we do not think that the pecuniary result of such performances will—we take the low view of the subject—balance the loss which the scheme will sustain by the admission of the histrionic element to exclude the thousands who consider the theatrical system, as at present administered, as objectionable in a moral point of view as the intellectual world regards it with reference to true art.

We think that the statue is the form which the tribute should take, and that the metropolis is entitled to the custody of the statue, not only because London was the place where the poet flourished, but because it is only by placing the memorial in the capital that we shall afford the world a chance of seeing it. The claims of Stratford are untenable, though we are aware that certain selfish interests will be clamorously asserted. The statue must be in London, and we think that it ought to be in a public place, if a good site can be obtained. In front of the Temple Garden, where Shakspeare has laid a scene which no one forgets, will be created a new promenade where the memorial might well be placed, especially as it would be seen from the river. It certainly ought to be placed in Old London. Some have advocated a site near that of the Globe Theatre, but there are heavy objections to this, besides the fatal objection to "that side of the water." We may add that if a fountain, on a noble scale, could be part of the memorial, we have precedent in the Molière fountain in Paris, and may hope to make something even better than that. But, of course, all these questions are swallowed up in the great question—one of funds; and it is because we feel that a large fund ought to be collected by worthy means (or the tribute will be a scandal instead of an honour to us) that we would specially urge upon all concerned in the movement to lose no time in enlisting the active co-operation of the best classes.

Nothing can be done in England without a dinner, and why should we not always have a dinner when we can? We can have the best dinner in the world (we could do so even before the Acclimatisation Society enlightened us), we can have the best wine, and our party, large or small, will contain a great preponderance of honest men. Why should we not meet in honour of William Shakspeare's birthday. By all means let us have a banquet; and if "orations" are to be pronounced upon such an occasion, why, let us even bear those sooner than refuse to assemble. They will be very foolish orations, of course; but the parties will mean well, and we shall have a good subscription. There will be no enthusiasm: a second-rate town in Germany will go more mad over a third-rate statue to a fourth-rate fiddler than all England will show itself on this occasion; but the most honourable admiration is not the most noisy. The masses will not be in the movement, and it is only cant that seeks to persuade others that the artisan is half as much interested in "Ophelia" as in the other drowned lady, the "Colleen Bawn;" but, if the business be managed properly, we shall secure the middle and the upper classes, for different reasons, into which it is not necessary to go. But we must lose no time; here is July, the next three months will be a blank, and then the interval between the reorganisation of society and the birthday will be short indeed. We learn that there are great and distinguished names in large numbers ready to be announced, and the sooner we hear of them the better, in companionship with a definite announcement of the object of the committee.

THE COURT.

The Queen and the Royal family, attended by Viscountess Jocelyn, the Hon. Mrs. Bruce, the Hon. Beatrice Byng, Lord Alfred Paget, and Colonel the Hon. Sir Charles Phipps, arrived at Osborne at a quarter past one o'clock on Saturday last. In the afternoon her Majesty, accompanied by Princess Helena, drove out in a carriage and four. On the same day the Prince and Princess of Leiningen arrived on a visit to her Majesty.

On Sunday the Queen, Princesses Helena and Louisa, with the ladies and gentlemen in waiting, attended Divine service, performed at Osborne by the Rev. G. Prothero.

On Monday morning the Queen walked in the grounds adjacent to Osborne. In the afternoon her Majesty, accompanied by Princess Louisa and the Princess of Leiningen, drove out in a carriage and four. Lord Alfred Paget attended on horseback.

On Tuesday the Queen, attended by Viscountess Jocelyn, walked and drove in the vicinity of Osborne.

On Wednesday Prince Leopold arrived at Osborne from Windsor Castle. The Duke of Somerset also arrived on a visit to her Majesty.

THE PRINCE AND PRINCESS OF WALES.

On Saturday the Princess, attended by the Marchioness of Carmarthen, visited the Horticultural Gardens at Kensington. In the evening the Prince, attended by Captain Grey, went to Twickenham, and dined with the Duke d'Aumale, at Orleans House. On the same day the Queen of Prussia, Princess Mary, and the Duke de Montpensier visited the Prince and Princess at Marlborough House.

On Sunday the Prince and Princess attended Divine service in the Chapel Royal, St James's. The Sub-Dean, the Rev. R. Harvey, and the Rev. J. C. Haden officiated. In the evening the Prince and Princess gave a dinner to the Queen of Prussia. Among those who had the honour of meeting her Majesty were the following:—The Duke of Cambridge, Prince Edward of Saxe-Weimar and the Countess Domburg, Count Bernstorff, the Duke of Hamilton, the Duke and Duchess of Manchester, &c.

On Monday the Prince and Princess accompanied the Queen of Prussia to the London Bridge terminus, and took leave of her Majesty. In the afternoon the Prince, attended by Captain Grey, rode on horseback. The Princess, attended by the Marchioness of Carmarthen, took a drive in an open carriage. In the evening the Prince, attended by the Earl of Mount-Edgcumbe and Captain Grey, honoured the Royal Italian Opera with his presence.

On Tuesday the Prince and Princess went to Chiswick, and honoured the Duchess Dowager of Sutherland with their presence at a déjeuner at Chiswick House. On the same day the Duke and Duchess of Cambridge and Princess Mary visited their Royal Highnesses at Marlborough House.

On Wednesday the Prince, attended by Lord Alfred Hervey,

NATIONAL SPORTS.

A good meeting at Worcester was especially marked by the kind running of Umpire, who has now paid back £970 of the thousand which Lord Coventry gave for him when the public considered him "a hopeless savage." Coup d'Etat was another winner for Leamington, and Practitioner gave Alpheus (considered to be better than Leicester, and heavily backed by his owner) 8 lb. and a very easy beating after a very bad start. He is by The Cure, and seems a cheap 155-guinea purchase for Mr. Craven at the annual Sheffield Lane stud sale. The weather at Newmarket was fearfully hot, and the shade of the beeches near the July Stakes Course most grateful. Brother to Morocco in his two races nearly made up for Wingrave's defeat in his match with Umpire. Ten came out for the July, and the finish, between the somewhat leggy Cambuscan, the neat little Midnight Mass, and the slovenly-looking Scottish Chief, was a very fine thing, there being barely half a length between the three. The Calista colt went remarkably well in his canter, but never got near the leaders, which are most probably a very moderate lot, despite the 7 to 4 on Mr. Merry's crack. Claremont did not look fit, and with his companion, Rouge Cross, came more to get a line with "The Chief." The winner and the second were both by Newminster, and the former was bought at her Majesty's sale by Lord Winchelsea for 400 gs., and sold by him, it is said, for 900 gs. to Lord Stamford, sadly to his trainer's dismay, who thought he had another "stinger" to succeed Macaroni. Newmarket has thus won the greatest races of its season so far, as well as the Derby. Baron Rothschild was amazingly lucky on Wednesday, but his King of Diamonds broke down.

Lord Clifden has gone back to 100 to 6 in the St. Leger betting, and as The Ranger's legs were said to be the cause of his party not backing him heavily for the Derby during the winter, he is not a very hot favourite, with the ground in such a hard state. Some few, relying on their remembrances of "the family blood," are disposed to back Mr. I'Anson's Bonny Bell. John Day is said to have a Barb in hand for the Goodwood Cup, which has defeated everything at Gibraltar, and carried 14 st. well to hounds, which is considerably more than twice what it is honoured with at Goodwood in consequence of the tremendous allowances to eastern-bred horses. The race meetings next week are at Liverpool, Abingdon, Hungerford, Pontefract, and Stamford; and but for her temper being a little odd, Imperatrice's chance would be worth more than 10 to 1 for the Liverpool Cup.

We hear that his Royal Highness the Prince of Wales has sold both the hunters he bought at the Quorn sale at the same price he gave for them. "Bentinck," we believe, goes to Mr. Chaplin, and "The Right Man" to a foreign nobleman. His Royal Highness (whose purchase of Bilton Grange is not yet confirmed) has bought one of Sir Frederick Johnstone's best hunters at Tattersalls' lately.

Robert Chambers still declines to row another match with Green on the Thames in August, but contends that, as he has rowed four times already on that river, it is but fair that Green should come down to "the coaly Tyne." He does not seem to care much about a match, but suggests to the Australian that if he is not satisfied he had better enter against him for the Tyne champion cup. Green claims forfeit on the ground that Chambers will not row in reasonable time, and Chambers's backers think Green unreasonable for not taking expenses to row on the Tyne; and there the matter stands. So far, Chambers has won £2100 in matches. At Greenock, on Thursday, the regatta came off under the auspices of the Royal Northern Yacht Club. The Fairy Cross took the £100 prize for schooners, the Surf the £50 prize for yachts, and the Glide the £20 prize.

Rugby quite overtasked itself in trying to play the Marylebone Club and Ground, as Grundy and Baker bowled in their best style, and defeated them in one innings, with twenty-five to spare. In the second Gentlemen v. Players match the former did still worse than before, and were beaten by nine wickets. Willsher's 77, T. Lockyer's 76 (not out), Mortlock's 70, and Iddison's 49, were rare players' scores. Mr. R. D. Walker (40 and 37), Mr. Mitchell (76), and Mr. Daniel (51—run out), and Mr. E. M. Grace (31), were in good force. The gentlemen's bowling, with the exception of Mr. Grace's, was very weak; but Willsher, in one innings, and Griffith in another, told their tale. Mr. Daniel's run out was effected by a most masterly piece of play between Lockyer and Willsher, who "sent in the ball like a race horse" to Tom. Willsher was immensely applauded when he went up to the pavilion, as it was felt that he had stood on his high position as a cricketer, and declined to enter into any miserable anti-Oval cabal. "The talent sovereign" was given him, and we trust that the club will never again desert this good old rule. Five gentlemen and eight players from Kent could make no head against ten players and Mr. Grace (who got "the leger" 52) at Lord's, this week. Willsher (25 and 25) was more effective in batting than bowling, and T. Sewell (28—not out) never bowled better, and took both Griffith's and Carpenter's wickets. Griffith made the best player's innings, 43; but Tarrant was the lion of the match, and his bowling in the second innings was most destructive in its pace and precision. Woe, woe, to the men at the antipodes when they try to face him! The All England Eleven intend to compete next Thursday, Friday, and Saturday, at Hackwood Park, near Basingstoke, with twenty-two gentlemen of that locality.

NEWMARKET JULY MEETING.—TUESDAY.

Handicap Sweepstakes of 15 sovs.—Neophyte, 1. Sparkle, 2. Columba, 3.
Handicap Plate of £50.—Zeloo, 1. Battery, 2. Fanatic, 3.
Sweepstakes of 50 sovs.—Brother to Morocco, 1. Columba, 2.
July Stakes.—Cambuscan, 1. Midnight Mass, 2. Scottish Chief, 3.
Sweepstakes of 10 sovs.—Deerfoot, 1. King of Italy, 2. Daniel, 3.
Sweepstakes of 10 sovs.—Fletton, 1. Wild Tom, 2.
Plate of 50 sovs.—Brother to Morocco, 1. Harlequin, 2. Oberon, 3.

WEDNESDAY.

Sweepstakes of 10 sovs.—Rest, 1. Stomacher f., 2. La Medora, 3.
Handicap Plate of £50.—Waterwitch, 1. Spark, 2. Meriden, 3.
Stamford Plate.—Argonaut, 1. Livingstone, 2. Queen of Trumps, 3.
Plate of £50.—Brother to Canace, 1. Washington, 2. Usher, 3.
Exeter Stakes.—Eveline, 1. Crytheia, 2. Lady Caroline, 3.
Town Plate.—Golden Dust, 1. Dunkeld, 2. Canace, 3.
Sweepstakes of 10 sovs.—Daniel, 1. Oneida, 2. Abderrahman, 3.
Midsummer Stakes.—Carnival, 1. Sea King, 2. Ænopides, 3.

THURSDAY.

Handicap Sweepstakes of 10 sovs.—Black Lily, walked over.
£50 Plate.—Rosa f, 1.—Fletton, 2.
Chesterfield Stakes.—Scottish Chief, 1. Crytheia, 2.—Becky Sharpe, 3.
Sweepstakes of 10 sovs.—Zeloo, 1. Meriden, 2.
Handicap Plate.—Neophyte, 1. Prophet, 2. Columba, 3.

Sir Henry Bulwer has presented the Viceroy of Egypt, in the name of her Majesty, with the insignia of the Order of the Bath.

A great agricultural meeting has just been held at Odense, the principal town of the island of Funen. Of twenty silver medals, nine have fallen to the share of Englishmen; of forty bronze medals, five; and one obtained "honourable mention."

M. Lamartine has sent the following notice to the subscribers to his "Entretiens" and other works:—"The death of Mdme. Lamartine, that good and brave woman whom God had given me for the support and consolation of my life; the rheumatism, which has for three months kept me, and still continues to keep me, in a state of total inaction; the forced suspension of all work, of all income, and all payment during this period, will explain to my subscribers why they have received nothing from me. I request them to wait till the end of July. My health will then allow me to continue the interrupted "Entretiens," and to publish two numbers each month till the back numbers are all delivered. As to the 'Œuvres Complètes,' I have just signed an agreement with my good friend M. Gustave Delahaute, by which he, with disinterested friendship, agrees to pay my publishers for the eight volumes now in course of printing. The whole forty volumes will be finished and ready for sale on the 31st of December next.—A. DE LAMARTINE."

A further reduction of the artisans and labourers of Woolwich Arsenal is to be made, 200 men will be discharged from the Royal gun factories, thereby reducing that branch of the establishment (a short time ago numbering 3500 men) to 800. The laboratory department is likewise ordered to be reduced, and a number of wheelers and tin workers in the Royal carriage department have received notices of dismissal, some of whom have been in the employment about twenty years. For several months past the departments have been engaged solely in executing outstanding orders for the coast defences, some of which have been on the order-books about eight years; the whole of which are now completed, and the establishment is literally "at a standstill." The only work now being executed in the Royal gun factories consists of repairs, the completion of 200-pounder coast defence guns, and the adjustment of some guns on Mr. Broadwell's principle, on a peculiar system of breech-loading, for experimental purposes, commenced recently with success.

METROPOLITAN NEWS.

Messrs. Kelk and Lucas have commenced pulling down the Great Exhibition building.

The Newsvenders' Benevolent and Provident Institution holds its annual festival at Freemasons' Tavern on the 21st inst.

The members of the Navy Club gave their annual entertainment to the First Lord of the Admiralty (the Duke of Somerset) on Tuesday evening at Willis's Rooms.

The annual distribution of the medals and prizes to the students of the Female School of Art took place on Thursday at University College, Gower-street.

Public drinking-fountains were opened on Saturday at Peckham and Peckham-rye—Miss Chapman drinking the first glass of water at the former, and Miss Taylor at the latter.

On Monday the Rev. Joseph Brown, Rector of Christchurch, Surrey, with a committee of ladies and gentlemen and hundreds of poor parishioners, had their annual trip to Chiselhurst, Kent.

The sale of pictures by Italian, Flemish, and Dutch masters, commenced by Messrs. Christie, Manson, and Woods last Saturday, was concluded on Monday. The sum realised amounted to nearly £6000.

The London and South-Western Railway Company have just opened their new branch line of four miles between Twickenham and Kingston, giving stations at Teddington, Hampton-wick, and Surbiton.

At the July Quarter Sessions for Middlesex, which began on Monday, there were 133 prisoners for trial. Of these 44 can neither read nor write, 73 can read and write imperfectly, and one only can read and write well.

The important collection of old Greek coins, in gold, silver, and bronze, formed by the Chevalier N. Ivanhoff, Consul-General for Russia at Smyrna, during a long official residence in Turkey, has been disposed of under the hammer of Messrs. Sotheby and Wilkinson. The sale lasted throughout the whole of the week and realised more than £3000.

Last week the births of 1937 children—995 boys and 942 girls—were registered in London. In the ten corresponding weeks of the years 1853-62 the average number (corrected) was 1728.——The rate of mortality in London was nearly constant during the month of June. In the week that ended last Saturday the deaths were 1187. The average weekly number at the beginning of July, corrected for increase of population, is 1142. A girl and a boy died from swallowing cherry-stones.

A meeting of the Metropolitan Board of Works was held yesterday week, when Mr. Bazalgette reported favourable and rapid progress on the different sections of the main-drainage scheme. An application from the trustees of the Peabody fund had been received by the board, soliciting that the provision of the Act of Parliament which requires that houses where a number of families are intended to reside shall be built in such a manner as to render them fireproof should be relaxed in the case of some houses they intend to build at Shadwell. The board decided that they had no power to relax the provisions of the Act, and refused the application.

Tattersalls', familiarly known as the Corner, will shortly change its time-honoured location. In 1765, a hundred years' lease was taken of these premises by an ancestor of the present family. They then simply consisted of a stable-yard, with a few buildings attached. From time to time various additions and improvements have been made to meet the requirements of business, but it is still an inconvenient and contracted establishment. The immense amount of business which is now transacted in connection with racing affairs renders Tattersalls' a species of sporting Stock Exchange. Before and after races of any importance, the subscription-room is so crowded as to render moving about a work of great difficulty. The want of space applies equally to the box and stall accommodation for the large number of horses which are annually brought to the hammer by Messrs. Tattersall. In 1865 the present lease will expire, and handsome and more commodious premises will be built on a piece of ground at Knightsbridge-green, which is already being cleared for the purpose.—*Building News.*

The half-yearly meeting of the Royal Humane Society was held at the offices of the society, in Trafalgar-square, on Wednesday—Mr. B. Bond Cabbell in the chair. It appeared from the report that the receipts for the last half year amounted to £779, the expenditure being £582. The number of cases since last December were 65; persons successfully treated, 81; beyond recovery, 6; suicides, 7. The return for Hyde Park is as follows:—12 persons successfully treated, 1 beyond recovery, 3 found drowned, 3 attempts at suicide. The council awarded the society's silver medal to the following applicants:—Maori Jack, who saved the life of Mr. Mitchell, and tried to save Mr. Rogers, whose boat upset on Lake Whakatep, New Zealand, on Aug. 9, 1862; Mr. A. Maclean, who saved Mr. T. Davies, who was carried away by the current while bathing in the Buffalo River, King William's Town, Cape of Good Hope, Feb. 11, 1863; Lieutenant G. A. Turner, her Majesty's 50th Regiment, who saved Lieutenant W. R. White, and tried to save a boatman whose boat upset on Lake Tumbligam, near Trincomalee, Feb. 19, 1863; Charles Murphy, who saved Margaret Fitzgerald, who accidentally fell into the river at Cork, May 3, 1863.

There are few spots within the metropolitan district which possess so many historic charms, and around which there cluster so many pleasant memories and agreeable associations as Strawberry Hill. Pope gathered around him, at his villa at Twickenham, a select circle of the men of genius of his time; and Horace Walpole made Strawberry Hill the resort of the wits, the aristocracy, the statesman, and the leading spirits of the fashionable world. From the luxurious shades of Strawberry Hill Walpole sent forth those graphic and gossiping pictures of the doings and sayings of the fashionable world, which have given so much zest to the history of the eighteenth century. It was the dwelling-place of one who has been very happily described as "the most eccentric, the most artificial, the most fastidious, the most capricious of men;" one whose mind was "a bundle of inconsistent whims and affectations." The gardens of this famous place, now in the possession of the Countess of Waldegrave, are, by the kind permission of its amiable owner, to be opened on Wednesday and Thursday, the 15th and 16th, for the purpose of a bazaar in aid of the funds required for the enlargement of Holy Trinity Church, Twickenham. The list of patronesses includes an array of influential names. Military bands are engaged.

The distribution of prizes and testimonials by Lord Shaftesbury among the poorer inhabitants of the parish of St. George's, Bloomsbury, who had kept their rooms clean and tidy during a prescribed period took place on Thursday in the inclosure of Russell-square. A large marquee was erected, in which the competitors for the flower-show prizes exhibited their specimens of window-sill floriculture. Considering that the whole of these flowers were grown in the worst courts of the parish, the collection of fuchsias, geraniums, and other flowering plants was really surprising. Perhaps the most interesting portion of the show was the children's class, containing annuals grown in pots by the Sunday-school children. Some of the young exhibitors had struck out a new line for themselves, and had reared miniature orange and lemon trees, walnut-trees, and even date palms and locust-trees from the stones and seeds of those plants they had become possessed of. Between four and five hundred plants were exhibited. The idea of the flower-show was originated three or four years since by the Rev. S. H. Parkes, Curate of the Rev. Emilius Bayley, the Rector of the parish. The still more valuable notion of giving prizes for clean and tidy rooms was first proposed by a charitable friend to the Rev. Mr. Bayley. The good effected by this simple means can hardly be over estimated. The gentlemen connected with the affair state that the transformation from filth to cleanliness in numbers of rooms in the very worst districts is almost incredible. In distributing the prizes Lord Shaftesbury told the successful competitors that they ought to feel proud and happy at what they had accomplished. They had done their duty by themselves and their families, and they would feel the benefit of it sooner or later. He reminded them, in conclusion, that the virtue of cleanliness was next to godliness, and that the cultivation of flowers, whether in a princely garden or a humble flower-pot, was one of the purest of earthly pleasures. The bands of the Bloomsbury Rifle Corps and of the E division of police attended during the day.

The annual distribution of rewards by the Royal Society for the Protection of Life from Fire took place on Tuesday in the Mansion House—the Lord Mayor in the chair. The chairman, having pointed out the excellence of the objects of the society and dwelt upon the public importance of well-organised fire brigades, called upon the secretary to read the report. By this document it appears that since March, 1862, six new stations have been established, raising the total number of stations belonging to the society to 81. The society's brigade numbers 90 members, under four inspectors. During the year 613 fires have been attended, and 67 persons rescued from burning premises. The balance-sheet shows the receipts to have been £3278; payments, £3111. After the reading of the report the Lord Mayor distributed the awards as follow:—James O'Brien, silver medal; John Andrew Schulkins, testimonial; Williams Mullins, testimonial and half a sovereign; Charles Arnold, silver medal; Edward Dunk, testimonial and one sovereign; John Tordhoff, testimonial and half a sovereign; George Edsden, silver medal and one sovereign; John Shaw, testimonial and one sovereign; Samuel Lemmen, testimonial and one sovereign; Joseph Jacobs, testimonial and one sovereign; Joseph Robinson, testimonial and half a sovereign; Adam Briggs, silver medal; John M'Cormick and Colin M'Donald, testimonial and one sovereign each; Thomas Clarke, silver medal; Henry Attwood Allen, silver medal; Edward Ross, testimonial; Samuel Hawtree, testimonial and half a sovereign; Caleb Hooker and William Miller, testimonial and half a sovereign each; George Hardway, silver medal; Samuel Wood, testimonial and one sovereign (this man was the owner of the celebrated "fireman's dog," and he wore the gold and silver medals of the society, and had five testimonials; on one occasion Wood brought three children from the upper floor of a burning house, carrying one under each arm and one in his mouth); William Hunt, testimonial; Nathaniel Puzey, testimonial and one sovereign; Henry Hughes and John Foy, testimonial and half a sovereign each; Joseph Pryer, testimonial; William Irvine, testimonial and half a sovereign; Richard Storey, testimonial; George Searle, testimonial and one sovereign; George Varney, testimonial and half a sovereign; George Cornell, testimonial and half a sovereign; and Thomas Welford, one sovereign and a clasp to the society's silver medal already in his possession. Welford's special service was the rescuing of seven persons from great danger at a fire in Upper Thames-street.

LAW AND POLICE.—An important decision has been given in the Court of Exchequer. The Crown has been suing the Earl of Sefton for succession duty on account of certain lands in the neighbourhood of Toxteth Park, Liverpool, which he inherited from his father. The land is at present unproductive, but its value is increasing, and it is now calculated to be worth above £1000 an acre more than agricultural land. The Earl of Sefton contends that, as it yields no immediate revenue, it has no right to be charged with succession duty. The Court of Exchequer delivered judgment in the suit on Monday. Baron Martin thought that the duty ought to be charged. The Lord Chief Baron's decision was the other way, and, as Baron Wilde and Baron Channell agreed with him, the judgment was for the Earl.

A trial took place in the Court of Exchequer last Saturday upon a disputed bill. The plea of the defendant was that though his name was on the bill as acceptor he had not written it, but that it was put there by his son without his authority. The peculiarity in the case was that the son entered the witness-box apparently to bear out this statement, when the Judge cautioned him that if that was the purport of his testimony it would be the duty of the Court to commit him for forgery. On hearing this the witness left the witness-box, and the jury decided that his father must pay.

Some time ago Mr. Collingwood obtained damages against Mr. Berkeley, M.P. for Bristol, and the other directors of the British Overland Transit Company for not fulfilling their contract of carrying him and other passengers by the overland route to British Columbia. The directors came before the court for a new trial, but the Barons of the Exchequer on Monday decided that the verdict of the jury ought not to be disturbed, and the judgment was made absolute against the directors.

A case of interest to all parochial Incumbents came before the Court of Queen's Bench on Tuesday. A labouring man in the parish of Horton, Buckinghamshire, applied to the Rector to marry him, but refused to pay the fees. The Rector offered, if the labourer would plead inability, to advance the fees for him, which the labourer refused to do, on which the Rector declined to perform the ceremony, and both bride and bridegroom brought actions against him. The action of the bride was, however, afterwards withdrawn, and it was understood that the parties had been married; but the action of the bridegroom, which was said to be really the action of some litigious persons in the parish, was continued, and turned upon the right of the Rector to exact fees at all. At the suggestion of the Lord Chief Justice the case was made a special one, and submitted for arbitration.

In an action for false imprisonment before the Court of Exchequer on Monday, a police sergeant who was called as a witness stated that he claimed and exercised authority to inspect the books of plaintiff. Baron Martin, who presided, rebuked him severely, and said not even the Judge had power to inspect people's books without warrant.

The state of ventilation in the Second Court of Queen's Bench at the Guildhall is such that Mr. Justice Mellor, after numberless complaints, publicly stated last week that if something were not done to remedy the evil he would not sit in it. It was "a cucumber frame."

The inhabitants of Frankfort, in Germany, have sent 13,000 lbs. of linen and lint to the Federal army.

The Copenhagen paper *Danmark* which used to bring out an English article once a week, will not be published during the coming three months.

The offices of Surveyor-General of Prisons and Chairman of the Directors of Convict Prisons, rendered vacant by the decease of Major-General Sir Joshua Jebb, K.C.B., have been conferred by the Secretary of State for the Home Department upon Lieutenant-Colonel Edmund Y. W. Henderson, of the Royal Engineers, who has for many years been Controller of the Convict Department in Western Australia.

One of the most valuable veins of petroleum yet discovered was lately struck on the Farrell farm, Old Creek, Verango County, Pennsylvania. When the well commenced flowing, the oil spouted to a height of fifty feet, with a roar like a hurricane, and escaping at the rate of two thousand barrels per day. A stop-cock was got on after much trouble, and the flow can now be regulated to suit the demand. Another flowing well in the vicinity was so affected by the opening of the new well that its yield decreased over three hundred barrels per day. The Farrell well, which is about 450 ft. deep, was, at last accounts, flowing steadily at the rate of twelve hundred barrels a day. This, even at the moderate prices ruling at the wells, would yield the owners 3600 dols. a day.

In a letter addressed to the *Nation* M. Duchesnay gives an account of the discoveries lately made in the environs of Rome, on the spot where Constantine defeated Maxentius—that is, near Cremera, outside the Porta del Popolo. On one of the hills of that locality a villa, believed to have belonged to Calpurnia, Cæsar's wife, has this year been entirely exhumed. One of the conduit-pipes found on the spot bears the name of that lady. At an insignificant depth below the surface of the soil a suite of rooms has been found, which must have been the ground floor of the villa. The walls of one of these rooms are decorated with painted landscapes, one of which represents a grove of palm and orange trees, with fruits and birds on the branches. The colours are perfectly well preserved, and as vivid as if they had been painted but a few days ago. The ceilings have fallen in, but from the fragments it is easy to perceive that they were decorated with aerial figures similar to those discovered at Pompeii. Glass and pottery have also been found on the spot; but the great object of attraction is a beautiful marble statue of Augustus, in his triumphal robes, open enough to reveal a richly-sculptured breastplate, the subjects of which are Rome with a cornucopia, and the twins by her side; Apollo with his lyre, mounted on a hippogryph; Diana with a hart, Mars sheathing his sword, a trophy, and a triumphal car drawn by four horses and preceded by winged figures of Victory. The feet of this statue are broken off, but not lost. One of them is flanked by a cupid on a dolphin. The statue is two metres and a half in height, and bears evident traces of paint on its surface. The busts of Septimius Severus, his wife, and his son Geta have also been found,

INDIAN RAILWAYS.—The report of Mr. Ireland Danvers, the Government Director of Indian Railways, for the year 1862-3 has been issued. According to this document, 747 miles had on the 31st of December last been added to the 1609½ which were open for traffic on the 1st of January, 1862. Since the beginning of this year 184 miles more have been finished, making a total of 2528 miles upon which passengers and goods are now being conveyed. The greatest distance traversed in a direct line is on the East Indian Railway, from Calcutta to Benares, 540 miles; the next greatest is the trans-peninsula line from Madras to Beypore, 405 miles; and the next from Bombay to Sholapore, across the Bhore Ghât, 295 miles. In the year 1861 the goods sent out from this country for Indian railway construction weighed 182,621 tons, and cost £1,669,443; last year these respective amounts were 138,013 tons and £1,487,582, which, added to former years, makes a total of 2,597,941 tons of materials, of the value of £13,843,392, sent out to India from this country, in 3292 ships, for the purposes of the railways. With regard to the persons employed on the open lines, compared with last year, the number of natives is 35,468, against 32,148; of Europeans, 2344, against 2181. The amount raised by the companies, in addition to the sum of £2,515,496, which stood to their credit on the 1st of May, 1862, was £5,238,567; so that on the 1st of May there was a balance of £1,943,211 available for the current year's expenditure. It has been estimated that the expenditure for the year 1863-4 will be £2,012,000 in England, and £4,189,000 in India; and that £5,293,000 will be raised to meet it, in addition to the balance of £1,943,211. In another year the great cotton-fields of Central India and of Guzerat will be in direct communication with Bombay, and Delhi will be within two days of Calcutta.

GRAVEYARD OF THE ANGLO-SAXON.—The Rev. J. G. K. Houghton writes as follows to a Montreal paper:—"It may afford a melancholy consolation to some of those who have suffered from the loss of the Anglo-Saxon to know something of the spot where so many victims of carelessness, want of discipline, and cowardice lie buried. Between Cape Race and Cape Ballard the land retires in a semicircular bay; the line of the shore, however, is not even, and this bay may be said to be formed by several smaller bays, the first, the scene of the calamity, extending from Cape Race to the entrance to Clan Cove. Within this bay, at about four miles and a half from Cape Race, in a recess formed by the sea retiring between projecting rocks, the Anglo-Saxon was wrecked nearly at noonday. The ship lies in between six and seven fathoms of water, and on the 16th of May the masts were yet visible, standing about six or eight feet from the water. As nearly as I could judge, at about a mile and a quarter from the wreck, bold rocks, covered with trees, mark the spot where Clan Cove indents the shore, and, after piercing the land for some distance in a direct line, turns at a right angle and runs on for about 100 yards. This bend is on the sea side bordered by rocks covered with low firs; on the land side there is a level breadth from which the rocks rise precipitately to the plain above, and these rocks, like those opposite, are more or less covered with trees, a deep belt of which surrounds the whole cove. On this level 134 bodies, as nearly as it was in my power to estimate, lie buried. It is a peaceful and quiet spot, and, till the rude wooden crosses and mounds of stones marked the graves, seemed to have remained undisturbed by the tread of man. Old men and young men were there buried side by side—two sometimes in one grave, a woman and a child, a man and a youth. It was a terrible sight to see the boats bringing in now one, now two or three, dead bodies—bodies of those who had died in the prime of life or in the full flush of the confidence and the hope of youth, within a few days' sail of the land where their friends waited to greet them or where their new future was laid. After my arrival I personally superintended the burials, and it will be a melancholy comfort to us all to know that the rough islanders treated the bodies themselves with decency and reverence. Although not proof against the temptation of unholy gain, the religion of even the wreckers had taught them to respect the dead; but no persuasions or promises of mine availed to rescue even a watch or a ring as a memento for the living. While one hand reverently swathed the head with handkerchiefs and linen, the other rifled the pockets. Some were much changed, but the countenances generally appeared to indicate that the last moments had been painless, and that they had passed away in peace; the eyes even of some were closed, and the clenched hands were often the only evidences of a violent death. The funeral service of the Church of England was, I am informed, read by the Rev. Mr. Eaton; but, as the larger number had been interred subsequently, I myself read it on Ascension Day, and again on Saturday, the 16th of May."

THE LATE PRINCE FERDINAND OF DENMARK.

THE LATE SIR JOSHUA JEBB.

THE HEREDITARY PRINCE OF DENMARK.

OUR Obituary notice of his Royal Highness Frederick Ferdinand, Hereditary Prince of Denmark, whose Portrait is here given, will be found in our Impression for last week. His Royal Highness died at Copenhagen on the 29th ult. By his demise Prince Christian, the father of the Princess of Wales, becomes Hereditary Prince.

SIR JOSHUA JEBB.

WE give a Portrait (from a photograph by Mr. Herbert Watkins) of General Sir Joshua Jebb, K.C.B., Surveyor-General of Convict Prisons, whose sudden death occurred on the 26th ult. Our Obituary column last week contained a detailed notice of this distinguished officer.

NEW ASSEMBLY-ROOMS AT BOULOGNE.

THE new assembly-rooms and bathing establishment at Boulogne were opened last week by a grand banquet, a concert, and a ball; besides which the hospitable Corporation had provided a continual round of amusements for their guests, consisting, among other matters, of promenades by land and water, gymnastic performances,

CHARITABLE FETE IN THE INTERNATIONAL EXHIBITION BUILDING: SCENE FROM THE BURLESQUE OF "THE PORT ADMIRAL."—SEE PAGE 43.

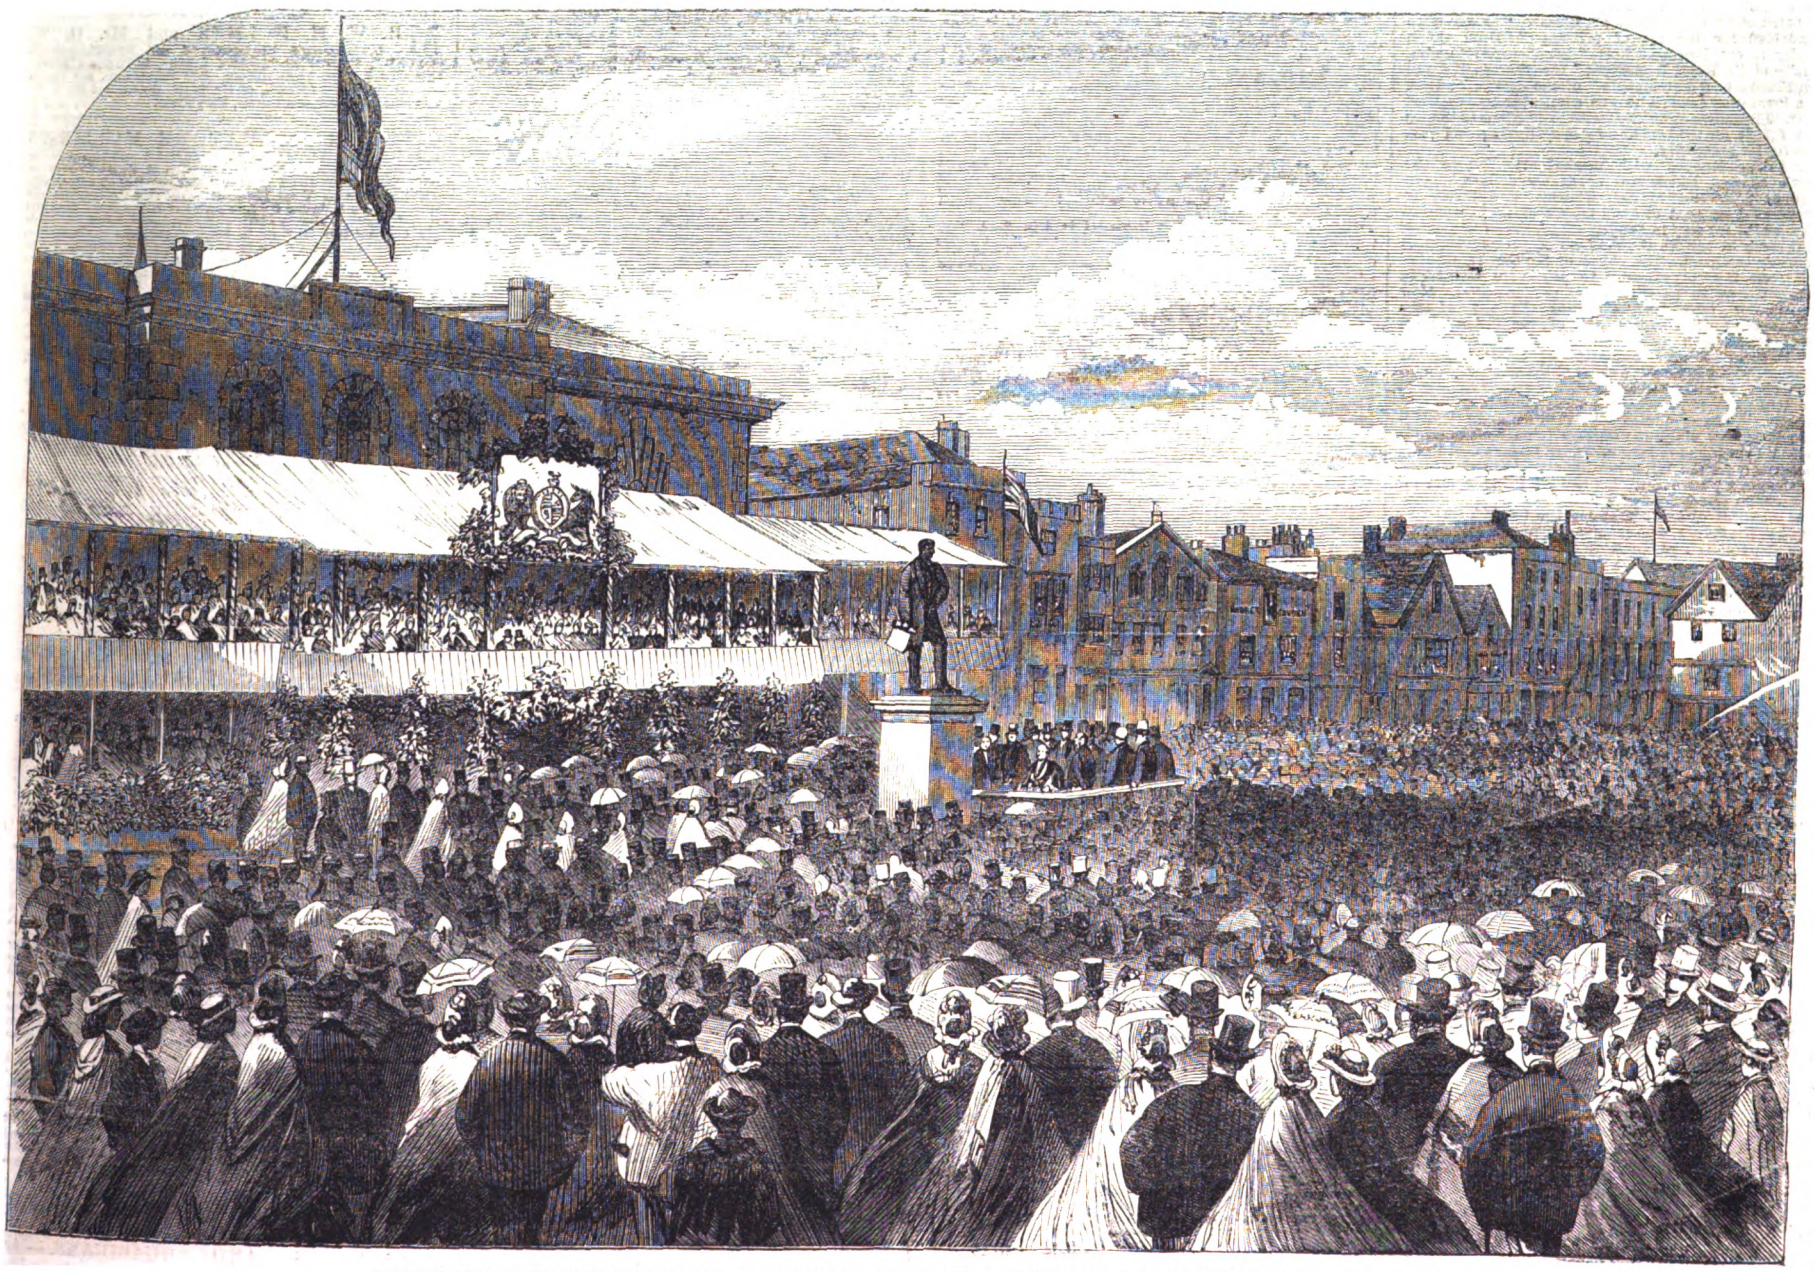
THE NEW BATHING ESTABLISHMENT AT BOULOGNE-SUR-MER.

breakfasts, luncheons, dinners, and suppers. The building is very handsome, and comprises a ball and concert room, billiard and card rooms, music-rooms, and is probably on a more splendid scale than any establishment of the same nature, except at the German watering-places. It has been erected at a cost said to have exceeded £40,000, and is surrounded by gardens and spacious terraces overlooking the sea. Attached to it are hot and cold sea water swimming and ordinary baths; and in connection with it is an improved service of bathing-machines on the beach. The whole establishment reflects great credit on the municipal authorities under whose auspices it has been completed, and will permanently add to the attractions of Boulogne as a place of resort for sea-bathing and summer residence.



INAUGURATION OF THE MONUMENT TO THE LATE LORD HERBERT OF LEA, AT SALISBURY.—SEE PAGE 43.

*** The charge for the insertion of Births, Marriages, and Deaths is Five Shillings for each announcement.*

BIRTHS.

On the 3rd inst., at Marlborough House, Newbury, Berks, the wife of John Knight, Esq., of a daughter.

On the 6th inst., at Garendon Park, Leicestershire, the lady of A. C. De Lisle, Esq., of a son, who survived his birth only a few hours.

On the 8th inst., at Stonecot Hill, Sutton, Surrey, the wife of Henry R. Stone, Esq., of a son.

On the 8th inst., the wife of Captain Purcell Williams, of Pentre Mawr, Denbigh, of a daughter.

MARRIAGES.

On the 18th of May, at Buenos Ayres, by the Rev. James Smith, Scotch Chaplain, and afterwards by Doctor Martin Pinyero, cousin of the bride, Mr. Charles William Benn, of Mansfield, Notts, to Rosario, youngest daughter of the late Senor Don Juan de Dios Carranza, of that city.

On the 4th inst., at St. George's Church, Hanover-square, by the Rev. Frederick Norman, Rector of Bottesford, Leicestershire, William Earle Welby, Esq., M.P., eldest son of Sir Glynne Earle Welby Gregory, Bart., of Denton Hall, Lincolnshire, to the Hon. Victoria Alexandrina, only daughter of the late Hon. Charles and Lady Emmeline Stuart-Wortley.

DEATHS.

On the 1st inst., at Castleton, Sherborne, Dorset, Joseph Turner, fourth son of James Borrett, Esq., M.D., and Catherine Elizabeth Borrett, aged four months and nine days.

On the 1st inst., after a long and afflicting illness, borne with Christian resignation and fortitude, Eliza Jane, eldest beloved daughter of David Clarke, Esq., of Meadowbank, Macclesfield, aged 22 years.

On the 8th inst., at Rhyl, John Whitehall Dod, Esq., of Cloverley, Shropshire, in the 66th year of his age.

THE PRINCE OF WALES AT MERCERS' HALL.

His Royal Highness the Prince of Wales honoured the Mercers' Company with his presence, on Wednesday morning, at their hall in Cheapside, for the purpose of taking up his freedom in that most ancient of the twelve great City guilds.

The Master, Wardens, and Court of Assistants met at noon. The old structure had put on quite a festive aspect in honour of the day, banners being suspended from its walls, and a bank of flowering plants rising from the dais prepared for the Royal visitor. The worshipful the Master, the Rev. Markland Barnard, Incumbent of Colney, himself the fourteenth of his family who had held that office, was supported by a full court. The Master and Court of Assistants, attired in their scarlet robes of office, were in waiting at the Cheapside gates to receive the Prince, when his Royal Highness, whose carriage had become blocked in that busy thoroughfare and turned by the police into Ironmonger-lane, suddenly alighted at the private entrance, and, as it was taking his entertainers in flank, necessitated a somewhat ruffled reception. The gracious cordiality of the Prince and the ready self-possession of the members of the court soon set matters straight, and his Royal Highness, accepting the conduct of the Master, ascended the grand staircase into the hall, where the Royal presence was gracefully acknowledged by the ladies who thronged both sides of the apartment. As the Prince ascended the stairs the band of the Artillery Company, under the conduct of Mr. Hird, played a few bars of the National Anthem. The Prince was attended by Lieutenant-General Knollys, Lord Alfred Harvey, and Captain Grey.

His Royal Highness having taken his seat upon the dais, the master standing upon his right hand and the other members of the court being stationed around, Mr. Barnes advanced with the books of the company, and read therefrom the various entries referring to the necessary suspension of the standing orders, and the proposal to confer the freedom of the company upon the Prince of Wales, which was described to have been carried by acclamation in a full court. His Royal Highness having bowed his acknowledgments, Mr. Barnes administered the customary oath. The rev. the Master then addressed the Prince, calling to mind the antiquity of the company, which could be traced as far back as 1172, while the company received a charter of incorporation from Richard II. in 1392, and enumerating the famous members of the company—Whittington, "the great artist of his own fortune;" Caxton, "to whom we are indebted for the art of printing;" Dean Colet, "founder of our Pauline School;" Sir Thomas Gresham, "founder of the Royal Exchange;" Sir Thomas Boleyn; Queen Elizabeth, "a free sister" of the company; Lord Hill, a Peninsular fame, who was a member by ancestral descent. The address concluded with expressions of thanks to the Prince for the honour he was conferring, and good wishes for his prosperity.

The Prince listened with marked attention to the Master's address, which was admirably delivered, and replied as follows:—"Master, Wardens, and Court of Assistants,—I am glad to avail myself of the last opportunity which my stay in London affords me of attending here this day to receive the freedom of your ancient and honourable company. The oldest of the City companies, the Mercers, is hardly exceeded by any in the amount of its charities, or in its capabilities of doing good. How these powers have been exercised the list of the foundations of the company and of the distinguished persons whom you have enumerated as benefactors and freemen tell us. Amongst the latter the great Sovereign, who was herself a sister of the company, stands conspicuous, and commerce and science appear equally to have lent their representatives to ennoble the Mercers' Company. To be connected with such names in the freedom and history of your company is an honour and a privilege I am proud to have conferred upon me. I thank you sincerely for the terms in which you have mentioned the names of my beloved mother and the Princess, and for the happiness you desire for us both."

The beautiful casket containing the freedom was now handed to the Prince, who examined it with evident admiration and interest. A work of the highest goldsmith's art, this casket is wrought in Gothic style, with pillars at each corner, the lid bearing the form of a Gothic cupola, very richly ornamented and surmounted by a crown in various coloured enamels, from which rises the Prince of Wales's plume. The front is divided into three arches, or compartments, the centre one bearing the arms of the Prince and Princess of Wales in coloured enamels, surrounded by the Garter with its motto, "Honi soit qui mal y pense." In the centre of the remaining arches are the arms of the Mercers' Company, also in coloured enamels, with their motto, "Honor Deo." On the reverse, divided in like manner into three arches, the central one bears the following inscription:—

"Presented to H.R.H. Albert Edward Prince of Wales K.G., by the Corporation of Mercers, Premier Guild of the City of London, on the occasion of his Royal Highness honouring them by accepting the freedom of the Company, July 8, 1863."

This inscription is supported on each side by the monograms of the Prince and Princess of Wales in pale blue enamel. The casket is based upon a slab of black Australian marble, ornamented with garlands of flowers in gold, and the whole work is worthy of the artistic taste and skill of the successful candidate for its design and execution, Mr. C. F. Hancock, of Bruton-street.

The Master now presented the various members of the court to the Prince of Wales, who presently retired to the banqueting-room, where a civic luncheon, prepared by Messrs. Staples, of the Albion, was served on the company's service of gold plate, with their accustomed precision and judgment. The Prince sat on the right of the Master, Mr. Johnson, the father of the company, a hale octogenarian, occupying a seat upon his Royal Highness's left hand. During the repast the Master proposed "The Health of his Royal Highness the Prince of Wales, citizen and mercer." This toast having been warmly responded to, his Royal Highness took cordial leave of the Master and the several members of the company and retired.

Mr. Mulready, R.A., died on Tuesday, at Linden-grove, Bayswater, in his 78th year.

Letters from Caprera state that Dr. Albanese leaves Garibaldi at the end of the month, and that then, or very shortly after, the General will be able to walk without crutches.

On Tuesday the Countess of Zetland presented to her Royal Highness the Princess of Wales, from the ladies of Shetland, a large selection of the finest woollen goods which can be manufactured in that part of Scotland, inclosed in a beautiful case or box, designed and executed for that purpose by Messrs. Stephenson and Son., of Prince's-street, Edinburgh.

An important target trial took place at Shoeburyness on Tuesday. Hitherto the targets have been constructed on the principle that the backing must be elastic, but this trial was to determine the value of the opposite or rigid theory. Up to the test furnished by the old-fashioned and still favourite 68-pounder the rigid theory was sustained; but a 150-lb. steel shot passed through the target and its supports, and a 300-lb. shell penetrated the target and set the filling of the cells on fire. One of the Armstrong guns used at the trial burst—that is to say, the outer ring of the gun gave way. No one was injured.

A Victoria Cross has been awarded to George Hinckley, a quartermaster of the Sphinx, 6, paddle-sloop, for gallant conduct in an attack on the city of Fung-Wha, China, on the 9th of October, 1862. Hinckley carried off, while exposed to a heavy fire from the enemy in going and coming, two officers on his shoulders, one after the other. The Sphinx being about to be paid off at Devonport on Thursday week, the ceremony of the presentation of the cross took place there at the Government Parade, Mount Wise, on Tuesday. About 1000 seamen and marines were landed from the various men-of-war in commission there to witness the presentation. Admiral Sir Houston Stewart, K.C.B., presented the cross in the name of her Majesty.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

NOTWITHSTANDING that the transactions in National Stocks, for Money, have been only moderate, prices—owing to the unusually favourable accounts at hand in reference to the crops, and the great abundance of money—have had an upward tendency, and the dealings for Time have increased to some extent. The Unfunded Debt has shown more firmness than for some time past.

The demand for accommodation is steady, but by no means active, at the annexed rates for the best commercial paper:—

	Per cent.		Per cent.
Thirty days' bills	3½	Four months' bills	4¼
Sixty days' ditto	3¾	Six months' ditto	4¼ 5
Three months' ditto	4		

In the Stock Exchange the rate for money, for short periods, has declined to 2 per cent.

Throughout the Continent, capital is firm in price, and the inquiry for it tolerably firm. We annex the quotations in the leading cities:—

	Bank rate, per cent.	Open market, per cent.
Paris	4	3½ ¾
Vienna	5	5
Berlin	4	3¼
Frankfort	3	2¾
Amsterdam	3½	3¼
Turin	5	5
Brussels	3	2¾
Hamburg	—	3½
St. Petersburg	5½	7½

Several parcels of bullion have arrived from New York; but the amount disposed of to the Bank has been trifling. The steamer for the Brazil has taken out £107,590 in gold.

At the half-yearly meeting of the shareholders of the Union Bank of London, the net profits for the six months were stated at £89,148, out of which an increased dividend of 18s. per share was declared. To the reserve fund £60,000 has been added, thereby raising the amount to £110,000.

The dividend of the Colonial Bank is at the rate of 12 per cent per annum.

Most of the Continental exchanges continue in favour of this country, and there is still a steady profit on the import of gold from New York.

On Monday the Consol Market was very inactive, and prices ruled a shade lower than on Saturday. Consols, for Money, were done at 92⅝ ⅛; Ditto, for August, 92⅝ ⅜; Reduced and New Three per Cents, 92½ ⅝; India Five per Cents, 108½; Ditto, Debentures, 106½; Ditto Bonds, 2s. prem.; Exchequer Bills, 2s. dis. to 2s. prem.; Bank Stock sold at 225; and the Five-and-a-Half per Cent Rupee Paper, 116½. An increased business was transacted on the following day:—Consols, for Money, sold at 92⅝ ½; Ditto, for Time, 92⅝ ⅜; Bank Stock, 234 to 236; Reduced and New Three per Cents, 92½ to 92⅝; India Stock, 225 to 227 ex div; Ditto, New, 108¾ ¼; India Five per Cent Rupee Paper, 106⅞; Ditto, Bonds, 18s. prem.; Exchequer Bills, 1s. dis. to 2s. prm. The Funds generally were very firm on Wednesday:—Bank Stock marked 237 to 235; Reduced and New Three per Cents, 92¾ ⅝; Consols, for Money, 92⅝ ⅞; Ditto, for Account, 92¾; Long Annuities, 15; India Stock 227; Ditto, New, 108¾ ¼; Ditto, Five per Cent Rupee Paper, 107½; Ditto, Five-and-a-Half per Cent, 116½; Ditto Debentures, 100; Exchequer Bills, 1s. dis. to 2s. prem. On Thursday the market was rather flat:—Consols for Money marked 92⅝ to ½; for Account, 92⅝ to ¾; Reduced and New Three per Cents, 92¼ to ⅝; and Exchequer Bills, 1s. dis; India Five per Cent Stock marked 108¾ ¼.

Very little change has taken place in the value of American Securities:—United States Five per Cents have been 59; Illinois Central 100-Dollar Shares, 20¼ dis.; Ditto, all paid, 62.

The market for Foreign Bonds continues flat, and, in some instances, a further reduction has taken place in the quotations. The changes from last week, however, are not important:—Brazilian Five per Cents have marked 101; Ditto Four-and-a-Half per Cents, 91; Chilian Four-and-a-Half per Cents, 85; Danish Five per Cents, 1863, 102½; Egyptian, 101½; Greek, 35½; Ditto, Coupons, 16½; Italian Railways, 79 ex div.; Mexican Three per Cents, 21½; New Grenada Two per Cents, 32½; Ditto, Deferred, 9½; Peruvian Four-and-a-Half per Cents, 1852, 87½ ex div.; Portuguese Three per Cents, 1852, 44¼ ex div.; Russian Old Five per Cents, 95; Ditto, Three per Cents, 59; Ditto, 1862, 90½; Sardinian Five per Cents, 90¾; Spanish Three per Cents, 34½ ex div.; Ditto, Passive, 31½; Ditto, Certificates, 12½; Turkish Old Six per Cents, 92½; Ditto, 1862, 68 ex div.; Venezuela Six per Cents, 57½; Dutch Two-and-a-Half per Cents, 64 ex div.; Ditto Four per Cents, 101½; and Italian Five per Cents, 74¼ ex div. Italian Scrip has sold at 1½ to ⅞ prem.

A moderate business has been transacted in Joint-Stock Bank Shares and prices, almost generally, have ruled firm. Alliance have been done at 33½; Australasia, New, 31½; Bank of Egypt, 27½; Chartered of British Columbia, 11¾; Chartered of India, Australia, and China, 30; City, 108½; English, Scottish, and Australian Chartered, 23½; Imperial, 23½; Imperial Ottoman, 19½; London and Brazilian, 42½; London Chartered of Australia, 28½; London and Westminster, 86½; National of Liverpool, 4; South Australia, 40½ ex div.; Union of Australia, 57; Union of London, 29½ to 30.

Colonial Government securities have changed hands to a moderate extent, as follows:—Canada Six per Cents, 105 ex div.; Ditto Five per Cents, 96 ex div.; Cape Six per Cents, 1873, 109½; Mauritius Six per Cents, 109½; Ceylon Six per Cents, 114; New South Wales Five per Cents, 101 ex div.; Nova Scotia Six per Cents, 103½ ex div.; and Victoria Six per Cents, 111½.

The Miscellaneous Market has ruled steady. Crystal Palace have been done at 3¾; East Indian Irrigation and Canal, 5 ex int.; English and Australian Copper, 1⅞; International Financial Society, 7⅛; General Credit and Finance of London, 3½; Italian Irrigation Canal Cavour, 6½; Ditto, Six per Cent Bonds, 4¾; Joint-Stock Discount, 4½; National Discount of Peninsula and Oriental Steam, 7; Rhymney Iron, 21; Royal Mail Steam, 67½; Regent's Canal, 25¾; and East London Waterworks, 131.

Most Railway Shares have been somewhat firm in price, but the dealings in them have been only moderate. Annexed are Thursday's official closing quotations:—

Ordinary Shares and Stocks.—Caledonian, 119¼; Great Eastern, 53½; Great Northern, 127½; Great Western, 66¾; Lancashire and Yorkshire, 113¾; London and Brighton, 109; London, Chatham, and Dover, 44½; London and North-Western, 102½; London and South-Western, 106; Manchester, Sheffield, and Lincolnshire, 45¼; Metropolitan, 122; Ditto, New, 5¾; Midland, 128¾; North British, 53½; North Eastern—Berwick, 103; Ditto, Leeds, 99½; Ditto, York, 99½; North London, 118; Scottish North Eastern—Aberdeen Stock, 45½; South Eastern, 62½; Stockton and Darlington, 38¾; West Cornwall, 27½; West Midland—Oxford, 46¾.

Preference Shares.—London and Brighton, 118; Ditto, Seven per Cent Stock, 156; Midland—Bristol and Birmingham, 141.

British Possessions.—Atlantic and St. Lawrence, 62½; Bombay, Baroda, and Central India, 107½ ex int.; Calcutta and South-Eastern, 106½ ex int.; Eastern Bengal, 109½ ex int.; East Indian, 108 ex int.; Grand Trunk of Canada, 20½; Great Indian Peninsula, 108 ex int.; Indian Branch, 2¾; Madras Five per Cent, 106½ ex int.; Punjaub, 106½ ex int.; Indus Steam Flotilla, 103 ex int.

Foreign.—Belgian East Junction, 14½; Dutch Rhenish, 17¾; Great Luxembourg, 14; Recife and San Francisco, 16½; San Paulo, 9¾ ex int.; Ditto, 2½ ex int.; West Flanders, 10¾; Western and North Western of France, 20¾.

The return of the Bank of England, for the week ending July 8, shows the following results, when compared with the preceding statement:—

An increase of circulation of	£209,782
A decrease of public deposits of	1,752,539
An increase of other deposits of	2,320,973
A decrease of Government Securities of	8,391
A decrease of other Securities of	1,830,788
A decrease of bullion of	245,302
An increase of rest of	43,357
A decrease of reserve of	490,032

The total circulation is £22,033,478. Public deposits amount to £5,593,834; and private deposits to £18,595,718. Securities are £234,617,536; and the stock of bullion is £14,921,999.

THE MARKETS.

CORN EXCHANGE, July 6.—There was a very moderate supply of English wheat on offer in to-day's market; nevertheless, the demand for all kinds ruled heavy, and, in some instances, the quotations gave way 1s. per quarter. Foreign wheat—the show of which was extensive—moved off slowly, and the currencies had a drooping tendency. Floating cargoes of grain were very dull. Scarcely any English barley was on the stands, and the supply of foreign was rather limited. The demand, however, was in a sluggish state, at about stationary prices. Malt changed hands slowly, on former terms. Good sound oats maintained their previous value; but the rest qualities were very dull. Beans moved off heavily, at 1s. per quarter less money. No change took place in the value of peas. The flour trade was in a most inactive state, on former terms.

July 8.—All kinds of produce were very dull to-day, and wheat was again rather cheaper.

English.—Wheat, Essex and Kent, red, 49s. to 51s.; ditto, white, 42s. to 52s.; Norfolk and Suffolk, red, 40s. to 51s.; rye, 31s. to 35s.; grinding barley, 25s. to 27s.; distilling ditto, 29s. to 34s.; malting ditto, 33s. to 40s.; Lincoln and Norfolk malt, 60s. to 66s.; brown ditto, 50s. to 57s.; Kingston and Ware, 60s. to 65s.; Chevalier, 66s. to 68s.; Yorkshire and Lincolnshire feed oats, 18s. to 22s.; potato ditto, 23s. to 26s.; Youghal and Cork, black, 16s. to 21s.; ditto, white, 17s. to 22s.; tick beans, 30s. to 35s.; grey peas, 35s. to 36s.; maple, 38s. to 40s.; white, 36s. to 38s.; boilers, 37s. to 39s. per quarter. Town-made flour, 40s. to 47s.; town households, 34s. to 36s.; country marks, 29s. to 32s. per 280 lb.; American, 21s. to 22s. per barrel. French, 38s. to 42s. per sack.

Arrivals.—English and Scotch: Wheat, 460; barley, 10; malt, 1660; flour, 200. Foreign: Wheat, 1610; barley, 800; oats, 39,980; flour, 830 sacks.

Seeds.—The demand for seeds, generally, is heavy, and the quotations rule almost nominal. In cakes very little is doing.

Linseed, English, crushing, 62s. to 63s.; Calcutta, 63s. to 67s.; hempseed, 44s. to 48s. per quarter; coriander, 14s. to 16s. per cwt.; brown mustard seed, 8s. to 10s.; white ditto, 7s. to 9s.; tares, 7s. to 8s. per bushel; English rapeseed, 90s. to 94s. per quarter. Linseed cakes, English, £9 10s. to £10 10s.; ditto, foreign, £9 10s. to £11; rape cakes, £5 10s. to £6 per ton; canary, 46s. to 52s. per quarter; red clover seed, 38s. to 60s.; white ditto, 54s. to 57s. per cwt.

Bread.—The prices of wheaten bread in the metropolis are from 7½d. to 8d.; of household ditto, 5½d. to 7d. per 4 lb. loaf.

Imperial Weekly Averages.—Wheat, 46s. 11d.; barley, 30s. 9d.; oats, 23s. 11d.; rye, 32s. 11d.; beans, 39s. 6d.; peas, 38s.

The Six Weeks Averages.—Wheat, 46s. 9d.; barley, 31s. 9d.; oats, 23s.; rye, 31s. 9d.; beans, 39s. 8d.; peas, 36s. 11d.

English Grain Sold last Week.—Wheat, 66,191; barley, 785; oats, 3460; rye, 46; beans, 1920; peas, 170 quarters.

Tea.—The public sales have gone off heavily, and the quotations are barely supported. Privately, the demand is very inactive.

Sugar.—All kinds move off slowly, and the currencies have a drooping tendency. Barbadoes has sold at 31s. 6d. to 33s. 6d.; fine Mauritius, 37s. 6d. to 40s. per cwt. Refined goods sell slowly, at 47s. per cwt. for common brown lumps. The stock is now 101,0.0 tons against 85,000 tons last year.

Coffee.—The market is in a very inactive state; nevertheless, prices rule about stationary. The stock continues heavy for the time of year.

Rice.—Sales progress slowly. In prices, however, no change has taken place. Stock, 44,000 tons against 47,000 ditto last year.

Provisions.—Irish butter moves off slowly, at about previous quotations; but fine foreign is rather dearer. The bacon market is inactive, and prices have a drooping tendency. In all other provisions very little is doing.

Tallow.—The market is very inactive, and the quotations are barely supported. P.Y.C., on the spot, 42s. 9d. per cwt. Stock, 37,514 casks against 24,519 ditto last year. Rough fat, 2s. 1d. per 8 lb.

Oils.—Linseed oil moves off slowly, at £44 15s. per ton, on the spot. Rape is selling at £46 to £48; cocoanut, £44 to £48; and fine palm, £36. American turpentine, 160s.; French ditto, 90s. per cwt.

Spirits.—Very little is doing in rum, at about stationary prices. Proof Leewards, 1s. 5d.; proof East India, 1s. 4d. per gallon. Brandy is quoted at from 8s. to 11s. 4d.; English spirit, grain 1s. 9d. to 1s. 10d.; ditto, rice, 1s. 4d. to 1s. 5d.; and English gin, for export, proof, 2s. 9d. to 3s. per gallon.

Hay and Straw.—Old meadow hay, £3 10s. to £4 15s.; new ditto, £3 to £4; old clover, £4 10s. to £6 6s.; new ditto, £3 10s. to £4 15s.; and straw, £1 8s. to £1 16s. per load.

Coals.—Best home coals, 16s. 6d. to 17s. 3d.; seconds, 14s. 3d. to 15s.; Hartley's, 14s. to 15s.; and manufacturers', 13s. to 15s. per ton.

Hops.—The plantations being more favourable, all kinds of hops move off slowly, at barely stationary prices.

Wool.—The public sales of colonial wool—at which about 100,000 bales will be offered—having been announced, the market is inactive. Prices, however, rule steady.

Potatoes.—The supplies of new potatoes are large, and chiefly in excellent condition. The demand for them is steady, at from 5s. to 8s. per cwt.

Metropolitan Cattle Market (Thursday, July 9).—To-day's market was fairly supplied with beasts, in but middling condition. All breeds met a dull inquiry, at Monday's decline in the quotations. The top figure for Scots was 5s. per 8 lb. The show of sheep was moderately extensive, and the mutton trade was in a sluggish state, at barely stationary prices. The best Downs sold at 5s. 2d. per 8 lb. Good and prime lambs sold freely, at extreme currencies. Inferior lambs were dull, at late rates. Calves moved off heavily, at 2d. per 8 lb. less money, owing to the large number on offer. Prices ranged from 3s. 6d. to 4s. 6d. per 8 lb. Pigs and milch cows were very dull, at last week's prices. Per 8 lb. to sink the offal:—Coarse and inferior beasts, 3s. 4d. to 3s. 8d.; second quality ditto, 3s. 10d. to 4s. 4d.; prime large oxen, 4s. 6d. to 4s. 8d.; prime Scots, &c., 4s. 10d. to 5s.; coarse and inferior sheep, 3s. 8d. to 4s. 2d.; second quality ditto, 4s. 4d. to 4s. 8d.; prime coarse-woolled sheep, 4s. 10d. to 5s.; prime Southdown ditto, 5s. to 5s. 2d.; large coarse calves, 3s. 6d. to 4s.; prime small ditto, 4s. to 4s. 6d.; large hogs, 3s. 6d. to 4s.; neat small porkers, 4s. 2d. to 4s. 6d.; lambs, 5s. 4d. to 6s. 4d.; suckling calves, 12s. to 20s.; and quarter-old store pigs, 20s. to 28s. each. Total supply:—Beasts, 960; cows, 141; sheep and lambs, 10,800; calves, 470; pigs, 350. Foreign: Beasts, 305; sheep and lambs, 1440; calves, 580.

Newgate and Leadenhall.—The supplies of meat are moderate, and the demand is inactive, as follows:—Beef, from 3s. 4d. to 4s. 2d.; mutton, 3s. 6d. to 4s. 4d.; lamb, 4s. 8d. to 5s. 6d.; veal, 3s. 8d. to 4s. 4d.; and pork, 3s. 4d. to 4s. 6d. per 8 lb. by the carcase.

ROBERT HERBERT.

JAMES

NEW BOOKS.

BATTLES OF ENGLAND.
Showing the Cause, Conduct, and Issue of every Battle since the Conquest. Compiled expressly for the Use of Schools. By C. SANDERSON, L.C.P. Price One Shilling.
BRADBURY and EVANS, 11, Bouverie-street.

At the Libraries, in 2 vols, post 8vo, 21s.,
MEMOIRS OF VICTOR HUGO; Related by the Companion of his Lifetime.
This work, including the "Biography of Victor Hugo," by his Wife, founded mainly on her gifted husband's own notes, is enriched with many hitherto unpublished productions from his pen. Amongst them are an Original Drama, Miscellaneous Poems, Recollections of Travel, &c. The work may be regarded not only as a history of a certain school of writers in France, but in some respects as a literary history of the nineteenth century.

MR. JEAFFRESON'S NEW NOVEL.
Now ready, at all the Libraries, in 1 vol. post 8vo, 10s. 6d.,
SIR EVERARD'S DAUGHTER.
London: WM. H. ALLEN and Co., 13, Waterloo-place.

Now ready,
THE CHEAPEST FIRST CLASS VOCAL AND INSTRUMENTAL MUSIC EVER PUBLISHED.
VOLUME I. of the MUSICAL HERALD.
Handsomely bound. Price 3s. 6d.
Containing Sir Henry Bishop's Glees, the standard compositions of Arne, Auber, Beethoven, Calcott, Dibdin, Glück, Handel, Haydn, Mendelssohn, Mozart, Purcell, Rossini, Spohr, &c. This reprint of the best music of all the most renowned composers, issued at a price so very much below anything ever yet attempted, will, it is hoped, supply the great and admitted want of a carefully and ably edited selection of secular music suitable for the Choral, Amateur, and other Musical Societies now so rapidly growing and spreading over this country. The present volume forms an exquisite gift-book.
A MANUEL OF MUSIC, with Dictionary of Musical Terms, Explanation of Abbreviations, Signs, &c. Price 3d.
Published by B. BLAKE, 421, Strand, London.

FRANCATELLI'S STANDARD COOKERY BOOKS.

REDMAYNE and CO. beg to announce that, as the whole of their Bond-street premises are about to be rebuilt and considerably enlarged, they are now offering their STOCK, consisting of SILKS, Shawls, Mantles, Lace Goods, Fancy Dresses, Muslins, Ribbons, Gloves, Parasols, &c., at such a reduction in price as will command an immediate sale.—30 New Bond-street and 35, Conduit-street.

CURIOUS and USEFUL CHINESE and JAPANESE ARTICLES, suitable for Presents.—Just imported, several large cases of beautifully-lacquered JAPANESE TRAYS, at 5s. the pair.—Oriental Warehouse, 179, Regent-street; FARMER and ROGERS; also at the Great Shawl and Cloak Emporium, 171, 173, 175, Regent-street.

HAIR JEWELLERY.—ARTIST in HAIR. DEWDNEY begs to inform Ladies or Gentlemen that he beautifully makes, and elegantly mounts in Gold, Hair Bracelets, Chains, Brooches, Rings, Pins, Studs, &c., and forwards the same at about one-half the usual charge. A beautiful collection of specimens, handsomely mounted, kept for inspection. An illustrated book sent post-free.—Dewdney, 179, Fenchurch-street, London.

A. FORBER, Hair Jeweller to the Queen, 2, Hanover-street, Hanover-square, REMOVED from Regent-street and Baker-street.

MARBRES ONYX D'ALGERIE.—One Thousand Objects made from this beautiful Marble, and comprehending every variety of work of Decorative Art, including clocks, candelabra, vases, guéridons, inkstands, tazzi, card-trays, jardinières, perte-bouquets, lamps, ring-stands, &c., &c., are now being exhibited in the Onyx Salon, at Messrs. HOWELL, JAMES, and CO.'S, 5, 7, 9, Regent-street.

SANGSTERS' FANCY SUNSHADES, Parasols, Umbrellas, on Fox's Paragon Frames.—W. and J. Sangster respectfully solicit an inspection of their New Patterns in Fancy Sunshades and Parasols, comprising the new colours in combination with white silk, lace, &c., prepared expressly for the fêtes that will take place this season in honour of the Royal marriage. 140, Regent-street, W.; 94, Fleet-street E.C.; 10, Royal Exchange, E.C.; 75, Cheapside, E.C.

THE SUMMER SUN and DUST.—Ladies will find the application of ROWLANDS' KALYDOR both cooling and refreshing to the face and skin; allaying all heat and irritability; removing eruptions, freckles, and discolorations; and rendering the skin soft, clear, and blooming. Price 4s. 6d. and 8s. 6d. per bottle. Sold at 20, Hatton-garden; and by Chemists and Perfumers. Ask for "Rowlands' Kalydor," and beware of spurious and pernicious articles under the name of "Kalydor."

EAU and POMMADE RÉPARATRICE DE FRUCHET, à PARIS.—Infallible to restore the Hair to its natural colour; keeps it clean, smooth, and brilliant.—Sold by all Chemists and Perfumers. Wholesale Dépôt, TH. LUSCHER and CO., 27, Cannon-street West, London.

TOURISTS.—Travellers journeying into countries where miasma is prevalent should be provided with Dr. Lang's ESSENTIAL SPIRIT OF MELISSUS, a perfect preventive of that dread disease. Its invigorating and restorative effects cannot be too highly estimated. Sold in 1s 6d. and 3s. bottles, wholesale and retail, by BUTLER and CRISPE, Chemists to the Royal Family, 4, Cheapside (corner of St. Paul's), London; and respectable Chemists throughout the country. Wholesale Dépôt, Telfer and Co., 11, St. John-court, Snow-hill.

MORSON'S PEPSINE WINE, containing the digestive principle prepared from fresh calves' stomachs, combined with a rich stomachic wine, is a perfectly palatable form for administering this popular remedy for weak digestion.
Manufactured by T. Morson and Son, 19 and 46, Southampton-row Russell-square, W.C., in Bottles, at 3s., 5s., and 10s. each.

DR. DE JONGH'S
(Knight of the Order of Leopold of Belgium)
LIGHT-BROWN COD-LIVER OIL,
prescribed by the most eminent Medical Men throughout the world as the safest, speediest, and most effectual remedy for
CONSUMPTION, CHRONIC BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GOUT, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS,
is incomparably superior to every other variety.

SELECT MEDICAL OPINIONS.
Sir HENRY MARSH, Bart., M.D.,
Physician in Ordinary to the Queen in Ireland.
"I consider Dr. DE JONGH'S Light-Brown Cod Liver Oil to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

DR. GRANVILLE, F.R.S.,
Author of the "Spas of Germany."
"Dr. Granville has found that DR DE JONGH'S Light-brown Cod-liver Oil produces the desired effect in a shorter time than other kinds, and that it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oil."

EDWIN CANTON, Esq., F.R.C.S.,
President of the Medical Society of London, &c., &c.
"For several years past I have been in the habit of prescribing Dr. DE JONGH'S Light-brown Cod-liver Oil, and find it to be much more efficacious than other varieties of the same medicine which I have also employed with a view to test their relative superiority."

DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL is sold only in Imperial half-pints, 2s. 6d.; pints, 4s. 9d.; quarts, 9s.; capsuled and labelled with his stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists and Druggists.
SOLE CONSIGNEES,
ANSAR HARFORD and CO., 77, STRAND, LONDON, W.C.

Grand Selection for Military Band, arranged by Godfrey .. 15 0
CHAPPELL and CO., 50, New Bond-street.

CHAPPELL'S FOREIGN PIANINO
(the only Pianino to which the Prize Medal was awarded).—A very elegant Pianoforte, of small size, the full compass, check action, and most perfect touch, admirably adapted to small rooms, yachts, boudoirs, &c. Warranted to keep in tune, and to be the best and cheapest Pianoforte, with check action and all the latest improvements.
Price, in mahogany, rosewood, or walnut, 25 and 28 guineas. A great variety may be seen at
Chappell and Co.'s, 50, New Bond-street.

CHAPPELL and CO.'S ENGLISH MODEL
COTTAGE PIANOFORTE.—To amateurs preferring the pure English tone of the Broadwood or Collard quality, the English Model will be found the most perfectly satisfactory instrument, at amoderate price. The action is of the same simple description as the above makers', and therefore especially adapted to the country, where the more complicated actions are objectionable to many of the tuners. In elegant rosewood case, with full fret, similar in every respect to other instruments at 50 guineas, price 35 guineas; in walnut, 40 guineas.
Chappell and Co., 50, New Bond-street.

CHAPPELL'S FOREIGN MODEL
PIANOFORTE, price 50 guineas in rosewood; or in walnut, 60 guineas. This Instrument has Three Strings and the fullest grand compass of Seven Octaves. It is strengthened by every possible means to endure the greatest amount of wear, and to stand perfectly in any climate. The workmanship is of the best description; the tone is round, full, and rich; and the power equal to that of a Bichord Grand. The touch is elastic, and the repetition very rapid. No pianoforte, in all respects comparable, has hitherto been made in England at the same price. Every instrument will be warranted, and (if desired) exchanged within six months of the purchase.
Chappell and Co., 50, New Bond-street.

BROADWOOD, COLLARD, and ERARD.
The best Pianofortes of every description, including all the newest kinds by these celebrated makers, may be tried side by side (and hired with option of purchase) at the new Showrooms of
CHAPPELL and CO., 50, New Bond-street.

ERARD'S NEW BOUDOIR GRAND
PIANOFORTES, at 120 guineas, having been now brought to perfection, can be hired, with the option of purchase, at
CHAPPELL and CO.'S, 50, New Bond-street.

SECONDHAND PIANOFORTES.
CHAPPELL and CO. have a large Stock of SECONDHAND PIANOFORTES for Sale, by BROADWOOD, COLLARD, ERARD, &c., &c., at very reduced prices. Also, new Instruments of every description.—Chappell and Co., 50, New Bond-street.

PIANOFORTES at CHAPPELL'S.—The largest Stock in London, by Broadwood, Collard, Erard, &c., for Sale or Hire.—50, New Bond-street.

ALEXANDRE'S DRAWING-ROOM
MODEL HARMONIUM, the best that can be made, price 60 guineas; other varieties at 25 and 35 guineas. Illustrated Catalogues of Pianofortes and Harmoniums upon application to
CHAPPELL and CO., 50, New Bond-street.

SIX-GUINEA HARMONIUM by
ALEXANDRE, with five octaves, two footboards, and in oak case. These instruments are lower in price and superior to all other cheap harmoniums. Descriptive lists on application to
CHAPPELL and CO., 50, New Bond-street.

SECONDHAND HARMONIUMS,
by ALEXANDRE, nearly (if not quite) as good as new, at greatly-reduced prices, at CHAPPELL'S, 50, New Bond-street.

ALEXANDRE'S PRIZE EXHIBITION
MODEL HARMONIUM, for the CHURCH, 13 stops, 4 rows of vibrators, and Venetian swell, worked by the heel of the right foot, in oak case, 33 guineas. A large assortment may be always seen at CHAPPELL and CO.'S, 50, New Bond-street.

BEETHOVEN WALTZ.—O'LEARY'S
Beethoven Waltz is an arrangement of the most fascinating airs of the immortal Beethoven. Sent free for 24 stamps.
EWER and CO., 67, Regent-street, London.

O'LEARY'S CELEBRATED DANCES:—The Stamp Galop, the Ducal Waltz, and the Beethoven Waltz are also published in parts for Orchestra, 3s.; and Septet, 2s.
EWER and CO., her Majesty's Music sellers, 67, Regent-street.

STAMP GALOP.—O'Leary's Stamp Galop is
the best and most popular Galop of the season. The titlepage is adorned with Postage-stamps of all Nations, beautifully printed in Colours. Sent free on receipt of 12 stamps.
EWER and CO., 67, Regent-street, London.

THE DUCAL WALTZ.—O'Leary's Ducal
Waltz is played at all the nobility's balls. The titlepage is adorned with the Arms and Crests of all the Dukes of Great Britain, splendidly printed in Colours and Gold. Sent free for 24 stamps.
EWER and CO., 67 Regent-street, London.

CRAMER, BEALE, and WOOD, 201, Regent-street.

CRAMER'S PIANOFORTE GALLERY
offers peculiar advantages for the choice of a first-rate Pianoforte. There is a profusion of every de-cription, from the smallest Pianette to the largest and finest Grand, and by all the eminent makers of England and the Continent. Nothing but the very best instruments are selected from the factories, all that are declient in tone being carefully avoided. Purchasers from CRAMER and CO. may therefore rely on having placed in their hands whatever may be reasonably expected from a selection made with competent practical skill.
Cash purchasers will receive the usual discount.
Every instrument fully guaranteed.
Cramer and Co. deliver their Pianofortes at any railway station in the kingdom without risk to the purchaser, and at a very trifling cost.
Cramer and Co.'s Pianoforte Gallery (the largest in Europe), 207 and 209, Regent-street.

CRAMER'S ENGLISH PIANETTE,
22 guineas. Cramer and Co. manufacture this capital small instrument. It has all the requisites of the best Pianoforte—check action, solid touch, agreeable tone. The case is of polished ash or pine. In practising on this Pianofortethe fingers of the player will be strengthened much more rapidly than on an old instrument, loose in the key and worn in the hammer. In rosewood, 25 guineas; in walnut, 28 guineas.
Purchasers are particularly requested to observe that this instrument has not the common or single action, but the double or check action; and that Cramer and Co. are the only manufacturers of it in England.—207 and 209, Regent-street.

CRAMER'S INDIAN PIANETTE, in solid
Mahogany, for warm climates. The most portable Pianoforte yet made. The packing-case forms a dressing-table for an officer's quarters. Price 35 guineas; with case complete, 40 guineas.
207 and 209, Regent-street.

THALBERG'S GRAND PIANOFORTES.
These magnificent instruments, manufactured by Messrs. J. and P. Erard, and selected by M. Thalberg for his London concerts, have been purchased by CRAMER and CO., and are universally admitted to be the most exquisite Pianofortes ever finished by these distinguished manufacturers, combining in an extraordinary decree all their peculiar excellences; the tone has great volume, together with a charmingly vocal quality. The cases are in walnut and rosewood. Prices, 230 and 240 guineas.—207 and 209, Regent-street.

CRAMER'S CONCERTINAS—PRIZE
MEDAL. Prices, 2, 3, 4, 5, 6, 8, 10, 12, 14, and 18 guineas.
201, Regent-street.

CRAMER'S CORNETS, manufactured by
F. BESSON, the receiver of twenty-three medals, Cramer and Co. are now the sole Agents in London for the sale of F. Besson's well-known Brass Instruments. Estimates for Bands furnished.
Mr. Boulecourt, the celebrated cornet-player, attends daily to try instruments and give private lessons. 201, Regent-street.

NEW VALSE.—THE ANGLO-DANISH
VALSE. By R. L. HIME. Solo or Duet. Price 4s. (Sent at half-price.) This Valse, so universally admired, may now be had as a Solo or Duet for Pianoforte, and in Parts for Septet or full Orchestra.—DUFF and HODGSON, 20, Oxford-street.

NEW SONG.—THE WELCOME AT THE
DOOR. Composed by STEPHEN GLOVER. Price 2s. 6d. (Sent at Half-price.) Sequel to the celebrated Song, "The Good-by at the Door." Popular as the latter has been, "The Welcome" will be equally successful.—DUFF and HODGSON, 20, Oxford-street.

NEW SONG. BIRD OF THE
WILDERNESS. Composed by EDWARD LAND; Sung by Mr. KENNEDY. Price 3s. 6d. (Sent at half-price.) This graceful Song is the conspicuous favourite in the Entertainment on the Songs of Scotland.—DUFF and HODGSON 20, Oxford-street.

THE MAIDEN AND HER LINNET. Song.
Nightly singing by Miss Louise Keeley at the Theatre Royal, Haymarket. Words by F. C. BURNAND; Music by W. H. MONTGOMERY. Price 3s.
London: JOSEPH WILLIAMS, 11, Holborn-bars, and 123, Cheapside.

KIRKMAN'S 7-octave trichord SEMI-
GRAND and DRAWING-ROOM GRAND PIANOFORTES, with double repeating action and all their very latest improvements. Price from 100 guineas and upwards. For beauty of tone, perfection of touch, and durability, these instruments are unrivalled.—COCK, HUTCHINGS, and CO., Music and Pianoforte Warehouse, 62 and 63, New Bond-street, London, W.

PIANOFORTES, New and Secondhand, by
Broadwood, Collard, Kirkman, and other Makers, for SALE or HIRE, at Messrs. COCK, HUTCHINGS, and CO.'S (late Leader and Cock), Nos. 62 and 63, New Bond-street, corner of Brook-street.

KIRKMAN'S CELEBRATED TRICHORD
PIANOFORTES, of every description, for SALE or HIRE, at COCK, HUTCHINGS, and CO.'S Pianoforte Warehouse, 62 and 63, New Bond-street, London.

NEW MUSIC.

HERR SCHACHNER'S ORATORIO,

ISRAEL'S RETURN FROM BABYLON.
BOOSEY and SONS have much pleasure in announcing that they have purchased the copyright of Herr Schachner's Grand Oratorio, "Israel's Return from Babylon," which was performed with such eminent success a short time since at Exeter Hall, with the aid of Mdlle. Titiens and Mr. Sims Reeves. It is about to be reproduced at the Worcester Festival on a scale of very great magnificence, and the publishers are glad to announce that the complete work will be ready for sale in time for this important performance. The Pianoforte Score will be published in a handsome volume, complete, price One Guinea, several hundred copies having already been subscribed for. The separate Vocal Pieces will also be published at the usual prices. With the view of assisting the numerous choral societies in the production of a work that cannot fail to attain a high and permanent position in the grandest school of sacred music, the publishers have determined to publish the Orchestral Score, and the separate Orchestral and Vocal Parts, at the lowest possible price. These will shortly be ready for delivery, and orders may at once be forwarded to the publishers for copies.
The "Book of Words" (also the property of Boosey and Sons) may be had on moderate terms for public performances.

THE SEASIDE MUSIC BOOK.
A Collection of new Pianoforte, Dance, and Vocal Music, especially recommended to Tourists and Travellers, as containing in a small compass and at a low price sufficient music for an evening's amusement. In an elegant volume, large size, beautifully illustrated, price 2s. 6d.
BOOSEY and SONS, Holles-street.

THE AMATEUR'S LIBRARY OF
PIANOFORTE MUSIC. Price 2s. 6d. Each Volume, full size, contains from 40 to 60 pages of music, ordinarily sold at more than 20s. Now ready:—
1. Thalberg's Art of Singing applied to the Piano. With Introduction. 3s. 6d.
2. Kuhe's Six Transcriptions of Schubert's Melodies. 2s. 6d.
3. Strauss's Six Favourite Sets of New Waltzes. 2s. 6d.
4. Mdme. Oury's Six most Popular Pieces. 2s. 6d.
5. Thalberg's "Home, Sweet Home," "Minnie," and "Last Rose of Summer." 2s. 6d.
BOOSEY and SONS, Holles-street.

BOOSEYS' MUSICAL LIBRARY.—Every
SUBSCRIBER at Two Guineas receives a splendid Guinea Volume of Illustrated Music, and has the use of Twelve Pieces of Music in Town and Twenty Pieces in the Country. Subscribers at One Guinea have the use of Four Pieces. Full particulars from 28, Holles-street.

BOOSEYS' MINIATURE PIANOFORTE,
price 17 guineas, in walnut or mahogany.—"We have had occasion to examine a new description of Pianoforte manufactured by Boosey and Sons, which combines quality and cheapness in a degree which has not previously been ever attempted. When heard it creates much surprise as would be caused by a child 'discoursing most eloquent' music with the voice of a full-grown man. It has a rich, brilliant tone, quite strong enough to fill the largest drawing-room; and the whole mechanism of the instrument seems to be firm and durable. No piano of so small a size has ever before been presented to the public."—Vide ILLUSTRATED LONDON NEWS, Feb. 28, 1863. This Piano is well adapted for the cabin of a ship, or an extreme climate.—Boosey and Sons, 24, Holles-street, London.

MDLLE. ADELINA PATTI'S NEW SONG,
"Sing me a Merry Lay," composed for her by LANGTON WILLIAMS. Just published, with Portrait of Mdlle. Patti. Price 2s. 6d.—W. WILLIAMS and CO., 221, Tottenham-court-road.

"THE BIRD AND THE STREAMLET."
New Song. By LANGTON WILLIAMS. Just published. Sung with the greatest success by Miss Banks. Price 2s. 6d.
W. WILLIAMS and Co., 221, Tottenham-court-road.

"THE BROKEN ROSE." Song for
Mezzo-Soprano Voice. Composed by the Hon. ALFRED STOUTON. Price 2s. 6d.
LAMBORN, COCKS, HUTCHINGS, and CO., 63, New Bond-street.

SIGNS OF AUTUMN and MERRY SLEIGH
BELLS. Sung with immense applause by Mr. Lord in his popular Entertainment, "The Canoe, the Rifle, and the Axe."
Just published by ROBERT W. OLLIVIER, 19, Old Bond-street W.

MUSICAL BOX DEPOT for the Sale of

KEYZOR and BENDON'S TWO-GUINEA
BINOCULAR FIELD, RIFLE, or OPERA GLASS.—The extraordinary power of this instrument renders it adapted to define objects distinctly at ten miles' distance—suitable for the theatre, racecourse, target practice, sportsmen, tourists, and general outdoor observation. Illustrated Price Lists of Optical Instruments for 2 stamps.—60, High Holborn, London.

LETTER received about the NEW £5
TELESCOPE:—"Pwllheli, Carnarvonshire, June 9, 1863.
Sirs,—I have purposely avoided writing until I should get fair opportunities to test the telescope under different circumstances. Now I have the great pleasure to assure you that I find your statements as to the capacity of the instrument very much under the real performance, both astronomically and terrestrially. I have had very capital views of Jupiter with its moons, immersing and emersing, and also the belts; Saturn with two of its moons, its ring, and the shadow thereof thrown, very well defined, upon the body of the planet. I have also resolved several double stars most beautifully, with their different colours. The mountains in the moon I can see as plainly and distinctly in alto relievo as those of Carnarvonshire. With the day eyepiece I have seen a woman at a distance of three miles knitting her stocking. I could see the woollen thread and her needles playing as plainly as if she had been only six or seven yards distant. I am, gentlemen, yours respectfully, W. O. Williams."—S. and B. SOLOMONS, sole makers, 39, Albemarle-street, Piccadilly. Powerful small pocket telescopes, opera, field, and general outdoor day and night glasses.

DEAFNESS.—The SOUND MAGNIFIER
and INVISIBLE VOICE CONDUCTOR, for Deafness. It fits into the ear not perceptible, removes singing noises in the head, and enables deaf persons to hear distinctly at church and at public assemblies.—S. and B. SOLOMONS, 39, Albemarle-street, Piccadilly.

SPECTACLES.—The Patent Newly-invented
TINTED SPECTACLES are patronised by the majority of the nobility, including Viscount Palmerston. They give extraordinary relief by day and night to weak, dim, and defective vision.
S. and B. SOLOMONS, 39, Albemarle-street, Piccadilly.

DO YOU DOUBLE UP YOUR
PERAMBULATOR?—See T. TROTMAN'S Patent Safety Folding, for Infants and Invalids. T. Trotman (the maker), High-street (Gate), Camden-town, N.W. All kinds on view.

"TRENTO, IN THE TYROL," BY W. C. SMITH, IN THE EXHIBITION OF THE SOCIETY OF PAINTERS IN WATER COLOURS.

FINE-ART ENGRAVINGS.

INSTEAD of (as we have hitherto done) giving detached notices of the works of art which we engrave, we think it will be found more agreeable to the reader, as well as convenient to ourselves, to comprise them in one article, following the order in which the engravings appear in our pages. First on the list, then, in our Fine-Art Supplement is the Engraving of Mr. W. Collingwood Smith's *Trento*. This capital of a "circle" in the Tyrol is known universally as the site of the celebrated "Council of Trent," assembled by Pope Paul III. in 1545, and continued by twenty-five sessions, till 1563, under Julius III. and Pius IV., in order to fix with perspicuity the doctrine of the Church, reform its discipline, &c. The decrees of this famous council, together with the creed of Pius IV., contain a summary of the doctrine of the Roman Catholic Church. The church of St. Maria Maggiore occupies the site of the council chamber, now destroyed, and has a painting with portraits of all the members. It is, however, the picturesqueness of Trento which, doubtless, attracted Mr. Smith, as it has attracted Callcott and other painters. By-the-way, the old bridge seen in Callcott's picture is no longer in existence; the strada ferrata, "the iron road," as the railway is called in the language of Italy, has usurped its place. Still the old town—ancient as the days of Cæsar— is

THE GUARDS' BALL.—THE SUPPER-ROOM.

THE Guards' ball to the Prince and Princess of Wales, a fitting climax to the long series of festivities which have been given in honour of their Royal Highnesses, took place, as reported in this *Journal*, in the picture-galleries of the International Exhibition building. The rooms were decorated in the most elegant manner. The Queen kindly placed at the service of the committee the whole of the temporary fittings used at Buckingham Palace on festive occasions. Emulating this Royal liberality, several members of the aristocracy contributed the wealth of their gold and silver plate; and the value of the plate and ornaments is stated at two millions sterling. The supper-room, of which we give an Engraving, presented a scene of almost regal magnificence. Dancing was continued until one o'clock, when the heavy curtains at the head of the room were drawn aside, and the Prince and Princess of Wales, the Duke and Duchess and Princess Mary of Cambridge, followed by the most illustrious and distinguished guests, passed down the ballroom to the apartment where the supper was laid out. The room had been decorated by Mr. Stone entirely with military trophies. Four great stars, formed of weapons, occupied each side of the room, each star requiring the martial equipments of almost an entire regiment to complete it. Some were of immense weight, all were of great size and beauty, and those towards the centre of the room were encircled with wreaths formed of sabre blades, which had a beautiful effect. Between these trophies, which glittered from a thousand different points, were noble groups of flags, with men in armour at the bases; while at the head of the room, in the alcove where Foley's great statue of Caractacus stood last year, was a fine ornamental, military trophy, consisting of a group of figures in full suits of tilting armour, with vizor down lance in hand. The centre knights supported shields bearing the Prince's plume and motto, and the cross of the Dannebrog. Behind them were grouped a superb collection of ancient weapons—a perfect thicket of bristling points and blades, battleaxes, brown bills, two-handed swords, halberds, partisans, with helmets, gauntlets, shields, greaves, and breastplates, mixed up with spears and wall-pieces that had done duty from the wars of the Roses to the time of the Ironsides of Cromwell. Behind all was a star, composed of nearly a thousand ramrods, its centre formed of a small glass device representing the crosses of St. George and Andrew, with the badge of the brigade with its motto, "Tria juncta in uno." This magnificent trophy was raised about 10 ft. from the floor, and its base of scarlet cloth was enriched with a magnificent collection of gold plate lent by the Dukes of Cambridge, Wellington, and Buccleuch; the Marquises of Exeter, Salisbury, and Londonderry; the Earl of Derby; and, indeed, most of the chief nobility famous for the rarity and value of their collections of plate. The centre piece of the buffet was the celebrated Flaxman Waterloo Shield—the largest and probably the finest work of art in gold in Europe—the first time that it had ever been lent by the Duke of Wellington. On the table itself was a perfect monument in silver, belonging to the Duke of Buccleuch; while on every side were massive piles of silver-gilt cups, salvers, and candelabra. After supper the dance was resumed with renewed spirit, and kept up with vivacity for several hours.

ROYAL THAMES YACHT CLUB SCHOONER MATCH.

THE schooner match in this club, a match which, on account of the size of the vessels engaged the long and adventurous course, and as closing the Thames season, always excites much attention, took place on the 27th ult. On this occasion there was an unusually large assembly on board the club steamer, in order to welcome the return of the Commodore, Lord Alfred Paget, whose reappearance at his wonted post was acknowledged by the loudest and heartiest cheers which some 400 members and friends could produce. The club this year offered two prizes, one value £100, for schooners above 100 tons; another, value £50, for schooners not above 100 tons. The matches to be sailed separately, and no time allowed. Course, from Rosherville round the Mouse Light and back. The following vessels entered :—

Above 100 Tons.

Yacht.	Tons.	Owner.
1. Galatea	143	T. Broadwood.
2. Gloriana	134	A. O. Wilkinson.
3. Albertine	155	Lord Londesborough.
4. Albatross	107	T. Brassey.

Under 100 Tons.

Yacht.	Tons.	Owner.
Clytie	64	Capt. F. S. Clarkson.
Fleur-de-Lys	77	W. H. Birch.
Intrigue	83	F. K. Dumas.

At the time of the start the weather looked gloomy and threatening, and a strong W.S.W. wind was blowing. The vessels were moored in two lines, the small vessels lowest, and the first gun for them was fired at 12.2, the second gun at 12.7. The Clytie, being out in the tide, was first to swing, and so got up her mainsail first. Intrigue was rather behindhand; we believe that her spring parted; however, she was first with her gaff topsail.

The first gun for the first-class yachts was fired at 12.7, the second at 12.12, and the sails of these fine vessels began to rise like a cloud. Of course, with a strong west wind, all had to get their heads round, and then cant, each relying on her neighbour performing the same operation, and getting out of the way. The Albatross, however, made no move, so that she was right in the way of the Albertine, and a terrible collision was with difficulty avoided. The Albertine was obliged to shift her helm and sail up the river, and as soon as she got clear, before she could round into her proper course, she was very nearly ashore on the dangerous point opposite Northfleet. The arrangements for hoisting sail on board the Albertine were disarranged by this, and she was all adrift, and the crew so confused and puzzled that she was not got into proper trim until they were in the Lower Hope. Meantime, the Galatea and Gloriana were off, Galatea at once taking the lead. She set an enormous balloon jib, and began rapidly to gain, going through the water at a tremendous pace, every stitch drawing through most of the reaches. They ran through the Lower Hope, sails wing and wing, and here Albertine began to prove that she had the speed of her competitors. Still Galatea kept fairly ahead, until off the Chapman the big ballooner proved too much for the jib-boom, which broke short off. The stump or a spare jib-boom was set with great rapidity, and a jib and outer jib hoisted, but of course the delay was serious. There was nothing remarkable except the pace until they rounded the Mouse, as follows :—

	H. M. S.		H. M. S.		H. M. S.
Fleur-de-Lys	2 33 15	Intrigue	2 39 30	Clytie	2 44 20
Galatea	2 34 5	Albertine	2 40 40	Gloriana	2 41 50

There was now a dead beat back against wind, and at first against tide, and just at this time the wind was very strong, but being with tide there was no sea. Intrigue began to gain steadily, and, after a hard fight, passed Fleur-de-Lys off Southend. The breeze held on strong and steady, and the leading vessels increased their lead till they passed the winning buoy off Rosherville :—

	H. M. S.		H. M. S.		H. M. S.
Intrigue	7 17 30	Fleur-de-Lys	7 21 15	Clytie	7 29 0

Before the Chapman Head, Albertine had fairly passed to windward of Galatea, and the race was over, barring those accidents of which this season has been so prolific. They passed the buoy at Rosherville :—

	H. M. S.		H. M. S.		H. M. S.
Albertine	7 7 0	Galatea	7 13 15	Gloriana	7 28 0

As soon as the Intrigue had come alongside, Lord Alfred Paget presented the prizes, the prize in the large class being, of course, given to Lord Londesborough; that in the smaller class to Mr. Dumas. The success of Lord Londesborough afforded general satisfaction.

Mr. Alfred Gatley, whose colossal bassi-relievi of "The Host of Pharaoh in the Red Sea" and "The Song of Moses" formed such prominent features amidst the sculpture of the late International Exhibition, died recently in Rome of dysentery.

The *Northern Ensign* has received advices from the Rockall cod-fishing up to Saturday week, by the fishing-smack Mandant, Captain Ross, who left the ground on that day. He reports the fishing this season as a complete failure, he having only caught 180 cod during six days of splendid fishing weather. He left a number of vessels, including two Dutch busses, at Rockall, which had done no better at the fishing than himself, and with no prospect of improvement. The accounts from the Faroe Isles continue fair. A number of the French and Dutch vessels had sailed for home, with splendid cargoes of fine fish.

LITERATURE.

MARKS AND MONOGRAMS ON POTTERY AND PORCELAIN. By Mr. W. CHAFFERS, F.S.A. Davy.

This work goes far to supply a want felt by a large class. Within a very few years a more enlightened view of the value of that form of "applied art" found in ceramic productions has spread with surprising rapidity. Collectors have sprung up on all hands, and they buy at enormous prices not one or two, but every kind of pottery and porcelain. The prices of some fictile wares have increased fifty and a hundred fold. To meet the market these fanciful prices have created, a number of spurious articles are offered for sale. The genuine productions are, however, for the most part, distinguishable by the makers' marks and monograms, which are nearly always affixed, and these are seldom imitated—at all events successfully. The value to collectors of a full and accurate list of such marks is therefore at once apparent. It renders the same service to the ceramic art that the collectors of paintings and prints have derived from the lists of painters' and engravers' marks and monograms. Mr. Chaffers does not claim that his list is complete—on the contrary, he asks for further aid from collectors—yet it includes a vast number of examples of the signatures to the productions of all ages and countries, and it is the result of many years' attention to the subject under most favourable circumstances. The book contains, including the representations of the various wares, nearly a thousand wood engravings. The work is, besides, a descriptive guide to the various kinds of pottery and porcelain. The introductions to each section contain much well-digested information, particularly those relating to Roman pottery and our own mediæval wares; also the productions of France, Italy, Holland, especially Delft and recent English manufactures. The section on the famous French faïence, known as "Henri II. ware," the rarest and most valuable, if not also the most beautiful, form of the potter's art, contains a peculiarly interesting announcement. It appears highly probable that a M. Fillon, of Poictiers, has just solved the mystery which has hitherto enveloped the origin of this pottery. This gentleman adduces the strongest evidence that this faïence was actually fabricated at Oiron, near Thouars (Deux Sèvres), with clay from the immediate neighbourhood. "Two artists assisted in the work—a potter, named François Charpentier, and Jean Bernard, librarian and secretary of Hélène de Hangest-Genlis, widow of Artus Gouffier, a superior woman and a cultivator of the arts. After the decease of this lady, in 1537, they both entered the service of Claude Gouffier, her son, Grand Ecuyer de France, who had inherited the tastes of his mother, and who, moreover, collected a vast number of works of art. The librarian had, whilst in the service of Hélène de Hangest, furnished designs for the ornamental bindings of books and frontispieces, specimens of which are annexed to M. Fillon's pamphlet copied from the etchings of Octave de Rochebrune. It has been noticed by the Comte de Ris, in the *Gazette des Beaux Arts* (January, 1860), that a great resemblance exists between the interlaced ornaments of the Henri II. ware and the bookbindings of Grolier and Maioli. Mr. Fillon (by aid of the monograms, ciphers, and arms which occur on this ware) has chronologically arranged them from the published drawings, and comes to the conclusion that the earliest pieces were executed under the direction of Hélène de Hangest herself in the latter part of the reign of Francis I.; afterwards by her son, Claude Gouffier, and other hands, down to the accession of Charles IX. The arming of the Protestants put an end to a fabrication which could no longer maintain itself; for this reason—that, its only object being to supply the *dressoirs* and furnish the chapels of one family, their relations and personal friends, and not for commercial purposes, it followed the fortune of its patrons in a country menaced like Poicton with the horrors of a religious war."

THE FINE ARTS QUARTERLY REVIEW. Chapman and Hall.

The first number of this review, with a body of able contributors, and in all the appropriate *luxe* of toned paper, wide margins, and old-fashioned typography, has just made its appearance. The editor, Mr. Woodward, one of the Queen's librarians, and keeper of the prints and drawings at Windsor Castle, announces that his primary inducement to establish this review was the need he had long felt of a medium of intercommunication for collectors, connoisseurs, and others interested in the art-wealth amassed in this country. Consistently with the endeavour to supply this desideratum, the first number contains articles on the Raphael Collection of the late Prince Consort, the Loan Museum, the Royal Collection, the Italian Collection, South Kensington, the Tenison Psalter, extracts from State Papers relating to the Arundel and Royal Collections, and a catalogue of the engravings of Cornelius Visscher. Several other catalogues of inedited works are promised. Closely connected with this sphere of usefulness is the intended historical, archæological, and contemporary record of art, exemplified in the present number by an instalment of a "History of the Royal Academy" and a "Summary of Art-News," both of which are carefully written; but the latter decidedly follows in its selections and few criticisms the dicta of a journal notoriously sectarian. The *Review* thus takes its stand principally on ground only very partially occupied by Dr. Waagen, Mr. Smith, Mrs. Jameson, the authorities at South Kensington, &c. If the historical and technical so greatly preponderate in future numbers we fear it may limit the circulation and influence at which a periodical bearing the title of a quarterly review may be presumed to aim. Two or three of the papers treat, however, of some of those art questions of the day which, without the profitless "discussion" deprecated by the editor, one would expect to find handled in a publication of this description. One of the most readable of these, though somewhat carelessly written, is Mr. Tom Taylor's article on "English Painting in 1862," reviewing the leading characteristics of British as compared with Continental art. It might be urged that the writer has done, on many occasions, as much as in him lay to glorify the *bourgeois* and dealer's art in England, of the prevalence of which he justly complains, but we see that, regardless of consistency, he here claims for art in its historical, religious, and poetical developments, great national and educational influence. The reasons assigned for the comparative dearth of all these forms of art in this country are, however, superficial. It is not the result almost entirely of the want of State patronage, though this of course is an essential condition, because such patronage has often failed here and elsewhere. But it is principally the domestic utilitarian character of the English people and their institutions, and likewise the abstract nature of the Protestant religion. The very imperfect training supplied by our Royal Academy is properly instanced as a minor cause; and we would name in addition the absence of that cumulative technical mastery naturally acquired by the Continental system of transmission from master to pupil. Lastly might be mentioned the evidences of the want of special qualification, and a large and liberal view of art in so many of our critic class, and the inevitable substitution of accidental impressions, prejudice, and partiality for actual knowledge of painting as a technical art and consistent principles of taste.

MEDICAL BOOKS.

THE NATURE AND TREATMENT OF GOUT AND RHEUMATIC GOUT. By ALFRED BARING GARROD, M.D., F.R.S. Second Edition. London: Walton and Maberly.

The medical profession, and, indirectly, the public at large, are much indebted to Dr. Garrod for his very successful researches upon the subject of gout, which are embodied in the able and compendious work which is now before us. The first chapter of this book contains a résumé of the knowledge of the ancient writers upon the subject, and the classifications of the more modern writers; and it concludes with the author's own division of gout into the regular and irregular varieties, in the latter of which the disease may be manifested either in severe functional disorder of any organ, or in the development of inflammation in parts or tissues other than those connected with the joints. The attack and progress of acute and chronic gout, which form the subjects of the second and third chapters, have been well described by previous authors, but perhaps by none more graphically than by Sydenham, from whose works Dr. Garrod gives quotations sufficiently appropriate. Our author fortifies his statement that acute gout at its first invasion seldom attacks any other part than the ball of the great toe, by a list of 516 cases drawn up by Sir C. Scudamore, in which one or other of the great toes alone were affected in 341 instances, and the great toe with some other part in 373 cases. And he finds from his personal observations of cases in hospital practice, extending over a period of more than twelve years, that in not more than 5 per cent were other joints implicated, to the exclusion of the great toe. While treating of the subject of chronic gout, the author has rendered familiar to the eye of the reader, by several good drawings, the deformities arising from the deposition of chalk stones in and around the smaller joints and in the helix of the ear, as well as the appearances presented under the microscope of the urate of soda, of which they are specially composed. Not the least interesting part of this work is the consideration of the condition of the blood in gout. Dr. Garrod first published his views on this subject in the *Medico-Chirurgical Transactions* in the year 1848. He then stated that he had detected uric acid not only in the blood of persons affected with gout but also in those not so affected. In the former, at least, it is found to be in the form of urate of soda; and from 1000 grains of the serum of blood he extracted in one case as much as 0.175 grains of uric acid, which he considers was probably far less than the amount actually contained; whilst in the latter only the minutest traces of uric acid can be detected. Dr. Garrod has been at much pains to ascertain the condition of the urine of persons suffering from gout; and, amongst other alterations, he finds that there is a "deficiency of uric acid in gouty urine, and that the defective elimination generally bears a close relation to the inveterate character of the malady." The portion of this work which treats of the morbid anatomy and pathology of gout is exhaustive of the subject and well illustrated with plates, some of which are coloured. As respects the medicinal treatment of this disease in its acute stage Dr. Garrod says with truth that "those who have had many opportunities of witnessing the progress of gout will not, I believe, be inclined to agree with Cullen's aphorism—'the common practice of committing the person to patience and flannel alone is established on the best foundation.'" He is of opinion that the most successful treatment in this stage is by some alkaline saline combined with a moderate dose of colchicum. Mention should also be made of the introduction by Dr. Garrod of lithia as a remedy into practice, which is now extensively used. Dr. Garrod's book, which, by the way, has been translated into German, and of which we understand a French edition will shortly appear, will be perused with satisfaction—although brought out as a handbook for medical men—by all intelligent readers.

THE WATERING-PLACES OF ENGLAND. By EDWIN LEE, M.D. Fourth Edition. John Churchill.

THE PRINCIPAL BATHS OF GERMANY, FRANCE, AND SWITZERLAND. By EDWIN LEE, M.D. Fourth Edition. J. Churchill and Sons.

It must be a subject of congratulation to such persons as are in the habit of frequenting the English and Continental watering-places to be able to refer to the testimony of an impartial witness, who, from his personal observation and experience of the effects of the various mineral waters in disease, is eminently qualified to give instruction in these matters. Such is given by Dr. Lee in his two books, entitled "Watering-places of England" and "The Baths of Germany." It is a fact well known to all that a large proportion of our countrymen, in seeking relief from chronic disorders by means of mineral waters, are willing to undergo the fatigues of a long journey to some one or other of the Continental watering-places rather than resort to the mineral springs of their own country. This may be partially accounted for by the greater variety of mineral ingredients which they find in the Continental springs; but, in addition to this, as Dr. Lee truly observes, "The Continental watering-places offer more resources and *agrément* both to valetudinarians and pleasure-seekers, being often situated amidst beautiful scenery, having well-lighted rooms for evening reunion and or walking in wet weather." The expenses, too, of living and of public amusements in the Continental watering-places are considerably less than in England; although it is probable that year by year they become more equalised in this respect. In "The Watering-places of England" Dr. Lee commences with a glowing description of the city of Bath, one of the most ancient resorts of the sick in search of recovery through the agency of mineral waters, and possessing the only hot mineral spring in England. The temperature of the Bath mineral waters is high, varying from 104 deg. Fahrenheit to 120 deg. In this respect they, of all the English mineral springs, approximate the most to those of Teplitz. The amount of saline ingredients in both is also somewhat alike. The Teplitz water, however, contains a certain quantity of carbonate of soda, while in the Bath water the soda is in the form of a sulphate. They are, nevertheless, both "efficacious in analogous cases;" the class of patients which are sent to such springs being those who are afflicted with gout, rheumatism, and stomach disorders, attended by acidity and want of tone. The waters of Vichy, Ems, Wildbad, and Buxton may be classified with those of Bath and Teplitz, inasmuch as their effect in the cure of disease depends more upon their thermal properties than upon the agency of the mineral salts which they hold in solution. More energetic in their effects than any of these are the waters of Wiesbaden, the temperature of which, from the Kockbrunnen spring, rises as high as 158 deg. Fahrenheit. They also contain as much as 63 grains of fixed substances in a *pint* of the water, of which 53·499 are composed of muriate of soda. These waters must, therefore, be taken with caution, more especially by such persons as are subject to active congestion of the internal organs. Dr. Lee's books abound with useful information for those who intend visiting any of the mineral watering-places; and a graphic description of the town and the places of interest in its neighbourhood precedes the more important account of the nature of the mineral springs which are there, and the various maladies for which they are suitable. The second part of the book, entitled "The Watering-places of England," gives a good account of the principal winter places of resort on our coasts, including Brighton, Hastings, Sandgate, the Isle of Wight, &c., and is a very fit appendage to the first part of the work upon the places possessing mineral waters. We feel thankful to Dr. Lee for having, with so much success, devoted his time and energies to a subject possessing such considerable interest for the public.

ON DISEASES OF THE CHEST. By HENRY WILLIAM FULLER, M.D., &c. Pp. 703.

In this work the author has presented the profession of medicine with a very complete summary of all that is worth knowing of the subject on which it treats, not merely at second hand, but as the result also of his own independent labour and original observation. We should not omit to mention here that the manner of putting forth his teaching possesses features entirely novel, each important topic or section being placed before the reader in well-arranged tables.

Our readers, however, not being exclusively medical, we shall limit our remarks to certain portions of Dr. Fuller's book which cannot, we are sure, fail to interest the non-professional public. The space to which we are necessarily restricted will prevent our dwelling upon al that has attracted our own attention. We select as an illustration the chapter on "pulmonary consumption," which, by-the-way, we opine, would, in the hands of some authors more alive to "rapid returns" than Dr. Fuller seems to be, have made its appearance as a separate book—and a good and successful book, we doubt not, it would have made.

Dr. Fuller points out that consumption is especially a constitutional malady, and not, as has too often been erroneously assumed, a disease of the lungs alone, its essential element, technically known as "tubercle," being found in all parts of the body, although it affects the lungs by preference. Of the hereditary nature of consumption there can be no doubt; but, on the question of the possibility of its communication by infection, the public need such clear and correct views as are conveyed in the following extract :—

A wife hitherto healthy, and apparently free from phthisical pains, nurses her consumptive husband, and falls a victim to the same form of pulmonary disease. A sister tends her gradually failing phthisical brother, and soon afterwards shows symptoms of decline. The sequence is remarkable, and as it naturally places the two facts before us in the relation of cause and effect, it is apt to excite unnecessary apprehension, for there is really no ground for supposing that they hold that relationship to one another. The sister, probably, inherited the tendency in common with her brother; and the wife, if free from an inherited predisposition, was not unlikely to become consumptive, worn out by her weary, anxious watching, sleepless nights, and long exposure to the confined atmosphere and other depressing influences of the sick-room—circumstances, beyond all others, powerful in fostering or exciting a tendency to phthisis. The marvel rather is that, notwithstanding the strain of long-continued anxiety and the depression inseparable from the protracted

Digitized by Google

burning of a dearly-loved relative, consumption should not be developed in the survivor more frequently than observation has proved it to be.

There exists, moreover, another prevalent and still more mischievous error as to another cause of consumption, which is exposed by Dr. Fuller :—

"Nothing is more common," observes the author, "than to hear consumption attributed to the effect of wet and cold, the inclemency of the season, or the variableness of the climate in which the person is resident; and nothing, unhappily, is more consistent than the practice which is based on this supposition. Encased in warm clothes, and shut up in heated rooms from which every breath of fresh air is carefully excluded, the unfortunate victim to this prevalent superstition becomes rapidly enervated, and falls an easy prey to this formidable disorder. But careful observation, corroborated by statistical records, proves incontestably that the pure air of heaven, which God has provided for us to breathe, and the variations of temperature to which, in His all-wise providence, He has seen fit to subject us, are not so noxious or productive of ill-health as man in his ignorance has oftentimes asserted.

Thus clearing off the mists of this cloudland of ignorance and error, Dr. Fuller sees clearly how to direct his patient to the climate best adapted for the renovation of his failing powers and the arrest of the tubercular disease. The first involves the question of prevention, the second of cure.

The first and most effectual means of prevention has been held to be a residence in a warm climate.

Now, here (says Dr. Fuller) I find myself at issue with the opinions of many excellent and learned physicians, and no less so with popular prejudice. From our cradle to our grave we are taught to regard cold as an unmitigated evil; and as warmth is intimately mixed up in our minds with the notion of comfort, and that again with everything which is conducive to our bodily well-doing, the recommendation to seek a warm and more genial climate is quite in keeping with our inbred feelings, and is regarded as consistent with sound sense and the exercise of common prudence.

Nothing, however, is further from this very desirable end. Cold, with due protection of the surface of the body, invigorates the system and arrests that morbid formation on which consumption depends. The most remarkable recoveries have followed removal to a cold climate—e.g., Canada and other northern countries, while the disease itself is comparatively rare in St. Petersburg and Moscow, in the northern districts of America, Norway, Sweden, Lapland, &c. Dr. Fuller gives abundant evidence in support of his views, showing the superiority of a cold over a warm climate for the victims of phthisis in certain stages of the disease. However startling such propositions may seem, because at variance with commonly preconceived notions and prejudices, they have, nevertheless, gained ground in the medical profession, and are gradually assuming the form of an accepted doctrine.

We must here stay our pen, although we could point out much more that would interest in the various chapters on the healthy action and on the diseases of the heart. We cannot conclude without expressing our conviction that to the student of medicine this work must prove invaluable, to the medical practitioner most useful, and to the general reader interesting and instructive.

THE MAGAZINES.

Of the magazines—which are unusually dull this month—*Fraser's* is undeniably the best. "Late Laurels" is not attractive reading, but it is followed by a very admirable paper entitled "A Chapter showing how Lord P—— became our Rector," which will recall to those acquainted with Scotch life a few years back a very famous wit *bon vivant*, and compatriot of Lockhart and Wilson, whose memory deserves to be more securely embalmed than in the fugitive pages of a magazine. Another critic applies the scalpel to Mr. Kinglake's "Invasion of the Crimea," and with telling effect. No effect, however, is likely to be produced upon the hon. member for Bridgewater, who, with an obstinacy worthy of Macaulay's worst mood, appends to the advertisement of the new edition of his book a statement to the effect that "some fresh notes will be found in it, including documentary proofs of controverted statements; but not a word of the text has been withdrawn, and not a word has been added to it." The conclusions drawn in the essay on "Our Modern Youth" would be very disheartening if we were obliged to admit the author's premises. But while there can be no denying the fact which the writer deplores, that too many of our youth of both sexes are losing that moral sensibility and generous enthusiasm which should belong to their age, we still believe their cases, numerous as they are, to be exceptions to the general rule.

In the *Cornhill* "Romola" draws statelily to its end, and "Crosbie" suffers so fearfully that Mr. Trollope must be on his guard lest the very excess of punishment inflicted on the wretched Government clerk should excite a reaction of sympathy in his favour. The quiet, literal truthfulness of Mr. Trollope's story, "The Small House of Allington," becomes more and more remarkable each month. There is no plot in it worth mentioning; we know exactly what is going to happen to each character, and how; and yet so exquisite is the art of the narrator that we await his utterances with impatience. The padding of the *Cornhill* this month is more than ordinarily hard and uninteresting.

In *Macmillan* we have a very fair sketchy article—it would have been better but for the writer's morbid endeavour to be amusing—upon a subject of which little is really known in England—Indian life. Probably, of the social condition of no other of our colonial possessions are we so ignorant as we are of our great Eastern Empire. For some reason or other old Indians are generally reticent upon the subject; but it is a significant fact that the desire to leave the country is general, and that it is adopted as a settled home by none, save by those to whom the possession of authority and the habit of command have become necessities of existence. Signor Saffi's paper upon "Southern Italy, its Conditions and Prospects," is very valuable. He attributes, and with reason, the evils to which Naples is still a prey to the amount of indolence and corruption which the many years of bad government could not fail to engender. Of the agricultural population, who labour hard for insufficient pay, Signor Saffi speaks with respect, and, while he admits frankly the misery and degradation existing among them, he lays both at the door of Bourbonic despotism. Of this he adduces ample proofs. Among them may be cited the fact that the provinces of the mainland had only five high roads to connect them with the capital, while of these some were so imperfect that travellers had to make a portion of the journey on horseback, and others had no bridges. The existence of brigandage is attributed by Signor Saffi to the intrigues of some of the feudal families who flourished under the *ancien régime*, to the foolish disbandment of the old Neapolitan army, and to the gaol birds who escaped during the progress of the revolution. At the same time he admits that the peasants have not a sufficient interest in the maintenance of order to side actively against the brigands. A bold and decided article upon the question at issue between Dr. Colenso and Convocation completes an interesting number, which will, however, scarcely be popular with the majority of Mr. Mudie's subscribers.

Miss Cobbe's article in the *Victoria Magazine* is a peg on which she has hung a number of very good, if not new, stories. We have seen the following somewhere, but it will bear repeating:—"An Irish Judge sentenced a man to be flogged at the cart's tail from the gaol to a certain turnpike. The wretched man answered derisively, 'Thank you, my Lord; you've done your worst.' '*And back again*,' added the Judge, with imperturbable composure." As usual, Miss Cobbe underrates Scotch wit, and, in endeavouring to illustrate it, simply proves her ignorance of the language and the people. Mr. Tom Taylor completes his task of bringing Lichtenberg's opinion of the actors of 1775 before his readers: and Mr. Senior continues his very interesting "Journal kept in Egypt in 1855 and 1856." Altogether, it is evident that the *Victoria Magazine* relies for appreciation upon something better than sensation stories and startling theories, and for this, if other reasons were wanting, we wish it every success.

London Society is, as usual, light, amusing, and frothy. The article on Dickens's dogs is one of the best. Familiar as the world is with the works of the author of "Pickwick," many readers will feel surprised to see how many types of dogs Mr. Dickens has depicted, ranging from Mr. Sykes's Bull's-eye, raised and reared in the neighbourhood of Field-lane, Holborn, to poor Dora Copperfield's sleek, curly, pampered Jip. There is an article upon a subject which crops up annually under the July sun—that masterly pedestrian feat of going to Milan over the Oberland in a month for £16. Well, it is possible, from sixteen to twenty, but not advisable. Another fallacy which needs correcting is that of making the tour with as little luggage as possible, and travelling with no more impediments than a *robe de nuit* and a toothbrush. It is a serious mistake. We remember coming across such a pedestrian once in a heavy storm at Ragatz. We lent him some spare things while his own single suit was being dried in the village oven. He begged hard to buy them of us, but we were obliged to decline; and we watched him at eventide walk away steaming.

Good Words seems to have been more affected by the rebukes of the *Record* than its directors will allow, and to be growing decorously dull. "In the Dark" is a poor poem on a good subject, which is redeemed by the last stanza. Mr. Ludlow contributes a very readable paper on religious sisterhoods. "A Word of Remonstrance with some Novelists," by a Novelist," was very much needed, and will, we hope, be attended to; but, after all, the remedy for the evil which the writer deplores is to be found in the reading public, who have during the past season harassed Mr. Mudie's assistants for copies of "Aurora Floyd" and "Lady Audley's Secret," and left "David Elginbrod" unheeded on his shelves.

MUSIC.

Gounod's new opera, "Faust," has been as successful at the ROYAL ITALIAN OPERA as it had previously been at Her Majesty's Theatre. It was performed for the first time at Covent Garden on Thursday, last week, and the success of the first night has been fully confirmed by subsequent repetitions. Of the merits of this work, dramatic and musical, we have very little to say in addition to what has already been said by ourselves and our contemporaries. We think it owes its remarkable success as much to the excellence of the drama as to the attractions of the music. Goethe's grand and beautiful tragedy has been adapted to the musical stage with much felicity. The plot is clear and coherent, the incidents striking and pathetic, the catastrophe sublime. As to the music, it is certainly the work of a man of genius, though it is deformed by crudities which might have militated against the success of the piece had its dramatic interest been less powerful. Gounod is a musician of the new school. Though not a German, he belongs nevertheless to the "Young Germany" of music, and may be classed in the same category with Berlioz, Liszt, and (above all) Wagner, whom in many respects he strongly resembles. Like them, he sets at nought the time-honoured laws of musical art, and indulges in (so-called) harmonies and modulations which would have driven Mozart or Cimarosa crazy, and are no small trial to the nerves even at the present day. His melody, too, shows little attention to rhythm, and is often more in the style of measured recitative than of air—which is exactly the case with the music of Wagner. But still, we repeat, Gounod's music is the music of a man of genius; it has imagination, individuality, expression, and picturesque effect, and, like all music of a new and original character, it improves upon repetition. Its asperities are softened down, and its beauties are more prominently conspicuous. So that, taking all things together, we are not surprised at its success. The performance at Covent Garden is magnificent. The characters are strongly cast, Mdme. Miolan-Carvalho, the original Margaret at the Théâtre Lyrique, has assumed the part here. The music, written expressly for it, is calculated for her powers, and she sings it perfectly. In aspect and manner she realises the fine creation of the great German poet; and her acting is gentle and touching, though she fails to rise to the passion and grandeur of the concluding scenes. Tamberlik's Faust is a powerful performance, though he lacks the sweetness of voice which enables Giuglini to throw so much seductive tenderness into the love scenes with Margaret. Faure's Mephistophiles is a most artistic performance. He realises the cold, sneering character of the fiend, and he executes the music magnificently. The part of Valentine is well sustained by Graziani, and that of Siebel by Mdme. Didiée. As to the *mise en scène*, the richness and splendour of the costumes and decorations, the beauty of the scenery, and the brilliancy of the spectacle—all these things are such as might be expected from the management of this magnificent theatre.

The run of "Faust" having now slackened at HER MAJESTY'S THEATRE, its representations now alternate with those of other operas. On Saturday last "Norma" was performed, with Titiens in the character of the heroine, Mdlle. Artôt in that of Adalgisa, and Signor Geremia Bettini in that of Pollione. The appearance of Artôt as Adalgisa gave a new and interesting feature to the performance. Adalgisa is deemed a secondary part, and many prima donnas do not choose to perform it. It is, nevertheless, a most beautiful part, worthy of any actress or singer, however high her position; and, therefore, when such an artist as Mdlle. Artôt has the good sense to appear in it, the effect is as delightful as it is rare. The audience were enchanted, and lavished their applause on both the performers. Signor Bettini acquitted himself respectably, but did not achieve a brilliant success.

The concert season is almost over. Nearly the last, but by no means the least, of the benefit concerts was that of Mr. Brinley Richards, at the Hanover-square Rooms, on Wednesday evening last week. Mr. Richards holds a high position in his profession, being much esteemed as a composer, a pianist, and instructor, so that his concert was attended by an overflowing assemblage of fashionable people. There was an elegant selection of vocal and instrumental music, in which Mr. Richards's own compositions very properly held a prominent place. One of the newest of them, the song "Daughter of Denmark," was evidently the principal feature of the evening. Exquisitely sung by Mdlle Parepa, it was applauded and encored with the utmost enthusiasm. Mr. Richards's new national song, "God bless the Prince of Wales," a composition which has gained unbounded popularity, was sung by Mr. Sims Reeves and the National Choral Union with the effect which it never fails to produce. A number of favourite vocal and instrumental pieces, performed by Miss Edith Wynne, Mdlle. Parepa, Mr. Lewis Thomas, M. Paque, Mr. Balsir-Chatterton, and Mr. John Thomas, completed the programme of this excellent and interesting concert.

THE THEATRES.

STRAND.—**A new drama, possessing more weight than** generally pertains to pieces produced at this theatre, has been given to the stage by Mr. John Brougham, and entitled "While there's Life there's Hope." We do not exactly perceive the peculiar relation of the title to the plot, nor which of the characters is supposed to benefit by the comforting assurance contained in it. For the plot itself, it bears considerable resemblance to Mr. Arthur Sketchley's drama of "The Dark Cloud," some twelve months ago produced at the St. James's. But it has the advantage of introducing an actor new to the Strand Theatre who is likely to be of service to the establishment. We allude to Mr. Vollaire, late of the Surrey, who has been engaged to support the character of Adam Greenleaf, and who is of such a cheerful disposition that he is always laughing. He has recently married a young wife, Rose Greenleaf (Miss L. Thorne), with whom he is remarkably happy. Living in the country and enjoying a competence, his heart overflows with mirth. But some mortification is prepared for him by a hypocritical nephew, who seeks to estrange him from Rose by casting doubts on her fidelity. A gossiping dentist lends much unintentional assistance to his plan by the discovery of a letter written by Rose to a former lover, one Rupert Wolfe (Mr Parselle). Wolfe is in possession of many other letters, the records of her early affection, and seeks to derive profit from them, but is disappointed. Rose will not purchase them; but the nephew, by a ruse, seeks to turn them to account, and by exciting Rupert with brandy induces him to declare that Rose has been guilty. Greenleaf overhears this, and he laughs no more; he is penetrated with the deepest sorrow. But Wolfe has been cheated out of the profit of his evidence, and his mind changes. He even feels remorse, and, determining to undo the mischief he has occasioned, remonstrates with his seducer, and is again overheard by Greenleaf, who is thus made acquainted with the conspiracy and receives Rose again to his arms. An underplot relieves the serious business, consisting of two precocious young persons who are permitted to marry by their friends before they are properly prepared in mind and heart for the matrimonial state. The young husband is cleverly personated by Miss Ada Swanborough, and the bride by Miss Fanny Hughes. They quarrel as to his smoking in the drawing-room, but being well advised by a good-hearted widow (Miss Bufton), who acts as the good genius of the family, the lady submits in time to her husband, and thus wins his concession to her prejudices. The drama was well acted, and made an impression on the audience.

SURREY.—**This theatre proceeds for the summer season under** the management of Mr. Henry Loraine, who has strengthened his bill by a version of the romantic drama "Le Bossu," the same that has retained so strong a hold on the Lyceum audience under the title of "The Duke's Motto." The conductor has also transferred to this stage the pleasing little drama of "The Burgomaster's Daughter," with the fairy fountain, of which we have already given an account, as recently produced at the Marylebone.

Mr. and Mrs. Charles Kean sailed on Monday from Liverpool, in the Champion of the Seas, for Australia. They were accompanied by their niece, Miss Chapman, Mr. George Everett, and Miss Cathcart.

Mr. Samuel Roxby, for years proprietor and manager of the Sunderland, Shields, Durham, Stockton, and Scarborough theatres, died at the latter place yesterday week.

A petition of adjudication of bankruptcy has been presented against Mr. Dion Boucicault, formerly an actor at the Adelphi and Drury-lane theatres, and afterwards manager of the New Theatre Royal, Westminster, and the author of the well-known drama, "The Colleen Bawn." It is stated that the bankrupt, having made a large sum of money at the Adelphi, entered upon the occupation of the Westminster Theatre (late Astley's), and there expended about £14,000 upon decorations and improvements. A company was afterwards started for the purchase of the bankrupt's premises, and the bankrupt was to receive as much as £10,000 out of the proceeds. To the non-completion of that arrangement the bankrupt attributed his failure. The bankrupt's liabilities are stated, in round numbers, at £30,000; the assets are returned at £20,000, independently of a claim for £38,000 upon the New Theatre Company.

FETE FOR THE ROYAL HOSPITAL FOR INCURABLES.

A GRAND fête and fancy fair in aid of the funds of the Royal Hospital for Incurables was recently held in the International Exhibition building, under the patronage of the Duchess of Cambridge and Princess Mary. The eastern half of the nave was lined on each side with a row of counters gracefully draped with pink and white gauze in the form of a tent. The stalls (nearly forty in number) were held by Maria, Marchioness of Ailesbury; the Countess of Westmorland, the Countess of Shaftesbury, the Countess of Antrim, and a number of other ladies of rank. In the centre of the nave, between the two rows of stalls, were several scent-fountains, tended by aristocratic naiads; and at the western end of the building, Mr. F. C. Burnand, Mr. M. Morgan, Mr. T. Robertson, and a number of other gentlemen connected with literature and the arts, had established a burlesque theatre, a Richardson's show, and a circus. In the theatre were performed at intervals short burlesques, full of the most boisterous fun and lunatic puns. One of these pieces—a "subaqueous, ultramarine, aquario-domestic drama," entitled "The Port Admiral; or, the Mysterious Mariner and the Rightful Heir"—furnishes us with a subject for illustration at page 36. When the nave was at its fullest it was not hard to fancy that one of the five-shilling Saturdays of last year had come back. The dense throng of fashionables, the crowds streaming through the entrance at the eastern dome, Minton's majolica fountain playing perfumed water, Foster and Andrew's great organ striving, as of old, to put down the Coldstreams, and the flashing of the sun through the many-coloured window behind the great clock—all helped most wonderfully to keep up the illusion. The braying of Richardson's brass band and the shouts of the amateur showmen, however, soon put one in mind that the great show of last year was a thing of the past.

INAUGURATION OF A MEMORIAL STATUE TO THE LATE LORD HERBERT OF LEA.

THE commemoration statue to the memory of the late Lord Herbert was inaugurated on Monday week, at Salisbury. Immediately after the decease of this lamented statesman, his friends and neighbours in his native county of Wilts met to decide on the most appropriate mode of commemorating his good service in ameliorating the condition of the British soldier, when it was decided that a statue and a convalescent home should be erected at Salisbury. The task of producing the statue was confided to Baron Marochetti. It is 9 ft. in height, standing on a square pedestal of Penrhyn granite 10 ft. high. The base of the statue bears simply the inscription, "Sidney Herbert." The site chosen is in the market-place, in front of the Townhall or Council House. The occasion was made quite a fête day. All the shops were closed, flags were flying, bells ringing, and the town was crowded with visitors from the adjacent towns and villages. The 1st Wilts Administrative Battalion of Volunteers were drawn up on three sides of a square surrounding the statue, leaving an open space, which was guarded by a body of police. In front of the Council House a large covered gallery had been erected, which was filled with the élite of the county. The attendance in the market square was very numerous, there not being less than 10,000 persons present. Lord Palmerston had intended to be present, but in consequence of a severe attack of gout his Lordship could not attend. He was represented by Earl De Grey and Ripon, who occupies in the Cabinet the position held by Lord Herbert. Earl De Grey, after expressing to the Mayor, Corporation, and memorial committee Lord Palmerston's extreme regret that he could not be present, proceeded to a dais erected by the side of the statue. In an eloquent address he described Lord Herbert as a thorough English statesman, and a philanthropist in the best meaning of the word; not hasty, crotchety, nor rash, but cautious, practical, and calm, never resting in pursuit of the great objects he had in view, and devoting his life to the service of his Sovereign and his country until in that service he laid it down. When Earl De Grey had concluded, the covering was removed from the statue amid loud cheers. A déjeûner afterwards took place in the council-chamber, at which the Mayor presided.

Our Engraving is from a photograph by J. W. Miell, of Salisbury.

Lord Cranworth has been chosen Speaker of the House of Lords, in the event of the absence of the Lord Chancellor or the Lord Commissioner.

The well-known Roman banking firm of Torlonia is extinct. The Prince has withdrawn his name from business operations, and the only representatives of his once colossal house will in future be known to the commercial world as Messrs. Spada, Flamini, and Co.

Last Saturday the screw steam-ship Gibraltar, formerly the well-known Confederate privateer Sumter, left the Mersey for Nassau with a large and well-assorted cargo. Since her arrival in Liverpool the Sumter has undergone a complete overhaul, and her deck timbers have been materially strengthened. It is generally believed that the Gibraltar, upon her arrival at Nassau, will be further strengthened, and eventually resume her old occupation of looking after Federal merchantmen. We understand the Gibraltar took out the monster guns which caused her to be detained by the Customs authorities a few days ago.

Operations for the recovery of the treasure contained in the wreck of the Royal Charter are still carried on. Messrs. Gibbs, Bright, and Co. sold the pool some time ago to a firm in Anglesea for about £700. Whenever the weather permits divers descend to collect the mud at the bottom, and this, on being washed, is found to contain golddust and coin. Five pounds and upwards are thus recovered every week. Numerous persons visit the now celebrated village of Moelfra. Some of these are persons who were themselves saved from the wreck. One of these has lately been at much pains to cut and carry away a portion of the rock to which the heroic sailor Rogers had made fast the hawser that was the means of saving so many lives. In the Llanallgo churchyard, situated about a mile from the scene of the wreck, a monument has been erected of stone carried chiefly from the place where the vessel struck. On this column a late visitor had carved with his knife these words:—"Came from Australia to see this.—B. NEIL." On one side of the monument there is inscribed as follows:—"The Royal Charter steam-clipper, of 2719 tons burden, sailed from Melbourne Aug. 26, 1859, bound for Liverpool, having on board 324 passengers, besides a crew of 103." On the second side:—"This monument has been erected, by public subscriptions, to the memory of those who perished in the wreck of the Royal Charter, off Moelfra, on the coast of Anglesea, on Wednesday, the 26th of October, A.D. 1859." On the third side:—"There lie in this churchyard the remains of 140 of the sufferers, and 45 in the churchyard of Penrhosllugwy, all of whom were buried by the pious and charitable Incumbents, the Rev. S. Roose Hughes, and his brother, the Rev. H. Roose Hughes." On the fourth side are enumerated the various adjacent parishes where the remains of some of the other sufferers were washed ashore and interred.

the case. The steering of the ship is managed by a simple reversion to the old gunroom tiller—i.e., a long straight tiller projecting from the rudder-head into the after cabin, in a line with the keel, and the manner in which the ship answered her helm on Monday satisfied all on board that the resumption of the old description of tiller has given back to our ships some considerable portion at least of their old power of answering their helm, even before the introduction of the screw. She has also the advantage of an excellent system of ventilation, the invention of Mr. Baker, chief engineer of Chatham Dockyard, under whose superintendence a comprehensive system of up and down cast air-tubing and shafting has been fitted. This is stated to be quite sufficient for the ship's ventilation—in fact, everything connected with the vessel and her equipment is highly creditable to Chatham and all concerned in her construction.

TRIAL OF STEAM FIRE-ENGINES.

LAST week a series of experiments, interesting in themselves and likely to be in their result of the highest importance, was carried on in the Crystal Palace grounds, with a view to ascertain which is the best description of steam fire-engine of the different machines of the kind now made. These trials were conducted under the superintendence of a committee of noblemen and gentlemen, having the Duke of Sutherland for chairman, Captain Shaw as hon. secretary, and including among its members the most eminent mechanical engineers in the kingdom. The engines produced for trial were divided into two classes—the small class, consisting of those not exceeding 30 cwt.; and the large class, those exceeding 30 cwt. and not exceeding 60 cwt.; those weights not including coal, water, hose, or other gear. The premiums were £250 for the best engine, and £100 for the second best in each class. The chief points to which the committee directed their attention, in addition to the consideration of cost and weight, were those which relate to the general efficiency of the machines as fire-engines, combining, among other points of excellence, rapidity in raising and generating steam, facility of drawing water, the large volume thrown, the distance to which it can be projected with the least amount of loss, and simplicity, accessibility, and durability of parts. In order to carry out these trials with perfect uniformity and fairness, the committee provided the fuel (Welsh coal) and the nozzles—all of one pattern. One of the principal objects to be ascertained being to define the quantity of water which each could project through the atmosphere to certain heights and distances, the committee had prepared a set of water-targets and tanks, arranged in such a manner that the water could be measured after delivery. These targets consisted of canvas hoods with circular openings of 6 ft. in diameter, having attached to each a tail or shoot, through which the water was conducted into a gauged tank standing below, from which the quantity delivered within the opening of the target could be read off by means of a graduated index.

A great many engines of different kinds were entered for this trial, which took place on Wednesday, Messrs. Shand and Mason and Mr. Merryweather being the principal English competitors against the American machines, of which two competed. To the chief of these, the Manhattan, an accident occurred on Tuesday, by which it was partially disabled. On going down a steep hill, the men who guided it with ropes lost all control over it, and it fell on one side, injuring one workman fatally and destroying its chances of competition. In its place, however, another American engine entered the lists, and worked well. The muster of the fire-engines and the firemen, in various costumes, near the lower basin of the fountains, was a very pretty and animated sight, and we give an Engraving of the scene. As far as the trials went on Wednesday, the superiority rested with the engines of Messrs. Shand and Mason. They were the first to get up steam from cold water and be in full work, accomplishing this task within eight minutes, the others taking nearly ten. They were the first to throw through their target their allotted quota of 1000 gallons of water, and the distance to which they projected their massive column of water vertically into the air clearly overtopped the rather feathery shoots of their antagonists.

The trials of the machines were continued on Thursday. The tests were on this occasion devised to put the strength and durability of each machine to the most arduous proof. For this purpose each engine had to work by itself for two hours without stopping, drawing its supply of water up into the engine from a depth of 18 ft., and delivering it through a hose no less than 400 ft. long, the hose being laid from the lower basin of the fountains up the steep incline, along the bed of the cascades, into the water temples at the top. To raise its water up from a depth of 18 ft., to deliver it up a very steep hill through a 400-ft. length of hose, and, finally, to project it from the nose-pipe a distance of 56 ft. through the atmosphere at an angle of 45 deg. from the horison, requires the most powerful and perfect engines. The weather was unfavourable for the trial, especially in the early part of the day, when the high wind scattered a great deal of the water as it came from the hose. The engine of Messrs. Shand and Mason, which was tried first, was exposed to great disadvantages from this cause, from 10 to 15 per cent of the quantity of its jet being blown away before it could pass through the aperture of the target in the water temple. The American engine was unable to go through this ordeal, not being able to keep up steam enough for the great force required to raise and propel the water. On the whole, the honours of this day remained with Mr. Merryweather, his powerful three-hose engine accomplishing its two hours' task with great ease, notwithstanding that the hose burst twice under the great pressure of the water.

The trials with the fire-engines were brought to a close on Friday, after each machine had been put through every conceivable form of ordeal, some of which were so severe that one—an American engine—broke down completely. His Royal Highness the Prince of Wales, accompanied by Lord Caithness and attended by Captain Grey, came on the ground soon after ten o'clock to witness the experiments. The Manhattan, which was seriously injured by turning over when being brought upon the ground on Tuesday, was tried in the presence of his Royal Highness. It was scarcely fair to try this engine at all, but the American gentlemen themselves wished it, and steam was got up accordingly. Before it had pumped long, however, it was found to be too much injured to work with safety, and a crack which its flywheel had received when it fell over began to spread so fast that the machine had to be stopped at once. The Prince took great interest in the working of the machines, the different merits of which were pointed out to him by the Duke of Sutherland and Captain Shaw. The most important experiments made on this day with the engines took place just under the north water tower, to test them as to their power in throwing a vertical jet high into the air. For this purpose the nozzles of the hose of the four competing machines were fixed upright side by side in a frame about 10 ft. high. The diameter of the nose-pipe used by Mr. Merryweather was 26-16ths of an inch, or more than an inch and a half. Messrs. Shand and Mason used a nozzle of 22-16ths of an inch, the American engine one of 21-16ths of an inch, and Mr. Roberts's engine one of 14-16ths of an inch. The latter, for such a small engine (only 30 cwt.), threw a steady and high jet, at times quite as high as 140 ft., into the air. All, however, were eclipsed in height by the jets thrown by Mr. Merryweather's and Messrs. Shand and Mason's, which reached a height of 180 ft. The American engine was literally nowhere, and, except during an occasional spurt, 50 ft. was about its maximum. As the jets were kept close and parallel with the tower, and only distant from it a couple of feet, it was quite easy, by a comparison with the stories of the tower itself, each of which is 20 ft. high, to estimate almost to a foot the height each jet was thrown. The united efforts of all the nozzles of course came down in a perfect cataract of water. This last effort, which was exceedingly beautiful to witness, brought the trials to a close.

At a meeting of the committee on Wednesday evening—his Grace the Duke of Sutherland in the chair—the following official award of prizes was made:—The patent steam fire-engine by Messrs. Merryweather and Sons, of Long-acre (large size), was awarded the first prize of £250. The £100 prize was awarded to Messrs. Shand, Mason, and Co., of Blackfriars-road, for the next large engine. Only two prizes could be given, but Robert's engine was, by formal resolution of the committee, highly commended. It should be stated that this engine was over 30 cwt. and under 60 cwt., and that a quantity of shavings got by some means into the suction-pipe of the engine at her trial. Amongst the small land-steamers the prize of £250 was awarded to Messrs. Shand, Mason, and Co. The £100 prize was awarded to Messrs. Lee and Co.'s small engine.

CALENDAR FOR THE WEEK ENDING JULY 18.

SUNDAY, July 12.—Sixth Sunday after Trinity. Acre taken by the Crusaders under Richard I. of England and Philip Augustus of France, 1191. Battle of Aughrim; the adherents of James II. defeated by General Ginkell, 1691. Peace concluded between Austria, France, and Sardinia, at Villafranca, 1859.

MONDAY, 13.—The Parliamentarians under Waller defeated near Devizes, 1643. Cook returned from his first voyage round the world, 1771.

TUESDAY, 14.—Destruction of the Bastille, and beginning of the French Revolution, 1789. French National Confederation celebrated at the Champ de Mars, 1790, 1791, 1792. Marat killed by Charlotte Corday, 1793.

WEDNESDAY, 15.—St. Swithin (Bishop of Winchester, 852). Pope Pius VII. and Napoleon Bonaparte by a concordat re-established the Catholic religion in France, 1801. Napoleon I. surrenders himself to Captain Maitland, of the Bellerophon, 1815. New moon, 10h. 54m. p.m.

THURSDAY, 16.—Great victory of the Gauls, under Brennus, over the Romans at the Allia, 389 B.C. Anne Askew, an accomplished Protestant lady, burnt in Smithfield, London, 1546.

FRIDAY, 17.—Charles VII. crowned King of France, through the aid of Joan of Arc, 1429. Death of Earl Grey, the head of the "Reform" Ministry, aged eighty-one, 1845.

SATURDAY, 18.—Death of the great Italian poet Petrarch, 1374. The French invasion of Sussex repelled, 1543.

NOTICE.—The Titlepage and Index of Vol. XLII. will be given in next week's Number.

THE ILLUSTRATED LONDON NEWS.

LONDON: SATURDAY, JULY 11, 1863.

HAVING already called attention to the movements that are being made for celebrating the tercentenary of the birth of Shakspeare, we will briefly advert to the present position of those who are making creditable efforts to carry out this purpose. We offer these remarks chiefly for the sake of promoting the cause, which is now being taken up in a right spirit and with a reasonable prospect of success. Time, however, is rapidly passing, and in another month there will be little chance of obtaining active co-operation from the influential classes. The Premier has intimated that Parliament has no inclination to sit much after July, and when the season is over the Shakspeare movement will stagnate unless energetic steps are at once taken to rouse public attention. It would be affectation to say that we believe that the people will join with eagerness in the demonstration, or that it is not one in which the leadership of the educated classes must be given earnestly if the result is to be worthy the name of the poet and of the nation.

We are glad to learn that the amalgamation of the associations that have taken the matter in hand either has been effected or will at once be arranged. A united effort alone can accomplish the object, and we rejoice to believe that there is a strong desire on the part of those really interested in the scheme to pull together. The question which the public will, of course, put is, "What is proposed?" If a definite answer, embodying a practical aim, be given, we do not see why the movement should not be very successful; but all depends upon this. We confess that we adhere to all that we have hitherto advanced in reference to the question, and that we believe the doom of the scheme will be pronounced by the issue of any announcement that shall make it impossible for the non-theatrical world to join in the tribute to the poet whose poems take the form of plays, but whose dramatic faculty was among the least of his glories. We should desire to eliminate from the scheme all that appertains to the mere playhouse. William Cowper has been dead many years, but we have not forgotten the satire in which he immortalised the antics performed by Garrick at his celebration in honour of Shakspeare and himself:—

> The mulberry-tree was hung with blooming wreaths,
> The mulberry-tree stood centre of the dance,
> The mulberry-tree was hymned with dulcet airs,
> For Garrick was a worshipper himself.
> He drew the liturgy, and framed the rites
> And solemn ceremonial of the day.

We are happy to believe that the age has advanced, and that any mummery of the kind that pleased the age of Garrick would now be scouted. That money might be obtained by the announcement of a procession at Stratford is very likely, when we know that the vulgarities of the Godiva show draw thousands, and that even the May-Day chimney-sweeps get a good deal by their masque; but it would be an insult to the memory of the poet to buy him a statue with coin so gained. On the other hand, there is no reason why Shakspearean performances should not take place on the night of the birthday, for those curiously-constituted persons who believe that the Shakspearean drama can be decently represented by any talent now upon the boards. But these performances should have no connection with the national scheme. If they succeed, and produce money, it may be added to the fund, but it is not the National Committee that should seek to raise supplies by such means. If the actors like to abandon sensation dramas and slang burlesques for a single night, and speak the language of Shakspeare, the virtuous effort will deserve all plaudit, and this is not an age when under-praise is in vogue; but we do not think that the pecuniary result of such performances will—we take the low view of the subject—balance the loss which the scheme will sustain by the admission of the histrionic element to exclude the thousands who consider the theatrical system, as at present administered, as objectionable in a moral point of view as the intellectual world regards it with reference to true art.

We think that the statue is the form which the tribute should take, and that the metropolis is entitled to the custody of the statue, not only because London was the place where the poet flourished, but because it is only by placing the memorial in the capital that we shall afford the world a chance of seeing it. The claims of Stratford are untenable, though we are aware that certain selfish interests will be clamorously asserted. The statue must be in London, and we think that it ought to be in a public place, if a good site can be obtained. In front of the Temple Garden, where Shakspeare has laid a scene which no one forgets, will be created a new promenade where the memorial might well be placed, especially as it would be seen from the river. It certainly ought to be placed in Old London. Some have advocated a site near that of the Globe Theatre, but there are heavy objections to this, besides the fatal objection to "that side of the water." We may add that if a fountain, on a noble scale, could be part of the memorial, we have precedent in the Molière fountain in Paris, and may hope to make something even better than that. But, of course, all these questions are swallowed up in the great question—one of funds; and it is because we feel that a large fund ought to be collected by worthy means (or the tribute will be a scandal instead of an honour to us) that we would specially urge upon all concerned in the movement to lose no time in enlisting the active co-operation of the best classes.

Nothing can be done in England without a dinner, and why should we not always have a dinner when we can? We can have the best dinner in the world (we could do so even before the Acclimatisation Society enlightened us), we can have the best wine, and our party, large or small, will contain a great preponderance of honest men. Why should we not meet in honour of William Shakspeare's birthday. By all means let us have a banquet; and if "orations" are to be pronounced upon such an occasion, why, let us even bear those sooner than refuse to assemble. They will be very foolish orations, of course; but the parties will mean well, and we shall have a good subscription. There will be no enthusiasm: a second-rate town in Germany will go more mad over a third-rate statue to a fourth-rate fiddler than all England will show itself on this occasion; but the most honourable admiration is not the most noisy. The masses will not be in the movement, and it is only cant that seeks to persuade others that the artisan is half as much interested in "Ophelia" as in the other drowned lady, the "Colleen Bawn;" but, if the business be managed properly, we shall secure the middle and the upper classes, for different reasons, into which it is not necessary to go. But we must lose no time; here is July, the next three months will be a blank, and then the interval between the reorganisation of society and the birthday will be short indeed. We learn that there are great and distinguished names in large numbers ready to be announced, and the sooner we hear of them the better, in companionship with a definite announcement of the object of the committee.

THE COURT.

The Queen and the Royal family, attended by Viscountess Jocelyn, the Hon. Mrs. Bruce, the Hon. Beatrice Byng, Lord Alfred Paget, and Colonel the Hon. Sir Charles Phipps, arrived at Osborne at a quarter past one o'clock on Saturday last. In the afternoon her Majesty, accompanied by Princess Helena, drove out in a carriage and four. On the same day the Prince and Princess of Leiningen arrived on a visit to her Majesty.

On Sunday the Queen, Princesses Helena and Louisa, with the ladies and gentlemen in waiting, attended Divine service, performed at Osborne by the Rev. G. Prothero.

On Monday morning the Queen walked in the grounds adjacent to Osborne. In the afternoon her Majesty, accompanied by Princess Louisa and the Princess of Leiningen, drove out in a carriage and four. Lord Alfred Paget attended on horseback.

On Tuesday the Queen, attended by Viscountess Jocelyn, walked and drove in the vicinity of Osborne.

On Wednesday Prince Leopold arrived at Osborne from Windsor Castle. The Duke of Somerset also arrived on a visit to her Majesty.

THE PRINCE AND PRINCESS OF WALES.

On Saturday the Princess, attended by the Marchioness of Carmarthen, visited the Horticultural Gardens at Kensington. In the evening the Prince, attended by Captain Grey, went to Twickenham, and dined with the Duke d'Aumale, at Orleans House. On the same day the Queen of Prussia, Princess Mary, and the Duke de Montpensier visited the Prince and Princess at Marlborough House.

On Sunday the Prince and Princess attended Divine service in the Chapel Royal, St James's. The Sub-Dean, the Rev. R. Harvey, and the Rev. J. C. Haden officiated. In the evening the Prince and Princess gave a dinner to the Queen of Prussia. Among those who had the honour of meeting her Majesty were the following:—The Duke of Cambridge, Prince Edward of Saxe-Weimar and the Countess Domburg, Count Bernstorff, the Duke of Hamilton, the Duke and Duchess of Manchester, &c.

On Monday the Prince and Princess accompanied the Queen of Prussia to the London Bridge terminus, and took leave of her Majesty. In the afternoon the Prince, attended by Captain Grey, rode on horseback. The Princess, attended by the Marchioness of Carmarthen, took a drive in an open carriage. In the evening the Prince, attended by the Earl of Mount-Edgcumbe and Captain Grey, honoured the Royal Italian Opera with his presence.

On Tuesday the Prince and Princess went to Chiswick, and honoured the Duchess Dowager of Sutherland with their presence at a déjeuner at Chiswick House. On the same day the Duke and Duchess of Cambridge and Princess Mary visited their Royal Highnesses at Marlborough House.

On Wednesday the Prince, attended by Lord Alfred Hervey,

NATIONAL SPORTS.

A GOOD meeting at Worcester was especially marked by the kind running of Umpire, who has now paid back £970 of the thousand which Lord Coventry gave for him when the public considered him "a hopeless savage." Coup d'Etat was another winner for Leamington, and Practitioner gave Alpheus (considered to be better than Leicester, and heavily backed by his owner) 8 lb. and a very easy beating after a very bad start. He is by The Cure, and seems a cheap 155-guinea purchase for Mr. Craven at the annual Sheffield Lane stud sale. The weather at Newmarket was fearfully hot, and the shade of the beeches near the July Stakes Course most grateful. Brother to Morocco in his two races nearly made up for Wingrave's defeat in his match with Umpire. Ten came out for the July, and the finish, between the somewhat leggy Cambuscan, the neat little Midnight Mass, and the slovenly-looking Scottish Chief, was a very fine thing, there being barely half a length between the three. The Calista colt went remarkably well in his canter, but never got near the leaders, which are most probably a very moderate lot, despite the 7 to 4 on Mr. Merry's crack. Claremont did not look fit, and with his companion, Rouge Cross, came more to get a line with "The Chief." The winner and the second were both by Newminster, and the former was bought at her Majesty's sale by Lord Winchelsea for 400 gs., and sold by him, it is said, for 900 gs. to Lord Stamford, sadly to his trainer's dismay, who thought he had another "stinger" to succeed Macaroni. Newmarket has thus won the greatest races of its season so far, as well as the Derby. Baron Rothschild was amazingly lucky on Wednesday, but his King of Diamonds broke down.

Lord Clifden has gone back to 100 to 6 in the St. Leger betting, and as The Ranger's legs were said to be the cause of his party not backing him heavily for the Derby during the winter, he is not a very hot favourite, with the ground in such a hard state. Some few, relying on their remembrances of "the family blood," are disposed to back Mr. Anson's Bonny Bell. John Day is said to have a Barb in hand for the Goodwood Cup, which has defeated everything at Gibraltar, and carried 14 st. well to hounds, which is considerably more than twice what it is honoured with at Goodwood in consequence of the tremendous allowances to eastern-bred horses. The race meetings next week are at Liverpool, Abingdon, Hungerford, Pontefract, and Stamford; and but for her temper being a little odd, Imperatrice's chance would be worth more than 10 to 1 for the Liverpool Cup.

We hear that his Royal Highness the Prince of Wales has sold both the hunters he bought at the Quorn sale at the same price he gave for them. "Bentinck," we believe, goes to Mr. Chaplin, and "The Right Man" to a foreign nobleman. His Royal Highness (whose purchase of Bilton Grange is not yet confirmed) has bought one of Sir Frederick Johnstone's best hunters at Tattersalls' lately.

Robert Chambers still declines to row another match with Green on the Thames in August, but contends that, as he has rowed four times already on that river, it is but fair that Green should come down to "the coaly Tyne." He does not seem to care much about a match, but suggests to the Australian that if he is not satisfied he had better enter against him for the Tyne champion cup. Green claims forfeit on the ground that Chambers will not row in reasonable time, and Chambers's backers think Green unreasonable for not taking expenses to row on the Tyne; and there the matter stands. So far, Chambers has won £2100 in matches. At Greenock, on Thursday, the regatta came off under the auspices of the Royal Northern Yacht Club. The Fairy Cross took the £100 prize for schooners, the Surf the £50 prize for yachts, and the Glide the £20 prize.

Rugby quite overtasked itself in trying to play the Marylebone Club and Ground, as Grundy and Baker bowled in their best style, and defeated them in one innings, with twenty-five to spare. In the second Gentlemen v. Players match the former did still worse than before, and were beaten by nine wickets. Willsher's 77, T. Lockyer's 76 (not out), Mortlock's 70, and Iddison's 49, were rare players' scores. Mr. R. D. Walker (40 and 37), Mr. Mitchell (76), and Mr. Daniel (51—run out), and Mr. E. M. Grace (31), were in good force. The gentlemen's bowling, with the exception of Mr. Grace's, was very weak; but Willsher, in one innings, and Griffith in another, told their tale. Mr. Daniel's run out was effected by a most masterly piece of play between Lockyer and Willsher, who "sent in the ball like a race horse" to Tom. Willsher was immensely applauded when he went up to the pavilion, as it was felt that he had stood on his high position as a cricketer, and declined to enter into any miserable anti-Oval cabal. "The talent sovereign" was given him, and we trust that the club will never again desert this good old rule. Five gentlemen and eight players from Kent could make no head against ten players and Mr. Grace (who got "the leger" 52) at Lord's, this week. Willsher (25 and 25) was more effective in batting than bowling, and T. Sewell (28—not out) never bowled better, and took both Griffith's and Carpenter's wickets. Griffith made the best player's innings, 43; but Tarrant was the lion of the match, and his bowling in the second innings was most destructive in its pace and precision. Woe, woe, to the men at the antipodes when they try to face him! The All England Eleven intend to compete next Thursday, Friday, and Saturday, at Hackwood Park, near Basingstoke, with twenty-two gentlemen of that locality.

NEWMARKET JULY MEETING.—TUESDAY.

Handicap Sweepstakes of 15 sovs.—Neophyte, 1. Sparkle, 2. Columba, 3.
Handicap Plate of £50.—Zeloo, 1. Battery, 2. Fanatic, 3.
Sweepstakes of 50 sovs.—Brother to Morocco, 1. Columba, 2.
July Stakes.—Cambuscan, 1. Midnight Mass, 2. Scottish Chief, 3.
Sweepstakes of 10 sovs.—Deerfoot, 1. King of Italy, 2. Daniel, 3.
Sweepstakes of 10 sovs.—Fletton, 1. Wild Tom, 2.
Plate of 50 sovs.—Brother to Morocco, 1. Harlequin, 2. Oberon, 3.

WEDNESDAY.

Sweepstakes of 10 sovs.—Rest, 1. Stomacher f., 2. La Medora, 3.
Handicap Plate of £50.—Waterwitch, 1. Spark, 2. Meriden, 3.
Stamford Plate.—Argonaut, 1. Livingstone, 2. Queen of Trumps, 3.
Plate of £50.—Brother to Canace, 1. Washington, 2. Usher, 3.
Exeter Stakes.—Evelina, 1. Crytheia, 2. Lady Caroline, 3.
Town Plate.—Golden Dust, 1. Dunkeld, 2. Canace, 3.
Sweepstakes of 10 sovs.—Daniel, 1. Oneida, 2. Abderrahman, 3.
Mid-summer Stakes.—Carnival, 1. Sea King, 2. Ænopides, 3.

THURSDAY.

Handicap Sweepstakes of 10 sovs.—Black Lily, walked over.
£50 Plate.—Rosa f, 1.—Fletton, 2.
Chesterfield Stakes.—Scottish Chief, 1. Crytheia, 2.—Becky Sharpe, 3.
Sweepstakes of 10 sovs.—Zeloo, 1. Meriden, 2.
Handicap Plate.—Neophyte, 1. Prophet, 2. Columba, 3.

Sir Henry Bulwer has presented the Viceroy of Egypt, in the name of her Majesty, with the insignia of the Order of the Bath.

A great agricultural meeting has just been held at Odense, the principal town of the island of Funen. Of twenty silver medals, nine have fallen to the share of Englishmen; of forty bronze medals, five; and one obtained "honourable mention."

M. Lamartine has sent the following notice to the subscribers to his "Entretiens" and other works:—"The death of Mme. Lamartine, that good and brave woman whom God had given me for the support and consolation of my life; the rheumatism, which has for three months kept me, and still continues to keep me, in a state of total inaction; the forced suspension of all work, of all income, and all payment during this period, will explain to my subscribers why they have received nothing from me. I request them to wait till the end of July. My health will then allow me to continue the interrupted "Entretiens," and to publish two numbers each month till the back numbers are all delivered. As to the 'Œuvres Complètes,' I have just signed an agreement with my good friend M. Gustave Delahaute, by which he, with disinterested friendship, agrees to pay my publishers for the eight volumes now in course of printing. The whole forty volumes will be finished and ready for sale on the 31st of December next.—A. DE LAMARTINE."

A further reduction of the artisans and labourers of Woolwich Arsenal is to be made. 200 men will be discharged from the Royal gun factories, thereby reducing that branch of the establishment (a short time ago numbering 3500 men) to 800. The laboratory department is likewise ordered to be reduced, and a number of wheelers and tin workers in the Royal carriage department have received notices of dismissal, some of whom have been in the employment about twenty years. For several months past the departments have been engaged solely in executing outstanding orders for the coast defences, some of which have been on the order-books about eight years; the whole of which are now completed, and the establishment is literally "at a standstill." The only work now being executed in the Royal gun factories consists of repairs, the completion of 300-pounder coast defence guns, and the adjustment of some guns on Mr. Broadwell's principle, on a peculiar system of breech-loading, for experimental purposes, commenced recently with success.

METROPOLITAN NEWS.

Messrs. Kelk and Lucas have commenced pulling down the Great Exhibition building.

The Newsvenders' Benevolent and Provident Institution holds its annual festival at Freemasons' Tavern on the 21st inst.

The members of the Navy Club gave their annual entertainment to the First Lord of the Admiralty (the Duke of Somerset) on Tuesday evening at Willis's Rooms.

The annual distribution of the medals and prizes to the students of the Female School of Art took place on Thursday at University College, Gower-street.

Public drinking-fountains were opened on Saturday at Peckham and Peckham-rye—Miss Chapman drinking the first glass of water at the former, and Miss Taylor at the latter.

On Monday the Rev. Joseph Brown, Rector of Christchurch, Surrey, with a committee of ladies and gentlemen and hundreds of poor parishioners, had their annual trip to Chiselhurst, Kent.

The sale of pictures by Italian, Flemish, and Dutch masters, commenced by Messrs. Christie, Manson, and Woods last Saturday, was concluded on Monday. The sum realised amounted to nearly £6000.

The London and South-Western Railway Company have just opened their new branch line of four miles between Twickenham and Kingston, giving stations at Teddington, Hampton-wick, and Surbiton.

At the July Quarter Sessions for Middlesex, which began on Monday, there were 133 prisoners for trial. Of these 44 can neither read nor write, 73 can read and write imperfectly, and one only can read and write well.

The important collection of old Greek coins, in gold, silver, and bronze, formed by the Chevalier N. Ivanhoff, Consul-General for Russia at Smyrna, during a long official residence in Turkey, has been disposed of under the hammer of Messrs. Sotheby and Wilkinson. The sale lasted throughout the whole of the week and realised more than £3000.

Last week the births of 1937 children—995 boys and 942 girls—were registered in London. In the ten corresponding weeks of the years 1853-62 the average number (corrected) was 1728.——The rate of mortality in London was nearly constant during the month of June. In the week that ended last Saturday the deaths were 1187. The average weekly number at the beginning of July, corrected for increase of population, is 1142. A girl and a boy died from swallowing cherry-stones.

A meeting of the Metropolitan Board of Works was held yesterday week, when Mr. Bazalgette reported favourable and rapid progress on the different sections of the main-drainage scheme. An application from the trustees of the Peabody fund had been received by the board, soliciting that the provision of the Act of Parliament which requires that houses where a number of families are intended to reside shall be built in such a manner as to render them fireproof should be relaxed in the case of some houses they intend to build at Shadwell. The board decided that they had no power to relax the provisions of the Act, and refused the application.

Tattersalls', familiarly known as the Corner, will shortly change its time-honoured location. In 1765, a hundred years' lease was taken of these premises by an ancestor of the present family. They then simply consisted of a stable-yard, with a few buildings attached. From time to time various additions and improvements have been made to meet the requirements of business, but it is still an inconvenient and contracted establishment. The immense amount of business which is now transacted in connection with racing affairs renders Tattersalls' a species of sporting Stock Exchange. Before and after races of any importance, the subscription-room is so crowded as to render moving about a work of great difficulty. The want of space applies equally to the box and stall accommodation for the large number of horses which are annually brought to the hammer by Messrs. Tattersall. In 1865 the present lease will expire, and handsome and more commodious premises will be built on a piece of ground at Knightsbridge-green, which is already being cleared for the purpose.—*Building News.*

The half-yearly meeting of the Royal Humane Society was held at the offices of the society, in Trafalgar-square, on Wednesday—Mr. B. Bond Cabbell in the chair. It appeared from the report that the receipts for the last half year amounted to £779, the expenditure being £582. The number of cases since last December were 65; persons successfully treated, 81; beyond recovery, 6; suicides, 7. The return for Hyde Park is as follows:—12 persons successfully treated, 1 beyond recovery, 3 found drowned, 3 attempts at suicide. The council awarded the society's silver medal to the following applicants:—Maori Jack, who saved the life of Mr. Mitchell, and tried to save Mr. Rogers, whose boat upset on Lake Whakatep, New Zealand, on Aug. 9, 1862; Mr. A. Maclean, who saved Mr. T. Davies, who was carried away by the current while bathing in the Buffalo River, King William's Town, Cape of Good Hope, Feb. 11, 1863; Lieutenant G. A. Turner, her Majesty's 50th Regiment, who saved Lieutenant W. R. White, and tried to save a boatman whose boat upset on Lake Tumbligam, near Trincomalee, Feb. 19, 1863; Charles Murphy, who saved Margaret Fitzgerald, who accidentally fell into the river at Cork, May 3, 1863.

There are few spots within the metropolitan district which possess so many historic charms, and around which there cluster so many pleasant memories and agreeable associations as Strawberry Hill. Pope gathered around him, at his villa at Twickenham, a select circle of the men of genius of his time; and Horace Walpole made Strawberry Hill the resort of the wits, the aristocracy, the statesmen, and the leading spirits of the fashionable world. From the luxurious shades of Strawberry Hill Walpole sent forth those graphic and gossiping pictures of the doings and sayings of the fashionable world, which have given so much zest to the history of the eighteenth century. It was the dwelling-place of one who has been very happily described as "the most eccentric, the most artificial, the most fastidious, the most capricious of men;" one whose mind was "a bundle of inconsistent whims and affectations." The gardens of this famous place, now in the possession of the Countess of Waldegrave, are, by the kind permission of its amiable owner, to be opened on Wednesday and Thursday, the 15th and 16th, for the purpose of a bazaar in aid of the funds required for the enlargement of Holy Trinity Church, Twickenham. The list of patronesses includes an array of influential names. Military bands are engaged.

The distribution of prizes and testimonials by Lord Shaftesbury among the poorer inhabitants of the parish of St. George's, Bloomsbury, who had kept their rooms clean and tidy during a prescribed period took place on Thursday in the inclosure of Russell-square. A large marquee was erected, in which the competitors for the flower-show prizes exhibited their specimens of window-sill floriculture. Considering that the whole of these flowers were grown in the worst courts of the parish, the collection of fuchsias, geraniums, and other flowering plants was really surprising. Perhaps the most interesting portion of the show was the children's class, containing annuals grown in pots by the Sunday-school children. Some of the young exhibitors had struck out a new line for themselves, and had reared miniature orange and lemon trees, walnut-trees, and even date palms and locust-trees from the stones and seeds of those plants they had become possessed of. Between four and five hundred plants were exhibited. The idea of the flower-show was originated three or four years since by the Rev. S. H. Parkes, Curate of the Rev. Emilius Bayley, the Rector of the parish. The still more valuable notion of giving prizes for clean and tidy rooms was first proposed by a charitable friend to the Rev. Mr. Bayley. The good effected by this simple means can hardly be over estimated. The gentlemen connected with the affair state that the transformation from filth to cleanliness in numbers of rooms in the very worst districts is almost incredible. In distributing the prizes Lord Shaftesbury told the successful competitors that they ought to feel proud and happy at what they had accomplished. They had done their duty by themselves and their families, and they would feel the benefit of it sooner or later. He reminded them, in conclusion, that the virtue of cleanliness was next to godliness, and that the cultivation of flowers, whether in a princely garden or a humble flower-pot, was one of the purest of earthly pleasures. The bands of the Bloomsbury Rifle Corps and of the E division of police attended during the day.

The annual distribution of rewards by the Royal Society for the Protection of Life from Fire took place on Tuesday in the Mansion House—the Lord Mayor in the chair. The chairman, having pointed out the excellence of the objects of the society and dwelt upon the public importance of well-organised fire brigades, called upon the secretary to read the report. By this document it appears that since March, 1862, six new stations have been established, raising the total number of stations belonging to the society to 81. The society's brigade numbers 90 members, under four inspectors. During the year 613 fires have been attended, and 67 persons rescued from burning premises. The balance-sheet shows the receipts to have been £3278; payments, £3111. After the reading of the report the Lord Mayor distributed the awards as follow:—James O'Brien, silver medal; John Andrew Schulkins, testimonial; Williams Mullins, testimonial and half a sovereign; Charles Arnold, silver medal; Edward Dunk, testimonial and one sovereign; John Tordhoff, testimonial and half a sovereign; George Edsden, silver medal and one sovereign; John Shaw, testimonial and one sovereign; Samuel Lemmen, testimonial and one sovereign; Joseph Jacobs, testimonial and one sovereign; Joseph Robinson, testimonial and half a sovereign; Adam Briggs, silver medal; John M'Cormick and Colin M'Donald, testimonial and one sovereign each; Thomas Clarke, silver medal; Henry Attwood Allen, silver medal; Edward Rose, testimonial; Samuel Hawtree, testimonial and half a sovereign; Caleb Hooker and William Miller, testimonial and half a sovereign each; George Hardway, silver medal; Samuel Wood, testimonial and one sovereign (this man was the owner of the celebrated "fireman's dog," and he wore the gold and silver medals of the society, and had five testimonials; on one occasion Wood brought three children from the upper floor of a burning house, carrying one under each arm and one in his mouth); William Hunt, testimonial; Nathaniel Puzey, testimonial and one sovereign; Henry Hughes and John Foy, testimonial and half a sovereign each; Joseph Pryer, testimonial; William Irvine, testimonial and half a sovereign; Richard Storey, testimonial; George Searle, testimonial and one sovereign; George Varney, testimonial and half a sovereign; George Cornell, testimonial and half a sovereign; and Thomas Welford, one sovereign and a clasp to the society's silver medal already in his possession. Welford's special service was the rescuing of seven persons from great danger at a fire in Upper Thames-street.

LAW AND POLICE.—An important decision has been given in the Court of Exchequer. The Crown has been suing the Earl of Sefton for succession duty on account of certain lands in the neighbourhood of Toxteth Park, Liverpool, which he inherited from his father. The land is at present unproductive, but its value is increasing, and it is now calculated to be worth above £1000 an acre more than agricultural land. The Earl of Sefton contends that, as it yields no immediate revenue, it has no right to be charged with succession duty. The Court of Exchequer delivered judgment in the suit on Monday. Baron Martin thought that the duty ought to be charged. The Lord Chief Baron's decision was the other way, and, as Baron Wilde and Baron Channell agreed with him, the judgment was for the Earl.

A trial took place in the Court of Exchequer last Saturday upon a disputed bill. The plea of the defendant was that though his name was on the bill as acceptor he had not written it, but that it was put there by his son without his authority. The peculiarity in the case was that the son entered the witness-box apparently to bear out this statement, when the Judge cautioned him that if that was the purport of his testimony it would be the duty of the Court to commit him for forgery. On hearing this the witness left the witness-box, and the jury decided that his father must pay.

Some time ago Mr. Collingwood obtained damages against Mr. Berkeley, M.P. for Bristol, and the other directors of the British Overland Transit Company for not fulfilling their contract of carrying him and other passengers by the overland route to British Columbia. The directors came before the court for a new trial, but the Barons of the Exchequer on Monday decided that the verdict of the jury ought not to be disturbed, and the judgment was made absolute against the directors.

A case of interest to all parochial Incumbents came before the Court of Queen's Bench on Tuesday. A labouring man in the parish of Horton, Buckinghamshire, applied to the Rector to marry him, but refused to pay the fees. The Rector offered, if the labourer would plead inability, to advance the fees for him, which the labourer refused to do, on which the Rector declined to perform the ceremony, and both bride and bridegroom brought actions against him. The action of the bride was, however, afterwards withdrawn, and it was understood that the parties had been married; but the action of the bridegroom, which was said to be really the action of some litigious persons in the parish, was continued, and turned upon the right of the Rector to exact fees at all. At the suggestion of the Lord Chief Justice the case was made a special one, and submitted for arbitration.

In an action for false imprisonment before the Court of Exchequer on Monday, a police sergeant who was called as a witness stated that he claimed and exercised authority to inspect the books of plaintiff. Baron Martin, who presided, rebuked him severely, and said not even the Judge had power to inspect people's books without warrant.

The state of ventilation in the Second Court of Queen's Bench at the Guildhall is such that Mr. Justice Mellor, after numberless complaints, publicly stated last week that if something were not done to remedy the evil he would not sit in it. It was "a cucumber frame."

The inhabitants of Frankfort, in Germany, have sent 13,000 lbs. of linen and lint to the Federal army.

The Copenhagen paper *Danmark* which used to bring out an English article once a week, will not be published during the coming three months.

The offices of Surveyor-General of Prisons and Chairman of the Directors of Convict Prisons, rendered vacant by the decease of Major-General Sir Joshua Jebb, K.C.B., have been conferred by the Secretary of State for the Home Department upon Lieutenant-Colonel Edmund Y. W. Henderson, of the Royal Engineers, who has for many years been Controller of the Convict Department in Western Australia.

One of the most valuable veins of petroleum yet discovered was lately struck on the Farrell farm, Old Creek, Verango County, Pennsylvania. When the well commenced flowing, the oil spouted to a height of fifty feet, with a roar like a hurricane, and escaping at the rate of two thousand barrels per day. A stop-cock was got on after much trouble, and the flow can now be regulated to suit the demand. Another flowing well in the vicinity was so affected by the opening of the new well that its yield decreased over three hundred barrels per day. The Farrell well, which is about 450 ft. deep, was, at last accounts, flowing steadily at the rate of twelve hundred barrels a day. This, even at the moderate prices ruling at the wells, would yield the owners 3600 dols. a day.

In a letter addressed to the *Nation* M. Duchesnay gives an account of the discoveries lately made in the environs of Rome, on the spot where Constantine defeated Maxentius—that is, near Cremera, outside the Porta del Popolo. On one of the hills of that locality a villa, believed to have belonged to Calpurnia, Cæsar's wife, has this year been entirely exhumed. One of the conduit-pipes found on the spot bears the name of that lady. At an insignificant depth below the surface of the soil a suite of rooms has been found, which must have been the ground floor of the villa. The walls of one of these rooms are decorated with painted landscapes, one of which represents a grove of palm and orange trees, with fruits and birds on the branches. The colours are perfectly well preserved, and as vivid as if they had been painted but a few days ago. The ceilings have fallen in, but from the fragments it is easy to perceive that they were decorated with aerial figures similar to those discovered at Pompeii. Glass and pottery have also been found on the spot; but the great object of attraction is a beautiful marble statue of Augustus, in his triumphal robes, open enough to reveal a richly-sculptured breastplate, the subjects of which are Rome with a cornucopia, and the twins by her side; Apollo with his lyre, mounted on a hippogryph; Diana with a hart, Mars sheathing his sword, a trophy, and a triumphal car drawn by four horses and preceded by winged figures of Victory. The feet of this statue are broken off, but not lost. One of them is flanked by a cupid on a dolphin. The statue is two metres and a half in height, and bears evident traces of paint on its surface. The busts of Septimius Severus, his wife, and his son Geta have also been found,

INDIAN RAILWAYS.—The report of Mr. Ireland Danvers, the Government Director of Indian Railways, for the year 1862-3 has been issued. According to this document, 747 miles had on the 31st of December last been added to the 1609¼ which were open for traffic on the 1st of January, 1862. Since the beginning of this year 184 miles more have been finished, making a total of 2528 miles upon which passengers and goods are now being conveyed. The greatest distance traversed in a direct line is on the East Indian Railway, from Calcutta to Benares, 540 miles; the next greatest is the trans-peninsula line from Madras to Beypore, 405 miles; and the next from Bombay to Sholapore, across the Bhore Ghât, 295 miles. In the year 1861 the goods sent out from this country for Indian railway construction weighed 182,621 tons, and cost £1,669,443; last year these respective amounts were 138,013 tons and £1,487,582, which, added to former years, makes a total of 2,597,941 tons of materials, of the value of £13,843,392, sent out to India from this country, in 3292 ships, for the purposes of the railways. With regard to the persons employed on the open lines, compared with last year, the number of natives is 35,468, against 32,148; of Europeans, 2344, against 2181. The amount raised by the companies, in addition to the sum of £2,515,496, which stood to their credit on the 1st of May, 1862, was £5,238,567; so that on the 1st of May there was a balance of £1,943,211 available for the current year's expenditure. It has been estimated that the expenditure for the year 1863-4 will be £2,012,000 in England, and £4,189,000 in India; and that £5,293,000 will be raised to meet it, in addition to the balance of £1,943,211. In another year the great cotton-fields of Central India and of Guzerat will be in direct communication with Bombay, and Delhi will be within two days of Calcutta.

GRAVEYARD OF THE ANGLO-SAXON.—The Rev. J. G. K. Houghton writes as follows to a Montreal paper:—"It may afford a melancholy consolation to some of those who have suffered from the loss of the Anglo-Saxon to know something of the spot where so many victims of carelessness, want of discipline, and cowardice lie buried. Between Cape Race and Cape Ballard the land retires in a semicircular bay; the line of the shore, however, is not even, and this bay may be said to be formed by several smaller bays, the first, the scene of the calamity, extending from Cape Race to the entrance to Clan Cove. Within this bay, at about four miles and a half from Cape Race, in a recess formed by the sea retiring between projecting rocks, the Anglo-Saxon was wrecked nearly at noonday. The ship lies in between six and seven fathoms of water, and on the 16th of May the masts were yet visible, standing about six or eight feet from the water. As nearly as I could judge, at about a mile and a quarter from the wreck, bold rocks, covered with trees, mark the spot where Clan Cove indents the shore, and, after piercing the land for some distance in a direct line, turns at a right angle and runs on for about 100 yards. This bend is on the sea side bordered by rocks covered with low firs; on the land side there is a level breadth from which the rocks rise precipitately to the plain above, and these rocks, like those opposite, are more or less covered with trees, a deep belt of which surrounds the whole cove. On this level 134 bodies, as nearly as it was in my power to estimate, lie buried. It is a peaceful and quiet spot, and, till the rude wooden crosses and mounds of stones marked the graves, seemed to have remained undisturbed by the tread of man. Old men and young men were there buried side by side—two sometimes in one grave, a woman and a child, a man and a youth. It was a terrible sight to see the boats bringing in now one, now two or three, dead bodies—bodies of those who had died in the prime of life or in the full flush of the confidence and the hope of youth, within a few days' sail of the land where their friends waited to greet them or where their new future was laid. After my arrival I personally superintended the burials, and it will be a melancholy comfort to us all to know that the rough islanders treated the bodies themselves with decency and reverence. Although not proof against the temptation of unholy gain, the religion of even the wreckers had taught them to respect the dead; but no persuasions or promises of mine availed to rescue even a watch or a ring as a memento for the living. While one hand reverently swathed the head with handkerchiefs and linen, the other rifled the pockets. Some were much changed, but the countenances generally appeared to indicate that the last moments had been painless, and that they had passed away in peace; the eyes even of some were closed, and the clenched hands were often the only evidences of a violent death. The funeral service of the Church of England was, I am informed, read by the Rev. Mr. Eaton; but, as the larger number had been interred subsequently, I myself read it on Ascension Day, and again on Saturday, the 16th of May."

THE LATE PRINCE FERDINAND OF DENMARK.

THE LATE SIR JOSHUA JEBB.

THE HEREDITARY PRINCE OF DENMARK.

OUR Obituary notice of his Royal Highness Frederick Ferdinand, Hereditary Prince of Denmark, whose Portrait is here given, will be found in our Impression for last week. His Royal Highness died at Copenhagen on the 29th ult. By his demise Prince Christian, the father of the Princess of Wales, becomes Hereditary Prince.

SIR JOSHUA JEBB.

WE give a Portrait (from a photograph by Mr. Herbert Watkins) of General Sir Joshua Jebb, K.C.B., Surveyor-General of Convict Prisons, whose sudden death occurred on the 26th ult. Our Obituary column last week contained a detailed notice of this distinguished officer.

NEW ASSEMBLY-ROOMS AT BOULOGNE.

THE new assembly-rooms and bathing establishment at Boulogne were opened last week by a grand banquet, a concert, and a ball; besides which the hospitable Corporation had provided a continual round of amusements for their guests, consisting, among other matters, of promenades by land and water, gymnastic performances,

CHARITABLE FETE IN THE INTERNATIONAL EXHIBITION BUILDING: SCENE FROM THE BURLESQUE OF "THE PORT ADMIRAL."—SEE PAGE 43.

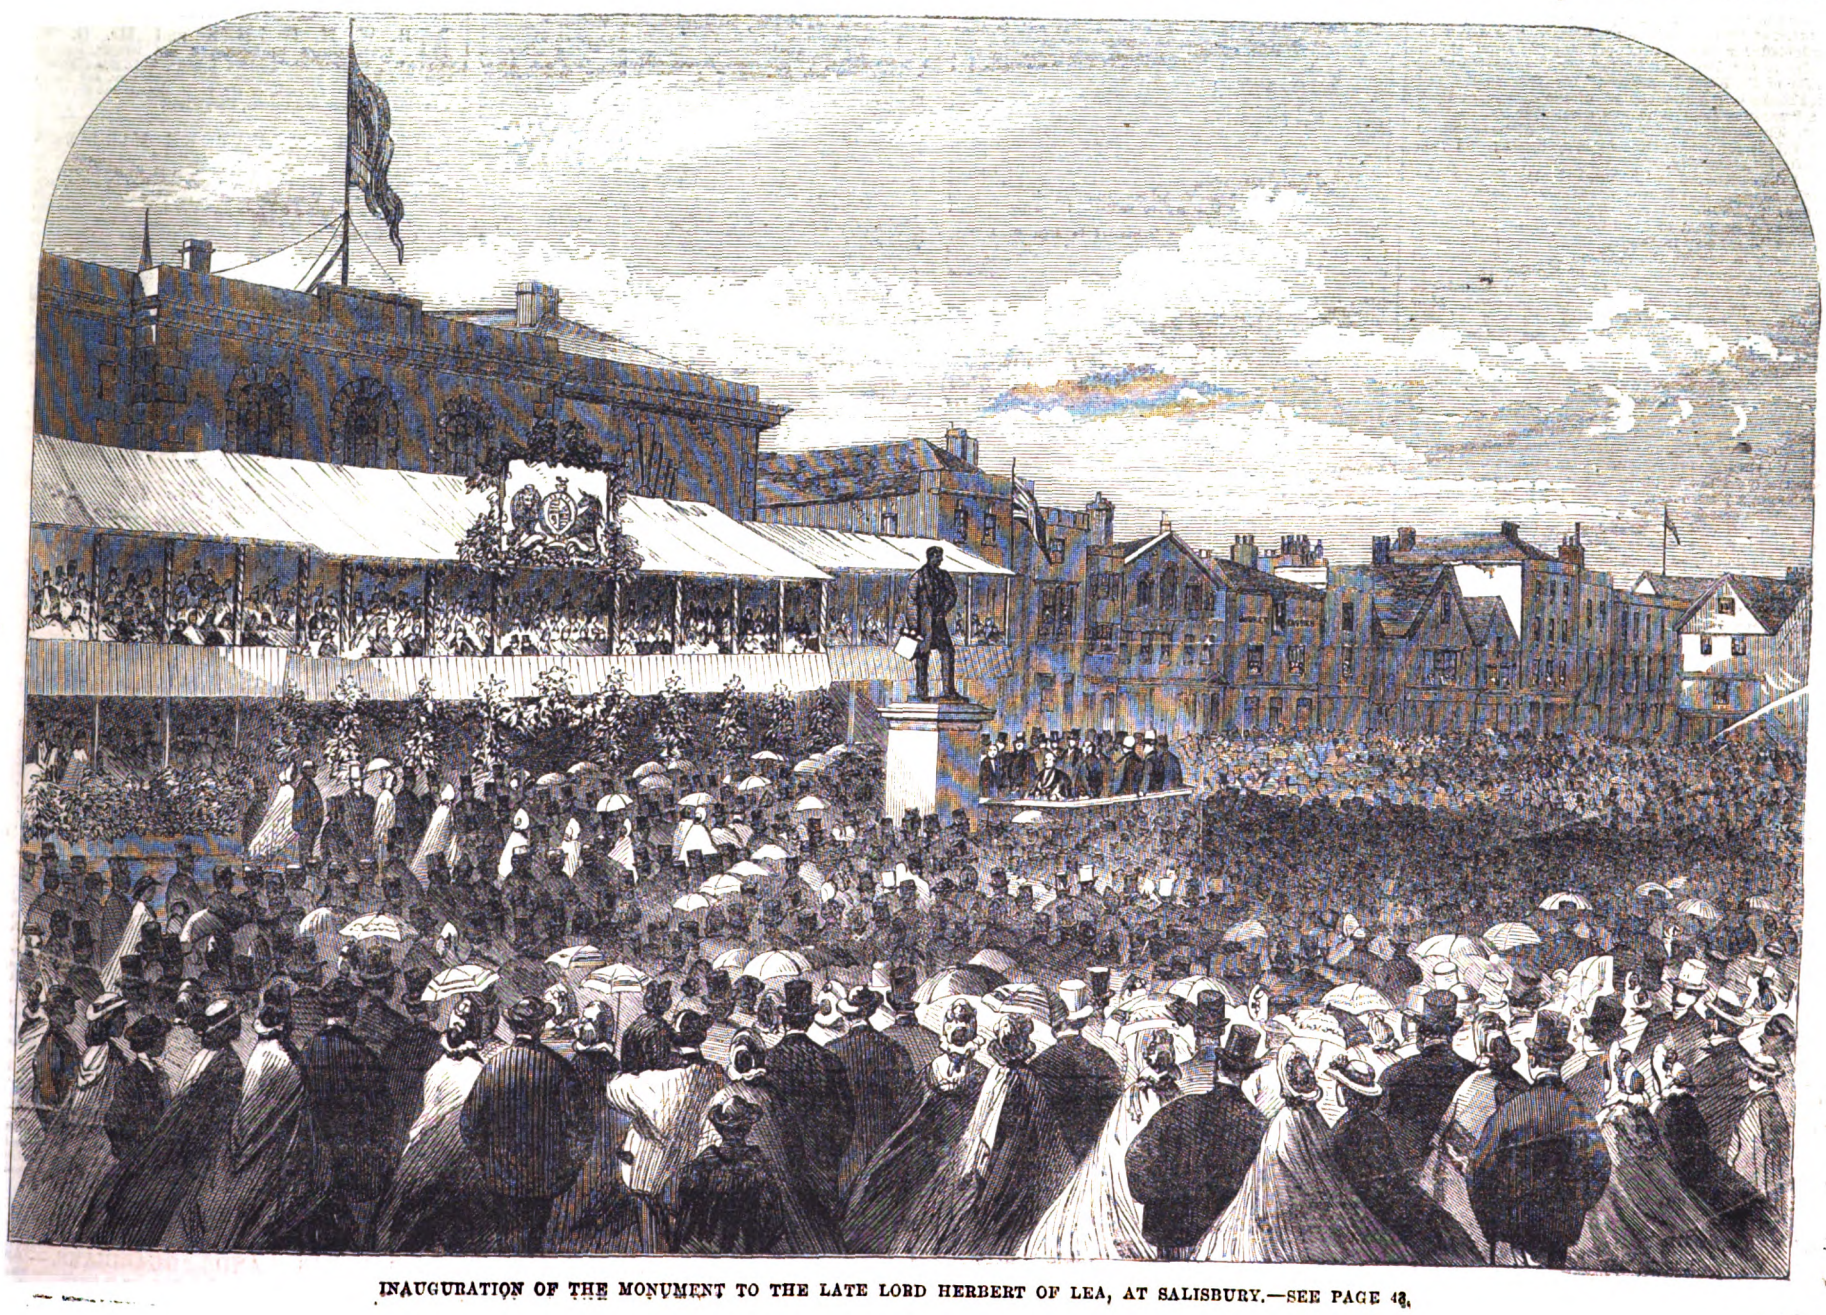
THE NEW BATHING ESTABLISHMENT AT BOULOGNE-SUR-MER.

breakfasts, luncheons, dinners, and suppers. The building is very handsome, and comprises a ball and concert room, billiard and card rooms, music-rooms, and is probably on a more splendid scale than any establishment of the same nature, except at the German watering-places. It has been erected at a cost said to have exceeded £40,000, and is surrounded by gardens and spacious terraces overlooking the sea. Attached to it are hot and cold sea water swimming and ordinary baths; and in connection with it is an improved service of bathing-machines on the beach. The whole establishment reflects great credit on the municipal authorities under whose auspices it has been completed, and will permanently add to the attractions of Boulogne as a place of resort for sea-bathing and summer residence.



INAUGURATION OF THE MONUMENT TO THE LATE LORD HERBERT OF LEA, AT SALISBURY.—SEE PAGE 48.

**** *The charge for the insertion of Births, Marriages, and Deaths is Five Shillings for each announcement.*

BIRTHS.

On the 3rd inst., at Marlborough House, Newbury, Berks, the wife of John Knight, Esq., of a daughter.

On the 6th inst., at Garendon Park, Leicestershire, the lady of A. C. De Lisle, Esq., of a son, who survived his birth only a few hours.

On the 6th inst., at Stonecot Hill, Sutton, Surrey, the wife of Henry R. Stone, Esq., of a son.

On the 8th inst., the wife of Captain Purcell Williams, of Pentre Mawr, Denbigh, of a daughter.

MARRIAGES.

On the 18th of May, at Buenos Ayres, by the Rev. James Smith, Scotch Chaplain, and afterwards by Doctor Martin Pinyero, cousin of the bride, Mr. Charles William Benn, of Mansfield, Notts, to Rosario, youngest daughter of the late Senor Don Juan de Dios Carranza, of that city.

On the 4th inst., at St. George's Church, Hanover-square, by the Rev. Frederick Norman, Rector of Bottesford, Leicestershire, William Earle Welby, Esq., M.P., eldest son of Sir Glynne Earle Welby Gregory, Bart., of Denton Hall, Lincolnshire, to the Hon. Victoria Alexandrina, only daughter of the late Hon. Charles and Lady Emmeline Stuart-Wortley.

DEATHS.

On the 1st inst., at Castleton, Sherborne, Dorset, Joseph Turner, fourth son of James Borrett, Esq., M.D., and Catherine Elizabeth Borrett, aged four months and nine days.

On the 1st inst., after a long and afflicting illness, borne with Christian resignation and fortitude, Eliza Jane, eldest beloved daughter of David Clarke, Esq., of Meadowbank, Macclesfield, aged 22 years.

On the 8th inst., at Rhyl, John Whitehall Dod, Esq., of Cloverley, Shropshire, in the 66th year of his age.

THE PRINCE OF WALES AT MERCERS' HALL.

His Royal Highness the Prince of Wales honoured the Mercers' Company with his presence, on Wednesday morning, at their hall in Cheapside, for the purpose of taking up his freedom in that most ancient of the twelve great City guilds.

The Master, Wardens, and Court of Assistants met at noon. The old structure had put on quite a festive aspect in honour of the day, banners being suspended from its walls, and a bank of flowering plants rising from the dais prepared for the Royal visitor. The worshipful the Master, the Rev. Markland Barnard, Incumbent of Colney, himself the fourteenth of his family who had held that office, was supported by a full court. The Master and Court of Assistants, attired in their scarlet robes of office, were in waiting at the Cheapside gates to receive the Prince, when his Royal Highness, whose carriage had become blocked in that busy thoroughfare and turned by the police into Ironmonger-lane, suddenly alighted at the private entrance, and, as it was taking his entertainers in flank, necessitated a somewhat ruffled reception. The gracious cordiality of the Prince and the ready self-possession of the members of the court soon set matters straight, and his Royal Highness, accepting the conduct of the Master, ascended the grand staircase into the hall, where the Royal presence was gracefully acknowledged by the ladies who thronged both sides of the apartment. As the Prince ascended the stairs the band of the Artillery Company, under the conduct of Mr. Hird, played a few bars of the National Anthem. The Prince was attended by Lieutenant-General Knollys, Lord Alfred Harvey, and Captain Grey.

His Royal Highness having taken his seat upon the dais, the master standing upon his right hand and the other members of the court being stationed around, Mr. Barnes advanced with the books of the company, and read therefrom the various entries referring to the necessary suspension of the standing orders, and the proposal to confer the freedom of the company upon the Prince of Wales, which was described to have been carried by acclamation in a full court. His Royal Highness having bowed his acknowledgments, Mr. Barnes administered the customary oath. The rev. the Master then addressed the Prince, calling to mind the antiquity of the company, which could be traced as far back as 1172, while the company received a charter of incorporation from Richard II. in 1392, and enumerating the famous members of the company—Whittington, "the great artist of his own fortune;" Caxton, "to whom we are indebted for the art of printing;" Dean Colet, "founder of our Pauline School;" Sir Thomas Gresham, "founder of the Royal Exchange;" Sir Thomas Boleyn; Queen Elizabeth, "a free sister" of the company; Lord Hill, a Peninsular fame, who was a member by ancestral descent. The address concluded with expressions of thanks to the Prince for the honour he was conferring, and good wishes for his prosperity.

The Prince listened with marked attention to the Master's address, which was admirably delivered, and replied as follows:—"Master, Wardens, and Court of Assistants,—I am glad to avail myself of the last opportunity which my stay in London affords me of attending here this day to receive the freedom of your ancient and honourable company. The oldest of the City companies, the Mercers, is hardly exceeded by any in the amount of its charities, or in its capabilities of doing good. How these powers have been exercised the list of the foundations of the company and of the distinguished persons whom you have enumerated as benefactors and freemen tell us. Amongst the latter the great Sovereign, who was herself a sister of the company, stands conspicuous, and commerce and science appear equally to have lent their representatives to ennoble the Mercers' Company. To be connected with such names in the freedom and history of your company is an honour and a privilege I am proud to have conferred upon me. I thank you sincerely for the terms in which you have mentioned the names of my beloved mother and the Princess, and for the happiness you desire for us both."

The beautiful casket containing the freedom was now handed to the Prince, who examined it with evident admiration and interest. A work of the highest goldsmith's art, this casket is wrought in Gothic style, with pillars at each corner, the lid bearing the form of a Gothic cupola, very richly ornamented and surmounted by a crown in various coloured enamels, from which rises the Prince of Wales's plume. The front is divided into three arches, or compartments, the centre one bearing the arms of the Prince and Princess of Wales in coloured enamels, surrounded by the Garter with its motto, "Honi soit qui mal y pense." In the centre of the remaining arches are the arms of the Mercers' Company, also in coloured enamels, with their motto, "Honor Deo." On the reverse, divided in like manner into three arches, the central one bears the following inscription:—

"Presented to H.R.H. Albert Edward Prince of Wales K.G., by the Corporation of Mercers, Premier Guild of the City of London, on the occasion of his Royal Highness honouring them by accepting the freedom of the Company, July 8, 1863."

This inscription is supported on each side by the monograms of the Prince and Princess of Wales in pale blue enamel. The casket is based upon a slab of black Australian marble, ornamented with garlands of flowers in gold, and the whole work is worthy of the artistic taste and skill of the successful candidate for its design and execution, Mr. C. F. Hancock, of Bruton-street.

The Master now presented the various members of the court to the Prince of Wales, who presently retired to the banqueting-room, where a civic luncheon, prepared by Messrs. Staples, of the Albion, was served on the company's service of gold plate, with their accustomed precision and judgment. The Prince sat on the right of the Master, Mr. Johnson, the father of the company, a hale octogenarian, occupying a seat upon his Royal Highness's left hand. During the repast the Master proposed "The Health of his Royal Highness the Prince of Wales, citizen and mercer." This toast having been warmly responded to, his Royal Highness took cordial leave of the Master and the several members of the company and retired.

Mr. Mulready, R.A., died on Tuesday, at Linden-grove, Bayswater, in his 78th year.

Letters from Caprera state that Dr. Albanese leaves Garibaldi at the end of the month, and that then, or very shortly after, the General will be able to walk without crutches.

On Tuesday the Countess of Zetland presented to her Royal Highness the Princess of Wales, from the ladies of Shetland, a large selection of the finest woollen goods which can be manufactured in that part of Scotland, inclosed in a beautiful case or box, designed and executed for that purpose by Messrs. Stephenson and Son., of Prince's-street, Edinburgh.

An important target trial took place at Shoeburyness on Tuesday. Hitherto the targets have been constructed on the principle that the backing must be elastic, but this trial was to determine the value of the opposite or rigid theory. Up to the test furnished by the old-fashioned and still favourite 68-pounder the rigid theory was sustained; but a 150-lb. steel shot passed through the target and its supports, and a 300-lb. shell penetrated the target and set the filling of the cells on fire. One of the Armstrong guns used at the trial burst—that is to say, the outer ring of the gun gave way. No one was injured.

A Victoria Cross has been awarded to George Hinckley, a quartermaster of the Sphinx, 6, paddle-sloop, for gallant conduct in an attack on the city of Fung-Wha, China, on the 9th of October, 1862. Hinckley carried off, while exposed to a heavy fire from the enemy in going and coming, two officers on his shoulders, one after the other. The Sphinx being about to be paid off at Devonport on Thursday week, the ceremony of the presentation of the cross took place there at the Government Parade, Mount Wise, on Tuesday. About 1000 seamen and marines were landed from the various men-of-war in commission there to witness the presentation. Admiral Sir Houston Stewart, K.C.B., presented the cross in the name of her Majesty.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

NOTWITHSTANDING that the transactions in National Stocks, for Money, have been only moderate, prices—owing to the unusually favourable accounts at hand in reference to the crops, and the great abundance of money—have had an upward tendency, and the dealings for Time have increased to some extent. The Unfunded Debt has shown more firmness than for some time past.

The demand for accommodation is steady, but by no means active, at the annexed rates for the best commercial paper:—

	Per cent.		Per cent.
Thirty days' bills	3½	Four months' bills	4¼
Sixty days' ditto	3¾	Six months' ditto	4¼ 5
Three months' ditto	4		

In the Stock Exchange the rate for money, for short periods, has declined to 2 per cent.

Throughout the Continent, capital is firm in price, and the inquiry for it tolerably firm. We annex the quotations in the leading cities:—

	Bank rate, per cent.	Open market, per cent.
Paris	4	3½ ¾
Vienna	5	5
Berlin	4	3½
Frankfort	3	2¾
Amsterdam	3½	3¼
Turin	5	5
Brussels	3	2½
Hamburg	—	3¼
St. Petersburg	5½	7½

Several parcels of bullion have arrived from New York; but the amount disposed of to the Bank has been trifling. The steamer for the Brazils has taken out £107,590 in gold.

At the half-yearly meeting of the shareholders of the Union Bank of London, the net profits for the six months were stated at £89,446, out of which an increased dividend of 18s. per share was declared. To the reserve fund £60,000 has been added, thereby raising the amount to £110,000.

The dividend of the Colonial Bank is at the rate of 12 per cent per annum.

Most of the Continental exchanges continue in favour of this country, and there is still a steady profit on the import of gold from New York.

On Monday the Consol Market was very inactive, and prices ruled a shade lower than on Saturday. Consols, for Money, were done at 92¼ ¼; Ditto, for August, 92¾ ⅜; Reduced and New Three per Cents, 92½ ⅔; India Five per Cents, 105 ½; Ditto, Debentures, 102; Ditto Bonds, 17s. prem.; Exchequer Bills, 2s. dis. to 2s. prem.; Bank Stock sold at 235; and the Five-and-a-Half per Cent Rupee Paper, 116¾. An increased business was transacted on the following day:—Consols, for Money, sold at 92½ ⅝; Ditto, for Time, 92¾ ⅞; Bank Stock, 234 to 236; Reduced and New Three per Cents, 92 to 92½; India Stock, 225 to 227 ex div.; Ditto, New, 105¾ ½; India Five per Cent Rupee Paper, 105½; Ditto, Bonds, 18s. prem.; Exchequer Bills, 1s. dis. to 2s. pr.m. The Funds generally were very firm on Wednesday:—Bank Stock marked 237 to 239; Reduced and New Three per Cents, 92½ ⅝; Consols, for Money, 92¾ ⅞; Ditto, for Account, 92¾; Long Annuities, 15; India Stock, 227; Ditto, New, 105¾ ¼; Ditto, Five per Cent Rupee Paper, 105½; Ditto, Five-and-a-Half per Cent, 116¾; Ditto Debentures, 100; Exchequer Bills, 1s. dis. to 2s. prem. On Thursday the market was rather flat:—Consols for Money marked 92¾ to ⅞; for Account, 92⅞ to ¾; Reduced and New Three per Cents, 92½ to ⅝; and Exchequer Bills, 1s. dis; India Five per Cent Stock marked 105¾ ½.

Very little change has taken place in the value of American Securities:—United States Five per Cents have been 59; Illinois Central 100-Dollar Shares, 29½ dis.; Ditto, all paid, 62.

The market for Foreign Bonds continues flat, and, in some instances, a further reduction has taken place in the quotations. The changes from last week, however, are not important:—Brazilian Five per Cents have marked 101; Ditto Four-and-a-Half per Cents, 91; Chilian Four-and-a-Half per Cents, 86; Danish Five per Cents, 1863, 101; Egyptian Seven per Cents, 93½; Ditto, Coupons, 105; Italian Railways, 79 ex div.; Mexican Three per Cents, 31; New Grenada Two per Cents, 32; Ditto, Deferred, 9; Peruvian Four-and-a-Half per Cents, 1862, 57½ ex div.; Portuguese Three per Cents, 1852, 48½ ex div.; Russian Old Five per Cents, 95; Ditto, Three per Cents, 59½; Ditto, 1862, 93½; Sardinian Five per Cents, 90¼; Spanish Three per Cents, 54½ ex div.; Ditto, Passive, 3½; Ditto, Certificates, 12; Turkish Old Six per Cents, 92; Ditto, 1862, 68 ex div.; Venezuela Six per Cents, 57½; Dutch Two-and-a-Half per Cents, 64 ex div.; Ditto Four per Cents, 103; and Italian Five per Cents, 77½ ex div. Italian Scrip has sold at 1½ to ¾ prem.

A moderate business has been transacted in Joint-Stock Bank Shares, and prices almost generally have ruled firm. Alliances have been done at 35; Australasia, New, 31; Bank of Egypt, 27½; Chartered of British Columbia, 11; Chartered of India, Australia, and China, 30; City, 16½; English, Scottish, and Australian Chartered, 23; Imperial, 23; Imperial Ottoman, 19; London and Brazilian, 42; London Chartered of Australia, 28; London and Westminster, 8; National of Liverpool, 4; South Australia, 40 ex div.; Union of Australia, 57; and Union of London, 36 to 37.

Colonial Government Securities have changed hands to a moderate extent, as follows:—Canada Six per Cents, 105 ex div.; Ditto Five per Cents, 96 ex div.; Cape Six per Cents, 1873, 109; Mauritius Six per Cents, 109; Ceylon Six per Cents, 114; New South Wales Five per Cents, 101 ex div.; Nova Scotia Six per Cents, 103 ex div.; and Victoria Six per Cents, 111.

The Miscellaneous Market has ruled steady. Crystal Palace have been done at 33; East Indian Irrigation and Canal, 5 ex int.; English and Australian Copper, 1; International Financial Society, 7; General Credit and Finance of London, 3; Italian Irrigation Canal Cavour, 5; Ditto, Six per Cent Bonds, 43; Joint-stock Discount, 4; National Discount, 9; Peninsular and Oriental Steam, 78; Rhymney Iron, 21; Royal Mail Steam, 67; Regent's Canal, 25; and East London Waterworks, 131.

Most Railways have been somewhat firm in price, but the dealings in them have been only moderate. Annexed are Thursday's official closing quotations:—

Ordinary Shares and Stocks.—Caledonian, 119; Great Eastern, 53; Great Northern, 127; Great Western, 64; Lancashire and Yorkshire, 113; London and Brighton, 109; London, Chatham, and Dover, 44; London and North-Western, 102; London and South-Western, 106; Manchester, Sheffield, and Lincolnshire, 45; Metropolitan, 127; Ditto, New, 5; Midland, 128; North British, 53; North Eastern—Berwick, 103; Ditto, Leeds, 50; Ditto, York, 90; North London, 118; Scottish North Eastern—Aberdeen Stock, 45; South Eastern, 92; Stockton and Darlington, 38; West Cornwall, 27; West Midland—Oxford, 93.

Preference Shares.—London and Brighton, 115; Ditto, Seven per Cent Stock, 156; Midland—Bristol and Birmingham, 131.

British Possessions.—Atlantic and St. Lawrence, 62; Bombay, Baroda, and Central India, 107 ex int.; Calcutta and South-Eastern, 103 ex int.; Eastern Bengal, 109 ex int.; East Indian, 108 ex int.; Grand Trunk of Canada, 24; Great Indian Peninsula, 108 ex int.; Indian Branch, 2; Madras Five per Cent, 109 ex int.; Punjaub, 107 ex int.; Indus Steam Flotilla, 103 ex int.

Foreign.—Belgian Eastern Junction, 1; Dutch Rhenish, 17; Great Luxembourg, 14; Recife and San Francisco, 10; San Paulo, 9 ex int.; Ditto, 7 ex int.; West Flanders, 10; Western and North Western of France, 29.

The return of the Bank of England, for the week ending July 8, shows the following results, when compared with the preceding statement:—

An increase of circulation of	£209,732
A decrease of public deposits of	4,737,539
An increase of other deposits of	2,330,979
A decrease of Government Securities of	8,391
A decrease of other Securities of	1,893,788
A decrease of bullion of	25,302
An increase of rest of	43,357
A decrease of reserve of	495,042

The total circulation is £22,033,478. Public deposits amount to £5,563,831; and private deposits to £18,595,718. Securities are £34,617,936; and the stock of bullion is £14,924,969.

THE MARKETS.

CORN EXCHANGE, July 6.—There was a very moderate supply of English wheat on offer in to-day's market; nevertheless, the demand for all kinds ruled heavy, and, in some instances, the quotations gave way 1s. per quarter. Foreign wheat—the show of which was extensive—moved off slowly, and the currencies had a drooping tendency. Floating cargoes of grain were very dull. Scarcely any English barley was on the stands, and the supply of foreign was rather limited. The demand, however, was in a sluggish state, at about stationary prices. Malt changed hands slowly, on former terms. Good round oats maintained their previous value; but hulled qualities were very dull. Beans moved off heavily, at 1s. per quarter less money. No change took place in the value of peas. The flour trade was in a most inactive state, on former terms.

July 8.—All kinds of produce were very dull to-day, and wheat was again rather cheaper.

English.—Wheat, Essex and Kent, red, 49s. to 51s.; ditto, white, 42s. to 52s.; Norfolk and Suffolk, red, 40s. to 51s.; rye, 31s. to 35s.; grinding barley, 25s. to 27s.; distilling ditto, 23s. to 34s.; malting ditto, 33s. to 40s.; Lincoln and Norfolk malt, 60s. to 66s.; brown ditto, 50s. to 57s.; Kingston and Ware, 60s. to 66s.; Chevalier, 66s. to 68s.; Yorkshire and Lincolnshire feed oats, 18s. to 22s.; potato ditto, 23s. to 26s.; Youghal and Cork, black, 16s. to 21s.; ditto, white, 18s. to 22s.; tick beans, 30s. to 33s.; grey peas, 35s. to 36s.; maple, 38s to 40s.; white, 36s. to 39s.; boilers, 37s. to 39s. per quarter. Town-made flour, 40s. to 47s.; town households, 34s. to 36s.; country marks, 29s. to 32s. per 280 lb.; American, 21s. to 23s. per barrel. Fresh, 38s. to 42s. per sack.

Arrivals.—English and Scotch: Wheat, 460; barley, 10; malt, 1660; flour, 240. Foreign: Wheat, 1610; barley, 860; oats, 39,980; flour, 850 sacks.

Seeds.—The demand for seeds, generally, is heavy, and the quotations rule almost nominal. In cakes very little is doing.

Linseed, English, crushing, 62s. to 63s.; Calcutta, 63s. to 67s.; hempseed, 44s. to 48s. per quarter; coriander, 14s. to 16s. per cwt.; brown mustard seed, 8s. to 10s.; white ditto, 7s. to 9s.; tares, 7s. to 8s. per bushel; English rapeseed, 90s. to 84s. per quarter. Linseed cakes, English, £9 10s. to £10 10s.; ditto, foreign, £9 10s. to £11; rape cakes, £5 10s. to £6 per ton; canary, 46s. to 52s. per quarter; red clover seed, 38s. to 60s.; white ditto, 54s. to 57s. per cwt.

Bread.—The prices of wheaten bread in the metropolis are from 7d. to 8d.; of household ditto, 5d. to 7d. per 4 lb loaf.

Imperial Weekly Averages.—Wheat, 46s. 11d.; barley, 30s. 9d.; oats, 23s. 11d.; rye, 32s. 11d.; beans, 39s. 6d.; peas, 38s.

The Six Weeks Averages.—Wheat, 46s. 9d.; barley, 31s. 9d.; oats, 23s.; rye, 31s. 9d.; beans, 39s. 8d.; peas, 36s. 11d.

English Grain Sold last Week.—Wheat, 66,191; barley, 785; oats, 3405; rye, 46; beans, 1920; peas, 170 quarters.

Tea.—The public sales have gone off heavily, and the quotations are barely supported. Privately, the demand is very inactive.

Sugar.—All kinds move off slowly, and the currencies have a drooping tendency. Barbadoes has sold at 31s. 6d. to 33s. 6d.; fine Mauritius, 37s. 6d. to 40s. per cwt. Refined goods sell slowly, at 47s. per cwt. for common brown lumps. The stock is now 101,000 tons against 85,000 tons last year.

Coffee.—The market is in a very inactive state; nevertheless, prices rule about stationary. The stock continues heavy for the time of year.

Rice.—Sales progress slowly. In prices, however, no change has taken place. Stock, 44,000 tons against 47,000 ditto last year.

Provisions.—Irish butter moves off slowly, at about previous quotations; but fine foreign is rather dearer. The bacon market is inactive, and prices have a drooping tendency. In all other provisions very little is doing.

Tallow.—The market is very inactive, and the quotations are barely supported. P.Y.C., on the spot, 42s. 9d. per cwt. Stock, 27,514 casks against 31,519 ditto last year. Rough fat, 2s. 1d. per 8 lb.

Oils.—Linseed oil moves off slowly, at £44 15s. per ton, on the spot. Rape is selling at £46 to £48; cocoanut, £44 to £48; and fine palm, £36. American turpentine, 100s.; French ditto, 90s. per cwt.

Spirits.—Very little is doing in rum, at about stationary prices. Proof Leewards, 1s. 5d.; proof East India, 1s. 4d. per gallon. Brandy is quoted at from 8s. to 11s. 6d.; English spirit, grain 1s. 9d. to 1s. 10d.; ditto, from Ic, 1s. 3d. to 1s. 5d.; and English gin, for export, proof, 2s. 9d. to 3s. per gallon.

Hay and Straw.—Old meadow hay, £3 10s. to £4 15s.; new ditto, £3 to £4; old clover, £4 10s. to £6 6s.; new ditto, £3 10s. to £4 15s.; and straw, £1 8s. to £1 16s. per load.

Coals.—Best home coals, 16s 6d. to 17s. 3d.; seconds, 14s. 3d. to 15s.; Hartley's, 14s. to 15s.; and manufacturers', 13s. to 15s. per ton.

Hops.—The plantation accounts being more favourable, all kinds of hops move off slowly, at barely stationary prices.

Wool.—The public sales of colonial wool—at which about 100,000 bales will be offered—having been announced, the market is inactive. Prices, however, rule steady.

Potatoes.—The supplies of new potatoes are large, and chiefly in excellent condition. The demand for them is steady, at from 5s. to 8s. per cwt.

Metropolitan Cattle Market (Thursday, July 9).—To-day's market was fairly supplied with beasts, in but middling condition. All breeds met a dull inquiry, at Monday's decline in the quotations. The top figure for Scots was 5s. per 8 lb. The show of sheep was moderately extensive, and the mutton trade was in a sluggish state, at barely stationary prices. The best Downs sold at 5s. 2d. per 8 lb. Good and prime lambs sold freely, at extreme currencies. Inferior lambs were dull, at late rates. Calves moved off heavily, at 5d. per 8 lb, less money, owing to the large number on offer. Prices ranged from 3s. 6d. to 4s. 6d. per 8 lb. Pigs and milch cows were very quiet, at last week's prices. Per 8 lb. to sink the offal:—Coarse and inferior beasts, 3s. 4d. to 3s. 8d.; second quality ditto, 3s. 10d. to 4s. 4d.; prime large oxen, 4s. 6d. to 4s. 8d.; prime Scots, &c., 4s. 10d. to 5s.; coarse and inferior sheep, 3s. 8d. to 4s. 2d.; second quality ditto, 4s. 4d. to 4s. 8d.; prime coarse-woolled sheep, 4s. 10d. to 5s.; prime Southdown ditto, 5s. to 5s. 2d.; large coarse calves, 3s. 6d. to 4s.; prime small ditto, 4s. 2d. to 4s. 6d.; large hogs, 3s. 6d. to 4s.; neat small porkers, 4s. 2d. to 4s. 6d.; lambs, 5s. 4d. to 6s. 4d.; suckling calves, 12s. to 20s.; and quarter-old store pigs, 20s. to 26s. each. Total supply:—Beasts, 930; cows, 140; sheep and lambs, 10,800; calves, 670; pigs, 350. Foreign: Beasts, 305; sheep and lambs, 1800; calves, 580.

Newgate and Leadenhall.—The supplies of meat are moderate, and the demand is inactive, as follows:—Beef, from 3s. 4d. to 4s. 2d.; mutton, 3s. 6d. to 4s. 4d.; lamb, 4s. 8d. to 5s. 6d.; veal, 3s. 8d. to 4s. 4d.; and pork, 3s. 4d. to 4s. 6d. per 8 lb. by the carcase.

ROBERT HERBERT.

THE LONDON GAZETTE.

BRADBURY and EVANS, 11, Bouverie-street.

At the Libraries, in 2 vols, post 8vo, 21s.,
MEMOIRS OF VICTOR HUGO; Related by the Companion of his Lifetime.
This work, including the "Biography of Victor Hugo," by his Wife, founded mainly on her gifted husband's own notes, is enriched with many hitherto unpublished productions from his pen. Amongst them are an Original Drama, Miscellaneous Poems, Recollections of Travel, &c. The work may be regarded not only as a history of a certain school of writers in France, but in some respects as a literary history of the nineteenth century.

MR. JEAFFRESON'S NEW NOVEL.
Now ready, at all the Libraries, in 1 vol. post 8vo, 10s. 6d.,
SIR EVERARD'S DAUGHTER.
London: WM. H. ALLEN and CO., 13, Waterloo-place.

Now ready,
THE CHEAPEST FIRST CLASS VOCAL AND INSTRUMENTAL MUSIC EVER PUBLISHED.
VOLUME I. of the MUSICAL HERALD.
Handsomely bound. Price 3s. 6d.
Containing Sir Henry Bishop's Glees, the standard compositions of Arne, Auber, Beethoven, Callcott, Dibdin, Glück, Handel, Haydn, Mendelssohn, Mozart, Purcell, Rossini, Spohr, &c. This reprint of the best music of all the most renowned composers, issued at a price so very much below anything ever yet attempted, will, it is hoped, supply the great and admitted want of a carefully and ably edited selection of secular music suitable for the Choral, Amateur, and other Musical Societies now so rapidly growing and spreading over this country. The present volume forms an exquisite gift-book.
A MANUAL OF MUSIC, with Dictionary of Musical Terms, Explanation of Abbreviations, Signs, &c. Price 3d.
Published by B. BLAKE, 431, Strand, London.

FRANCATELLI'S STANDARD COOKERY BOOKS.
I. THE COOK'S GUIDE. 1000 Recipes and 40 Illustrations. Price 5s.
II. THE MODERN COOK. 1500 Recipes and 60 Illustrations. 12s.
RICHARD BENTLEY, New Burlington-street, Publisher in Ordinary to her Majesty.

PRIZE STORIES for the PARISH MAGAZINE.—£10 and £5 are offered for the Best Short Stories for this Serial. Conditions and requirements may be had by sending a stamped and addressed envelope to the Editor, Rev. J. ERSKINE CLARKE, St. Michael's Vicarage, Derby.

THE PARISH MAGAZINE. 20pp. First-class Wood Engravings. Price 1d. monthly. Vols. I., II., III., IV., price, each, 1s. 6d. limp; 2s. cloth. Are much liked in parish and school libraries, and for lending to the sick, or in hospitals, &c.
London: BELL and DALDY, 186, Fleet-street.

TO BRITISH and CONTINENTAL TOURISTS—EDWD. STANFORD has just issued a New Edition of his "Tourist's Catalogue," containing Title, Price, &c., of the best Guide-Books, Maps, Conversation-Books, Dictionaries, &c., published in the United Kingdom, the Continent, and America. It can be had gratis upon application, or will be forwarded per post for one stamp. London: Edwd. Stanford, Mapseller by appointment to H.R.H. the Prince of Wales, and Agent for the sale of Ordnance Maps, Geological Survey Maps, and Admiralty Charts. 6, Charing-cross, S.W.

THOMAS D. MARSHALL, 167, Oxford-street, London, W.

CLOSE OF THE SEASON.—SILKS, DRESSES, SHAWLS, MANTLES, HALF-PRICE.
In consequence of the advanced state of the season and the general depression in the Foreign Markets, NICHOLSON and AMOTT have just concluded the purchase of several thousand pounds' worth of Silks, Dresses, Shawls, Mantles, and French Fancy Goods, at extremely low prices, which are now being sold at about half the original cost of production.
Fancy Silks, originally 3s. per yard, now 1s. 11½d.
Rich Chéné Silks, worth 5s. 6d., now 3s. 6d. per yard.
Rich Glacé Silks, new colours, worth 4s. 6d., now 2s. 11½d. per yard.
Magnificent Moire Antiques, originally 5 guineas, for £2 18s. 6d.
Rich Pompadours, worth 7 guineas, reduced to £3 13s. 6d.
Richest Lyons Fancy Silks yard wide, during the season, 6s. 9d., now selling at 3s. 11d. per yard.
180 Robes, magnific nt patterns and quality, originally 12 guineas, reduced to £4 18s. 6d.
Good Black Silks, worth 2s. 9d., for 1s. 11½d. per yard.
Rich Gros Grain and durable Black Glacé Silks, usually sold at 3s. 6d., 4s. 6d., and 5s. 6d. per yard, are now marked 2s. 3d., 3s. 3d., and 4s. 4½d. per yard.
All the best French Mantles and Jackets are marked one third the season prices.
Fancy trimmed Paisley and French Shawls less than half price.
Ribbons at 8d., worth 1s. per yard.
All Fancy Goods at an immense reduction.
1000 Pieces of Mohairs, 2s. 11½d. for 12 yards.
Norwich Tamataves, originally 5s. 11d., now selling at 4s. 6½d. 12 yards.
The New Zebelines, worth 8s. 11d., now reduced to 6s. 12 yards.
Rich Crystalisé Dresses, usually 12s. 9d., now 8s. 6d. 12 yards.
Splendid Washing Grenadines, 10s. 9d. 12 yards.
Rich French Materials, originally 16s. 9d. and 21s., now selling at 11s 9d and 14s. 9d.
500 pieces of Double Black Barèges, 6½d. per yard, worth 10½d.
To ensure a reply, and the dispatch of patterns the same day, it is positively necessary that all letters be addressed to the Crystal Warehouse.
NICHOLSON and AMOTT,
Crystal Warehouses,
61 and 63, St. Paul's-churchyard.

NEW SILKS FOR THE SEASON. JAMES SPENCE and CO. have now on hand a large Stock of rich, durable, and cheap Silks for Marriage Dresses, well worthy the immediate inspection of ladies:—
WIDE-WIDTH PLAIN GLACES, from 3s. 6d. per yard.
WHITE, SKY, PINK, "ALEXANDRA," and other new colours in Moire Antiques.
NEW BROCHES, 29s. 6d. for 16 yards.
NEW CHENES, in all the most elegant designs.
THE "ALEXANDRA" Checked and Striped Glacés (now so much in demand), from 2s. 9d. per yard, wide width.
Patterns post-free.
JAMES SPENCE and CO.,
Wholesale and Retail Silkmercers, Drapers, &c.,
77 and 78, St. Paul's-churchyard.
Close on Saturdays at Five o'Clock.

REDMAYNE and CO. beg to announce that, as the whole of their Bond-street premises are about to be rebuilt and considerably enlarged, they are now offering their STOCK, consisting of SILKS, Shawls, Mantles, Lace Goods, Fancy Dresses, Muslins, Ribbons, Gloves, Parasols, &c., at such a reduction in prices as will command an immediate sale.—20 New Bond-street and 35, Conduit-street.

CURIOUS and USEFUL CHINESE and JAPANESE ARTICLES, suitable for Presents.—Just imported, several large cases of beautifully-lacquered JAPANESE TRAYS, at 5s. the pair.—Oriental Warehouse, 179, Regent-street; FARMER and ROGERS; also at the Great Shawl and Cloak Emporium, 171, 173, 175, Regent-street.

HAIR JEWELLERY.—ARTIST in HAIR, DEWDNEY begs to inform Ladies or Gentlemen that he beautifully makes, and elegantly mounts in Gold, Hair Bracelets, Chains, Brooches, Rings, Pins, Studs, &c., and forwards the same at about one-half the usual charge. A beautiful collection of specimens, handsomely mounted, kept for inspection. An illustrated book sent post-free.—Dewdney, 172, Fenchurch-street, London.

A. FORRER, Hair Jeweller to the Queen, 2, Hanover-street, Hanover-square, REMOVED from Regent-street and Baker-street.

MARBRES ONYX D'ALGERIE.—One Thousand Objects made from this beautiful Marble, and comprehending every variety of work of Decorative Art, including clocks, candelabra, vases, guéridons, inkstands, tazzi, card-trays, jardinières, porte-bouquets, lamps, ring-stands, &c., &c., are now being exhibited in the Onyx Salon, at Messrs. HOWELL, JAMES, and CO.'S, 5, 7, 9, Regent-street.

SANGSTERS' FANCY SUNSHADES, Parasols, Umbrellas, on Fox's Paragon Frames.—W. and J. Sangster respectfully solicit an inspection of their New Patterns in Fancy Sunshades and Parasols, comprising the new colours in combination with white silk, lace, &c., prepared expressly for the fêtes that will take place this season in honour of the Royal marriage.
140, Regent-street, W.; 194, Fleet-street E.C.; 10, Royal Exchange, E.C.; 75, Cheapside, E.C.

THE SUMMER SUN and DUST.—Ladies will find the application of ROWLANDS' KALYDOR both cooling and refreshing to the face and skin; allaying all heat and irritability; removing eruptions, freckles, and discolourations; and rendering the skin soft, clear, and blooming. Price 4s. 6d. and 8s. 6d. per bottle. Sold at 20, Hatton-garden; and by Chemists and Perfumers. Ask for "Rowlands' Kalydor," and beware of spurious and pernicious articles under the name of "Kalydor."

EAU and POMMADE RÉPARATRICE DE FRUCHET, à PARIS.—Infallible to restore the Hair to its natural colour; keeps it clean, smooth, and brilliant.—Sold by all Chemists and Perfumers. Wholesale Dépôt, TH. LUSCHER and CO., 27, Cannon-street West, London.

TOURISTS.—Travellers journeying into countries where miasma is prevalent should be provided with Dr. Lang's ESSENTIAL SPIRIT OF MELISSUS, a perfect preventive of that dread disease. Its invigorating and restorative effects cannot be too highly esteemed. Sold in 1s 6d. and 3s. bottles, wholesale and retail, by BUTLER and CRISPE, Chemists to the Royal Family, 4, Cheapside (corner of St. Paul's), London; and respectable Chemists throughout the country. Wholesale Dépôt, Tulfer and Co., 11, St. John-court, Snow-hill.

MORSON'S PEPSINE WINE, containing the digestive principle prepared from fresh calves' stomachs, combined with a rich stomachic wine, is a perfectly palatable form for administering this popular remedy for weak digestion.
Manufactured by T. Morson and Son, 19 and 46, Southampton-row Russell-square, W.C., in Bottles, at 3s., 5s., and 10s. each.

DR. DE JONGH'S (Knight of the Order of Leopold of Belgium)
LIGHT-BROWN COD-LIVER OIL,
prescribed by the most eminent Medical Men throughout the world as the safest, speediest, and most effectual remedy for
CONSUMPTION, CHRONIC BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GOUT, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS,
is incomparably superior to every other variety.

SELECT MEDICAL OPINIONS.
Sir HENRY MARSH, Bart., M.D.,
Physician in Ordinary to the Queen in Ireland.
"I consider Dr. DE JONGH'S Light-Brown Cod Liver Oil to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

DR. GRANVILLE, F.R.S.,
Author of the "Spas of Germany."
"Dr. Granville has found that Dr. DE JONGH'S Light-brown Cod-liver Oil produces the desired effect in a shorter time than other kinds, and that it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oil."

EDWIN CANTON, Esq., F.R.C.S.,
President of the Medical Society of London, &c., &c.
"For several years past I have been in the habit of prescribing Dr. DE JONGH'S Light-brown Cod-liver Oil, and find it to be much more efficacious than other varieties of the same medicine which I have also employed with a view to test their relative superiority."

DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL is sold only in Imperial half-pints, 2s. 6d.; pints, 4s. 9d.; quarts, 9s.; capsuled and labelled with his stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists and Druggists.
SOLE CONSIGNEES,
ANSAR HARFORD and CO., 77, STRAND, LONDON, W.C.

EVERY ARTICLE of FOOD for INVALIDS and INFANTS FREE from ADULTERATION. Jellies, Soups, and Broths made to order. Gluten Bread, Chocolate, and Semola for Consumption, Diabetes, and General Debility.—VAN ABBOTT and CO., Dietetic Dépôt, 5, Princes-street, Cavendish-square, W.

Grand Selection for Military Band, arranged by Godfrey .. 15 0

CHAPPELL and Co., 50, New Bond-street.

CHAPPELL'S FOREIGN PIANINO (the only Pianino to which the Prize Medal was awarded).—A very elegant Pianoforte, of small size, the full compass, check action, and most perfect touch, admirably adapted to small rooms, yachts, boudoirs, &c. Warranted to keep in tune, and to be the best and cheapest Pianoforte, with check action and all the latest improvements.

Price, in mahogany, rosewood, or walnut, 25 and 26 guineas. A great variety may be seen at

Chappell and Co.'s, 50, New Bond-street.

CHAPPELL and CO.'S ENGLISH MODEL COTTAGE PIANOFORTE.—To amateurs preferring the pure English tone of the Broadwood or Collard quality, the English Model will be found the most perfectly satisfactory instrument, at moderate price. The action is of the same simple description as the above makers', and therefore especially adapted to the country where the more complicated actions are objectionable to many of the tuners. In elegant rosewood case, with full fret, similar in every respect to other instruments at 50 guineas, price 35 guineas; in walnut, 40 guineas.

Chappell and Co., 50, New Bond-street.

CHAPPELL'S FOREIGN MODEL PIANOFORTE, price 50 guineas in rosewood; or in walnut, 60 guineas. This Instrument has Three Strings and the fullest grand compass of Seven Octaves. It is strengthened by every possible means to endure the greatest amount of wear, and to stand perfectly in any climate. The workmanship is of the best description; the tone is round, full, and rich; and the power equal to that of a Bishord Grand. The touch is elastic, and the repetition very rapid. No pianoforte, in all respects comparable, has hitherto been made in England at the same price. Every instrument will be warranted, and (if desired) exchanged within six months of the purchase.

Chappell and Co., 50, New Bond-street.

BROADWOOD, COLLARD, and ERARD. The best Pianofortes of every description, including all the newest kinds by these celebrated makers, may be tried side by side (and hired with option of purchase) at the new Showrooms of CHAPPELL and CO., 50, New Bond-street.

ERARD'S NEW BOUDOIR GRAND PIANOFORTE, at 120 guineas, having been now brought to perfection, can be hired, with the option of purchase, at CHAPPELL and CO.'S, 50, New Bond-street.

SECONDHAND PIANOFORTES. CHAPPELL and CO. have a large Stock of SECONDHAND PIANOFORTES for Sale, by BROADWOOD, COLLARD, ERARD, &c., &c., at very reduced prices. Also, new Instruments of every description.—Chappell and Co., 50, New Bond-street.

PIANOFORTES at CHAPPELL'S.—The largest Stock in London, by Broadwood, Collard, Erard, &c., for Sale or Hire.—50, New Bond-street.

ALEXANDRE'S DRAWING-ROOM MODEL HARMONIUM, the best that can be made, price 60 guineas; other varieties at 35 and 35 guineas. Illustrated Catalogues of Pianofortes and Harmoniums upon application to CHAPPELL and CO., 50, New Bond-street.

SIX-GUINEA HARMONIUM by ALEXANDRE, with five octaves, two footboards, and in oak case. These instruments are lower in price and superior to all other cheap harmoniums. Descriptive lists on application to CHAPPELL and CO., 50, New Bond-street.

SECONDHAND HARMONIUMS, by ALEXANDRE, nearly (if not quite) as good as new, at greatly-reduced prices, at CHAPPELL'S, 50, New Bond-street.

ALEXANDRE'S PRIZE EXHIBITION MODEL HARMONIUM, for the CHURCH, 13 stops, 4 rows of vibrators, and Venetian swell, worked by the heel of the right foot, in oak case, 32 guineas. A large assortment may be always seen at CHAPPELL and CO.'S, 50, New Bond-street.

BEETHOVEN WALTZ.—O'LEARY'S Beethoven Waltz is an arrangement of the most fascinating airs of the immortal Beethoven. Sent free for 24 stamps.

EWER and CO., 87, Regent-street, London.

O'LEARY'S CELEBRATED DANCES:—The Stamp Galop, the Ducal Waltz, and the Beethoven Waltz are also published in parts for Orchestra, 3s.; and Septet, 2s.

EWER and CO., her Majesty's Music sellers, 87, Regent-street.

STAMP GALOP.—O'Leary's Stamp Galop is the best and most popular Galop of the season. The titlepage is adorned with Postage-stamps of all Nations, beautifully printed in Colours. Sent free on receipt of 12 stamps.

EWER and CO., 87, Regent-street, London.

THE DUCAL WALTZ.—O'Leary's Ducal Waltz is played at all the nobility's balls. The titlepage is adorned with the Arms and Crests of all the Dukes of Great Britain, splendidly printed in Colours and Gold. Sent free for 24 stamps.

EWER and CO., 87 Regent-street, London.

GRETTON'S PIANOFORTE WORKS, Rede und Erinnerung, 7s.; Der Herzen-tausch, 4s.; Der Waldstrom, 4s.; Pastorale, 4s.; Caprice Pathétique, 5s.; Toccata, Fugue, &c., &c. CRAMER, BEALE, and WOOD, 201, Regent-street.

CRAMER'S PIANOFORTE GALLERY offers peculiar advantages for the choice of a first-rate Pianoforte. There is a profusion of every de-cription, from the smallest Pianette to the largest and finest Grand, and by all the eminent makers of England and the Continent. Nothing but the very best instruments are selected from the factories, all that are declient in tone being carefully avoided. Purchasers from CRAMER and CO. may therefore rely on having placed in their hands whatever may be reasonably expected from a selection made with competent practical skill.

Cash purchasers will receive the usual discount.

Every Instrument fully guaranteed.

Cramer and Co. deliver their Pianofortes at any railway station in the kingdom without risk to the purchaser, and at a very trifling cost.

Cramer and Co.'s Pianoforte Gallery (the largest in Europe), 207 and 209, Regent-street.

CRAMER'S ENGLISH PIANETTE, 22 guineas. Cramer and Co. manufacture this capital small instrument. It has all the requisites of the best Pianoforte—check action, solid touch, agreeable tone. The case is of polished ash or pine. In practising on this Pianoforte the fingers of the player will be strengthened much more rapidly than on an old instrument, loose in the key and worn in the hammer. In rosewood, 25 guineas; in walnut, 26 guineas.

Purchasers are particularly requested to observe that this instrument has not the common or single action, but the double or check action; and that Cramer and Co. are the only manufacturers of it in England.—207 and 209, Regent-street.

CRAMER'S INDIAN PIANETTE, in solid Mahogany, for warm climates. The most portable Pianoforte yet made. The packing-case forms a dressing-table for an officer's quarters. Price 35 guineas; with case complete, 40 guineas.

207 and 209, Regent-street.

THALBERG'S GRAND PIANOFORTES. These magnificent instruments, manufactured by Messrs. J. and P. Erard, and selected by M. Thalberg for his London concerts, have been purchased by CRAMER and CO., and are universally admitted to be the most exquisite Pianofortes ever finished by these distinguished manufacturers, combining in an extraordinary decree all their peculiar excellences; the tone has great volume, together with a charmingly vocal quality. The cases are in walnut and rosewood. Prices, 230 and 240 guineas.—207 and 209, Regent-street.

CRAMER'S CONCERTINAS—PRIZE MEDAL. Prices, 2, 3, 4, 4, 6, 8, 10, 12, 16, and 18 guineas. 201, Regent-street.

CRAMER'S CORNETS, manufactured by F. BESSON, the receiver of twenty-three medals. Cramer and Co. are now the sole Agents in London for the sale of F. Besson's well-known Brass Instruments. Estimates for Bands furnished.

Mr. Boulcourt, the celebrated cornet-player, attends daily to try instruments and give private lessons. 201, Regent-street.

NEW VALSE.—THE ANGLO-DANISH VALSE. By E. L. HIME. Solo or Duet. Price 4s. (Sent at half-price.) This Valse, so universally admired, may now be had as a Solo or Duet for Pianoforte, and in Parts for Septet or full Orchestra.—DUFF and HODGSON, 20, Oxford-street.

NEW SONG—THE WELCOME AT THE DOOR. Composed by STEPHEN GLOVER. Price 2s. 6d. (Sent at Half-price.) Sequel to the celebrated Song, "The Good-by at the Door." Popular as the latter has been, "The Welcome" will be equally successful.—DUFF and HODGSON, 20, Oxford-street.

NEW SONG. BIRD OF THE WILDERNESS. Composed by EDWARD LAND; Sung by Mr. KENNEDY. Price 2s. 6d. (Sent at half-price.) This graceful Song is the conspicuous favourite in the Entertainment on the Songs of Scotland.—DUFF and HODGSON 20, Oxford-street.

THE MAIDEN AND HER LINNET. Song. Nightly singing by Miss Louise Keeley at the Theatre Royal, Haymarket. Words by F. C. BURNAND; Music by W. H. MONTGOMERY. Price 2s.

London: JOSEPH WILLIAMS, 11, Holborn-bars, and 123, Cheapside.

KIRKMAN'S 7-octave trichord SEMI-GRAND and DRAWING-ROOM GRAND PIANOFORTES, with double repeating action and all their very latest improvements. Price from 100 guineas and upwards. For beauty of tone, perfection of touch, and durability, these instruments are unrivalled.—COCK, HUTCHINGS, and CO., Music and Pianoforte Warehouse, 63 and 63, New Bond-street, London, W.

PIANOFORTES, New and Secondhand, by Broadwood, Collard, Kirkman, and other Makers, for SALE or HIRE, at Messrs. COCK, HUTCHINGS, and CO.'S (late Leader and Cock), Nos. 62 and 63, New Bond-street, corner of Brook-street.

KIRKMAN'S CELEBRATED TRICHORD PIANOFORTES, of every description, for SALE or HIRE, at COCK, HUTCHINGS, and CO.'S Pianoforte Warehouse, 62 and 63, New Bond-street, London.

NEW MUSIC.

HERR SCHACHNER'S ORATORIO,

ISRAEL'S RETURN FROM BABYLON. BOOSEY and SONS have much pleasure in announcing that they have purchased the copyright of Herr Schachner's Grand Oratorio, "Israel's Return from Babylon," which was performed with such eminent success a short time since at Exeter Hall, with the aid of Mdlle. Titiens and Mr. Sims Reeves. It is about to be reproduced at the Worcester Festival on a scale of very great magnificence, and the publishers are glad to announce that the complete work will be ready for sale in time for this important performance. The Pianoforte Score will be published in a handsome volume, complete, price One Guinea, several hundred copies having already been subscribed for. The separate Vocal Pieces will also be published at the usual prices. With the view of assisting the numerous choral societies in the production of a work that cannot fail to attain a high and permanent position in the grandest school of sacred music, the publishers have determined to publish the Orchestral Score, and the separate Orchestral and Vocal Parts, at the lowest possible price. These will shortly be ready for delivery, and orders may at once be forwarded to the publishers for copies.

The "Book of Words" (also the property of Boosey and Sons) may be had on moderate terms for public performances.

THE SEASIDE MUSIC BOOK. A Collection of new Pianoforte, Dance, and Vocal Music, especially recommended to Tourists and Travellers, as containing in a small compass and at a low price sufficient music for an evening's amusement. In an elegant volume, large size, beautifully illustrated, price 2s. 6d.

BOOSEY and SONS, Holles-street.

THE AMATEUR'S LIBRARY OF PIANOFORTE MUSIC. Price 2s. 6d. Each Volume, full size, contains from 40 to 60 pages of music, ordinarily sold at more than 20s. Now ready:—

1. Thalberg's Art of Singing applied to the Piano. With Introduction. 2s. 6d.
2. Kuhe's Six Transcriptions of Schubert's Melodies. 2s. 6d.
3. Strauss's Six Favourite Sets of New Waltzes. 2s. 6d.
4. Mdme. Oury's Six most Popular Pieces. 2s. 6d.
5. Thalberg's "Home, Sweet Home," "Minnie," and "Last Rose of Summer." 2s. 6d.

BOOSEY and SONS, Holles-street.

BOOSEYS' MUSICAL LIBRARY.—Every SUBSCRIBER at Two Guineas receives a splendid Guinea Volume of Illustrated Music, and has the use of Twelve Pieces of Music in Town and Twenty Pieces in the Country. Subscribers at One Guinea have the use of Four Pieces. Full particulars from 28, Holles-street.

BOOSEYS' MINIATURE PIANOFORTE, price 17 guineas, in walnut or mahogany.—"We have had occasion to examine a new description of Pianoforte manufactured by Boosey and Sons, which combines quality and cheapness in a degree which has not previously been ever attempted. When heard it creates much surprise as would be caused by a child 'discovering most eloquent' music with the voice of a full-grown man. It has a rich, brilliant tone, quite strong enough to fill the largest drawing-room; and the whole mechanism of the instrument seems to be firm and durable. No piano at so small a price has ever before been presented to the public."—Vide ILLUSTRATED LONDON NEWS, Feb. 28, 1863. This Piano is well adapted for the cabin of a ship, or an extreme climate.—Boosey and Sons, 24, Holles-street, London.

MDLLE. ADELINA PATTI'S NEW SONG, "Sing me a Merry Lay," composed for her by LANGTON WILLIAMS. Just published, with Portrait of Mdlle. Patti. Price 2s. 6d.—W. WILLIAMS and Co., 221, Tottenham-court-road.

"THE BIRD AND THE STREAMLET." New Song. By LANGTON WILLIAMS. Just published. Sung with the greatest success by Miss Banks. Price 2s 6d. W. WILLIAMS and Co., 221, Tottenham-court-road.

"THE BROKEN ROSE." Song for Mezzo-Soprano Voice. Composed by the Hon. ALFRED STOURTON. Price 2s. 6d. LAMBORN, COCKS, HUTCHINGS, and Co., 63, New Bond-street.

SIGNS OF AUTUMN and MERRY SLEIGH BELLS. Sung with immense applause by Mr. Lord in his popular Entertainment, "The Canoe, the Rifle, and the Axe." Just published by ROBERT W. OLLIVIER, 19, Old Bond-street W.

MUSICAL BOX DEPOT for the Sale of NICOLE'S celebrated Musical Instruments is removed from No. 54 to 11 and 12, Cornhill, London. Lists of tunes and prices gratis and postage-free.

PLATE.—A. B. SAVORY and SONS, Manufacturing Silversmiths, 11 and 12, Cornhill, London, opposite the Bank. The best wrought SILVER SPOONS and FORKS, fiddle pattern, 7s. 4d. per ounce; Queen's pattern, 7s. 6d. per ounce. Many other patterns recently finished, plain or highly ornamented.

KEYZOR and BENDON'S TWO-GUINEA BINOCULAR FIELD, RIFLE, or OPERA GLASS.—The extraordinary power of this instrument renders it adapted to define objects distinctly at ten miles' distance—suitable for the theatre, racecourse, target practice, sportsmen, tourists, and general outdoor observation. Illustrated Price Lists of Optical Instruments for 2 stamps.—50, High Holborn, London.

LETTER received about the NEW £5 TELESCOPE:—"Pwllheli, Carnarvonshire, June 9, 1863. Sirs,—I have purposely avoided writing until I should get fair opportunities to test the telescope under different circumstances. Now I have the great pleasure to assure you that I find your statements as to the capacity of the instrument very much under the real performance, both astronomically and terrestrially. I have had very capital views of Jupiter with its moons, immersing and emerging, and also the belts; Saturn with two of its moons, its ring, and the shadow thereof thrown, very well defined, upon the body of the planet. I have also resolved several double stars most beautifully, with their different colours. The mountains in the moon I can see as plainly and distinctly in alto relievo as those of Carnarvonshire. With the day eyepiece I have seen a woman at a distance of three miles knitting her stocking. I could see the woollen thread and her needles playing as plainly as if she had been only six or seven yards distant. I am, gentlemen, yours respectfully, W. O. Williams."—S. and B. SOLOMONS, sole makers, 39, Albemarle-street, Piccadilly. Powerful small pocket telescopes, opera, field, and general outdoor day and night glasses.

DEAFNESS.—The SOUND MAGNIFIER and INVISIBLE VOICE CONDUCTOR, for Deafness. It fits into the ear not perceptible, removes singing noises in the head, and enables deaf persons to hear distinctly at church and at public assemblies.—S. and B. SOLOMONS, 39, Albemarle-street, Piccadilly.

SPECTACLES.—The Patent Newly-invented TINTED SPECTACLES are patronised by the majority of the nobility, including Viscount Palmerston. They give extraordinary relief by day and night to weak, dim, and defective vision.

S. and B. SOLOMONS, 39, Albemarle-street, Piccadilly.

DO YOU DOUBLE UP YOUR PERAMBULATOR?—See T. TROTMAN'S Patent Safety Folding, for Infants and Invalids. T. Trotman (the maker), High-street (Gate), Camden-town, N.W. All kinds on view.

"TRENTO, IN THE TYROL," BY W. C. SMITH, IN THE EXHIBITION OF THE SOCIETY OF PAINTERS IN WATER COLOURS.

FINE-ART ENGRAVINGS.

INSTEAD of (as we have hitherto done) giving detached notices of the works of art which we engrave, we think it will be found more agreeable to the reader, as well as convenient to ourselves, to comprise them in one article, following the order in which the engravings appear in our pages. First on the list, then, in our Fine-Art Supplement is the Engraving of Mr. W. Collingwood Smith's *Trento*. This capital of a "circle" in the Tyrol is known universally as the site of the celebrated "Council of Trent," assembled by Pope Paul III. in 1545, and continued by twenty-five sessions, till 1563, under Julius III. and Pius IV., in order to fix with perspicuity the doctrine of the Church, reform its discipline, &c. The decrees of this famous council, together with the creed of Pius IV., contain a summary of the doctrine of the Roman Catholic Church. The church of St. Maria Maggiore occupies the site of the council chamber, now destroyed, and has a painting with portraits of all the members. It is, however, the picturesqueness of Trento which, doubtless, attracted Mr. Smith, as it has attracted Callcott and other painters. By-the-way, the old bridge seen in Callcott's picture is no longer in existence; the strada ferrata, "the iron road," as the railway is called in the language of Italy, has usurped its place. Still the old town—ancient as the days of Cæsar— is

THE GUARDS' BALL.—THE SUPPER-ROOM.

THE Guards' ball to the Prince and Princess of Wales, a fitting climax to the long series of festivities which have been given in honour of their Royal Highnesses, took place, as reported in this Journal, in the picture-galleries of the International Exhibition building. The rooms were decorated in the most elegant manner. The Queen kindly placed at the service of the committee the whole of the temporary fittings used at Buckingham Palace on festive occasions. Emulating this Royal liberality, several members of the aristocracy contributed the wealth of their gold and silver plate; and the value of the plate and ornaments is stated at two millions sterling. The supper-room, of which we give an Engraving, presented a scene of almost regal magnificence. Dancing was continued until one o'clock, when the heavy curtains at the head of the room were drawn aside, and the Prince and Princess of Wales, the Duke and Duchess and Princess Mary of Cambridge, followed by the most illustrious and distinguished guests, passed down the ballroom to the apartment where the supper was laid out. The room had been decorated by Mr. Stone entirely with military trophies. Four great stars, formed of weapons, occupied each side of the room, each star requiring the martial equipments of almost an entire regiment to complete it. Some were of immense weight, all were of great size and beauty, and those towards the centre of the room were encircled with wreaths formed of sabre blades, which had a beautiful effect. Between these trophies, which glittered from a thousand different points, were noble groups of flags, with men in armour at the bases; while at the head of the room, in the alcove where Foley's great statue of Caractacus stood last year, was a fine ornamental, military trophy, consisting of a group of figures in full suits of tilting armour, with vizor down lance in hand. The centre knights supported shields bearing the Prince's plume and motto, and the cross of the Dannebrog. Behind them were grouped a superb collection of ancient weapons—a perfect thicket of bristling points and blades, battleaxes, brown bills, two-handed swords, halberds, partisans, with helmets, gauntlets, shields, greaves, and breastplates, mixed up with spears and wall-pieces that had done duty from the wars of the Roses to the time of the Ironsides of Cromwell. Behind all was a star, composed of nearly a thousand ramrods, its centre formed of a small glass device representing the crosses of St. George and Andrew, with the badge of the brigade with its motto, "Tria juncta in uno." This magnificent trophy was raised about 10 ft. from the floor, and its base of scarlet cloth was enriched with a magnificent collection of gold plate lent by the Dukes of Cambridge, Wellington, and Buccleuch; the Marquises of Exeter, Salisbury, and Londonderry; the Earl of Derby; and, indeed, most of the chief nobility famous for the rarity and value of their collections of plate. The centre piece of the buffet was the celebrated Flaxman Waterloo Shield—the largest and probably the finest work of art in gold in Europe—the first time that it had ever been lent by the Duke of Wellington. On the table itself was a perfect monument in silver, belonging to the Duke of Buccleuch; while on every side were massive piles of silver-gilt cups, salvers, and candelabra. After supper the dance was resumed with renewed spirit, and kept up with vivacity for several hours.

ROYAL THAMES YACHT CLUB SCHOONER MATCH.

THE schooner match in this club, a match which, on account of the size of the vessels engaged the long and adventurous course, and as closing the Thames season, always excites much attention, took place on the 27th ult. On this occasion there was an unusually large assembly on board the club steamer, in order to welcome the return of the Commodore, Lord Alfred Paget, whose reappearance at his wonted post was acknowledged by the loudest and heartiest cheers which some 400 members and friends could produce. The club this year offered two prizes, one value £100, for schooners above 100 tons; another, value £50, for schooners not above 100 tons. The matches to be sailed separately, and no time allowed. Course, from Rosherville round the Mouse Light and back. The following vessels entered:—

Above 100 Tons.

Yacht.	Tons.	Owner.
1. Galatea	143	T. Broadwood.
2. Gloriana	134	A. O. Wilkinson.
3. Albertine	155	Lord Londesborough.
4. Albatross	107	T. Brassey.

Under 100 Tons.

Yacht.	Tons.	Owner.
Clytie	64	Capt. F. S. Clarkson.
Fleur-de-Lys	77	W. H. Birch.
Intrigue	83	F. K. Dumas.

At the time of the start the weather looked gloomy and threatening, and a strong W.S.W. wind was blowing. The vessels were moored in two lines, the small vessels lowest, and the first gun for them was fired at 12.2, the second gun at 12.7. The Clytie, being out in the tide, was first to swing, and so got up her mainsail first. Intrigue was rather behindhand; we believe that her spring parted; however, she was first with her gaff topsail.

The first gun for the first-class yachts was fired at 12.7, the second at 12.12, and the sails of these fine vessels began to rise like a cloud. Of course, with a strong west wind, all had to get their heads round, and then cant, each relying on her neighbour performing the same operation, and getting out of the way. The Albatross, however, made no move, so that she was right in the way of the Albertine, and a terrible collision was with difficulty avoided. The Albertine was obliged to shift her helm and sail up the river, and as soon as she got clear, before she could round into her proper course, she was very nearly ashore on the dangerous point opposite Northfleet. The arrangements for hoisting sail on board the Albertine were disarranged by this, and she was all adrift, and the crew so confused and puzzled that she was not got into proper trim until they were in the Lower Hope. Meantime, the Galatea and Gloriana were off, Galatea at once taking the lead. She set an enormous balloon jib, and began rapidly to gain, going through the water at a tremendous pace, every stitch drawing through most of the reaches. They ran through the Lower Hope, sails wing and wing, and here Albertine began to prove that she had the speed of her competitors. Still Galatea kept fairly ahead, until off the Chapman the big ballooner proved too much for the jib-boom, which broke short off. The stump or a spare jib-boom was set with great rapidity, and a jib and outer jib hoisted, but of course the delay was serious. There was nothing remarkable except the pace until they rounded the Mouse, as follows:—

	H. M. S.		H. M. S.		H. M. S.
Fleur-de-Lys	2 33 15	Intrigue	2 39 30	Clytie	2 44 20
Galatea	2 34 5	Albertine	2 40 40	Gloriana	2 41 50

There was now a dead beat back against wind, and at first against tide, and just at this time the wind was very strong, but being with tide there was no sea. Intrigue began to gain steadily, and, after a hard fight, passed Fleur-de-Lys off Southend. The breeze held on strong and steady, and the leading vessels increased their lead till they passed the winning buoy off Rosherville:—

	H. M. S.		H. M. S.		H. M. S.
Intrigue	7 17 30	Fleur-de-Lys	7 21 15	Clytie	7 29 0

Before the Chapman Head, Albertine had fairly passed to windward of Galatea, and the race was over, barring those accidents of which this season has been so prolific. They passed the buoy at Rosherville:—

	H. M. S.		H. M. S.		H. M. S.
Albertine	7 7 0	Galatea	7 13 15	Gloriana	7 29 0

As soon as the Intrigue had come alongside, Lord Alfred Paget presented the prizes, the prize in the large class being, of course, given to Lord Londesborough; that in the smaller class to Mr. Dumas. The success of Lord Londesborough afforded general satisfaction.

Mr. Alfred Gatley, whose colossal bassi-relievi of "The Host of Pharaoh in the Red Sea" and "The Song of Moses" formed such prominent features amidst the sculpture of the late International Exhibition, died recently in Rome of dysentery.

The *Northern Ensign* has received advices from the Rockall cod-fishing up to Saturday week, by the fishing-smack Mandant, Captain Ross, who left the ground on that day. He reports the fishing this season as a complete failure, he having only caught 180 cod during six days of splendid fishing weather. He left a number of vessels, including two Dutch busses, at Rockall, which had done no better at the fishing than himself, and with no prospect of improvement. The accounts from the Faroe Isles continue fair. A number of the French and Dutch vessels had sailed for home, with splendid cargoes of fine fish.

LITERATURE.

MARKS AND MONOGRAMS ON POTTERY AND PORCELAIN. By Mr. W. CHAFFERS, F.S.A. Davy.

This work goes far to supply a want felt by a large class. Within a very few years a more enlightened view of the value of that form of "applied art" found in ceramic productions has spread with surprising rapidity. Collectors have sprung up on all hands, and they buy at enormous prices not one or two, but every kind of pottery and porcelain. The prices of some fictile wares have increased fifty and a hundred fold. To meet the market these fanciful prices have created, a number of spurious articles are offered for sale. The genuine productions are, however, for the most part, distinguishable by the makers' marks and monograms, which are nearly always affixed, and these are seldom imitated—at all events successfully. The value to collectors of a full and accurate list of such marks is therefore at once apparent. It renders the same service to the ceramic art that the collectors of paintings and prints have derived from the lists of painters' and engravers' marks and monograms. Mr. Chaffers does not claim that his list is complete—on the contrary, he asks for further aid from collectors—yet it includes a vast number of examples of the signatures to the productions of all ages and countries, and it is the result of many years' attention to the subject under most favourable circumstances. The book contains, including the representations of the various wares, nearly a thousand wood engravings. The work is, besides, a descriptive guide to the various kinds of pottery and porcelain. The introductions to each section contain much well-digested information, particularly those relating to Roman pottery and our own mediæval wares; also the productions of France, Italy, Holland, especially Delft and recent English manufactures. The section on the famous French faience, known as "Henri II. ware," the rarest and most valuable, if not also the most beautiful, form of the potter's art, contains a peculiarly interesting announcement. It appears highly probable that a M. Fillon, of Poictiers, has just solved the mystery which has hitherto enveloped the origin of this pottery. This gentleman adduces the strongest evidence that this faience was actually fabricated at Oiron, near Thouars (Deux Sèvres), with clay from the immediate neighbourhood. "Two artists assisted in the work—a potter, named François Charpentier, and Jean Bernard, librarian and secretary of Hélène de Hangest-Genlis, widow of Artus Gouffier, a superior woman and a cultivator of the arts. After the decease of this lady, in 1537, they both entered the service of Claude Gouffier, her son, Grand Ecuyer de France, who had inherited the tastes of his mother, and who, moreover, collected a vast number of works of art. The librarian had, whilst in the service of Hélène de Hangest, furnished designs for the ornamental bindings of books and frontispieces, specimens of which are annexed to M. Fillon's pamphlet copied from the etchings of Octave de Rochebrune. It has been noticed by the Comte de Ris, in the *Gazette des Beaux Arts* (January, 1860), that a great resemblance exists between the interlaced ornaments of the Henri II. ware and the bookbindings of Grolier and Maioli. Mr. Fillon (by aid of the monograms, ciphers, and arms which occur on this ware) has chronologically arranged them from the published drawings, and comes to the conclusion that the earliest pieces were executed under the direction of Hélène de Hangest herself in the latter part of the reign of Francis I.; afterwards by her son, Claude Gouffier, and other hands, down to the accession of Charles IX. The arming of the Protestants put an end to a fabrication which could no longer maintain itself; for this reason—that, its only object being to supply the *dressoirs* and furnish the chapels of one family, their relations and personal friends, and not for commercial purposes, it followed the fortune of its patrons in a country menaced like Poictou with the horrors of a religious war."

THE FINE ARTS QUARTERLY REVIEW. Chapman and Hall.

The first number of this review, with a body of able contributors, and in all the appropriate *luxe* of toned paper, wide margins, and old-fashioned typography, has just made its appearance. The editor, Mr. Woodward, one of the Queen's librarians, and keeper of the prints and drawings at Windsor Castle, announces that his primary inducement to establish this review was the need he had long felt of a medium of *intercommunication* for collectors, connoisseurs, and others interested in the art-wealth amassed in this country. Consistently with the endeavour to supply this desideratum, the first number contains articles on the Raphael Collection of the late Prince Consort, the Loan Museum, the Royal Collection, the Italian Collection, South Kensington, the Tenison Psalter, extracts from State Papers relating to the Arundel and Royal Collections, and a catalogue of the engravings of Cornelius Visscher. Several other catalogues of inedited works are promised. Closely connected with this sphere of usefulness is the intended historical, archæological, and contemporary record of art, exemplified in the present number by an instalment of a "History of the Royal Academy" and a "Summary of Art-News," both of which are carefully written; but the latter decidedly follows in its selections and few criticisms the dicta of a journal notoriously sectarian. The *Review* thus takes its stand principally on ground only very partially occupied by Dr. Waagen, Mr. Smith, Mrs. Jameson, the authorities at South Kensington, &c. If the historical and technical so greatly preponderate in future numbers we fear it may limit the circulation and influence at which a periodical bearing the title of a quarterly review may be presumed to aim. Two or three of the papers treat, however, of some of those art questions of the day which, without the profitless "discussion" deprecated by the editor, one would expect to find handled in a publication of this description. One of the most readable of these, though somewhat carelessly written, is Mr. Tom Taylor's article on "English Painting in 1862," reviewing the leading characteristics of British as compared with Continental art. It might be urged that the writer has done, on many occasions, as much as in him lay to glorify *the bourgeois* and dealer's art in England, of the prevalence of which he justly complains, but we see that, regardless of consistency, he here claims for art in its historical, religious, and poetical developments, great national and educational influence. The reasons assigned for the comparative dearth of all these forms of art in this country are, however, superficial. It is not the result almost entirely of the want of State patronage, though this of course is an essential condition, because such patronage has often failed here and elsewhere. But it is principally the domestic utilitarian character of the English people and their institutions, and likewise the abstract nature of the Protestant religion. The very imperfect training supplied by our Royal Academy is properly instanced as a minor cause; and we would name in addition the absence of that cumulative technical mastery naturally acquired by the Continental system of transmission from master to pupil. Lastly might be mentioned the evidences of the want of special qualification, and a large and liberal view of art in so many of our critic class, and the inevitable substitution of accidental impressions, prejudice, and partiality for actual knowledge of painting as a technical art and consistent principles of taste.

MEDICAL BOOKS.

THE NATURE AND TREATMENT OF GOUT AND RHEUMATIC GOUT. By ALFRED BARING GARROD, M.D., F.R.S. Second Edition. London: Walton and Maberly.

The medical profession, and, indirectly, the public at large, are much indebted to Dr. Garrod for his very successful researches upon the subject of gout, which are embodied in the able and compendious work which is now before us. The first chapter of this book contains a résumé of the knowledge of the ancient writers upon the subject, and the classifications of the more modern writers; and it concludes with the author's own division of gout into the regular and irregular varieties, in the latter of which the disease may be manifested either in severe functional disorder of any organ, or in the development of inflammation in parts or tissues other than those connected with the joints. The attack and progress of acute and chronic gout, which form the subjects of the second and third chapters, have been well described by previous authors, but perhaps by none more graphically than by Sydenham, from whose works Dr. Garrod gives quotations sufficiently appropriate. Our author fortifies his statement that acute gout at its first invasion seldom attacks any other part than the ball of the great toe, by a list of 516 cases drawn up by Sir C. Scudamore, in which one or other of the great toes alone were affected in 341 instances, and the great toe with some other part in 373 cases. And he finds from his personal observations of cases in hospital practice, extending over a period of more than twelve years, that in not more than 5 per cent were other joints implicated, to the exclusion of the great toe. While treating of the subject of chronic gout, the author has rendered familiar to the eye of the reader, by several good drawings, the deformities arising from the deposition of chalk stones in and around the smaller joints and in the helix of the ear, as well as the appearances presented under the microscope of the urate of soda, of which they are specially composed. Not the least interesting part of this work is the consideration of the condition of the blood in gout. Dr. Garrod first published his views on this subject in the *Medico-Chirurgical Transactions* in the year 1848. He then stated that he had detected uric acid not only in the blood of persons affected with gout but also in those not so affected. In the former, at least, it is found to be in the form of urate of soda; and from 1000 grains of the serum of blood he extracted in one case as much as 0.175 grains of uric acid, which he considers was probably far less than the amount actually contained; whilst in the latter only the minutest traces of uric acid can be detected. Dr. Garrod has been at much pains to ascertain the condition of the urine of persons suffering from gout; and, amongst other alterations, he finds that there is a "deficiency of uric acid in gouty urine, and that the defective elimination generally bears a close relation to the inveterate character of the malady." The portion of this work which treats of the morbid anatomy and pathology of gout is exhaustive of the subject and well illustrated with plates, some of which are coloured. As respects the medicinal treatment of this disease in its acute stage Dr. Garrod says with truth that "those who have had many opportunities of witnessing the progress of gout will not, I believe, be inclined to agree with Cullen's aphorism—'the common practice of committing the person to patience and flannel alone is established on the best foundation.'" He is of opinion that the most successful treatment in this stage is by some alkaline saline combined with a moderate dose of colchicum. Mention should also be made of the introduction by Dr. Garrod of lithia as a remedy into practice, which is now extensively used. Dr. Garrod's book, which, by the way, has been translated into German, and of which we understand a French edition will shortly appear, will be perused with satisfaction—although brought out as a handbook for medical men—by all intelligent readers.

THE WATERING-PLACES OF ENGLAND. By EDWIN LEE, M.D. Fourth Edition. John Churchill.

THE PRINCIPAL BATHS OF GERMANY, FRANCE, AND SWITZERLAND. By EDWIN LEE, M.D. Fourth Edition. J. Churchill and Sons.

It must be a subject of congratulation to such persons as are in the habit of frequenting the English and Continental watering-places to be able to refer to the testimony of an impartial witness, who, from his personal observation and experience of the effects of the various mineral waters in disease, is eminently qualified to give instruction in these matters. Such is given by Dr. Lee in his two books, entitled "Watering-places of England" and "The Baths of Germany." It is a fact well known to all that a large proportion of our countrymen, in seeking relief from chronic disorders by means of mineral waters, are willing to undergo the fatigues of a long journey to some one or other of the Continental watering-places rather than resort to the mineral springs of their own country. This may be partially accounted for by the greater variety of mineral ingredients which they find in the Continental springs; but, in addition to this, as Dr. Lee truly observes, "The Continental watering-places offer more resources and *agrément* both to valetudinarians and pleasure-seekers, being often situated amidst beautiful scenery, having well-lighted rooms for evening reunion and or walking in wet weather." The expenses, too, of living and of public amusements in the Continental watering-places are considerably less than in England; although it is probable that year by year they become more equalised in this respect. In "The Watering-places of England" Dr. Lee commences with a glowing description of the city of Bath, one of the most ancient resorts of the sick in search of recovery through the agency of mineral waters, and possessing the only hot mineral spring in England. The temperature of the Bath mineral waters is high, varying from 104 deg. Fahrenheit to 120 deg. In this respect they, of all the English mineral springs, approximate the most to those of Teplitz. The amount of saline ingredients in both is also somewhat alike. The Teplitz water, however, contains a certain quantity of carbonate of soda, while in the Bath water the soda is in the form of a sulphate. They are, nevertheless, both "efficacious in analogous cases;" the class of patients which are sent to such springs being those who are afflicted with gout, rheumatism, and stomach disorders, attended by acidity and want of tone. The waters of Vichy, Ems, Wildbad, and Buxton may be classified with those of Bath and Teplitz, inasmuch as their effect in the cure of disease depends more upon their thermal properties than upon the agency of the mineral salts which they hold in solution. More energetic in their effects than any of these are the waters of Wiesbaden, the temperature of which, from the Kockbrunnen spring, rises as high as 158 deg. Fahrenheit. They also contain as much as 63 grains of fixed substances in a pint of the water, of which 53·499 are composed of muriate of soda. These waters must, therefore, be taken with caution, more especially by such persons as are subject to active congestion of the internal organs. Dr. Lee's books abound with useful information for those who intend visiting any of the mineral watering-places; and a graphic description of the town and the places of interest in its neighbourhood precedes the more important account of the nature of the mineral springs which are there, and the various maladies for which they are suitable. The second part of the book, entitled "The Watering-places of England," gives a good account of the principal winter places of resort on our coasts, including Brighton, Hastings, Sandgate, the Isle of Wight, &c., and is a very fit appendage to the first part of the work upon the places possessing mineral waters. We feel thankful to Dr. Lee for having, with so much success, devoted his time and energies to a subject possessing such considerable interest for the public.

ON DISEASES OF THE CHEST. By HENRY WILLIAM FULLER, M.D., &c. Pp. 703.

In this work the author has presented the profession of medicine with a very complete summary of all that is worth knowing of the subject on which it treats, not merely at second hand, but as the result also of his own independent labour and original observation. We should not omit to mention here that the manner of putting forth his teaching possesses features entirely novel, each important topic or section being placed before the reader in well-arranged tables.

Our readers, however, not being exclusively medical, we shall limit our remarks to certain portions of Dr. Fuller's book which cannot, we are sure, fail to interest the non-professional public. The space to which we are necessarily restricted will prevent our dwelling upon al that has attracted our own attention. We select as an illustration the chapter on "pulmonary consumption," which, by-the-way, we opine, would, in the hands of some authors more alive to "rapid returns" than Dr. Fuller seems to be, have made its appearance as a separate book—and a good and successful book, we doubt not, it would have made.

Dr. Fuller points out that consumption is especially a constitutional malady, and not, as has too often been erroneously assumed, a disease of the lungs alone, its essential element, technically known as "tubercle," being found in all parts of the body, although it affects the lungs by preference. Of the hereditary nature of consumption there can be no doubt; but, on the question of the possibility of its communication by infection, the public need such clear and correct views as are conveyed in the following extract:—

A wife hitherto healthy, and apparently free from phthisical pains, nurses her consumptive husband, and falls a victim to the same form of pulmonary disease. A sister tends her gradually failing phthisical brother, and soon afterwards shows symptoms of decline. The sequence is remarkable, and as it naturally places the two facts before us in the relation of cause and effect, it is apt to excite unnecessary apprehension, for there is really no ground for supposing that they hold that relationship to one another. The sister, probably, inherited the tendency in common with her brother; and the wife, if free from an inherited predisposition, was not unlikely to become consumptive, worn out by her weary, anxious watching, sleepless nights, and long exposure to the confined atmosphere and other depressing influences of the sick-room—circumstances, beyond all others, powerful in fostering or exciting a tendency to phthisis. The marvel rather is that, notwithstanding the strain of long-continued anxiety and the depression inseparable from the protracted

Digitized by Google

nursing of a dearly-loved relative, consumption should not be developed in the survivor more frequently than observation has proved it to be.

There exists, moreover, another prevalent and still more mischievous error as to another cause of consumption, which is exposed by Dr. Fuller :—

"Nothing is more common," observes the author, "than to hear consumption attributed to the effect of wet and cold, the inclemency of the season, or the variableness of the climate in which the person is resident; and nothing, unhappily, is more consistent than the practice which is based on this supposition. Encased in warm clothes, and shut up in heated rooms from which every breath of fresh air is carefully excluded, the unfortunate victim to this prevalent superstition becomes rapidly enervated, and falls an easy prey to this formidable disorder. But careful observation, corroborated by statistical records, proves incontestably that the pure air of heaven, which God has provided for us to breathe, and the variations of temperature to which, in His all-wise providence. He has seen fit to subject us, are not so noxious or productive of ill-health as man in his ignorance has oftentimes asserted.

Thus clearing off the mists of this cloudland of ignorance and error, Dr. Fuller sees clearly how to direct his patient to the climate best adapted for the renovation of his failing powers and the arrest of the tubercular disease. The first involves the question of prevention, the second of cure.

The first and most effectual means of prevention has been held to be a residence in a warm climate.

Now, here (says Dr. Fuller) I find myself at issue with the opinions of many excellent and learned physicians, and no less so with popular prejudice. From our cradle to our grave we are taught to regard cold as an unmitigated evil; and as warmth is intimately mixed up in our minds with the notion of comfort, and that again with everything which is conducive to our bodily well-doing, the recommendation to seek a warm and more genial climate is quite in keeping with our inbred feelings, and is regarded as consistent with sound sense and the exercise of common prudence.

Nothing, however, is further from this very desirable end. Cold, with due protection of the surface of the body, invigorates the system and arrests that morbid formation on which consumption depends. The most remarkable recoveries have followed removal to a cold climate—e.g., Canada and other northern countries, while the disease itself is comparatively rare in St. Petersburg and Moscow, in the northern districts of America, Norway, Sweden, Lapland, &c. Dr. Fuller gives abundant evidence in support of his views, showing the superiority of a cold over a warm climate for the victims of phthisis in certain stages of the disease. However startling such propositions may seem, because at variance with commonly preconceived notions and prejudices, they have, nevertheless, gained ground in the medical profession, and are gradually assuming the form of an accepted doctrine.

We must here stay our pen, although we could point out much more that would interest in the various chapters on the healthy action and on the diseases of the heart. We cannot conclude without expressing our conviction that to the student of medicine this work must prove invaluable, to the medical practitioner most useful, and to the general reader interesting and instructive.

THE MAGAZINES.

Of the magazines—which are unusually dull this month—*Fraser's* is undeniably the best. "Late Laurels" is not attractive reading, but it is followed by a very admirable paper entitled "A Chapter showing how Lord P—— became our Rector," which will recall to those acquainted with Scotch life a few years back a very famous wit *bon vivant*, and compatriot of Lockhart and Wilson, whose memory deserves to be more securely embalmed than in the fugitive pages of a magazine. Another critic applies the scalpel to Mr. Kinglake's "Invasion of the Crimea," and with telling effect. No effect, however, is likely to be produced upon the hon. member for Bridgewater, who, with an obstinacy worthy of Macaulay's worst mood, appends to the advertisement of the new edition of his book a statement to the effect that "some fresh notes will be found in it, including documentary proofs of controverted statements; but not a word of the text has been withdrawn, and not a word has been added to it." The conclusions drawn in the essay on "Our Modern Youth" would be very disheartening if we were obliged to admit the author's premises. But while there can be no denying the fact which the writer deplores that too many of our youth of both sexes are losing that moral sensibility and generous enthusiasm which should belong to their age, we still believe their cases, numerous as they are, to be exceptions to the general rule.

In the *Cornhill* "Romola" draws statelily to its end, and "Crosbie" suffers so fearfully that Mr. Trollope must be on his guard lest the very excess of punishment inflicted on the wretched Government clerk should excite a reaction of sympathy in his favour. The quiet, literal truthfulness of Mr. Trollope's story, "The Small House of Allington," becomes more and more remarkable each month. There is no plot in it worth mentioning; we know exactly what is going to happen to each character, and how; and yet so exquisite is the art of the narrator that we await his utterances with impatience. The padding of the *Cornhill* this month is more than ordinarily hard and uninteresting.

In *Macmillan* we have a very fair sketchy article—it would have been better but for the writer's morbid endeavour to be amusing—upon a subject of which little is really known in England—Indian life. Probably, of the social condition of no other of our colonial possessions are we so ignorant as we are of our great Eastern Empire. For some reason or other old Indians are generally reticent upon the subject; but it is a significant fact that the desire to leave the country is general, and that it is adopted as a settled home by none, save by those to whom the possession of authority and the habit of command have become necessities of existence. Signor Saffi's paper upon "Southern Italy, its Conditions and Prospects," is very valuable. He attributes, and with reason, the evils to which Naples is still a prey to the amount of indolence and corruption which the many years of bad government could not fail to engender. Of the agricultural population, who labour hard for insufficient pay, Signor Saffi speaks with respect, and, while he admits frankly the misery and degradation existing among them, he lays both at the door of Bourbonic despotism. Of this he adduces ample proofs. Among them may be cited the fact that the provinces of the mainland had only five high roads to connect them with the capital, while of these some were so imperfect that travellers had to make a portion of the journey on horseback, and others had no bridges. The existence of brigandage is attributed by Signor Saffi to the intrigues of some of the feudal families who flourished under the *ancien régime*, to the foolish disbandment of the old Neapolitan army, and to the gaol birds who escaped during the progress of the revolution. At the same time he admits that the peasants have not a sufficient interest in the maintenance of order to side actively against the brigands. A bold and decided article upon the question at issue between Dr. Colenso and Convocation completes an interesting number, which will, however, scarcely be popular with the majority of Mr. Mudie's subscribers.

Miss Cobbe's article in the *Victoria Magazine* is a peg on which she has hung a number of very good, if not new, stories. We have seen the following somewhere, but it will bear repeating:—"An Irish Judge sentenced a man to be flogged at the cart's tail from the gaol to a certain turnpike. The wretched man answered derisively, 'Thank you, my Lord; you've done your worst.' '*And back again*,' added the Judge, with imperturbable composure." As usual, Miss Cobbe underrates Scotch wit, and, in endeavouring to illustrate it, simply proves her ignorance of the language and the people. Mr. Tom Taylor completes his task of bringing Lichtenberg's opinion of the actors of 1775 before his readers: and Mr. Senior continues his very interesting "Journal kept in Egypt in 1855 and 1856." Altogether, it is evident that the *Victoria Magazine* relies for appreciation upon something better than sensation stories and startling theories, and for this, if other reasons were wanting, we wish it every success.

London Society is, as usual, light, amusing, and frothy. The article on Dickens's dogs is one of the best. Familiar as the world is with the works of the author of "Pickwick," many readers will feel surprised to see how many types of dogs Mr. Dickens has depicted, ranging from Mr. Sykes's Bull's-eye, raised and reared in the neighbourhood of Field-lane, Holborn, to poor Dora Copperfield's sleek, curly, pampered Jip. There is an article upon a subject which crops up annually under the July sun—that masterly pedestrian feat of going to Milan over the Oberland in a month for £16. Well, it is possible, from sixteen to twenty, but not advisable. Another fallacy which needs correcting is that of making the tour with as little luggage as possible, and travelling with no more impediments than a *robe de nuit* and a toothbrush. It is a serious mistake. We remember coming across such a pedestrian once in a heavy storm at Ragatz. We lent him some spare things while his own single suit was being dried in the village oven. He begged hard to buy them of us, but we were obliged to decline; and we watched him at eventide walk away steaming.

Good Words seems to have been more affected by the rebukes of the *Record* than its directors will allow, and to be growing decorously dull. "In the Dark" is a poor poem on a good subject, which is redeemed by the last stanza. Mr. Ludlow contributes a very readable paper on religious sisterhoods. "A Word of Remonstrance with some Novelists," by a Novelist," was very much needed, and will, we hope, be attended to; but, after all, the remedy for the evil which the writer deplores is to be found in the reading public, who have during the past season harassed Mr. Mudie's assistants for copies of "Aurora Floyd" and "Lady Audley's Secret," and left "David Elginbrod" unheeded on his shelves.

MUSIC.

Gounod's new opera, "Faust," has been as successful at the ROYAL ITALIAN OPERA as it had previously been at Her Majesty's Theatre. It was performed for the first time at Covent Garden on Thursday, last week, and the success of the first night has been fully confirmed by subsequent repetitions. Of the merits of this work, dramatic and musical, we have very little to say in addition to what has already been said by ourselves and our contemporaries. We think it owes its remarkable success as much to the excellence of the drama as to the attractions of the music. Goethe's grand and beautiful tragedy has been adapted to the musical stage with much felicity. The plot is clear and coherent, the incidents striking and pathetic, the catastrophe sublime. As to the music, it is certainly the work of a man of genius, though it is deformed by crudities which might have militated against the success of the piece had its dramatic interest been less powerful. Gounod is a musician of the new school. Though not a German, he belongs nevertheless to the "Young Germany" of music, and may be classed in the same category with Berlioz, Liszt, and (above all) Wagner, whom in many respects he strongly resembles. Like them, he sets at nought the time-honoured laws of musical art, and indulges in (so-called) harmonic and modulations which would have driven Mozart or Cimarosa crazy, and are no small trial to the nerves even at the present day. His melody, too, shows little attention to rhythm, and is often more in the style of measured recitative than of air—which is exactly the case with the music of Wagner. But still, we repeat, Gounod's music is the music of a man of genius; it has imagination, individuality, expression, and picturesque effect, and, like all music of a new and original character, it improves upon repetition. Its asperities are softened down, and its beauties are more prominently conspicuous. So that, taking all things together, we are not surprised at its success. The performance at Covent Garden is magnificent. The characters are strongly cast, Mdme. Miolan-Carvalho, the original Margaret at the Théâtre Lyrique, has assumed the part here. The music, written expressly for it, is calculated for her powers, and she sings it perfectly. In aspect and manner she realises the fine creation of the great German poet; and her acting is gentle and touching, though she fails to rise to the passion and grandeur of the concluding scenes. Tamberlik's Faust is a powerful performance, though he lacks the sweetness of voice which enables Giuglini to throw so much seductive tenderness into the love scenes with Margaret. Faure's Mephistophiles is a most artistic performance. He realises the cold, sneering character of the fiend, and he executes the music magnificently. The part of Valentine is well sustained by Graziani, and that of Siebel by Mdme. Didiée. As to the *mise en scène*, the richness and splendour of the costumes and decorations, the beauty of the scenery, and the brilliancy of the spectacle—all these things are such as might be expected from the management of this magnificent theatre.

The run of "Faust" having now slackened at HER MAJESTY'S THEATRE, its representations now alternate with those of other operas. On Saturday last "Norma" was performed, with Titiens in the character of the heroine, Mdlle. Artôt in that of Adalgisa, and Signor Geremia Bettini in that of Pollione. The appearance of Artôt as Adalgisa gave a new and interesting feature to the performance. Adalgisa is deemed a secondary part, and many prima donnas do not choose to perform it. It is, nevertheless, a most beautiful part, worthy of any actress or singer, however high her position; and, therefore, when such an artist as Mdlle. Artôt has the good sense to appear in it, the effect is as delightful as it is rare. The audience were enchanted, and lavished their applause on both the performers. Signor Bettini acquitted himself respectably, but did not achieve a brilliant success.

The concert season is almost over. Nearly the last, but by no means the least, of the benefit concerts was that of Mr. Brinley Richards, at the Hanover-square Rooms, on Wednesday evening last week. Mr. Richards holds a high position in his profession, being much esteemed as a composer, a pianist, and instructor, so that his concert was attended by an overflowing assemblage of fashionable people. There was an elegant selection of vocal and instrumental music, in which Mr. Richards's own compositions very properly held a prominent place. One of the newest of them, the song "Daughter of Denmark," was evidently the principal feature of the evening. Exquisitely sung by Mdlle Parepa, it was applauded and encored with the utmost enthusiasm. Mr. Richards's new national song, "God bless the Prince of Wales," a composition which has gained unbounded popularity, was sung by Mr. Sims Reeves and the National Choral Union with the effect which it never fails to produce. A number of favourite vocal and instrumental pieces, performed by Miss Edith Wynne, Mdlle. Parepa, Mr. Lewis Thomas, M. Paque, Mr. Balsir-Chatterton, and Mr. John Thomas, completed the programme of this excellent and interesting concert.

THE THEATRES.

STRAND.—A new drama, possessing more weight than generally pertains to pieces produced at this theatre, has been given to the stage by Mr. John Brougham, and entitled "While there's Life there's Hope." We do not exactly perceive the peculiar relation of the title to the plot, nor which of the characters is supposed to benefit by the comforting assurance contained in it. For the plot itself, it bears considerable resemblance to Mr. Arthur Sketchley's drama of "The Dark Cloud," some twelve months ago produced at the St. James's. But it has the advantage of introducing an actor new to the Strand Theatre who is likely to be of service to the establishment. We allude to Mr. Vollaire, late of the Surrey, who has been engaged to support the character of Adam Greenleaf, and who is of such a cheerful disposition that he is always laughing. He has recently married a young wife, Rose Greenleaf (Miss L. Thorne), with whom he is remarkably happy. Living in the country and enjoying a competence, his heart overflows with mirth. But some mortification is prepared for him by a hypocritical nephew, who seeks to estrange him from Rose by casting doubts on her fidelity. A gossiping dentist lends much unintentional assistance to his plan by the discovery of a letter written by Rose to a former lover, one Rupert Wolfe (Mr Parselle). Wolfe is in possession of many other letters, the records of her early affection, and seeks to derive profit from them, but is disappointed. Rose will not purchase them; but the nephew, by a ruse, seeks to turn them to account, and by exciting Rupert with brandy induces him to declare that Rose has been guilty. Greenleaf overhears this, and he laughs no more; he is penetrated with the deepest sorrow. But Wolfe has been cheated out of the profit of his evidence, and his mind changes. He even feels remorse, and, determining to undo the mischief he has occasioned, remonstrates with his seducer, and is again overheard by Greenleaf, who is thus made acquainted with the conspiracy and receives Rose again to his arms. An underplot relieves the serious business, consisting of two precocious young persons who are permitted to marry by their friends before they are properly prepared in mind and heart for the matrimonial state. The young husband is cleverly personated by Miss Ada Swanborough, and the bride by Miss Fanny Hughes. They quarrel as to his smoking in the drawing-room, but being well advised by a good-hearted widow (Miss Bufton), who acts as the good genius of the family, the lady submits in time to her husband, and thus wins his concession to her prejudices. The drama was well acted, and made an impression on the audience.

SURREY.—This theatre proceeds for the summer season under the management of Mr. Henry Loraine, who has strengthened his bill by a version of the romantic drama "Le Bossu," the same that has retained so strong a hold on the Lyceum audience under the title of "The Duke's Motto." The conductor has also transferred to this stage the pleasing little drama of "The Burgomaster's Daughter," with the fairy fountain, of which we have already given an account, as recently produced at the Marylebone.

Mr. and Mrs. Charles Kean sailed on Monday from Liverpool, in the Champion of the Seas, for Australia. They were accompanied by their niece, Miss Chapman, Mr. George Everett, and Miss Cathcart.

Mr. Samuel Roxby, for years proprietor and manager of the Sunderland, Shields, Durham, Stockton, and Scarborough theatres, died at the latter place yesterday week.

A petition of adjudication of bankruptcy has been presented against Mr. Dion Boucicault, formerly an actor at the Adelphi and Drury-lane theatres, and afterwards manager of the New Theatre Royal, Westminster, and the author of the well-known drama, "The Colleen Bawn." It is stated that the bankrupt, having made a large sum of money at the Adelphi, entered upon the occupation of the Westminster Theatre (late Astley's), and there expended about £11,000 upon decorations and improvements. A company was afterwards started for the purchase of the bankrupt's premises, and the bankrupt was to receive as much as £19,000 out of the proceeds. To the non-completion of that arrangement the bankrupt attributed his failure. The bankrupt's liabilities are stated, in round numbers, at £30,000; the assets are returned at £20,000, independently of a claim for £38,000 upon the New Theatre Company.

FETE FOR THE ROYAL HOSPITAL FOR INCURABLES.

A GRAND fête and fancy fair in aid of the funds of the Royal Hospital for Incurables was recently held in the International Exhibition building, under the patronage of the Duchess of Cambridge and Princess Mary. The eastern half of the nave was lined on each side with a row of counters gracefully draped with pink and white gauze in the form of a tent. The stalls (nearly forty in number) were held by Maria, Marchioness of Ailesbury; the Countess of Westmorland, the Countess of Shaftesbury, the Countess of Antrim, and a number of other ladies of rank. In the centre of the nave, between the two rows of stalls, were several scent-fountains, tended by aristocratic naiads; and at the western end of the building, Mr. F. C. Burnand, Mr. M. Morgan, Mr. T. Robertson, and a number of other gentlemen connected with literature and the arts, had established a burlesque theatre, a Richardson's show, and a circus. In the theatre were performed at intervals short burlesques, full of the most boisterous fun and lunatic puns. One of these pieces—a "subaqueous, ultramarine, aquario-domestic drama," entitled "The Port Admiral; or, the Mysterious Mariner and the Rightful Heir"—furnishes us with a subject for illustration at page 36. When the nave was at its fullest it was not hard to fancy that one of the five-shilling Saturdays of last year had come back. The dense throng of fashionables, the crowds streaming through the entrance at the eastern dome, Minton's majolica fountain playing perfumed water, Foster and Andrew's great organ striving, as of old, to put down the Coldstreams, and the flashing of the sun through the many-coloured window behind the great clock—all helped most wonderfully to keep up the illusion. The braying of Richardson's brass band and the shouts of the amateur showmen, however, soon put one in mind that the great show of last year was a thing of the past.

INAUGURATION OF A MEMORIAL STATUE TO THE LATE LORD HERBERT OF LEA.

THE commemoration statue to the memory of the late Lord Herbert was inaugurated on Monday week, at Salisbury. Immediately after the decease of this lamented statesman, his friends and neighbours in his native county of Wilts met to decide on the most appropriate mode of commemorating his good service in ameliorating the condition of the British soldier, when it was decided that a statue and a convalescent home should be erected at Salisbury. The task of producing the statue was confided to Baron Marochetti. It is 9 ft. in height, standing on a square pedestal of Penrhyn granite 10 ft. high. The base of the statue bears simply the inscription, "Sidney Herbert." The site chosen is in the market-place, in front of the Townhall or Council House. The occasion was made quite a fête day. All the shops were closed, flags were flying, bells ringing, and the town was crowded with visitors from the adjacent towns and villages. The 1st Wilts Administrative Battalion of Volunteers were drawn up on three sides of a square surrounding the statue, leaving an open space, which was guarded by a body of police. In front of the Council House a large covered gallery had been erected, which was filled with the élite of the county. The attendance in the market square was very numerous, there not being less than 10,000 persons present. Lord Palmerston had intended to be present, but in consequence of a severe attack of gout his Lordship could not attend. He was represented by Earl De Grey and Ripon, who occupies in the Cabinet the position held by Lord Herbert. Earl De Grey, after expressing to the Mayor, Corporation, and memorial committee Lord Palmerston's extreme regret that he could not be present, proceeded to a dais erected by the side of the statue. In an eloquent address he described Lord Herbert as a thorough English statesman, and a philanthropist in the best meaning of the word; not hasty, crotchety, nor rash, but cautious, practical, and calm, never resting in pursuit of the great objects he had in view, and devoting his life to the service of his Sovereign and his country until in that service he laid it down. When Earl De Grey had concluded, the covering was removed from the statue amid loud cheers. A déjeûner afterwards took place in the council-chamber, at which the Mayor presided.

Our Engraving is from a photograph by J. W. Miell, of Salisbury.

Lord Cranworth has been chosen Speaker of the House of Lords, in the event of the absence of the Lord Chancellor or the Lord Commissioner.

The well-known Roman banking firm of Torlonia is extinct. The Prince has withdrawn his name from business operations, and the only representatives of his once colossal house will in future be known to the commercial world as Messrs. Spada, Flamini, and Co.

Last Saturday the screw steam-ship Gibraltar, formerly the well-known Confederate privateer Sumter, left the Mersey for Nassau with a large and well-assorted cargo. Since her arrival in Liverpool the Sumter has undergone a complete overhaul, and her deck timbers have been materially strengthened. It is generally believed that the Gibraltar, upon her arrival at Nassau, will be further strengthened, and eventually resume her old occupation of looking after Federal merchantmen. We understand the Gibraltar took out the monster guns which caused her to be detained by the Customs authorities a few days ago.

Operations for the recovery of the treasure contained in the wreck of the Royal Charter are still carried on. Messrs. Gibbs, Bright, and Co. sold the pool some time ago to a firm in Anglesea for about £700. Whenever the weather permits divers descend to collect the mud at the bottom, and this, on being washed, is found to contain golddust and coin. Five pounds and upwards are thus recovered every week. Numerous persons visit the now celebrated village of Moelfra. Some of these are persons who were themselves saved from the wreck. One of these has lately been at much pains to cut and carry away a portion of the rock to which the heroic sailor Rogers had made fast the hawser that was the means of saving so many lives. In the Llanallgo churchyard, situated about a mile from the scene of the wreck, a monument has been erected of stone carried chiefly from the place where the vessel struck. On this column a late visitor had carved with his knife these words:—"Come from Australia to see this.—B. NEIL." On one side of the monument there is inscribed as follows:—"The Royal Charter steam-clipper, of 2719 tons burden, sailed from Melbourne Aug. 26, 1859, bound for Liverpool, having on board 324 passengers, besides a crew of 104." On the second side:—"This monument has been erected, by public subscriptions, to the memory of those who perished in the wreck of the Royal Charter, off Moelfra, on the coast of Anglesea, on Wednesday, the 26th of October, A.D. 1859." On the third side:—"There lie in this churchyard the remains of 140 of the sufferers, and 45 in the churchyard of Penrhosllugwy, all of whom were buried by the pious and charitable Incumbents, the Rev. S. Roose Hughes, and his brother, the Rev. H. Roose Hughes." On the fourth side are enumerated the various adjacent parishes where the remains of some of the other sufferers were washed ashore and interred.

THE FARM.

WHEN we have said that the weather is nearly everywhere most favourable for the crops, that the meadow clovers seem likely to turn out better than the meadow grasses, that a public testimonial has been set on foot to Mr. E. Holland, M.P., of Dumbleton, for his services to agriculture and the Agricultural College (at which the editors of the Devon and Hereford Herd Books, and other gentlemen well known in the agricultural world, have voluntarily offered to deliver lectures), that the farmers' hair is on end at the prospect of a decimalised system of weights and measures; and that the cock, like everything else, is entitled to a quiet Sunday in the country with his family—we have pretty well epitomised the fortnight's news. The stock for the Hamburg Show will be shipped about the 9th, but they are sent over for sale quite as much, if not more, than for show purposes, and their owners will be only too glad to get back without them in time for Worcester. We hear that Messrs. Weatherby, Barthropp, and Robert Smith have promised to judge, and that the secretary of the Agricultural Hall has been specially asked to go over and help the promotors of the maiden Dog Show in Germany. The Islington one produced about £1600 net to the shareholders.

The agricultural meetings so far have been well attended, and above the average. The Bath and West of England especially marked the strides which shorthorns are making in the close borough of the Devons; but still the show of the latter was, in the opinion of Mr. James Quartley, who was a judge, and not the man to shirk an unpleasant truth if it were needed, one of the very best he had seen. Sir J. Duckworth ineffectually objected to public judging, and denied it even the name, because he declared that he was fifty or sixty yards off the judges. Too great proximity to these functionaries has been the great complaint hitherto; but really, according to Sir John's argument, a cricket-match is not played in public because the spectators stand outside the flags. The careless way in which the catalogue was got up seems to have been the great blot of the Norfolk show, where the shorthorns, polls, and Southdowns were in good force. Sir Willoughby Jones, in a very practical speech at the dinner, said a good word for the blood-red dairies of the county, and for those who had through evil report and good report kept their faith with this stock, which prosper on very light herbage, are rare fill-pails, hornless, tractable and quiet, and never injure the trees and fences. It was thus that the Baronet summed up for them, and added that in offering his cup he had limited it to animals without either slugs or horns, "my object being to prevent our milk from being bred away by crossing with a Devon, or endeavouring to get a Devon back." He also announced a further limitation for next year, to prevent the cup being again won by an animal with a spot of white on it, as he is firmly persuaded that, "where you see a spot of white in our red Norfolk polls there is bad breeding somewhere, and a spot of white tells of stray shorthorn blood put in many years since, either to square the back or for something else." At the Essex meeting Sir John Barleycorn, who has played second and third parts at the Royal, was first in the blood-horse lists, with nothing but old Dr. Sangrado against him. Mr. Claydon won the two shorthorn bull prizes with his Marquis of Cornwallis and Marquis of Cornwallis 2nd, but was beaten for the champion one by Mr. Sworder's Duplicate; and Mr. M'Intosh had the rewards of his Kirkleavington allegiance in Lady Bates 3rd and Lady Oxford 5th, both by his American bull. In one class Mr. Claydon beat Sir Thomas Lennard, the great Southdown man of the district; but the Baronet had the open champion prize for the best ram of any pure breed with one said to have been bred at Babraham. At the dinner, the farmers complain that they were invited to express their opinions on the Bishop of Rochester *v.* Davis (clerk), and then snubbed for doing so. At Ipswich old Chester Emperor won first-class honours again. Mr. S. Wolton was supreme in Suffolks; and Sir E. Kerrison defeated the best shorthorn female (not Pride of Southwicke or Rosedale) that was sent from Branches Park. The pigs were pre-eminent, the blacks more especially so; but Mr. Rigden did not think highly of the Southdowns, save one, and rallied Mr. Dobito at the dinner on the new black-faced breed, "The Suffolk," with which he was most fortunate.

The recent Babraham sale was not, so to speak, a very dashing one, but The Beauty tribe, with The Lord Chancellor (400 gs.) at its head, pulled up the average well. This son of Usurer (decidedly the most characteristic bull we ever saw at Babraham) and Red Rose has gone to Mr. R. Sharp, of Courtlands, Sussex; and First Fruits, who lacks bull character, departs to Mr. Odam, of Bishop Stortford. It may be that the Birmingham mind has a native weakness on the subject of medals, but surely the pertinacious attempt to bid for and claim this bull "with his Battersea medal," which the executors very properly regarded as an heirloom, might have been spared. Old Frminstade, of Fawsley, from whom First Fruits is in direct descent through The Englishman and Sir Charles, ends her life in Saxony, and departs giving her six gallons per diem. Mildred Rose, from The Beauty, goes at 145 gs. to Cheshire, which is not often seduced into giving those prices; and Miss Burdett Coutts (91 gs.) to Mr. Barclay, in Fifeshire. The foreigners were busy, and Mr. Clark Irving (late of Sidney), whose laudable zeal for stock improvement in his native county has impelled him to offer 120 gs. in shorthorn prizes, and 20 gs. in Galloway prizes, at the Wigton Show next September, was either the winner or the second in some good bouts. The third prize cow at Battersea, Lady Elizabeth Yorke, only made 36 gs., so that the report of the Royal judges—"not a good one"—inconsistent as it might seem when Douglas's Maid of Athelstane and Ambler's Wood Rose were unnoticed, was not far from the mark. Early and continued fertility was the great feature of this herd. The calves were never very much to look at, as they seemed to get all their leg growth the first year, and to lack twist; but the way in which they let down and widened out in their second season was something marvellous, and a look over the cream of the yearling and two-year-old heifers in the smaller yard near the house was something to be remembered, especially when it was backed up with a short ride to the North Farm, when the troop of Royal shearlings were picked over for the second time before starting. The shorthorns have all gone: but the grand old Southdown blood of the five mysterious tribes will no doubt still continue to flourish, in the hands of the Webb family, about Babraham and West Wickham. Time has revealed the great secret at last that on some eight hundred acres the flocks and herds alone were worth some five-and-twenty thousand, and never was the triumph of blood more complete.

Mr. Sanday's Leicester shearlings, 60 rams and 100 ewes, will be sold on the 26th of August, by Mr. Strafford, and there ends the victorious Holmpierrepont flock. Mr. Preece leads off the "Shrop" sales of this year at Shrewsbury Fair on July 27 and 28, and follows up at Mr. Horley's on the 29th; while Mr. Lythall begins at the Lees Farm, near Stafford, on July 30, and has Mr. S. Byrd's shearlings second on his list. About forty shearlings and older Oxford Down rams of Mr. Charles Howard's, a flock which has taken so many first honours at Smithfield, and gained its maiden Royal prize last year, are announced for sale, as usual, by private contract.

The Act 6 and 7 Will. IV., c. 71, s. 42, enacts that lands in a district the tithes whereof shall have been commuted, and which shall afterwards be newly cultivated as hop-grounds, shall be charged with an additional rent charge; and it has just been held by the Court of Error, in "Trimmer (app.) v. Walsh (resp.)" (reversing the judgment of the majority of the Queen's Bench and confirming the judgment of Mr. Justice Wightman), that waste lands in a parish the tithes of which were commuted, but thereafter cultivated as hop-grounds, were not liable to such extra-ordinary rent charge.

A monument has just been erected in Carlisle Cathedral to the memory of the late William Blamire, Chief Commissioner of Tithes and Copyhold and Inclosure Commissioner. It records, *inter alia*, that during twenty-four years of official life he was "the willing adviser of the Government upon many political questions, especially those relating to agriculture." The Blamire family motto of "Faire sans dire" gave the impress to his whole life. He had learnt his experience in a hard school—among the borderers and the Cumberland "grey-coats," as, up to the period of his entering Parliament for the eastern division of his county, at forty-one, with a Cumbrian colleague in Sir James Graham, his life had been spent among "the brown fallows" and pastures, and in riding (sometimes all night) hundreds of miles per week from fair to fair. This tablet has been erected, and a Blamire agricultural prize founded, by public subscription.

INDOOR AMUSEMENTS.

DRAUGHTS, BACKGAMMON, DICE, DRAWING-ROOM CURLING, MERELLES, AND QUOITS.

DRAUGHTS, though despised by many persons, is a game full of interest, and, as a scientific recreation, though less pretentious than chess, it ranks very high. It has not the same stamp of antiquity as chess. Sir William Jones has traced the latter game back to some four thousand years, whereas we do not find that draughts was much practised in Europe until the middle of the sixteenth century. Some writers have held that draughts preceded chess, but apparently without sufficient evidence. In Angas's "Savage Life and Scenes" it is stated that a game much resembling draughts is played by the uncivilised tribes of the interior of New Zealand; the game is called by them "emu," and it seems to have originated with them, as it is scarcely possible that they derived it from any other people. In 1688 an elaborate treatise on draughts was published in Paris by a Monsieur Mallet, a well known professor of mathematics, and three-quarters of a century later Mr. William Payne, also a teacher of mathematics, published a celebrated work, entitled "Introduction to the Game of Draughts." In 1800 Joshua Sturges printed a guide to this game, which even at this lapse of time has never been surpassed; the work has been edited several times, but the additions to it are for the most part unimportant. In England draughts is universally played on the white squares, the board being placed with a black square in the right-hand corner; the reverse being the case at chess, a white square always occupying the right-hand corner. In Scotland, and as far as we know, this is the only exception, the game is played on the black squares. The colour of the squares, except as far as habit is concerned, makes no difference in the relative position of the pieces. The origin of backgammon is a vexed question; Palamedes, of Greece, is the reputed inventor of this game, decidedly one of the oldest known in our times, about 1224 years B.C. It is stated by some to have been invented in Wales during the period preceding the Conquest. The derivation even of the word is unsettled, some considering it to be from the Welsh "back," little, and "cammon," battle; others, from the Anglo-Saxon "bac," back, and "gamone," game—that is, a game where the player may be sent back. The latter derivation is supported by Bishop Kennett and Strutt. Tric-trac, a similar game, was formerly called "tick-tack," or "touch and take," because if you touch a man you must play him. Cotton, in "The Complete Gamester," has the following curious remarks on tric-trac:—"Some play this game with toots, bovereis, and flyers. Toots is when you fill up your table at home, for which is required small throws. Boveries is when you have a man in the eleventh point of your own table, and another in the same point of your adversary's directly answering. Flyers is when you bring a man round the tables before your adversary hath got over his first table, to the effecting of which there is rquired very high throwing on your side and very low throwing on his."

The early name of the backgammon board was tables, and we find that games with dice were divided into games within the tables—e.g., backgammon Irish (a very similar game), tric-trac and some minor games, one of which went by the suggestive appellation of "catch dolt." Of games without the tables may be mentioned "in and in," "hazard," and the like. Chaucer mentions "tables;" in his time it was played with three dice, and all the men commenced their action from the adversary's table (here we see the word "tables" preserved in the singular number). We also find "tables" mentioned in Rabelais, as a game played by Gargantua:—"Apres souper venaient en place les beaux Evangiles de bois, c'est-à-dire force tabliers." The fair wooden gospels are said to have been invented by certain monks in order to conceal their gaming propensities. The backgammon-boards were made, as we now see them, bound and lettered on the back to resemble volumes of books; and it was not thought too bold a device to insert the names of holy books. Should the quasi-pious monks be disturbed in their devotions at the gaming-table, they need only shut the volume before them, and restore it to the shelf till the intruder was gone. The odour of sanctity was not enough to prevent the disease that has been wittily described as "a paralytical distemper which, seizing the arm, the man cannot but choose shake his elbow." The invention of dice is ascribed to Palamedes, to whom we have already alluded. The game of "tall and tessers" among the Romans was played with dice. The use of dice is of very early date in this country, for we find in Stowe—"The Kings of Scotland, France, and Cyprus, being in England on a visit to Edward III., a great tournament was held in Smithfield, and afterwards the Mayor kept his Hall for all comers who were willing to play at dice and hazard. The Lady Margaret, his wife, kept her chamber to the same effect. Shortly afterwards they entertained the Princess of Wales, her son, Prince Richard, and their attendants, with a grand masquerade on horseback—the procession beginning at Newgate and ending at Kensington. Being arrived at the palace, one of the masques produced a pair of dice, and proposed to play with the Prince. The dice were so artfully contrived, that when the Prince threw he was sure to win; and, having thrown three times, his Royal Highness won a bowl, a cup, and a ring, all of gold; and, having given the Princess and each of the nobility attending, the like opportunity to win each a gold ring, they were highly pleased." Again, in Stowe's "Surrey" we read how "Sir Miles Partridge play'd at dice with King Henry VIII. for Jesus' bells (so called), which were the greatest in England, and hung in a tower of St. Paul's Church, and won them, whereby he brought them to ring in his pocket; but the ropes afterwards catched about his neck, for, in Edward VI.'s days, he was hanged for some criminal offence." An Act of George IV., passed 1828, regulating the license of makers and the sale of dice. There is a very amusing game lately invented, which is likely to become very popular—viz., "Drawing-room curling." The rink is made of strong plate glass, with a prepared ice surface. By a simple but hitherto unknown liquid preparation the inventor and constructor, Mr. Gavin Young, of Edinburgh, has been enabled to make the surface of the rink remarkably smooth, so smooth, indeed, that the curling stones, when propelled by an expert and practised curler, move along as gracefully as if the rink was really ice and not polished glass. The rink is twenty-one feet long by four broad, which is a size admirably suited for the amusement of private parties; but they can be increased to any size. The curling stones are made of finely-polished Aberdeen and Peterhead granite, between three and four pounds in weight, with silver handles. They are the exact models of the stones used by curlers. During the summer months, or even at Christmas, when through a succession of thaws no opportunity is afforded either for the graceful exercise of skating, or for the still more spirited and exciting game of curling, the new model curling rink will be found a delightful in-door amusement for persons of both sexes.

Another game, that of "merelles," ought to be here mentioned. It was formerly called in England "nine men's morris," and is one of some antiquity. The form of the board is the same as that used in the fourteenth century; and the rustics of that age, in lieu of a board, were wont to cut lines in the same form upon the ground, and make a small hole at every angle, using stones of different forms and colours to play the game with. Shakspeare refers to this, in his "Midsummer Night's Dream," when "proud Titania replies to jealous Oberon":—

> The nine men's morris is fill'd up with mud;
> And the quaint mazes in the wanton green,
> For lack of tread, are undistinguishable."

The game is played in the following manner. Two persons, having each nine men, or pieces, lay them down alternately, one by one, on the spots placed at each angle or intersection of the lines, and the object of either player is to prevent his opponent so placing his men as to form a row of three. When such a row is formed, he whose men form it has the privilege of removing from the board any one of his adversary's men, except it be one of the row of three. When all the pieces are laid down, they are moved to the best spot adjacent in any direction the lines run, if not already occupied. Each player moves alternately, and he who takes off all his opponent's men wins. Drawing-room quoits is also a very good game, although it depends more upon skilfully throwing the small ivory discus than any mental power. At the late fête at Fontainebleau quoits made of caoutchouc were introduced, and furnished great amusement to the Emperor, Empress, and their distinguished circle. We have no doubt that ere long indiarubber quoits will form one of our popular indoor games.

COLUMN FOR THE CURIOUS.

STRAWBERRY-HILL, which has for more than a century been historically associated with literature, taste, and genius will, on the 15th and 16th inst., by kind permisssion of Frances Countess Waldegrave be thrown open to the public in aid of the fund for the enlargement of Holy Trinity Church, Twickenham. In the grounds of Strawberry will be held a bazaar, reminding one of the "little plaything house" which Walpole bought of Mrs. Chevenix, the noted toywoman, and made the nucleus of the celebrated Strawberry Villa, "set in enamelled meadows, with phillagree hedges." We venture to suggest a stall inscribed "late Chevenix's." Strawberry-hill has a legion of celebrities, but never was its gaiety devoted to a holier purpose than the good work of next week.

The important collection of ancient Greek coins, in gold, silver, and bronze, formed by the Chevalier N. Ivanhoff, under favourable and advantageous circumstances, during a long official residence in Turkey, was disposed of by auction by Sotheby and Wilkinson last week. The collection comprised specimens of the coinage, both civic and regal, of numerous cities and kingdoms of the ancient world; the matchless series of the coins of the Lycian League, struck before the reign of Alexander—those of European Greece, Asia Minor, Syria, and Egypt being included, many examples of which are so rare as to be wanting in the richest cabinet. The sale lasted throughout the whole week, and realised upwards of £3000.

In the *Gentleman's Magazine* for the present month appears a communication addressed to the Editor on "The Fraudulent Manufacture of Flint Implements" recently detected at Winchester. They were offered for sale by a poor labouring man, who stated that he had found them in a barrow about eight miles from Winchester. Upon being much pressed, however, the man confessed the forgery, and, for a small consideration, showed the Correspondent the art and mystery. "Pulling out of his pocket a small, dirty bag, he took from it a common carpenter's awl and the hasp which goes over the staple of a padlock, and then taking from another pocket some pieces of flint, he sat down, and holding the flint dexterously between his thumb and finger, and resting his hand upon his knee, he soon formed a beautiful specimen (which is engraved, with others, in the *Gentleman's Magazine*.) The awl he used for making the angles at the base and rounding the barbs. The man's skill and quickness were remarkable, being, as he stated, the effect of several years' practice in this art. It should be added that the long portion of the hasp formed the handle, and the circular part the hammer on which he broke the flints." While upon this subject we may note that the *Journal of the Kilkenny Archæological Society*, vol. iv., part 1., just published, contains some lithographed illustrations of articles found in *crannoges*, or ancient lake habitations of Ireland, of the class to which Sir Charles Lyell's work on "The Antiquity of Man" has of late drawn so much interest. The most remarkable items represented are a piece of pottery, with the wavy pattern upon it; a paddle or oar 3 ft. 7 in. long; a wooden scoop, that might be used for baling out water from the boat with with which it was found, of similar form to that used by modern yachtsmen to sluice their sails in a match; a netting-needle; a battle-axe, of iron; sock of a plough, of iron; a knife with a goat's-horn handle; several iron and brass pins; a large button-like fastening, of brass, the eyes cast; a crucible, never used; and a bone comb.

In "Some Notes from French Towns," in the *Builder*, we read of the interesting results of the examination of the gravel-beds in the vicinity of Abbeville, which have provoked such intense discussion among geologists as to the antiquity of the formation and of the shaped flints which have been found there. M. Boucher de Perthes, resident in a handsome mansion in the Rue de Minimes, has for a considerable time collected all that the gravel-diggers have found, and has formed a museum of them. Visitors are freely admitted to view the contents. The number of the tooled flints, or *haches*, is about 1200, the whole of which M. de Perthes has offered to the Government, and his offer has been accepted.

The remains of a Roman hypocaust have been discovered on the site of the old Feathers Hotel, Bridge-street, Chester, which is now being taken down. The extent of the hypocaust is about 23 ft. square; height of the pillars, 32 in., quadrangular, with a cap of 12 in.; but few of the perforated tiles remained entire.

Coleridge oddly remarked, "You abuse snuff: perhaps it is the final cause of the human nose!" It is, however, against Samuel Taylor's argument to find that the custom of snufftaking has been traced in this country little beyond two centuries. Mr. O. Morgan, in recently exhibiting to the Society of Antiquaries some curious ivory snuffboxes of the last century, gave a short history of the introduction of snufftaking into this country, as exemplified by the boxes themselves. He said that the powder of tobacco having an agreeable smell, it became customary to use it as a scent about the year 1702; and, in the first instance, the snufftakers carried with them a small grater, with which they reduced the tobacco into powder. The grater was afterwards inclosed in a box; but the early snuffbox contained no reservoir, and the powder was consumed as soon as made. By the subsequent improvements a separate compartment was made in the box to hold the powder, and it was shut off from the snuff manufactory by a small pair of gates. By a further progress in the art of snuffmaking a sufficient quantity was manufactured to be contained in a separate box, which was carried in the pocket, whilst the manufactory itself was left at home. Some admirable specimens of the original portable manufactories of snuff were exhibited. Nevertheless, we have allusions to snufftaking of much earlier date than the above. Howell, who died in 1666, describes drawing smutchin into the nostrils with a quill; for, snuff was anciently taken in small spoons, whence, in old plays, we have a *spoonful*, not a *pinch*, of snuff. Two ancient snuffboxes, engraved in the "Archæologia," vol. xiii., resemble flat, circular smelling-bottles: the stopper screws in, and has a spoon fastened into it, resembling that of a cruet for cayenne pepper.

The tone and translucency so much extolled in ancient stained glass, in a lecture lately delivered by Mr. Edmundson to the Chester Architectural, Archæological, and Historic Society, are argued to be "simply and solely the effect of age, and to be legitimately produced in no other way." We have long held this same opinion, but with this addition—that some of the effect is due to the *passage of light through the glass in a series of ages*. On mentioning this effect to a celebrated artist in glass a few years since, he admitted its reasonableness. Mr. Edmundson has shown, by experiment on some very old cathedral glass, that the translucency is all a myth, for that, when cleaned and polished, it was as transparent, if not more so, than the modern glass. With respect to the tone, or mellow crust, upon old glass, Mr. Edmundson proves, by experiment, that the normal condition of ancient windows is that of perfect freedom from that tone. As to the popular notion of *lost colours*, Mr. Edmundson maintains that, not only is there no colour of ancient times not reproduced in all its vigour now, but there are many colours now known to the glass-stainer which were never dreamt of by the older artists. Here, again, the "question of time," we think, should be considered. It was noticed at the Chester meeting that the ancient circular quarries (*vulgo*, "oyster-shell glass") is believed to have wholly disappeared; the window of the small domestic chapel attached to the Bishop's palace at Chester being, according to Mr. Albert Way, the last apartment in England which retained that ancient form of glazing.

The "magic crystal" which played so conspicuous a part on the recent "Zadkiel" trial reminds one of the famous convex crystal which Dr. Dee had in 1582, and which he pretended to have received from the angel Uriel. This crystal was believed to have the quality, when intently surveyed, of presenting apparitions, and even emitting sounds. The phenomena varied. Sometimes the crystal had to be turned about several ways before the right focus was obtained; sometimes the spirits appeared upon the crystal, sometimes reflected upon parts of the room, but only one person could see the figure or hear the sounds. Hence a medium was requisite, with whose testimony the inquirer was compelled to be satisfied, for he neither saw nor heard anything himself. Much was said of the rank of some of the persons who inspected Zadkiel's magic crystal, but Dee had a Queen among his visitors, for he records in his "Diary," published by the Camden Society—

> 15th March, 1596.—Her Majestie (Elizabeth) willed me to fetch my glass, so famous, and to show unto her some of the properties of it, which I did. Her Majestie, being taken down from her horse by the Earle of Leicester, did see some of the properties of that glass, to her Majestie's great contentment and delight.

THE NATIONAL PRINCE CONSORT MEMORIAL.

We give in this week's Impression an important and carefully-executed view of the design recently adopted by her Majesty for the national memorial of her lamented Consort. Apart from the interest which attaches to its purpose, it has a special character as being the most important and elaborate work of monumental art in modern times. To make the project more intelligible to our readers it may be useful to recapitulate its history.

When the first impulse of grief was subsiding which the death of his Royal Highness the late Prince Consort had excited throughout the country, a common feeling seemed to suggest the adoption of some fitting mode of perpetuating the memory of a Prince whose life among us may be described in the most unaffected terms as one of eminent private virtue and public usefulness. Accordingly, a committee of influential men met for this purpose, under the presidency of the then Lord Mayor, Mr. Cubitt. From their deliberations, and the tone of the public press, the idea of erecting a monolithic obelisk in a conspicuous part of the metropolis seemed to find great favour, though public opinion was freely expressed as to the unfitness of adopting a pre-Christian form and type of monument as a memorial of an eminently Christian Prince. A Royal Commission, composed of the Earl of Derby, the Earl of Clarendon, Sir Charles Eastlake, President of the Royal Academy of Arts, and the Lord Mayor of London, was appointed by the Queen to investigate the obelisk scheme; and the result of their consultations was a report to her Majesty in which such a form of monument was recommended to be abandoned in consequence of the insuperable difficulties which seemed to surround the project—the chief one being the hopelessness of procuring a monolith of sufficient size in a durable material. The commission appended a suggestion that her Majesty should appoint a council of the most eminent artists of the day to investigate the subject and report as to the most fitting and practicable form which the monument to the Prince Consort should assume. The ultimate result was a competition between seven of the architects who had composed the deliberative council; and in January last they accordingly completed their work, and a magnificent series of designs was laid before her Majesty, who, in conjunction with the members of the commission, selected the design which we now publish. The architect, as the public are aware, is Mr. George Gilbert Scott, R.A. The drawing we engrave has been prepared under his immediate supervision, by one of his draughtsmen, for illustration in our pages. The cost of the work is reckoned at about £120,000. The site is at the westernmost end of Rotten Row, near Kensington Gardens, and opposite the gardens of the Royal Horticultural Society.

We understand that the practical execution of the design is to be commenced forthwith; and we can but reiterate the feeling of our contemporaries, as expressed at the time of the competition, that this magnificent design may be worthily and speedily realised, and that the Queen may find in that consummation, and in the interest felt by her loyal and attached people, some substantial consolation for her irreparable loss.

We extract from the *Builder* a technical description of the design:—"The leading idea is founded on what is of necessity its most important and central object—the statue of the Prince himself; and the great aim has been to add dignity to this statue, and to render the design expressive of the sentiment with which it is regarded. The statue—which is in a sitting posture, representing the Prince as clothed in the robes of the Order of the Garter, and is placed in an elevated position on a raised platform—is overshadowed by a vast and gorgeous canopy, not so much for physical protection as for the enhancement of its dignity. To carry out this view the canopy is treated almost with the richness of a shrine, or (one may say) of those imaginary structures of which ancient shrines took the form of the models. It is about 30ft. square, and is supported at the angles by groups of columns of polished granite. The material for the mass of the structure is not yet determined; but the aim is that it shall unite brilliancy with durability. Whatever the material may be, it will form but a groundwork for richer inlayings. The gables and spandrils will be filled in with mosaic pictures relating, probably, to scenes in the life of the Prince Consort; and other parts will be enriched by decorations in gilt and enamelled bronze, polished stones (such as crystals and cornelians), and other objects calculated to add to its brilliancy and beauty. The tabernacle-work, or flèche, rising from the roof of the canopy, as well as the covering of the roof itself and the cresting of the gables, will be wholly of gilt and enamelled metal-work, which, in the hands of Mr. Skidmore, may be expected worthily to exemplify this special branch of the art-progress of our day. The canopy rises from a lofty and solid basement or podium, which is surrounded with sculpture in high relief, representing, in figures of life-size, the history of the arts of painting, sculpture, architecture, and music; something after the manner of Delaroche's *hémicycle des beaux arts*. On pedestals projecting from the angles of this *podium* are groups illustrative of others of the arts and occupations of peace, as commerce, agriculture, manufactures, and engineering; and on larger pedestals, at the extreme angles of the flights of steps which surround the platform, are groups having reference to the contributions of the four quarters of the globe to the International Exhibitions. The detached figures which decorate the canopy itself represent the principal sciences and the Christian virtues; while the whole design is terminated by a richly-gemmed cross supported by angels. The square of the base of the platform will be between 130 and 140 ft., and the entire height of the monument about 150 ft."

OBITUARY OF EMINENT PERSONS.

GENERAL SIR JAMES LILLYMAN CALDWELL, G.C.B.

Sir James L. Caldwell, G.C.B., of Beachlands, Isle of Wight, a General in the Army, and Colonel-Commandant, R.E., who died at Beachlands, Ryde, on the 28th ult., was the son of Major Arthur Caldwell, of the Bengal Engineers, and nephew of the late General Sir Alexander Caldwell, G.C.B. He was born on the 22nd of November, 1770, and married, on the 18th of February, 1794, Mrs. Johnston, daughter of M. Maliard, of Dôle, in France, and relict of Richard Johnston, Esq., by whom he had a son, Arthur, who died in 1843, and a daughter, Maria, widow of Edward Sullivan, Esq., third son of Sir Richard Sullivan, first Baronet, of Thames Ditton, Surrey. Sir James Caldwell was appointed to the Royal (Madras) Engineers in 1788, and went through a long and distinguished career. He served in the war against Tippoo in 1790, and was in the attack on Tippoo's camp, and in the storming and capture of Bangalore, and in two battles near Seringapatam. He subsequently captured several Indian fortresses, and shared in the glories of the first siege of Seringapatam, the battle of Mallavelly, and in the final capture of Seringapatam, when he was severely wounded on the breach where Tippoo Sultaun himself was slain. Caldwell subsequently, as Commanding Engineer, took part in the capture of the Mauritius. He became a General in 1854, and a Colonel-Commandant of Engineers in 1862.

JAMES HANS HAMILTON, ESQ.

James Hans Hamilton, Esq., of Abbotstown and Holmpatrick, in the county of Dublin, D.L., J.P., and late M.P. for that county, was the only son of Hans Hamilton, Esq., M.P. for the county of Dublin for thirty years, by his second wife, Anne, daughter of Hugh Henry Mitchell, Esq., of Dublin. He was born in 1810, and was educated at Eton and Christchurch, Oxford. He was first elected to represent the county of Dublin in Parliament in 1841, and he continued in that representation with undiminished credit from that time until ill health compelled him to resign his seat only a few months ago. In politics Mr. Hamilton was a staunch Conservative; but, while he maintained his political principles with unwavering constancy and firmness, he won the respect and gratitude even of his opponents by his kind and conciliatory demeanour, and by his numerous acts of practical benevolence. Mr. Hamilton married, in 1833, Caroline, daughter of John F. Trant, Esq., of Dovea, in the county of Tipperary, and niece, maternally, of Sir Henry Brooke, first Baronet, of Cole Brooke, in the county of Fermanagh, by whom, who died in 1845, he had issue. Mr. Hamilton's demise occurred in London on the 29th ult. His son and successor, Ion Trant Hamilton, Esq., is one of the present member of Parliament for the county of Dublin, having been so elected lately, on his father's retirement. This family of Hamilton springs from a brother of Sir James Hamilton, Serjeant-at-Law, who was created Viscount Claneboye, and with whose grandson that viscountcy and the earldom of Clanbrassil became extinct, in 1675. In the female line, however, Claneboye has been restored as a barony, and is one of the titles of the present Lord Dufferin and Claneboye, the kinsman of Mr. Hans Hamilton just deceased. Mr. Hans Hamilton's ancestors have been for centuries of high note and political importance in the counties of Carlow and Dublin. His grandfather, James Hamilton, Esq., Deputy Prothonotary of the Court of King's Bench in Ireland, married thrice and had thirty-six children. His eldest son was Mr. Hans Hamilton's father, and one of his granddaughters, Harriette Catherine, is the wife of the eminent Indian Commissioner Sir John Laird Mair Lawrence, Bart., G.C.B.

The new duty of £3 3s., with 5 per cent thereon, on beer licenses to retailers keeping victualling-houses, but not selling spirits, took effect yesterday.

ICE: ITS PRODUCTION AND APPLICATION.

For a week or more the thermometer has stood at 75 deg. in the shade. When it stands at 80 deg. then it is that the great demand is made upon the ice-stores. Measured by the mercury in the tube, for every additional degree of heat in the temperature of the air the business of the ice-dealer increases tenfold. The last three years have been most unfavourable to this anti-thermal trade. The population has stood in greater need of seasonable sun than of the gelid gifts of winter; while rain flooded and cold winds blew, little disposition was felt to visit the ice-wells. Stores that have been long laid up have been kept from year to year; and many who think they are cooling themselves with the ice of last winter are in fact indebted to frosts of 1861 and 1862.

In America the trade in ice has always been much more extensive than in this country. It is said that in Boston alone more block ice is consumed than in the whole of this kingdom. The fact is, that it is there employed in winter as well as in summer, it being the fashion with our American cousins to quaff their beverages cold. Boston first started in the ice trade, in 1806. In 1854, 156,540 tons of ice were shipped from Boston, and 20,000 tons from New York, the home consumption of New York being last year about 270,000 tons. A splendid market was open in the South, of course, for the intense heat of those parts made ice an article of the first necessity. A multitude of speculators sprung up, and companies were formed to ship ice to Europe, to India, and China from lakes occupying an elevated situation about eighteen miles from Boston, of which Wenham Lake is one. The sale of ice and snow preserved in the caverns of Vesuvius, and on the more elevated parts of Etna, has long been a considerable branch of trade in Naples and Catania; and its use in the delicious confections of Italy in no small degree conduced to the same practice which has now overspread the West. In the absence of statistics from icebound Russia, we may suppose that during the short period of heat sustained by the inhabitants of the north, they compensate themselves by the use of ice as a luxury, for an unwilling submission to its frigid rule six or eight months out of the twelve. The tale told of certain sportive tendencies shown by the people of St. Petersburg during the severe winter of 1740 show that they can be merry with their fetters even while they wear them. At that date a house was built from the ice of the Neva, 52½ ft. long, 16½ feet wide, and 20 ft. high. The roof was of ice, and, notwithstanding its immense weight, the foundations sustained the burden without perceptible sign of crushing. Before this veritable ice-house, or palace, as it was called, stood six cannons of ice, resting upon carriages and wheels of ice, together with mortars of the same material. These six-pounder pieces were charged with three pounds of powder, and threw iron shot clean through two-inch boards at sixty paces. In this singular case ice not more than 4 in. thick was found to resist the force of the explosion.

We have never heard of any expedition being fitted out from Russia for the capture of icebergs, but we have certainly heard of such a case as this occurring at Boston. One burning summer, when the ice stores were empty and the hearts of the Yankees were melting within them, a ship was sent forth, at the public behest, to seize one of these monsters of the Arctic regions on its passage to the south. The birth and history of these wonderful transparent floating mountains is now a subject of common talk. The snow, which falls thickly on the Arctic islands and continents, being melted in summer, forms collections of fresh water, which soon freezes and increases yearly, until the mass becomes mountainous and rises to the elevation of the surrounding cliffs. The melting of the snow deposited on these elevations adds to their growth, and, by filling up the interstices, renders the whole solid. When such a mass has reached the height of 1000 or 1200 feet, the accumulated weight, assisted by the action of the ocean at its base, plunges into the sea, and by winds and currents is carried southwards, and finally disappears before the influence of the Gulph Stream, which throws an isothermal line from Newfoundland to the coast of Iceland, deflecting it upwards very nearly through twenty degrees of north latitude. Frequently these ponderous crystals hide as much of their proportions below the water as they expose above it, and float, grinding the rocks of the sea bottom as they go, with a force that may perhaps be visible to some future geologists when they shall be exalted to be the proud promontories of a now nameless continent. They carry huge boulders from the Arctic rocks and disperse them over the bed of the North Atlantic, and for the whaler they bear rich provision of fresh water, of which he spoils them. Well, it was for such a prize as this that the little vessel set sail from Boston, nor, if the narrative is to be depended upon, did it sail in vain, for a berg was attacked in high latitudes, hewn in pieces, and carried home with rejoicing.

Our ice comes not from America, as formerly, but from Norway. That which is not imported is, of course, procured from the rivers, ponds, and canals. Every dirty horsepond and stagnant pool near London is laid under tribute during the bitter reign of the winter blast, and, so soon as there is a little "cat's ice" to be seen, collectors set to work with rakes, poles, and scoops to prepare it for those who convey it in all sorts of vehicles to the various wells and stores. No matter how foul the water, ice is ice—dark, manurial water yields transparent ice; and, since no questions are asked, down go these various sorts of portable water into the ice-well to fraternise together. It is perfectly true that the upper stratum of water which is turned to ice may be regarded as distilled; but it is not so far distilled as that, when produced from foul water, it shall be perfectly pure. Although quite transparent, it will still contain a considerable portion of its impurity.

This, together with the refuse of foreign ice, is known as rough ice, and is rather used by fishmongers and in refrigerators than in direct contact with our beverages, for which purposes block ice is reserved. This rough ice is generally sold at 2s. or 3s. a hundredweight. Formerly it was customary for us to depend upon America for the block ice; but of late years our supply has come from Norway, which, though less clear, is less expensive. Certain fiords possessing water of known purity and wholesomeness are leased to such as may be engaged in this trade, and the ice produced may be said to be cultivated, since the inhabitants on the margin of the fiord are engaged to keep the ice free of snow, to watch its formation, and to cut it, when 12 in. or 15 in. thick, into blocks 22 in. square, weighing about 2 cwt. There are large stores on the coast to which these blocks are conveyed, and from these the ships receive their cargoes, the ice being packed neatly, but without any separating media. There is one company which confines itself to this trade—namely, the Wenham Lake Company. They pride themselves on vending a most superlative quality, for which the price charged is uniformly 1d. per lb. This seems a very cheap rate for the pure portable water of a Norwegian fiord, considering the expense incurred in obtaining it, and considering, too, that for every ton sold two tons are imported. We have recently paid a visit to their ice stores under Waterloo Bridge. They occupy five large arches on the Surrey side, and can stow away, in sawdust, some 2000 tons. During the hot weather a busy scene is thus presented at six o'clock in the morning, when the carts are packed and dispatched with supplies for town customers. Declining, as they do, to deal in rough ice, their trade is confined principally amongst the wealthy.

In the afternoon the railway vans arrive, and the packing is resumed for the country trade, at which time each block is put into a bag, with a thick layer of sawdust immediately surrounding it to absorb the liquid and act as a nonconductor. Perhaps the busiest time is when a ship arrives, not that foreign ships are allowed so high up as Waterloo Bridge, though it would be a great convenience to the company if they were. They get no further than the docks, whence they discharge into lighters, which conduct their frigid cargoes nearly to the mouths of the dark caves fitted for their reception. The blocks are received by attendants armed with huge grappling-irons, slid along a platform to a weighing-machine, there estimated in pounds avoirdupoise, and banished to realms of darkness which, for the time being, are illumined by scores of candles. We were shown one arch half full of ice eighteen months' old, the produce not of last winter, but of the previous one. When an arch is filled it is boarded up, and kept as impervious as possible to air; and the entire store is so drained that as fast as water is formed it is carried away.

The consumption of London is something like 50,000 to 60,000 tons of ice, and this trade is divided—unequally, of course—amongst ten or twelve firms. There have recently sprung up in this country important rivals to the natural ice-dealers, which are the artificial ice manufacturers. The former, when they are questioned about the matter, say that they entertain no fear. In the first place, being made so rapidly, it is clouded and less liked for those purposes to which block-ice is usually put, and, in the next, it cannot be made at less than ¾d. 5-14ths, according to the lowest estimate.

For our colonies, and India especially, this invention will prove a saving of at least fifty per cent on the miserable ice which the natives of the hill country contrive to scrape together during cool nights, when the process of evaporation or absorption chances to be vigorous; but in England it is not supposed by the best authorities that it will supersede the Norwegian supplies. The old method of getting ice in India was as follows:—Ice committees were organised for the different cantonments, and these superintended the production of the ice crop upon a large space of ground divided into compartments, and containing innumerable holes fitted with shallow dishes filled with water and covered with wet straw to assist the operation. A clear night and a sharpish breeze are propitious to the formation of a thin coating of ice, the appearance of which is no sooner discovered by the watchers than a cry is given which arouses the sleeping natives, who hurry to seize upon the fickle production before the sun's rays shall come to resolve it again to liquid. Such a mode of making this material has long proved thoroughly inefficient in a climate like that of India, where a constant supply is essential to life, let alone comfort. It is not improbable that the Indian Government may, as a public measure, help to establish ice machines at different large stations in the presidencies; for whilst this invention promises ice four times cheaper than that formed by radiation, it does more, for it produces it at stations where it could not otherwise be obtained. The value of ice for the sick man of India cannot be estimated, while for those in health it is an important preservative. In the hospitals it is used much, but far less than it will be when the supply is increased.

Briefly considered, the invention consists in the evaporation of volatile fluids *in vacuo* at a low temperature, and condensing at a higher temperature by pressure, and water at an ordinary temperature. In the absence of an illustration which was given during the exposition at Kensington, we give a summary of the *modus operandi* in very nearly the words of the manufacturers. Ether, being the only element used (besides brine), is placed in an air-tight vessel, called a refrigerator, and evaporated *in vacuo*. The vacuum is formed and sustained by a double-action pump, which extracts the vapour as it rises and forces it onwards into a large vessel or "condenser," where, under the influence of water at an ordinary temperature and pressure, it gives off its surplus heat and returns again to its fluid state, when it flows back to the refrigerator to be re-evaporated. The ether forms a complete circuit, passing from left to right in a vaporous state, and from right to left in a fluid state. In order that the supply of ether may be regular and neither too much nor too little, a self-regulating valve is placed in connection with the return-pipe from the condenser, which discreetly retards or accelerates its supply to the refrigerator. Thus, on the side where the ether is continually undergoing evaporation a large degree of caloric is absorbed, which is carried off in vapour. The temperature can thus be lowered in the refrigerator to 50 deg. Fah. below freezing-point, while the condenser becomes hot. This excessive amount of cold, being unprofitable in the production of ice, an uncongealable fluid medium—namely, brine—is made to pass over the surface of the refrigerator in a continuous stream, and allowed time to part with its caloric. When it has reached the required temperature it is admitted to a long trough, where it passes completely round moulds made of gun-metal, which are full of the pure water to be solidified. This solidification takes place most quickly at the end of the trough where the brine enters. As it does so the moulds are removed, emptied, refilled with water, and replaced at the opposite end, the others having been forced up by the turn of a screw to make room for them. Some recent ingenious arrangements have been made to quicken the operation and economise the ether; but there is no space now to particularise them. It may, however, be proper to add that the novelty of the process does not consist in the use of ether, which has been known to experimentalists for a long time, but in its economical use. In the machine which makes one ton of ice an hour, and which costs £520, 80 lb. of ether are in circulation, at 1s. 6d. per pound; and the loss is only about 1s. on every ton turned out.

The French showed a machine for icemaking in last year's exhibition, in which they produced the same results with ammonia under pressure as Siebe does with ether *in vacuo*. A great degree of cold is produced also by a mixture of saltpetre and Glauber salts, and there are now manufactured and exported to India, &c., in large quantities, chemical mixtures known as freezing powder, by means of which rough ice can be produced in fifteen minutes, at a cost of 1s. 9d., or about 4d. per lb. This powder, introduced into a little machine, invented by the same person, may be used upon the table to ice wine or water with the greatest celerity. A bottle of champagne may be iced in ten minutes for 3d. So great is the intensity of the cold produced that the sparkling contents of the bottle may be actually transformed into a spongy mass.

Ice is much used in medical practice to reduce fever and stop the flow of blood. Many lives are annually saved by it which are jeopardised by brain fever. In Bartholomew's Hospital about one ton is used every year in fever and other cases. The best block ice is also used by photographers and chemists, as giving them the most purely-distilled water they can obtain. The most novel application of ice of which we have heard, however, is for the preservation of salmon ova. It is supposed that by means of this medium it will be possible to convey the ova of the salmon to Australian waters, there to be hatched.

The manager of the Wenham Lake Company allowed a quantity of these ova to be buried in the ice vault on the 17th of January last. At the end of ninety days—the time taken for the passage to Tasmania—the packet was brought to light, a proportion of the ova, in a perfectly sound condition, were removed, and two thirds of them were successfully hatched. The remainder were taken on the 12th of June (the 144th day), and were shortly afterwards hatched with but small loss. This experiment quite contradicts the old theory that salmon ova, from the time of their emission to that of their being hatched, must be kept in running water. The action of the ice, in fact, is to check development, and we quite expect soon to hear the praises of Tasmanian salmon.

WILLS AND BEQUESTS.

The will of the Right Hon Caroline, Dowager Lady Poltimore, of Upper Brook-street, was proved in London on the 2nd inst. by her son, the Right Hon. Augustus Frederick George Warwick Bampfylde, Baron Poltimore, and William Henry Domville, Esq., the executors. The personalty was sworn under £35,000. The will, with two codicils, was executed in May last, the month in which she died. It contains many specific bequests to the members of her own and her late husband's family, including her brother, Lieut.-Gen. Sir George Buller, K.C.B.; a complimentary legacy to the Earl of Abingdon, one of the trustees, and to Mr. Domville, her executor; to the poor of North Molton, Devon, £500; the poor of Poltimore, £200; and to the Exeter Hospital, £500, appointing her son, Lord Poltimore, residuary legatee.

The will of Lieutenant-Colonel Sir William Lascelles Wraxall, Bart., of Wraxall, Somerset, was proved in London by his nephew, Sir Charles Frederick Lascelles Wraxall, Bart., the sole executor. The testator, Sir William, who attained the age of seventy-two, died at Passy, near Paris, on the 2nd of May last; and, though a British subject, and received his military education at Woolwich, was an officer in the Spanish service. He succeeded to the baronetcy in 1831. His heir and successor is his nephew, Sir Charles Frederick Lascelles Wraxall, Bart., to whom he has bequeathed the whole of his property, real and personal, and all other property over which he had the power of disposition. The will was executed in France, on the 23rd of April, 1863.

The will of Captain Charles Rayley, Esq., R.N., of Southwold, Suffolk, was proved in London by the executors—Mrs. Rayley, the relict; John Blacket, Esq., of Balleen, Kilkenny; and Robert Cunninghame Taylor, Esq., M.A., of Christ Church. The personalty sworn under £35,000. To his relict he has left his property and estates in Southwold absolutely, and a life interest in other estates in Suffolk, which, upon her decease, will be divided into certain portions amongst his nieces and their issue, appointing his relict residuary legatee for life. There are several pecuniary legacies, which are to be paid free of legacy duty.

Mr. Lindsay, M.P., writes to the *Times*:—"I think it due to Mr. Roebuck to say that what he has stated is true, and shall be confirmed by me in Parliament with time, place, and circumstances, when the debate is resumed."

"A SHIP IN DISTRESS BURNING A BLUE LIGHT," BY E. DUNCAN, IN THE EXHIBITION OF THE SOCIETY OF PAINTERS IN WATER COLOURS.

(*Continued from page* 41.)

eminently picturesque. Seen from a distance, its embattled walls, large ruined castle, and numerous towers and spires present great variety of form. Nearer, the Byzantine Duomo, constructed of coloured marbles, the great square, and its fine marble fountain, are splendid objects. The castle and ghetto are romantic in the extreme. It has, besides, a townhall, hospital, several monasteries, silkmills, and distilleries. Down many of the streets run canals of pure water, while the sluggish Adige, with its boats and cattle, add items invaluable to the painter, the rugged peaks of the Tyrolese mountains forming a glorious background to the whole. This is just the subject for this excellent water-colour painter, and he has brought to it the best resources of his art, judiciously heightening the effect of the many towers and spires by representing them flushed with the rays of the declining sun.

Our next Engraving is from a drawing by Mr. S. P. Jackson, a painter in water colours whose works are always commendable for careful fidelity to nature. *Staiths*, the subject of this drawing, is a fishing village in Yorkshire, ten miles north-west of Whitby. The word "stayth" was formerly applied to a quay, or wharf, especially in the old topographies of York, and may explain the origin of the name of this village. The chief natural feature of the place is the headland, seen in the view, and which is somewhat remarkable for its boldness. The village derives another kind of interest from its association with the name of Captain Cook. The great navigator was sent from his native place in the neighbourhood and apprenticed at an early age to a haberdasher of Staiths. A passion for the sea was, however, awakened in him among the humble fishermen, and, to indulge his bent, a discharge from his master was procured, and he was apprenticed to a firm engaged in the coal trade at Whitby. Mr. Jackson proves that he is also infected with a love of the sea. He has represented with evident relish all the picturesque objects and incidents of the sea-coast and fishing life—the vessels and boats, the anchoring and beaching of the same, the little smoky hamlet screened from the wind by the cliff, the low waves breaking and playfully running up the soft sand, with nothing to remind us of the terror and treachery of that cruel northern ocean, save the threat of a passing rain-cloud.

It is difficult for persons in this country—perhaps the more so, if actually engaged in the pastoral employment—to realise the full force and meaning of the text given by Mr. W. J. Webb, in illustration of his carefully painted and remarkable picture, *A Shepherd of Jerusalem*, engraved page 44. The artist quotes the verse from St. John x. 4:—"And when he putteth forth his own sheep, he goeth before them, and the sheep follow him: for they know his voice." Similar passages, containing images drawn from the relationship of the shepherd and his flock, occur constantly in both the Old and New Testaments. Indeed, all the poetry of Holy Writ, if not actually in the form of an eclogue or idyl, is more essentially pastoral than we can readily apprehend. In memory of the Good Shepherd who "laid down his life for the sheep," our ministers are still "pastors of the flock;" but to whom will this suggest that, in ancient Judea, the shepherd was sometimes actually slain by wild beasts in defending his charge? We drive and worry our sheep with dogs; but, as Mr. Webb represents, to this day in the East the shepherd *leads* his flock. Something like this may, it is true, be witnessed in the management of the great merino flocks of Spain; in France also, and even in Scotland. But it is only among the great Oriental pastoral

"THE REST," BY G. CHESTER, IN THE EXHIBITION OF THE ROYAL ACADEMY.

nations, who derive nearly all their sustenance from their flocks and herds, and who spend their whole lives in tending them, that the relationship so often alluded to in the Bible, the habits thus induced, and the influence they have on the very forms of speech and the imagery of the language, can be fully appreciated. The shepherd of the East not only leads his flock, but he teaches them to answer to names he gives to each when lambs, and thus, individually as well as collectively, they "know" and follow his voice. The shepherd gains the most wonderful influence over them by his constant attention and kindness, and, like this shepherd, by carrying the lambs, especially if weakly, literally "in his bosom." A very remarkable instance of the docility of sheep under this management occurs in a passage of "Philo-Judæus," where they are represented submitting themselves willingly to the hand of the shearer, standing before him in a silent, inclining posture, perfectly unconstrained. What a con-

trast this to the noise, confusion, and brutality often witnessed in our modern sheep-shearing! We trust we have said enough to indicate the deep religious suggestiveness of this picture. The artist apparently inclines to the realistic treatment of sacred subjects. The accurate representation of the peculiar lop-eared and long-tailed Syrian breed of sheep, and the view of Jerusalem in the background, seem to prove that he has actually visited the Holy Land, like Mr. Holman Hunt, who with more than a crusader's courage performed a solitary pilgrimage to the shores of the Dead Sea to paint his picture of "The Scapegoat." We have some æsthetic objections to this mode of rendering the historical incidents of the Bible, though we heartily commend the earnestness it implies. Even in regard to the question of fact we believe that the Canaan of the Old Testament or the Romanised Judea of the Gospels cannot be recalled by representing the Palestine of the nineteenth century. However, these objections should not be urged against Mr. Webb's present picture, because he represents no historical incident, but gives a scene the suggestiveness of which is legitimately associated with its literalness.

Mr. Gullick, in his picture illustrating the words from St. Luke, "*And Peter went out and wept bitterly*," engraved on page 44, seems to have discovered a subject in the Gospel narrative which, as far as we are aware, had never been painted. The trial scene and the moment when, at the third crowing of the cock, Christ turned that "look" on Peter which recalled the fulfilment of our Lord's prophecy of his unfaithfulness have been frequently represented, but not the Apostle weeping outside the high priest's palace. That memorable "look" of the Saviour, to which we have just referred, the painter seems to invite us to recall by the steps leading in the background of his picture to a half-opened door communicating, it is no doubt intended, with the "upper room," where the mock trial of our Lord is proceeding. Down these steps the conscience-smitten Apostle has descended. He has had to suppress his feelings as best he may, for in the hall are some of the rabble who went out with "swords and staves" to take Jesus. Among those warming themselves round the "fire they lit in the midst" we catch a glimpse of a Jew fiercely gesticulating to a puzzled Roman soldier; his thumb pointing over his shoulder towards the upper room sufficiently indicates the subject of his malicious tongue. Considerably nearer the door stands a woman with a key. A key in a picture of St. Peter is suggestive and not out of place here, for women have been doorkeepers from time immemorial in the East. But there is evidently a further allusion intended. She is surely the "maid," or "damsel" to whom St. Peter denied Christ, for she still points after him the finger of scorn. Seeing the disciple passing out with a look of convicted guiltiness, her suspicion would naturally be strengthened that he was "also one of them." Out from the doorway and round the angle of the projecting wall the Apostle has, however, passed, and seems to have arrested himself momentarily on the first impression of being alone. Still, even here, everything that might meet his eye is terribly calculated to deepen his remorse. Here the cross is placed in readiness, and against the doorpost and lintel is sprinkled the blood of the Passover—as enjoined in Leviticus. This was the very night of the Passover—that great type of our Lord's sacrifice—and, although the observance of this ceremony was not then general among the Jews, the sprinkling the blood on the walls of the high priest's palace would legitimately indicate his pretension to greater strictness and sanctity. The parchment also relates to the Passover, and likewise identifies the time and place, for it is headed with the words, in old Hebrew (i.e., without the vowel points) "The Passover—Caiaphas the High Priest." The initial letters—on the right of course, Hebrew reading from right to left—are painted red, like the minium initials of old Greek MSS. The introduction of the cross was a bold conception; but the instrument of shame and torture must have been in readiness, for our Saviour was crucified very shortly after. It is recorded that he bore it part of the road to Calvary; and where so likely that it should be placed as outside the palace of his most rancorous enemy and most bigotted judge. It will be noticed that the cross is inverted—in allusion, we presume to the tradition which represents St. Peter to have chosen to be crucified head downwards. The bramble growing near may have supplied the crown of thorns. The aloe is the favourite Eastern emblem of mental bitterness. Early morning is indicated by the lamp still burning under the keystone of the portal and by the low tone throughout, which also suits the scene in other respects. The introduction of the cock was essential to the narrative. All Mr. Gullick's critics unite in commending the expression of repentant anguish in the face, the bowed head, and clasped hands of the principal figure. The tear is just brimming over the eye; but the attitude is not that of prayer, nor does the disciple look heavenwards, for he had not yet apprehended the true nature of Christ's mission.

Mrs. E. M. Ward has selected one of the most touching incidents in the life of the unfortunate Mary Queen of Scots for the subject of the very admirable picture engraved on page 45. In *Mary Queen of Scots' Last Visit to Stirling Castle* the unfortunate Queen, as if feeling a presentiment that she was taking her last farewell of her babe, extracted a solemn pledge from the Earl of Mar (to whose care she had confided him) that he would guard his precious charge from every peril, and never give him up under any pretext without her consent. It was then the custom of the Sovereigns of Scotland to place the heir of the realm, for nurture and education, in the care of some nobleman of high rank. The weeping figure leaning over the cot is the Countess of Mar, Mary's confidential friend, governess or lady-mistress to the Royal infant. It may be interesting to know that the cot was painted from the original, which is still preserved. The ancient embroidered coverlet is a masterpiece of textural imitation. We have more than usual gratification in engraving this picture. We heartily congratulate Mrs. Ward upon her great success in a work the subject of which entitles it to rank as, in the best sense, an historical painting, which yet has afforded full scope for the artist's womanly and domestic feeling, and which are displayed without the slightest exaggeration. A more graceful subject for a female pencil could not have been chosen; and in treating it we believe Mrs. Ward has produced the most important picture yet painted by an English lady. It has unity and completeness as a whole, while parts—and those most important—such as the face of Mary, with its pathetic, appealing expression, and the chubby head of the infant Prince are admirable in the extreme. The colour and other technicalities are hardly less successful than the expression. A contemporary justly remarked in a notice of this picture that Mrs. Ward should, with other of our paintresses, write R.A. after her name, if the academy were as catholic now as it was in the last century, when it opened its ranks to Angelica Kauffmann and Mary Moser. Some of our readers may not remember that Mrs. Ward is granddaughter, daughter, and wife of artists; and, as another rare coincidence, that her married is the same as her maiden name. Mrs. Ward is married to Mr. E. M. Ward, the eminent historical painter, and is the daughter of Mr. George Raphael Ward, the distinguished engraver and miniature-painter, and the granddaughter of Mr. James Ward, the excellent animal-painter whose great bull picture was bought the other day for the National Gallery. Besides this, her aunt was the wife of Jackson, the portrait-painter, and her great-aunt the wife of the unhappy Morland.

The drawing of *A Ship in Distress* by the well-known marine painter Mr. E. Duncan, engraved on page 52, is remarkable for vigorous conception and powerful execution, but still more for the successful though very difficult combination of effects. We should, however, in the first place, endeavour to realise how the vessel drifted in the perilous position Mr. Duncan has represented. It seems, then, from the ragged but not massive character of the clouds crossing the moon that the vessel has been overtaken by bad weather, though not a gale, and to have, as it is called in nautical language, "missed stays," and then, her sails "clued up," to have drifted on to the rocks. In this hopeless extremity she burns "a blue light" as a signal of distress and to show her position to the people assembled on shore. These are evidently supposed to have made a fire with some wreck of tar-barrels, and are firing a rocket across the vessel with a line attached to it for the purpose of enabling the crew, by fixing this to the sinking ship, to establish a communication with the shore and thus save their lives. The yellow, fiery track of the rocket, and the less brilliant but broad red glare of the blazing barrels, with the pale though rather warm light of the rising moon, and the very cold colour of the blue light, form the contrast and variety of natural and artificial coloured light at night to which we have already alluded. The harmonious combination of all these effects is, we repeat—on account of its interest—the peculiar artistic merit of the picture over and above the nautical knowledge and artistic skill displayed in the truth and force with which the terrible situation of the vessel is represented.

Mr. Chester's landscape, *The Rest* (see p. 53), is the most artistic work by this painter we have seen. It is solidly painted, forcible, and rich in colour. It has a freshness and local character which sufficiently indicates study "on the spot," and satisfies the spectator of its fidelity; yet it is wholly free from imitative servility and photographic hardness. It has also—what is becoming more and more rare in our landscape school—the human element of interest, the expression of the artist's sympathy with his subject, that colouring which nature derives from transmission through the individual heart and mind, when these are frankly opened to her influence and the avenues to them are not barred by theory or choked with pride. The first impression conveyed by this landscape is that it is remarkably like Constable, than whom a more genuine lover of nature never lived. There is the same thoroughly rustic unconventional picturesqueness, the same showery English sky. The resemblance is, however, more in subject than style. There is no trace of imitation of the manner of any master; but we understand the scene represented is in the neighbourhood of Petworth—a picturesque district, which Constable actually visited, and where he painted, residing with a namesake, a brewer and an amateur artist, still living. It is the sentiment, however, more than the locality of this picture upon which one would fain linger longest. The title most aptly serves as text. There is dewy repose in the summer cloud-shadows; we fancy we hear the drowsy rustle of the umbrageous trees—all the more audible because the birds are hushed, listening for the coming shower; the lowly cottages nestle among the trees, types of quiet content, true sanctuaries of labour; the sheep take their afternoon "rest" near the still brooklet and up the sheltered avenue; the shepherd-boy lolls over the rail; the foxglove, unswayed by the wind, bows to its own sweet image in the unruffled water. All nature is lulled in transient reverie and repose, soon to awake with new life and vigour, joy, and song.

Our Continental neighbours say that one of the most salient characteristics of the English is the love of animals. The men have their horses and their dogs, and the maids—we will not say "old" ones—have their birds and their cats. To cater for the national taste we have a large class of animal painters, and in no country are so many really excellent artists in this department to be found. Among this large class few names are better known than that of Mr. Harrison Weir, and among the many drawings we have seen by this water-colour painter few have struck us as equal in merit to *The Wanderer Returned*, engraved on page 53. The cat is universally known to be one of the most difficult creatures to paint in the animal world—far more so than the robin and other birds so charmingly represented by Mr. Weir in other drawings from the same exhibition in which this finds a place; and the artist has succeeded perfectly in describing the general character as well as the coat of the cat, and also in the added difficulty of expressing master Tom's mewing for admission to the home he had forsaken.

FINE ARTS.

THE London Stereoscopic Company has just published, by permission of the Prince of Wales, two series of views—twelve large and twelve stereoscopic—of and about Sandringham, his Royal Highness's Norfolk seat. The public feel a very natural interest in everything relating to the Prince and his beautiful young partner, and the gratification of this feeling, even so far as to allow us, as it were, to follow the Royal pair into their domestic retirement from the ceaseless round of public festivity in London, is a gracious and graceful act. In these photographs we see the Prince and Princess and members of their suite in the shooting-jackets and wideawakes, the pork-pie hats and linsey-woolsey petticoats worn in ordinary English country life; we see the preparations for the morning drive, and the unostentations drawing-room where the quiet evenings are passed. The same company has also issued a set of portraits of the Prince and Princess, together and separate, seated and standing. In point of photographic merit these are scarcely equal to the larger series brought out some time since by Mr. Mayall, chiefly on account of the objectionable pattern on a column in the background and the too obvious arrangement of the drapery about it, which draw off the attention to these accessories. The portraits of the Princess are, nevertheless, especially welcome from the novelty of the attitudes and walking equipment and the very becoming elegance of her indoor dress. The company have also published a series of twenty-five photographs from the wedding presents recently exhibited at South Kensington.

Mr. Marshall Wood, whose colossal bust of the Prince of Wales we lately engraved, has recently finished the model for a bust of the Princess, for which her Royal Highness has given a number of sittings at Marlborough House. We must give to this model similar praise to that we bestowed on the former. Mr. Wood has evidently endeavoured to obtain a scrupulously faithful and exact likeness of the Princess, and he has succeeded in reproducing the contours and proportions of the head, together with those minute and almost evanescent details of form in the features which in this instance alone give individual character. Only great exactitude and delicacy of modelling in the individual parts would have secured resemblance in the whole, for only in these, when examined separately, are the facial angle and the relative spaces of the features and forehead found to differ in the slightest degree from the ideal of modern sculpture since Flaxman—and we take the ideal female head of modern sculpture to be a higher standard of comparison than that of the Greeks, because it gives fuller recognition to the frontal manifestations of intelligence. The head has still a degree of classic character rarely found in nature, and this has suggested the treatment of the hair and drapery. The hair recedes from the forehead in flowing waves rather than ripples; is bound with the Greek fillet, and the knot behind inclosed in the Greek net; the drapery is clasped over one shoulder, as in antique statues. The only part which to us seemed not entirely successful was the mouth—not its general form, but its expression. The play of the muscles at and near the angle of the lip hardly conveys the frankness and sweetness which appear to be—judging ever from the photographs—the prevailing characteristic. As this is only the preparatory model, a hint may be of service in the execution of the work in marble, and, if entitled to consideration, will not be unwelcome to so conscientious an artist. The bust will, we believe, be executed colossal size, and given by the Lord Mayor as a companion to the same sculptor's bust of the Prince for the Mansion House. We may add that a cast of the bust of the Princess, by the celebrated Danish sculptor, M. Jerichau, has been placed in the gallery of the French Exhibition, Pall-mall. Though rather tame and heavy, and wanting in the general delicacy of modelling of Mr. Wood's bust—for which, however, we must make some allowance on account of the plaster material—the sculptor seems to have caught the expression in the lips, which Mr. Wood has at present partly missed.

The mention of the French Gallery reminds us that Mr. Gambart, its enterprising manager, and the well-known print-publisher, who has been of late so energetically prosecuting the piratical photographers who had infringed his copyrights in several popular engravings, has just published a pamphlet on "Piracy of Artistic Copyright," in which he fully exposes the grievance, of which not only publishers but engravers and artists have justly to complain. It is an anomaly of the recent legislation on artistic copyright that while there is a ready and stringent remedy for the piracy of copyright in pictures, other works of art, and photographs, the infringement by photographers of copyright in engravings—which is most easily effected, and should therefore be rendered most easily punishable—is left without easy means of prevention, and with only the old, cumbrous, and expensive means of repression. Mr. Gambart treats the subject very ably and forcibly; and we regret our space does not permit making quotations which would show the great injustice at present suffered. The Society of Arts is, we are glad to know, moving in this matter; and we trust that some efficient means of redress will be devised by Parliament before the close of the present Session. Meanwhile, we would commend Mr. Gambart's pamphlet (which is published by Tegg) to all interested in this important question.

The great picture, the "Martyrdom of Huss," by Lessing, brought from the Dusseldorf Gallery, New York, exhibited in London last year, and reviewed at length in these columns, has found its way back to Germany. It has been purchased by the King of Prussia for 15,000 thalers.

Mr. Frederick Goodall has been elected from the ranks of the Associates to the full honour of Academician. The Royal Academy could not have made a better choice.

NAVAL AND MILITARY INTELLIGENCE.

ADMIRALTY.

Admiral of the Blue F. E. Loch has been appointed to receive a pension of £150 a year, as provided by her Majesty's Order in Council of the 25th of June, 1851, vacant by the death of Admiral the Hon. Sir G. Elliot, K.C.B.; and the name of Admiral Loch has been removed to the reserved Half-pay List accordingly, and, in consequence of this removal, the following promotions, to date the 25th ult., have taken place:—

Vice-Admiral of the Red the Hon. H. J. Rous to be Admiral of the Blue.
Vice-Admiral of the White Sir M. Seymour, G.C.B., to be Vice-Admiral of the Red.
Vice-Admiral of the Blue F. T. Michell, C.B., to be Vice-Admiral of the White.
Rear-Admiral of the Red the Hon. G. Grey to be Vice-Admiral of the Blue.
Rear-Admiral of the White Sir A. Milne, K.C.B., to be Rear-Admiral of the Red.
Rear-Admiral of the Blue the Hon. J. Denman to be Rear-Admiral of the White.
Captain H. Lyster to be Rear-Admiral of the Blue.
Retired Vice-Admirals H. T. B. Collier, H. Stanhope, and J. T. Coffin to be retired Admirals, but without increase of pay.

The screw steam-vessel Wolverine of twenty-one guns, is ordered to be launched at Woolwich on the 29th of August next.

The Hydra, paddle steam-vessel, is ordered to be commissioned for surveying service on the coast of Africa.

Colonel E. W. Crofton, C.B., commanding the Royal Artillery in Malta garrison, died, on the 26th ult., at his residence in Valletta.

The second battalion of the 20th Regiment of Foot and the 5th Hussars are ordered to hold themselves in readiness for immediate embarkation at Portsmouth for foreign service.

The Captain's good-service pension placed at the disposal of the First Lord of the Admiralty by the promotion of Capt. Lyster to the rank of Rear-Admiral has been conferred upon Capt. E. C. Tennyson D'Eyncourt.

The arrivals at Aldershott during last week were almost continuous. The division comprises an army of something like 712 officers, 16,000 sergeants, drummers, rank and file, and 4200 horses—being a total of close upon 17,000 well-trained and splendidly-equipped troops of all arms.

The officers of the 92nd Gordon Highlanders, in quarters at Gosport, and recently returned to England from Indian service, have presented to Captain Cammell, Royal Naval Reserve, of the ship Middlesex (the vessel which brought home the head-quarters of the regiment), a silver tankard.

A divisional order has been issued by Colonel W. Nedham, commanding the Royal Artillery in the Chatham district, in which Major-General J. Bloomfield, Inspector-General of the Royal Artillery, conveys to the troops his entire approbation of what he saw during his recent inspection of the first division of the depôt brigade.

On Saturday a detachment of the second battalion of the 19th Regiment, numbering 144 men of all ranks, left Chatham garrison and embarked on board the Leder, at Gravesend, for Dublin, to join the service companies of the 19th Regiment, which corps has been placed under orders to embark for India. The officers who proceeded from Chatham in charge of the detachment were Captain G. Clay and Ensign A. E. F. Brown.

A handsome service of plate has been presented by the officers of the Royal County of Down Regiment to Sergeant Patrick Currin, on his obtaining his discharge. Sergeant Currin served for a period of twenty-five years, during sixteen of which he filled the responsible situation of Mess-Sergeant to the regiment. He is in possession of a medal and clasp for Central India, together with a medal for meritorious service.

The following vessels have been chartered by the Government for the conveyance of troops and stores to India and the colonies—viz., the Conflict, 1170 tons, for Calcutta; the Queen of the North, 824 tons, and the Stamboul, 890 tons, for Bombay; the Albion, 478 tons, for Kurrachee; the Empress, 454 tons, for Mauritius; the Cambrian, 868 tons, for St. Helena; the Victory, 595 tons, for Shanghai; and the Enthusiast, 283 tons, for St. Helena and Ascension.

A notification has been received at Chatham garrison that the following troops will be dispatched to Calcutta during the present season—viz., 1000 officers and men of the second battalion of the 20th Regiment, to embark at Portsmouth; 1000 officers and men of the 36th Regiment, to embark at Cork; and 620 officers and men of the 5th Royal Irish Lancers, to embark at Portsmouth. Orders have also been issued at the Horse Guards for reinforcements of the Royal Artillery to be dispatched with these draughts to the number of upwards of 600 officers and men of all ranks.

THE VOLUNTEER MOVEMENT.

THE WIMBLEDON MEETING.

The meeting for 1863 commenced at one o'clock on Tuesday, with every prospect of a success exceeding that of any previous year. Taking the entries for the Queen's prize as the test, there are this year 1300, against 1100 last year, of whom only 901 went to the butts. There is also much better preparation for them. The number of targets has been increased to sixty, at from forty to fifty of which the marking will be on the Swiss or circular disc principle, the recommendations of which are that it insures increased accuracy of marking, and greatly economises time in cleaning the targets. Last year there was only one target of this kind in operation at Wimbledon; and, as the construction of each entails an expenditure of nearly £6, it follows that in the interval, upon this item alone, the association has spent some hundreds of pounds. The aggregate value of the prize list amounts to £4300 this year, or double the sum total which the association was in a position to offer at its last meeting. There is also a new running-deer target, cast from a sketch by Sir E. Landseer, and a "running man," the figure being that of a volunteer at the double. The camp accommodation is improved, one of the improvements being a good supply of water, the deficiency of which was much felt last year. On Monday 115 officers and 320 privates had intimated their intention to go into camp; last year the numbers were 66 officers and 146 non-commissioned officers and privates. On Monday and Tuesday the volunteers who mean to go into camp were arriving in great numbers, and the camp was alive with the bustle of preparation.

His Royal Highness the Prince of Wales rode to the ground on Monday afternoon, accompanied by Captain Grey, and was received by Lord Ducie, Lord Elcho, and other members of the council, who explained to his Royal Highness the intended proceedings. The Prince then visited the 200-yard range, where he fired several shots from a Whitworth rifle belonging to Lord Elcho. The marking was according to the Swiss system, and the first shot brought out a "centre" from the marker's butt. In every case save one, when the Prince fired an experimental shot from a different rifle, the bullets were, in the marksman's phrase, well "on" the target. But the fact that such crack shots as Lord Bury, Lord Elcho, and Major Holford, who fired at the same range, only succeeded in making "centres" and "outers," showed that there must have been a partial mirage, attributable to the glare of the sun and the swampiness of the intervening hollow. The final bull's-eye made by the Prince of Wales was the only one obtained at this target. The next trial was at a shorter range, but at a moving instead of a stationary target, and here the Highland experiences of the Prince stood him in good stead. Those who have not actually fired at the "running deer" can form no conception of the difficulty of hitting the mark. Appearing to move very slowly, it really travels with the velocity of a railway carriage, and as in its course it describes an arc of a circle, the rate of speed at different points is necessarily various. The artist has made the deer of the dun instead of the red tribe, and there is, consequently, little by which it can be distinguished from the bank behind; but for all that it rarely succeeded in crossing its "corrie" nevertheless. At one time the Prince succeeded in planting four bullets successively in the portion of the body forming the centre of the target. The members of the association who were present concurred in declaring that the practice which had been made at this range, if not better, was at least equal, taking the general average of the shots, to that recorded of any single rifle at the meeting of 1862. His Royal Highness used a double-barrelled rifle, made by Mr. Smith, the armourer to the National Rifle Association, and was so well satisfied with its performance that before leaving the ground he gave orders that one should be manufactured specially for him. He further caused it to be understood that he hoped to be present, with the Princess of Wales, on the 13th inst., to witness the match between the Lords and Commons and the contest for the "Alexandra" prize given by the association.

The rival eights, to represent England and Scotland in the match for the St. George's Challenge Vase, have been selected. The Scottish eight are—Captain Horatio Ross, Lord Elcho, Captain Edward Ross, Mr. Hercules Ross, Mr. Colin Ross, the Master of Lovat, Mr. H. Maxwell, and Mr. Ferguson; reserve candidate, Mr. Henry. The English eight are—Viscount Bury (ex officio), Earl Ducie, Captain Heaton, Mr. Martin Ridley Smith, Lieutenant-Colonel Halford; Captain Hawker, South Middlesex Rifle Volunteers; Mr. A. Ashton, and Captain Rowland, 55th Regiment; reserve candidate, Mr. Anthony Salvin.

A field day, under the command of Colonel M'Murdo, in which the Hon. Artillery Company, the London Rifle Brigade, the St. George's, and the Queen's (Westminster) Volunteer Rifles joined, took place last Saturday evening within the inclosure belonging to the National Rifle Association at Wimbledon. The corps first mustered at Wimbledon-green, and consisted of several troops of light horse and four battalions of artillery belonging to the Hon. Artillery Company, under the command of Major Robinson; the London Brigade, numbering about 300, under Lieutenant-Colonel Wardle; the Queen's, about 450, under Lieutenant-Colonel Earl Grosvenor; and the St. George's, mustering over 150, commanded by Colonel Lindsay, Colonel M'Murdo, attended by Lord Colville and Colonel Ibbetson as Aides-de-Camp, came upon the ground a little after seven, and marched the different corps, the artillery preceding, into the inclosure. An enemy was supposed to be advancing on

Digitized by Google

Wimbledon by the Putney and London roads. The St. George's, under Colonel Lindsay, and a field battery of artillery went out as a reconnoitring party. Skirmishers were thrown out, but the enemy being too strong for them, they retired on their supports, who immediately engaged the foe, the artillery opening on him from the left flank. The supports being gradually driven back, the reserves, consisting of the London Brigade, the Queen's, the Light Horse, and the second battery of the Hon. Artillery Company, advanced to their assistance, and succeeded in turning the right flank of the enemy, who made a long detour to the left by the Roehampton-road. The London Brigade, with the St. George's, were then thrown out to intercept him in this direction, the Queen's still acting as supports. The enemy, however, engaged them so hotly that a retreat in excellent order was made through the ranks of the Queen's, who then advanced on the coming foe, keeping up a withering fire with splendid precision, the artillery joining on the right flank. The St. George's and the London Brigade then pushing on, the action became general, and the right flank of the enemy was successfully turned, and he was driven back to his original position. Front was then changed, and the Queen's thrown out as skirmishers, but had to retire, the whole of the supports victoriously charging the imaginary enemy at the double. Colonel M'Murdo then addressed the men, explaining to them the objects of the different evolutions they had gone through, and complimented them on the manner in which they had been performed.

The annual inspection of the 1st Middlesex Volunteer Engineers in infantry drill, under their Lieutenant-Colonel, McLeod of MacLeod, took place in Hyde Park last Saturday. The inspecting officer was Colonel Erskine. The muster was somewhat small, being only about 350; they, however, went through all the battalion movements in a most creditable manner. After the manœuvres were over the men formed square, and were addressed by Colonel Erskine. He said they had performed their work in a very creditable manner.

Last Saturday evening was fixed for the official inspection of the 1st Middlesex Artillery Volunteers, and the place selected for the purpose was the parade-ground of the Wellington Barracks. There was a very good muster of men, under the command of Lieutenant-Colonel Creed. Colonel Smyth, R.A., was the inspecting officer of the day, and the proceedings were commenced by putting the corps through the battalion movements, after which followed the manual and platoon exercises. In all the various movements the men performed their part admirably. But satisfactory as was their performance of these operations, their gun-drill was even more perfect. The manner in which they handled the 18-pounders, the rapidity, steadiness, and certainty of their action, showed that they had not neglected their drill in the past twelve months. The inspection being at an end, Colonel Smyth briefly addressed the corps. He complimented the officers for the efficiency to which they had brought the men, and the men on the attention that he was sure, from what he had seen during the inspection, they must have paid to the instruction and drill they had undergone. He assured them he was highly satisfied with what he had seen, and it would be his duty to report accordingly.

The 2nd Norfolk Administrative Battalion, under the command of Lieutenant-Colonel Sir T. P. Beauchamp, assembled on Thursday and Friday, last week, in Langley Park, the seat of the gallant Baronet, for two days' training and inspection, and were placed under canvas on the occasion. On Friday the battalion was inspected by Colonel M'Murdo. The companies composing the battalion were the Harleston, Captain Holmes commanding; the Diss, Lieutenant Salmon; the Loddon, Lieutenant Gilbert; the Stalham, Lieutenant Burroughes; the Blofield, Lieutenant Jary; the Attleborough, Captain Sir R. J. Buxton; the Wymondham, Captain Gardon; and the Thetford, Lieutenant Davey. Altogether the assembled force comprised twenty-two officers, thirty sergeants, and 260 rank and file. Fifty camp-tents were borrowed from the War Office for the occasion, and in these the volunteers encamped on Thursday night. The whole battalion were entertained at dinner by Sir T. P. Beauchamp, who had also for his guests Lord and Lady Radstock, Lieutenant-General Sir H. Bentinck, Lord Suffield, the Hon. Major and Mrs. Walpole, Lieutenant-Colonel Ibbetson, Mr. R. J. H. Harvey, &c. In the course of a number of speeches in connection with various toasts, Colonel M'Murdo expressed his satisfaction at the prosperous position of the volunteer service; it had now turned the ebb to which it appeared to have receded, and, so far as he could judge, the tide was again flowing. The volunteer service now comprised 160,000 men, of whom 130,000 were riflemen, 80,000 of whom, again, belonged to detached companies seldom able to meet in battalion. If war came to-morrow, the country would have to depend on the 80,000 men composing the scattered corps which formed so large a portion of the volunteer force; and therefore he had come into Norfolk to see the manner in which the volunteers of this part of the country performed their duties. If they understood company drill, and had that cohesion in company which showed that they had paid attention to it, he should be quite satisfied; and he considered them perfect according to their degree, because he could not expect volunteers who could only meet two or three times a year in battalion to attain the position of those who had the advantage of turning out almost at their own doors and forming battalions of 500 or 600 strong. One battalion in London—the Inns of Court—was exceedingly well up in its work; but, under the different circumstances which obtained in Norfolk, he only expected that the men of the county battalions should understand company drill, and that the officers and non-commissioned officers should know their places. In such an event as the invasion of England it was not impossible that the northern coast of Norfolk might be selected as the point for landing. He had come into Norfolk to mark the thews and sinews of the volunteers who would have to oppose such a landing, and he was delighted to see so fine a body of men.

The annual inspection of the 1st Hants Artillery Volunteers, consisting of two batteries, took place on the 29th ult., at their platform on Hamble Common, the inspecting officer being Colonel Domville, of the Royal Artillery. Prizes were awarded to the successful competitors at the end of the day's proceedings. The guns are 24-pounders, the range being 1250 yards, and the precision of the firing was such as to elicit the highest commendation of the inspecting officer. There were forty-four shots fired, and of this number only one went wide of the mark, the others having been so well directed that not one would have missed a vessel moored in the position of the target. One shot fired by Gunner Reed carried away the flagstaff, a second hit the target, and a third fell within a yard of it. The men were afterwards inspected at company drill, and were then marched to Netley, where a dinner was provided for them by Captain Freeman and the officers of the corps. The batteries were under the command of Captain Freeman, the other officers present being Lieutenants Jackson, Smith, and Phillips, and the assistant-surgeon of the brigade, Dr. Orsborn. The whole of the proceedings passed off most satisfactorily, without a casualty of any kind.

A short time ago a challenge was received in England from an Australian battalion of volunteers to shoot an equal number of volunteers in this country—the latter to be selected from the best shooting company of enrolled volunteers for the year ending 1862, the firing to take place at any range not being the range of the respective corps. This challenge was addressed to the council of the National Rifle Association, and it appears that the best shooting company of volunteer rifles in England for the year 1862 was the No. 1 of the Nottingham Robin Hoods. This company has declared its readiness to accept the challenge, and on Saturday morning Lieutenant-Colonel Wright received a letter from the council of the National Rifle Association stating that an answer accepting the challenge had been sent to Australia. The contest will take place in September. The distances are 200, 300, 400, 500, 600, 700, and 800 yards; five shots at each range. The shooting will take place at the same time in England and Australia—ten men from each corps.

THE DISTRESS IN THE NORTH.

The weekly meeting of the Central Executive Committee took place at Manchester on Monday—Sir J. K. Shuttleworth in the chair.

Mr. Maguire, hon. secretary, reported the week's receipts at £6356; balance in the bank, £348,809. He also presented the monthly report, which stated:—"The very great increase of employment which has been afforded in the mills during the past month has enabled no less than forty-seven local committees to suspend operations for the present. From this circumstance I have been unable to obtain returns from their district, but, from reliable information which I have received, I am led to believe that out of 55,362 operatives resident in the districts in which committees acted, about 25,690 are working full time, and 16,801 are on short time. This improvement alone would have been a most satisfactory report; but I am also happy to state that in the districts in which local committees are still continuing their labours there are 2874 more operatives working full time than there were last month. It must not be forgotten that this is in addition to the 13,451 operatives who were reported to have obtained full work during the month of May; and it is now certain that, of those persons usually employed in the mills in the cotton districts, about 284,642 are in full work, 125,097 short time, and 180,729 out of work, against 192,527 full time, 129,741 short time, and 215,512 out of work in the last week of April. No further very great improvement can be anticipated in the state of employment before this time next year, as already it has reached the equivalent of an average of three days' employment a week for the operative population; and as at present there are 256,230 persons in receipt of relief, there is reasonable ground for apprehension that at least an additional 100,000 will have to be supported when the season arrives during which out-door labour will be considerably reduced."

Mr. Farnall presented his weekly report, by which it appeared that, on the 27th ult., there had been a further decrease in the number of persons receiving relief in twenty-seven unions of 3661 persons, making a total decrease, since the 6th of December, of 112,761 persons, and leaving 159,222 chargeable, independent of those receiving relief from the local committees.

Sir J. K. Shuttleworth, in a letter to a contemporary, says that the supply of cotton for the year may be expected to amount to half the old imports; and adds that the difficulties of manufacturing the Indian staple are actually overcome. It is only the price that kills. Of £40,000 now taken in weekly wages he thinks £22,000 may be due to the cotton trade, and £18,000 to casual employment. The latter must naturally be considered as in some degree temporary or precarious; but Sir James then proceeds to inform us that the factory work itself rests on no better basis. It is not a genuine revival of trade. It is only a little "spurt" put on by the energy of a few manufacturers who have adapted their mills to Indian cotton, and who have ventured, even at present prices, to replenish the stocks of goods, which, owing to the stoppage of production, had become very low indeed. But that demand must obviously be limited. The autumn would see it satisfied; and then the factory hands, the field hands, and the vagrants together would all come back upon the relief lists and swell the total of claimants to last year's figures.

CHESS.

TO CORRESPONDENTS.

WEE PAWN, L. M., and Others.—The key moves of Mr. Kling's instructive "Study" are as follows:—

WHITE.	BLACK.	WHITE.	BLACK.
1. R to K B 8th (ch)	R interposes.	6. R to Q B 3rd	R to Kt 5th (best)
2. R to K B 3rd	R to Kt 5th (best)	7. Kt to Q 7th	R to R 5th (ch)
3. R to Q B 3rd	R to Kt 8th (best)	8. K to Kt 6th	R to R 3rd (ch)
4. R to Q B 4th	R to Kt 8th (best)	9. K to B 7th, &c.	
5. R to Q B sq	R to Kt 8th (best)		

His beautiful Enigma, No. 1330, is solved by 1. R to Q Kt 4th; 2. R to Kt 6th; 3. K to B sq; 4. K to Kt sq, &c.

NORTHERN.—Mate cannot be given in Problem 1008 as you suggest.

C. M., Warrington.—BLINDFOLD CHESSPLAYING.—In ordinary chess play little if any progress beyond a better knowledge of the opening has been made during the last quarter of a century, but in the art of playing *sans voir* the improvement is very remarkable. In the time of Philidor, and down, indeed, to a comparatively recent period, it was thought an almost miraculous achievement for any one to conduct three games simultaneously without the assistance of a chess equipage. In the present day we have seen Mr. Morphy play eight games in this way; and even this performance, astonishing as it seems, has been surpassed by the exploits of Mr. Blackburne and Mr. Paulsen, each of whom has more than once played twelve games blindfold at the same time.

F. R. S.—A list of the members belonging to each of the leading European chess-clubs, from its foundation, would certainly be interesting, but is not very easy of attainment. On the roll of the chess-club formed in St. James-street in 1774, Professor Allen, in his "Life of Philidor," tells us:—"One noble lady (Dr. Franklin's Mrs. Howe) stood by the side of a Church dignitary (the Bishop of Durham), at the head of a list," comprising, "besides uncounted Dukes, Marquises, and Earls, the historical names of Gibbon, Charles James Fox, Lord Mansfield, Erskine, Wedderburne, and the Marquis of Rockingham—of Elliot, the defender of Gibraltar—of Fraser, who met a soldier's death—and Burgoyne, who underwent a soldier's last humiliation at American Saratoga."

P. J., of Paris.—The June number of the Magazine has not yet come to hand; and the Journal, we are sorry to add, is at least two months in arrear.

R. A.—A charming composition, but no novelty. It is found in chess treatises a century old.

R. W. B.—We have received a prospectus of the new Chess periodical you mention, but have no faith in its stability. A well managed English Chess Magazine, edited by an Englishman of competent literary ability and knowledge of the game, would supply an admitted want. A Chess Magazine, professing to be "the organ of English Chess," edited by a foreigner and produced under foreign auspices, has, however, been already tried, and the result was not such as to warrant a repetition of the experiment.

IGNORAMUS.—The expression, *coup de Jarnac*, used by Philidor in his treatise on Chess, is a French phrase, denoting a subtle and unforeseen attack. It had its origin in the memorable duel which was fought in 1547 between François de Vivonne, Lord of La Chataigneraie, and Guy De Chabot, Lord of Jarnac. In this combat De Jarnac, overpowered by the blows of his vigorous opponent, covered his head with his shield, and assuming a crouching attitude contrived to wound La Chataigneraie in the leg, and thus obtained the victory.

SOLUTION OF PROBLEM NO. 1010.

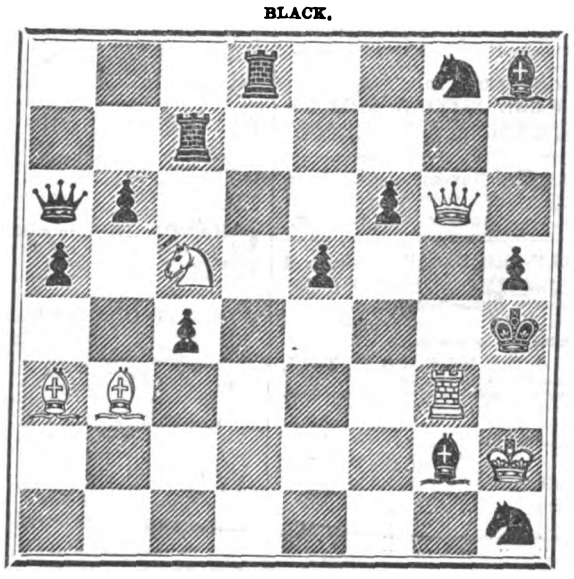
WHITE.	BLACK.	WHITE.	BLACK.
1. B to K R 4th (ch)	R takes B (best)	3. Kt to K 6th (dis. ch)	K to Kt sq, or R sq, or B 3rd, Kt 3rd, or R 3rd
2. Q to Q R 7th	K takes R, or (*a*)		
(*a*) 2. If any other move, then—		4. Q to K Kt 7th.	Mate.
3. Kt to K 8th (ch) B takes Kt			
4. Q to K B 7th. Mate.			

PROBLEM NO. 1011.

By Sig. PLACHUTTA.

One of the Prize Problems of the late Competition.

BLACK.



WHITE.

White to play, and mate in five moves.

CHESS IN LONDON.

A good Game in last Year's Tourney, between Messrs. PAULSEN and DUBOIS.

(*K Bishop's Gambit.*)

BLACK (Mr. P.)	WHITE (Mr. D.)	BLACK (Mr. P.)	WHITE (Mr. D.)
1. P to K 4th	P to K 4th	17. Q to K B 2nd	P to K B 4th
2. P to K B 4th	P takes P	18. R to K B 3rd	B to K B 3rd
3. B to Q B 4th	Kt to K B 3rd	19. R to K sq	P to K B 5th
(This is a very old though little used defence. It may be adopted safely, but the result is generally a dull game.)		20. R to Q 3rd	
4. Kt to Q B 3rd		(The intention of Black, apparently, was to follow this move with Rook to K 6th.)	
(He may also play 4. P to K 5th, but in that case the second player can preserve the Gambit Pawn.)		20.	K to B sq
4.	Kt to Q B 3rd	21. K to R sq	P to Q Kt 3rd
5. Kt to K B 3rd	B to Q Kt 5th	22. Q to K B 3rd	Q R to K sq
6. Castles	P to Q 3rd	23. R takes R (ch)	B takes R
7. Kt to Q 5th	Kt takes Kt	24. P to Q Kt 4th	Q to K 4th
8. P takes Kt	Kt to K 4th	25. K to Kt sq	B to K R 4th
9. Kt takes Kt	P takes Kt	26. Q to K B 2nd	B to K 7th
10. P to Q 4th	Q to K 2nd	27. R to Q 4th	P to K B 6th
11. P to Q B 3rd		(White plays this portion of the game very cleverly.)	
(This appears to be better than taking the K B Pawn with Bishop, though that move has its merits, if correctly followed up.)		28. B to Q 3rd	B takes B
11.	B to Q 3rd	29. R takes B	P takes K Kt P
12. P takes K P	B takes P	30. R to K B 3rd	K to K 2nd
13. B takes K B P	B takes B	31. R takes B	P takes R
14. R takes B	Castles	32. P to Q B 4th	P to K B 4th
15. Q to Q 4th	B to Q 2nd	33. K takes P	Q to K 5th (ch)
16. Q R to K B sq	Q to Q 3rd	34. Q to K B 3rd	Q takes Q B P
(Threatening to play P to Q 6th, and then to take the K B Pawn.		35. Q to K 3rd (ch)	K to Q sq
		36. Q to Q 2nd	K to Q 2nd
		37. P to K R 3rd	K to Q 3rd
		38. Q to Q Kt 2nd	Q takes Q P (ch)
		and White ultimately won the game.	

CHESS IN MANCHESTER.

The following Game, which illustrates a variation in the Scotch Opening much in vogue a few years back, is well entitled to consideration. It was played some time since between Mr. STANLEY and Mr. BLACKBURNE.

(*Scotch Gambit.*)

WHITE (Mr. B.)	BLACK (Mr. S.)	WHITE (Mr. B.)	BLACK (Mr. S.)
1. P to K 4th	P to K 4th	11.	K takes Kt
2. Kt to K B 3rd	Kt to Q B 3rd	12. Kt to Q 5th (ch)	Kt takes Kt
3. P to Q 4th	P takes B	13. B to K Kt 4th	Q takes B (ch)
4. Kt takes P	Q to K R 5th	14. K takes Q, &c.)	
(For an analysis of this interesting variation the student is referred to the "Chess Player's Handbook," pp. 171-172. He should see also a game at the same opening, published in the ILLUSTRATED LONDON NEWS of Dec. 7, 1861.)		12. B to K Kt 5th	P to K R 4th
		13. Kt takes Q R	Kt to K Kt 5th
5. Kt to Q Kt 5th	B to Q Kt 5th (ch)	14. B takes Kt	P takes B
6. B to Q 2nd	Q takes K P (ch)	15. B to K R 4th	P to Q Kt 3rd
7. B to K 2nd	K to Q sq	16. Kt to K 2nd	R takes B
8. Castles	Kt to K B 3rd	17. P takes R	P to K Kt 6th
9. Q Kt to Q B 3rd	Q to K R 5th	18. B P takes P	Kt to K Kt 5th
10. P to K Kt 3rd	Q to K R 6th	19. R to K B 2nd	B to Q B 4th
11. Kt takes Q B P		20. Kt to Q 4th	B to Q Kt 2nd
(In the game referred to above White now played—	11. B to K Kt 5th.)	21. P to Q B 3rd	Kt takes K R P
11.	Kt to K 4th	22. R takes Kt	Q takes P (ch)
(Had he taken the Kt with his King the game would probably have been continued thus:—		23. K to B sq	Q takes R
		24. K to K sq	Q takes P (ch)
		25. K to Q 2nd	Q to K B 5th (ch)
		26. K to Q B 2nd	B to K 5th (ch)
		27. K to Kt 3rd	B to Q 4th (ch)
		28. K to B 2nd	

The game was abandoned as a drawn battle.

CHESS ENIGMA.

No. 1338.—By Mr. C. BAYER. (*La Régence.*)

White: K at Q B sq, Q at K B 2nd, B at K R 4th, Kts at Q 4th and Q R 3rd, Ps at Q B 2nd and Q Kt 6th.

Black: K at Q B 6th, Rs at K B 2nd and Q B 5th, Kts at K Kt 5th and K B 8th; Ps at K B 5th, K 3rd, Q B 3rd, and Q R 3rd.

White to play, and mate in four moves.

SCIENTIFIC NEWS.

ACCLIMATISATION.—In the *Annals of Natural History* Dr. J. E. Gray has inserted a copy of the circular on this subject prepared by Mr. Wallace, approved of by a committee formed at the British Association meeting at Cambridge (consisting of Dr. Sclater, Mr. Alfred Newton, Mr. Wallace, and Dr. Gray), and now in course of distribution. The following are some of the points of inquiry to which the attention of persons resident in extra-European countries is especially requested:—1. As to the domesticated animals indigenous to the country, their differences from the wild races, the possibility of domesticating the latter, &c. 2. As to the domesticated animals which have been introduced from other countries, the date of their introduction, food, habits, longevity, fecundity, diseases, &c. 3. Special inquiries relating to the more common domestic animals—viz., sheep, horses, cattle, dogs, ducks, and geese; the capability of forming hybrids, &c.

NITROGEN IN BREAD.—A short time ago M. Barral laid before the French Academy of Sciences a memoir, in which he not only stated that, when in the same state of dryness, there is more nitrogen in the crust of bread than in the crumb, but that crust is more soluble than crumb in water. This last fact was imputed by M. Payen to the transformation of dextrine into starch during baking. M. Barral, in a note to his memoir, reports another important result, established by his researches. From the same weight of dried crust and dried crumb placed in water he has found that the soluble part of the crust gives from 7 to 8 per cent of nitrogen, while that of the crumb gives only from 2 to 3 per cent. The greater solubility of the crust no doubt proceeds from the gluten of the crust having undergone a remarkable transformation through exposure to the temperature of from 392 to 428 deg. Fahr. in the oven during baking. He says that the soluble part of crust possesses more nitrogen than there is in the juice of meat. By way of confirmation, M. Barral introduced some gluten into strong closed glass tubes, and submitted them to a bath of oil, of the temperature of 428 Fahr. In a few seconds the gluten liquefied. This liquefaction, effected under the influence of steam and pressure, gave rise to a disengagement of carbonic acid; for when the tube which contained the liquefied gluten was broken, a slight explosion took place. When the gas causing this explosion was collected, it was found to be carbonic acid, without any trace of nitrogen. The brown liquefied gluten was remarkably alkaline, and endowed with a peculiar odour. After filtration, a yellow precipitate was formed by treatment with acids, and none was produced by treatment with alkalies and alcohol. M. Barral states that he is still pursuing his interesting studies on the chemistry of bread-making.

THE PRESERVATION OF BUILDING MATERIALS is still the subject of the experimental researches of M. Kuhlmann, so well known for his memoirs on the applications of silicates of potash, or water-glass, for the hardening of stone, &c. The efficacy of this material having been found incomplete when applied to old buildings, under the influence of ammoniacal emanations and constant humidity, M. Kuhlmann has tried, in the case of brick walls, a mixture of tar obtained from the distillation of coal, laid on as hot as possible, the wall having been previously heated by placing near it a portable coke fire. This having been found successful, he was induced to experiment with several combinations of coal tar with various mineral substances, such as oxide of iron, obtained from the combustion of iron pyrites; this latter, united with one fourth of its weight of coal-tar, gives a plaster, which, when cold, possesses remarkable hardness and sonorousness. The application of silicious solutions is not suitable for moulded plaster, because, even at the moment of contact, there is an exchange of acids, and a gelatinous solution is produced, which forms on the surface of the plaster an impermeable layer, and thus prevents the silica from penetrating into the centre. In regard to the application of bituminous substances for the preservation of plaster, M. Kuhlmann states that the chemical properties of the plaster, instead of being an obstacle to its hardening and unalterability, as in the case of silicatisation, is, on the contrary, very favourable to these effects. In a recent communication to the French Academy of Sciences, he gives many details, and expresses great hopes of the preservation of many public buildings and monuments from the injurious action of frost and damp by means of the combination of gas-tar with plaster and other substances. He thinks also that the phenomena attending these combinations well deserve the study of geologists in relation to the history of many of the transformations which have taken place on the crust of the earth.

THE ELECTRIC THERMOMETER has been recently employed by M. Becquerel in determining the temperature of the earth at great depths, and the details of his experiments are given in the *Comptes Rendus* of the French Academy. The electric thermometer in its simplest form is a closed circuit composed of an iron wire and a copper wire soldered at their points of junction, and in which is found either a galvanometer keeping zero perfectly, or, better still, a magnetometer solidly fixed, with divers accessories, such as apparatus for heating or cooling the free solder, thermometers, lenses, &c. When the temperature is the same at the two solderings the magnetised needle rests at zero; when there is a change of temperature there is a deviation. If one of the solderings is placed in a spot where the temperature cannot be observed with a thermometer, then, by raising or lowering that of the other soldering, until the needle shall arrive at zero, the observer will be assured that this temperature is the same as that which was unknown. Thus, by giving to the metallic wires sufficient diameters, the temperature at great depths may be observed. Care must be taken that the temperatures given by the solderings are the same as those of the thermometers placed beside them. The operation requires a deep-bored well, a thermo-electric cable, a galvanometer, and other apparatus; in all which M. Becquerel was liberally aided by M. Rouland, the late French Minister of Public Instruction. On examining the earth at Paris M. Becquerel found—1, That, without going out of the tertiary basin of Paris, the invariable stratum is not of the same thickness; 2, That we can rigorously determine the march of the propagation of heat in the soil and the position of the invariable stratum; and, 3, That at the Jardin des Plantes from the depth of 26 to 36 metres, the temperature is constant, as it is also from 16 to 21 metres. He states that in passing from one stratum to another the temperature seemed to change, and thinks that, consequently, it will be possible to determine with great exactness the propagation of solar heat in the earth. Since this new mode of observation indicates changes of temperatures less than the tenth of a degree, M. Becquerel considers it to be highly desirable that experiments should be made at depths of 100 or even of 200 metres, in order to learn the nature of the strata, the infiltration of waters, chemical reactions, and other causes which influence the distribution of heat in the crust of the earth, and what are the modifications which it undergoes with the weather—a distribution, the effects of which may react on the temperature of the soil, and, consequently, on the climate. This is one of the grandest questions in terrestrial physics which a philosopher can propose to himself to solve, and well worthy of fixing his attention.

THE HERRING.—Some extracts from the report of the Royal Commission (consisting of Professors Lyon Playfair and Huxley, and Lieutenant-Colonel Maxwell) appear in the *Edinburgh Philosophical Journal*, and contain some interesting particulars respecting the natural history of this valuable fish. It is found in four conditions:—1, Fry or sill; 2, Maties or fat herring; 3, Full herring; 4, Shotten, or spent herring. Adult full herrings generally vary in length from ten to fifteen inches; they may vary, it is said, from seven to seventeen inches. Their food consists of small crustacea and fish, and particularly sand eels, while in the matie condition they feed voraciously. Their enemies are fish (cod, ling, &c.); birds (gulls and gannets); marine mammals (porpoise, and other cetacea); and man. In 1861 there were in Scotland, and that part of England over which the Fishery Board have jurisdiction, 42,751 fishermen and boys engaged in the herring fishery. The total take of the year would give about 20,000 herrings for each of these persons, or nearly 900,000,000 for the whole! This vast number sinks into insignificance if compared with the total destruction effected by agencies over which man has no control. Consider the destruction of large herring by cod and ling alone. It is a very common thing to find a codfish with six or seven large herrings in his stomach, of which not one has remained long enough to be digested. If, in order to be safe, we allow a codfish only two herrings per diem, and let him feed on herrings for only seven months of the year, then—2 herrings × 210 days = 420 herrings—his allowance during that time; and fifty codfish will equal one fisherman in destructive power. But the quantity of cod and ling taken in 1861, and registered by the Fishery Board, was over 80,000 cwt. On an average thirty codfish go to 1 cwt. of the dried fish. Hence, at least 2,400,000 codfish were caught in 1861. But, if fifty codfish equal one fisherman, 2,400,000 will equal 48,000 fishermen. In other words, the cod and ling caught on the Scotch coasts in 1861, if they had been left in the water, would have caught as many herrings as a number of fishermen equal to all those in Scotland, and six thousand more, in the same year.

A NEW GAS FURNACE for scientific purposes has been constructed by Mr. G. Gore, with the view of employing only ordinary coal gas and atmospheric air, dispensing with the use of bellows, blowing apparatus, tall chimney, or valves requiring frequent attention. It is figured and described by Mr. Gore in the *Philosophical Magazine*. It consists of a cylinder of fire-clay, about 9 in. high and 6 in. diameter, open at both ends, with a hole in its side near the bottom to lead into the chimney. It is covered with a movable plate of fire-clay with a hole in its centre for the introduction of the crucible or of substances to be melted. This hole is closed by a perforated plug of fire-clay for access to the contents of the crucible, and that again is closed by another stopper of clay. A chimney of sheet iron, about five or six feet high, kept upright by a ring of iron, is attached to the top of the furnace. The fire-clay cylinder is inclosed in a sheet-iron casing with a bottom of iron, to which are fixed three iron legs. Inside the larger cylinder is another fire-clay cylinder or cupola with open ends and with three projections of fire-clay for supporting a crucible, which is kept steady by means of three marbles. The gas-burner is a thin metal cylinder deeply corrugated at its upper end, with the corrugations diminishing to nothing at its lower end. For details of the management of this furnace we must refer our readers to Mr. Gore's description. He says that the chief conditions for its successful use are "sufficient gas, proper regulation of gas to air, and a suitable degree of draught." Mr. Gore states that it will readily melt half a pound of copper or six ounces of iron. It requires from twenty to thirty minutes to acquire its highest temperature, and then the entrance part of the chimney exhibits a faint red heat in daylight. If it exhibit much more than this the draught is too powerful. This furnace is protected by patent, and may be obtained of the maker, E. W. Ball, Islington, Birmingham.

THE FARM.

WHEN we have said that the weather is nearly everywhere most favourable for the crops, that the meadow clovers seem likely to turn out better than the meadow grasses, that a public testimonial has been set on foot to Mr. E. Holland, M.P., of Dumbleton, for his services to agriculture and the Agricultural College (at which the editors of the Devon and Hereford Herd Books, and other gentlemen well known in the agricultural world, have voluntarily offered to deliver lectures), that the farmers' hair is on end at the prospect of a decimalised system of weights and measures; and that the cock, like everything else, is entitled to a quiet Sunday in the country with his family—we have pretty well epitomised the fortnight's news. The stock for the Hamburg Show will be shipped about the 9th, but they are sent over for sale quite as much, if not more, than for show purposes, and their owners will be only too glad to get back without them in time for Worcester. We hear that Messrs. Weatherby, Barthropp, and Robert Smith have promised to judge, and that the secretary of the Agricultural Hall has been specially asked to go over and help the promotors of the maiden Dog Show in Germany. The Islington one produced about £1600 net to the shareholders.

The agricultural meetings so far have been well attended, and above the average. The Bath and West of England especially marked the strides which shorthorns are making in the close borough of the Devons; but still the show of the latter was, in the opinion of Mr. James Quartley, who was a judge, and not the man to shirk an unpleasant truth if it were needed, one of the very best he had seen. Sir J. Duckworth ineffectually objected to public judging, and denied it even the name, because he declared that he was fifty or sixty yards off the judges. Too great proximity to these functionaries has been the great complaint hitherto; but really, according to Sir John's argument, a cricket-match is not played in public because the spectators stand outside the flags. The careless way in which the catalogue was got up seems to have been the great blot of the Norfolk show, where the shorthorns, polls, and Southdowns were in good force. Sir Willoughby Jones, in a very practical speech at the dinner, said a good word for the blood-red dairies of the county, and for those who had through evil report and good report kept their faith with this stock, which prosper on very light herbage, are rare fill-pails, hornless, tractable and quiet, and never injure the trees and fences. It was thus that the Baronet summed up for them, and added that in offering his cup he had limited it to animals without either slugs or horns, "my object being to prevent our milk from being bred away by crossing with a Devon, or endeavouring to get a Devon back." He also announced a further limitation for next year, to prevent the cup being again won by an animal with a spot of white on it, as he is firmly persuaded that, "where you see a spot of white in our red Norfolk polls there is bad breeding somewhere, and a spot of white tells of stray shorthorn blood put in many years since, either to square the back or for something else." At the Essex meeting Sir John Barleycorn, who has played second and third parts at the Royal, was first in the blood-horse lists, with nothing but old Dr. Sangrado against him. Mr. Claydon won the two shorthorn bull prizes with his Marquis of Cornwallis and Marquis of Cornwallis 2nd, but was beaten for the champion one by Mr. Sworder's Duplicate; and Mr. M'Intosh had the rewards of his Kirkleavington allegiance in Lady Bates 3rd and Lady Oxford 5th, both by his American bull. In one class Mr. Claydon beat Sir Thomas Lennard, the great Southdown man of the district; but the Baronet had the open champion prize for the best ram of any pure breed with one said to have been bred at Babraham. At the dinner, the farmers complain that they were invited to express their opinions on the Bishop of Rochester *v.* Davis (clerk), and then snubbed for doing so. At Ipswich old Chester Emperor won first-class honours again. Mr. S. Wolton was supreme in Suffolks; and Sir E. Kerrison defeated the best shorthorn female (not Pride of Southwicke or Rosedale) that was sent from Branches Park. The pigs were pre-eminent, the blacks more especially so; but Mr. Rigden did not think highly of the Southdowns, save one, and rallied Mr. Dobito at the dinner on the new black-faced breed, "The Suffolk," with which he was most fortunate.

The recent Babraham sale was not, so to speak, a very dashing one, but The Beauty tribe, with The Lord Chancellor (400 gs.) at its head, pulled up the average well. This son of Usurer (decidedly the most characteristic bull we ever saw at Babraham) and Red Rose has gone to Mr. R. Sharp, of Courtlands, Sussex; and First Fruits, who lacks bull character, departs to Mr. Odam, of Bishop Stortford. It may be that the Birmingham mind has a native weakness on the subject of medals, but surely the pertinacious attempt to bid for and claim this bull "with his Battersea medal," which the executors very properly regarded as an heirloom, might have been spared. Old Erminstade, of Fawsley, from whom First Fruits is in direct descent through The Englishman and Sir Charles, ends her life in Saxony, and departs giving her six gallons per diem. Mildred Rose, from The Beauty, goes at 145 gs. to Cheshire, which is not often seduced into giving those prices; and Miss Burdett Coutts (91 gs.) to Mr. Barclay, in Fifeshire. The foreigners were busy, and Mr. Clark Irving (late of Sidney), whose laudable zeal for stock improvement in his native county has impelled him to offer 120 gs. in shorthorn prizes, and 20 gs. in Galloway prizes, at the Wigton Show next September, was either the winner or the second in some good bouts. The third prize cow at Battersea, Lady Elizabeth Yorke, only made 36 gs., so that the report of the Royal judges—"not a good one"—inconsistent as it might seem when Douglas's Maid of Athelstane and Ambler's Wood Rose were unnoticed, was not far from the mark. Early and continued fertility was the great feature of this herd. The calves were never very much to look at, as they seemed to get all their leg growth the first year, and to lack twist; but the way in which they let down and widened out in their second season was something marvellous, and a look over the cream of the yearling and two-year-old heifers in the smaller yard near the house was something to be remembered, especially when it was backed up with a short ride to the North Farm, when the troop of Royal shearlings were picked over for the second time before starting. The shorthorns have all gone; but the grand old Southdown blood of the five mysterious tribes will no doubt still continue to flourish, in the hands of the Webb family, about Babraham and West Wickham. Time has revealed the great secret at last that on some eight hundred acres the flocks and herds alone were worth some five-and-twenty thousand, and never was the triumph of blood more complete.

Mr. Sanday's Leicester shearlings, 60 rams and 100 ewes, will be sold on the 26th of August, by Mr. Strafford, and there ends the victorious Holmpierrepont flock. Mr. Preece leads off the "Shrop" sales of this year at Shrewsbury Fair on July 27 and 28, and follows up at Mr. Horley's on the 29th; while Mr. Lythall begins at the Lees Farm, near Stafford, on July 30, and has Mr. S. Byrd's shearlings second on his list. About forty shearlings and older Oxford Down rams of Mr. Charles Howard's, a flock which has taken so many first honours at Smithfield, and gained its maiden Royal prize last year, are announced for sale, as usual, by private contract.

The Act 6 and 7 Will. IV., c. 71, s. 42, enacts that lands in a district the tithes whereof shall have been commuted, and which shall afterwards be newly cultivated as hop-grounds, shall be charged with an additional rent charge; and it has just been held by the Court of Error, in "Trimmer (app.) v. Walsh (resp.)" (reversing the judgment of the majority of the Queen's Bench and confirming the judgment of Mr. Justice Wightman), that waste lands in a parish the tithes of which were commuted, but thereafter cultivated as hop-grounds, were not liable to such extra-ordinary rent charge.

A monument has just been erected in Carlisle Cathedral to the memory of the late William Blamire, Chief Commissioner of Tithes and Copyhold and Inclosure Commissioner. It records, *inter alia*, that during twenty-four years of official life he was "the willing adviser of the Government upon many political questions, especially those relating to agriculture." The Blamire family motto of "Faire sans dire" gave the impress to his whole life. He had learnt his experience in a hard school—among the borderers and the Cumberland "grey-coats," as, up to the period of his entering Parliament for the eastern division of his county, at forty-one, with a Cumbrian colleague in Sir James Graham, his life had been spent among "the brown fallows" and pastures, and in riding (sometimes all night) hundreds of miles per week from fair to fair. This tablet has been erected, and a Blamire agricultural prize founded, by public subscription.

INDOOR AMUSEMENTS.

DRAUGHTS, BACKGAMMON, DICE, DRAWING-ROOM CURLING, MERELLES, AND QUOITS.

DRAUGHTS, though despised by many persons, is a game full of interest, and, as a scientific recreation, though less pretentious than chess, it ranks very high. It has not the same stamp of antiquity as chess. Sir William Jones has traced the latter game back to some four thousand years, whereas we do not find that draughts was much practised in Europe until the middle of the sixteenth century. Some writers have held that draughts preceded chess, but apparently without sufficient evidence. In Angas's "Savage Life and Scenes" it is stated that a game much resembling draughts is played by the uncivilised tribes of the interior of New Zealand; the game is called by them "emu," and it seems to have originated with them, as it is scarcely possible that they derived it from any other people. In 1688 an elaborate treatise on draughts was published in Paris by a Monsieur Mallet, a well known professor of mathematics, and three-quarters of a century later Mr. William Payne, also a teacher of mathematics, published a celebrated work, entitled "Introduction to the Game of Draughts." In 1800 Joshua Sturges printed a guide to this game, which even at this lapse of time has never been surpassed; the work has been edited several times, but the additions to it are for the most part unimportant. In England draughts is universally played on the white squares, the board being placed with a black square in the right-hand corner; the reverse being the case at chess, a white square always occupying the right-hand corner. In Scotland, and as far as we know, this is the only exception, the game is played on the black squares. The colour of the squares, except as far as habit is concerned, makes no difference in the relative position of the pieces. The origin of backgammon is a vexed question; Palamedes, of Greece, is the reputed inventor of this game, decidedly one of the oldest known in our times, about 1224 years B.C. It is stated by some to have been invented in Wales during the period preceding the Conquest. The derivation even of the word is unsettled, some considering it to be from the Welsh "back," little, and "cammon," battle; others, from the Anglo-Saxon "bac," back, and "gamone," game—that is, a game where the player may be sent back. The latter derivation is supported by Bishop Kennett and Strutt. Tric-trac, a similar game, was formerly called "tick-tack," or "touch and take," because if you touch a man you must play him. Cotton, in "The Complete Gamester," has the following curious remarks on tric-trac:—"Some play this game with toots, bovereis, and flyers. Toots is when you fill up your table at home, for which is required small throws. Boveries is when you have a man in the eleventh point of your own table, and another in the same point of your adversary's directly answering. Flyers is when you bring a man round the tables before your adversary hath got over his first table, to the effecting of which there is required very high throwing on your side and very low throwing on his."

The early name of the backgammon board was tables, and we find that games with dice were divided into games within the tables—e.g., backgammon Irish (a very similar game), tric-trac and some minor games, one of which went by the suggestive appellation of "catch dolt." Of games without the tables may be mentioned "in and in," "hazard," and the like. Chaucer mentions "tables;" in his time it was played with three dice, and all the men commenced their action from the adversary's table (here we see the word "tables" preserved in the singular number). We also find "tables" mentioned in Rabelais, as a game played by Gargantua:—"Apres souper venaient en place les beaux Evangiles de bois, c'est-à-dire force tabliers." The fair wooden gospels are said to have been invented by certain monks in order to conceal their gaming propensities. The backgammon-boards were made, as we now see them, bound and lettered on the back to resemble volumes of books; and it was not thought too bold a device to insert the names of holy books. Should the quasi-pious monks be disturbed in their devotions at the gaming-table, they need only shut the volume before them, and restore it to the shelf till the intruder was gone. The odour of sanctity was not enough to prevent the disease that has been wittily described as "a paralytical distemper which, seizing the arm, the man cannot but choose shake his elbow." The invention of dice is ascribed to Palamedes, to whom we have already alluded. The game of "tall and tessers" among the Romans was played with dice. The use of dice is of very early date in this country, for we find in Stowe—"The Kings of Scotland, France, and Cyprus, being in England on a visit to Edward III., a great tournament was held in Smithfield, and afterwards the Mayor kept his Hall for all comers who were willing to play at dice and hazard. The Lady Margaret, his wife, kept her chamber to the same effect. Shortly afterwards they entertained the Princess of Wales, her son, Prince Richard, and their attendants, with a grand masquerade on horseback—the procession beginning at Newgate and ending at Kensington. Being arrived at the palace, one of the masques produced a pair of dice, and proposed to play with the Prince. The dice were so artfully contrived, that when the Prince threw he was sure to win; and, having thrown three times, his Royal Highness won a bowl, a cup, and a ring, all of gold; and, having given the Princess and each of the nobility attending, the like opportunity to win each a gold ring, they were highly pleased." Again, in Stowe's "Surrey" we read how "Sir Miles Partridge play'd at dice with King Henry VIII. for Jesus' bells (so called), which were the greatest in England, and hung in a tower of St. Paul's Church, and won them, whereby he brought them to ring in his pocket; but the ropes afterwards catched about his neck, for, in Edward VI.'s days, he was hanged for some criminal offence." An Act of George IV., passed 1828, regulating the license of makers and the sale of dice. There is a very amusing game lately invented, which is likely to become very popular—viz., "Drawing-room curling." The rink is made of strong plate glass, with a prepared ice surface. By a simple but hitherto unknown liquid preparation the inventor and constructor, Mr. Gavin Young, of Edinburgh, has been enabled to make the surface of the rink remarkably smooth, so smooth, indeed, that the curling stones, when propelled by an expert and practised curler, move along as gracefully as if the rink was really ice and not polished glass. The rink is twenty-one feet long by four broad, which is a size admirably suited for the amusement of private parties; but they can be increased to any size. The curling stones are made of finely-polished Aberdeen and Peterhead granite, between three and four pounds in weight, with silver handles. They are the exact models of the stones used by curlers. During the summer months, or even at Christmas, when through a succession of thaws no opportunity is afforded either for the graceful exercise of skating, or for the still more spirited and exciting game of curling, the new model curling rink will be found a delightful in-door amusement for persons of both sexes.

Another game, that of "merelles," ought to be here mentioned. It was formerly called in England "nine men's morris," and is one of some antiquity. The form of the board is the same as that used in the fourteenth century; and the rustics of that age, in lieu of a board, were wont to cut lines in the same form upon the ground, and make a small hole at every angle, using stones of different forms and colours to play the game with. Shakspeare refers to this, in his "Midsummer Night's Dream," when "proud Titania replies to jealous Oberon":—

> The nine men's morris is fill'd up with mud;
> And the quaint mazes in the wanton green,
> For lack of tread, are undistinguishable."

The game is played in the following manner. Two persons, having each nine men, or pieces, lay them down alternately, one by one, on the spots placed at each angle or intersection of the lines, and the object of either player is to prevent his opponent so placing his men as to form a row of three. When such a row is formed, he whose men form it has the privilege of removing from the board any one of his adversary's men, except it be one of the row of three. When all the pieces are laid down, they are moved to the best spot adjacent in any direction the lines run, if not already occupied. Each player moves alternately, and he who takes off all his opponent's men wins. Drawing-room quoits is also a very good game, although it depends more upon skilfully throwing the small ivory discus than any mental power. At the late fête at Fontainebleau quoits made of caoutchouc were introduced, and furnished great amusement to the Emperor, Empress, and their distinguished circle. We have no doubt that ere long indiarubber quoits will form one of our popular indoor games.

COLUMN FOR THE CURIOUS.

STRAWBERRY-HILL, which has for more than a century been historically associated with literature, taste, and genius will, on the 15th and 16th inst., by kind permission of Frances Countess Waldegrave be thrown open to the public in aid of the fund for the enlargement of Holy Trinity Church, Twickenham. In the grounds of Strawberry will be held a bazaar, reminding one of the "little plaything house" which Walpole bought of Mrs. Chevenix, the noted toywoman, and made the nucleus of the celebrated Strawberry Villa, "set in enamelled meadows, with phillagree hedges." We venture to suggest a stall inscribed "late Chevenix's." Strawberry-hill has a legion of celebrities, but never was its gaiety devoted to a holier purpose than the good work of next week.

The important collection of ancient Greek coins, in gold, silver, and bronze, formed by the Chevalier N. Ivanhoff, under favourable and advantageous circumstances, during a long official residence in Turkey, was disposed of by auction by Sotheby and Wilkinson last week. The collection comprised specimens of the coinage, both civic and regal, of numerous cities and kingdoms of the ancient world; the matchless series of the coins of the Lycian League, struck before the reign of Alexander—those of European Greece, Asia Minor, Syria, and Egypt being included, many examples of which are so rare as to be wanting in the richest cabinet. The sale lasted throughout the whole week, and realised upwards of £3000.

In the *Gentleman's Magazine* for the present month appears a communication addressed to the Editor on "The Fraudulent Manufacture of Flint Implements" recently detected at Winchester. They were offered for sale by a poor labouring man, who stated that he had found them in a barrow about eight miles from Winchester. Upon being much pressed, however, the man confessed the forgery, and, for a small consideration, showed the Correspondent the art and mystery. "Pulling out of his pocket a small, dirty bag, he took from it a common carpenter's awl and the hasp which goes over the staple of a padlock, and then taking from another pocket some pieces of flint, he sat down, and holding the flint dexterously between his thumb and finger, and resting his hand upon his knee, he soon formed a beautiful specimen (which is engraved, with others, in the *Gentleman's Magazine*.) The awl he used for making the angles at the base and rounding the barbs. The man's skill and quickness were remarkable, being, as he stated, the effect of several years' practice in this art. It should be added that the long portion of the hasp formed the handle, and the circular part the hammer on which he broke the flints." While upon this subject we may note that the *Journal of the Kilkenny Archæological Society*, vol. iv., part 1., just published, contains some lithographed illustrations of articles found in *cranoges*, or ancient lake habitations of Ireland, of the class to which Sir Charles Lyell's work on "The Antiquity of Man" has of late drawn so much interest. The most remarkable items represented are a piece of pottery, with the wavy pattern upon it; a paddle or oar 3 ft. 7 in. long; a wooden scoop, that might be used for baling out water from the boat with with which it was found, of similar form to that used by modern yachtsmen to sluice their sails in a match; a netting-needle; a battle-axe, of iron; sock of a plough, of iron; a knife with a goat's-horn handle; several iron and brass pins; a large button-like fastening, of brass, the eyes cast; a crucible, never used; and a bone comb.

In "Some Notes from French Towns," in the *Builder*, we read of the interesting results of the examination of the gravel-beds in the vicinity of Abbeville, which have provoked such intense discussion among geologists as to the antiquity of the formation and of the shaped flints which have been found there. M. Boucher de Perthes, resident in a handsome mansion in the Rue de Minimes, has for a considerable time collected all that the gravel-diggers have found, and has formed a museum of them. Visitors are freely admitted to view the contents. The number of the tooled flints, or *haches*, is about 1200, the whole of which M. de Perthes has offered to the Government, and his offer has been accepted.

The remains of a Roman hypocaust have been discovered on the site of the old Feathers Hotel, Bridge-street, Chester, which is now being taken down. The extent of the hypocaust is about 23 ft. square; height of the pillars, 32 in., quadrangular, with a cap of 12 in.; but few of the perforated tiles remained entire.

Coleridge oddly remarked, "You abuse snuff: perhaps it is the final cause of the human nose!" It is, however, against Samuel Taylor's argument to find that the custom of snufftaking has been traced in this country little beyond two centuries. Mr. O. Morgan, in recently exhibiting to the Society of Antiquaries some curious ivory snuffboxes of the last century, gave a short history of the introduction of snufftaking into this country, as exemplified by the boxes themselves. He said that the powder of tobacco having an agreeable smell, it became customary to use it as a scent about the year 1702; and, in the first instance, the snufftakers carried with them a small grater, with which they reduced the tobacco into powder. The grater was afterwards inclosed in a box; but the early snuffbox contained no reservoir, and the powder was consumed as soon as made. By the subsequent improvements a separate compartment was made in the box to hold the powder, and it was shut off from the snuff manufactory by a small pair of gates. By a further progress in the art of snuffmaking a sufficient quantity was manufactured to be contained in a separate box, which was carried in the pocket, whilst the manufactory itself was left at home. Some admirable specimens of the original portable manufactories of snuff were exhibited. Nevertheless, we have allusions to snufftaking of much earlier date than the above. Howell, who died in 1666, describes drawing smutchin into the nostrils with a quill; for, snuff was anciently taken in small spoons, whence, in old plays, we have a *spoonful*, not a *pinch*, of snuff. Two ancient snuffboxes, engraved in the "Archæologia," vol. xiii., resemble flat, circular smelling-bottles: the stopper screws in, and has a spoon fastened into it, resembling that of a cruet for cayenne pepper.

The tone and translucency so much extolled in ancient stained glass, in a lecture lately delivered by Mr. Edmundson to the Chester Architectural, Archæological, and Historic Society, are argued to be "simply and solely the effect of age, and to be legitimately produced in no other way." We have long held this same opinion, but with this addition—that some of the effect is due to the *passage of light through the glass in a series of ages*. On mentioning this effect to a celebrated artist in glass a few years since, he admitted its reasonableness. Mr. Edmundson has shown, by experiment on some very old cathedral glass, that the translucency is all a myth, for that, when cleaned and polished, it was as transparent, if not more so, than the modern glass. With respect to the tone, or mellow crust, upon old glass, Mr. Edmundson proves, by experiment, that the normal condition of ancient windows is that of perfect freedom from that tone. As to the popular notion of *lost colours*, Mr. Edmundson maintains that, not only is there no colour of ancient times not reproduced in all its vigour now, but there are many colours now known to the glass-stainer which were never dreamt of by the older artists. Here, again, the "question of time," we think, should be considered. It was noticed at the Chester meeting that the ancient circular quarries (*vulgo*, "oyster-shell glass") is believed to have wholly disappeared; the window of the small domestic chapel attached to the Bishop's palace at Chester being, according to Mr. Albert Way, the last apartment in England which retained that ancient form of glazing.

The "magic crystal" which played so conspicuous a part on the recent "Zadkiel" trial reminds one of the famous convex crystal which Dr. Dee had in 1582, and which he pretended to have received from the angel Uriel. This crystal was believed to have the quality, when intently surveyed, of presenting apparitions, and even emitting sounds. The phenomena varied. Sometimes the crystal had to be turned about several ways before the right focus was obtained; sometimes the spirits appeared upon the crystal, sometimes reflected upon parts of the room, but only one person could see the figure or hear the sounds. Hence a medium was requisite, with whose testimony the inquirer was compelled to be satisfied, for he neither saw nor heard anything himself. Much was said of the rank of some of the persons who inspected Zadkiel's magic crystal, but Dee had a Queen among his visitors, for he records in his "Diary," published by the Camden Society—

> 15th March, 1596.—Her Majestie (Elizabeth) willed me to fetch my glass, so famous, and to show unto her some of the properties of it, which I did. Her Majestie, being taken down from her horse by the Earle of Leicester, did see some of the properties of that glass, to her Majestie's great contentment and delight.

THE NATIONAL PRINCE CONSORT MEMORIAL.

We give in this week's Impression an important and carefully-executed view of the design recently adopted by her Majesty for the national memorial of her lamented Consort. Apart from the interest which attaches to its purpose, it has a special character as being the most important and elaborate work of monumental art in modern times. To make the project more intelligible to our readers it may be useful to recapitulate its history.

When the first impulse of grief was subsiding which the death of his Royal Highness the late Prince Consort had excited throughout the country, a common feeling seemed to suggest the adoption of some fitting mode of perpetuating the memory of a Prince whose life among us may be described in the most unaffected terms as one of eminent private virtue and public usefulness. Accordingly, a committee of influential men met for this purpose, under the presidency of the then Lord Mayor, Mr. Cubitt. From their deliberations, and the tone of the public press, the idea of erecting a monolithic obelisk in a conspicuous part of the metropolis seemed to find great favour, though public opinion was freely expressed as to the unfitness of adopting a pre-Christian form and type of monument as a memorial of an eminently Christian Prince. A Royal Commission, composed of the Earl of Derby, the Earl of Clarendon, Sir Charles Eastlake, President of the Royal Academy of Arts, and the Lord Mayor of London, was appointed by the Queen to investigate the obelisk scheme; and the result of their consultations was a report to her Majesty in which such a form of monument was recommended to be abandoned in consequence of the insuperable difficulties which seemed to surround the project—the chief one being the hopelessness of procuring a monolith of sufficient size in a durable material. The commission appended a suggestion that her Majesty should appoint a council of the most eminent artists of the day to investigate the subject and report as to the most fitting and practicable form which the monument to the Prince Consort should assume. The ultimate result was a competition between seven of the architects who had composed the deliberative council; and in January last they accordingly completed their work, and a magnificent series of designs was laid before her Majesty, who, in conjunction with the members of the commission, selected the design which we now publish. The architect, as the public are aware, is Mr. George Gilbert Scott, R.A. The drawing we engrave has been prepared under his immediate supervision, by one of his draughtsmen, for illustration in our pages. The cost of the work is reckoned at about £120,000. The site is at the westernmost end of Rotten Row, near Kensington Gardens, and opposite the gardens of the Royal Horticultural Society.

We understand that the practical execution of the design is to be commenced forthwith; and we can but reiterate the feeling of our contemporaries, as expressed at the time of the competition, that this magnificent design may be worthily and speedily realised, and that the Queen may find in that consummation, and in the interest felt by her loyal and attached people, some substantial consolation for her irreparable loss.

We extract from the *Builder* a technical description of the design:—"The leading idea is founded on what is of necessity its most important and central object—the statue of the Prince himself; and the great aim has been to add dignity to this statue, and to render the design expressive of the sentiment with which it is regarded. The statue—which is in a sitting posture, representing the Prince as clothed in the robes of the Order of the Garter, and is placed in an elevated position on a raised platform—is overshadowed by a vast and gorgeous canopy, not so much for physical protection as for the enhancement of its dignity. To carry out this view the canopy is treated almost with the richness of a shrine, or (one may say) of those imaginary structures of which ancient shrines took the form of the models. It is about 30ft. square, and is supported at the angles by groups of columns of polished granite. The material for the mass of the structure is not yet determined; but the aim is that it shall unite brilliancy with durability. Whatever the material may be, it will form but a groundwork for richer inlayings. The gables and spandrils will be filled in with mosaic pictures relating, probably, to scenes in the life of the Prince Consort; and other parts will be enriched by decorations in gilt and enamelled bronze, polished stones (such as crystals and cornelians), and other objects calculated to add to its brilliancy and beauty. The tabernacle-work, or flèche, rising from the roof of the canopy, as well as the covering of the roof itself and the cresting of the gables, will be wholly of gilt and enamelled metal-work, which, in the hands of Mr. Skidmore, may be expected worthily to exemplify this special branch of the art-progress of our day. The canopy rises from a lofty and solid basement or podium, which is surrounded with sculpture in high relief, representing, in figures of life-size, the history of the arts of painting, sculpture, architecture, and music; something after the manner of Delaroche's *hémicycle des beaux arts*. On pedestals projecting from the angles of this *podium* are groups illustrative of others of the arts and occupations of peace, as commerce, agriculture, manufactures, and engineering; and on larger pedestals, at the extreme angles of the flights of steps which surround the platform, are groups having reference to the contributions of the four quarters of the globe to the International Exhibitions. The detached figures which decorate the canopy itself represent the principal sciences and the Christian virtues; while the whole design is terminated by a richly-gemmed cross supported by angels. The square of the base of the platform will be between 130 and 140 ft., and the entire height of the monument about 150 ft."

OBITUARY OF EMINENT PERSONS.

GENERAL SIR JAMES LILLYMAN CALDWELL, G.C.B.

Sir James L. Caldwell, G.C.B., of Beachlands, Isle of Wight, a General in the Army, and Colonel-Commandant, R.E., who died at Beachlands, Ryde, on the 28th ult., was the son of Major Arthur Caldwell, of the Bengal Engineers, and nephew of the late General Sir Alexander Caldwell, G.C.B. He was born on the 22nd of November, 1770, and married, on the 18th of February, 1794, Mrs. Johnston, daughter of M. Maliard, of Dôle, in France, and relict of Richard Johnston, Esq., by whom he had a son, Arthur, who died in 1843, and a daughter, Maria, widow of Edward Sullivan, Esq., third son of Sir Richard Sullivan, first Baronet, of Thames Ditton, Surrey. Sir James Caldwell was appointed to the Royal (Madras) Engineers in 1788, and went through a long and distinguished career. He served in the war against Tippoo in 1790, and was in the attack on Tippoo's camp, and in the storming and capture of Bangalore, and in two battles near Seringapatam. He subsequently captured several Indian fortresses, and shared in the glories of the first siege of Seringapatam, the battle of Mallavelly, and in the final capture of Seringapatam, when he was severely wounded on the breach where Tippoo Sultaun himself was slain. Caldwell subsequently, as Commanding Engineer, took part in the capture of the Mauritius. He became a General in 1854, and a Colonel-Commandant of Engineers in 1862.

JAMES HANS HAMILTON, ESQ.

James Hans Hamilton, Esq., of Abbotstown and Holmpatrick, in the county of Dublin, D.L., J.P., and late M.P. for that county, was the only son of Hans Hamilton, Esq., M.P. for the county of Dublin for thirty years, by his second wife, Anne, daughter of Hugh Henry Mitchell, Esq., of Dublin. He was born in 1810, and was educated at Eton and Christchurch, Oxford. He was first elected to represent the county of Dublin in Parliament in 1841, and he continued in that representation with undiminished credit from that time until ill health compelled him to resign his seat only a few months ago. In politics Mr. Hamilton was a stanch Conservative; but, while he maintained his political principles with unwavering constancy and firmness, he won the respect and gratitude even of his opponents by his kind and conciliatory demeanour, and by his numerous acts of practical benevolence. Mr. Hamilton married, in 1833, Caroline, daughter of John F. Trant, Esq., of Dovea, in the county of Tipperary, and niece, maternally, of Sir Henry Brooke, first Baronet, of Cole Brooke, in the county of Fermanagh, by whom, who died in 1845, he had issue. Mr. Hamilton's demise occurred in London on the 29th ult. His son and successor, Ion Trant Hamilton, Esq., is one of the present member of Parliament for the county of Dublin, having been so elected lately, on his father's retirement. This family of Hamilton springs from a brother of Sir James Hamilton, Serjeant-at-Law, who was created Viscount Claneboye, and with whose grandson that viscountcy and the earldom of Clanbrassil became extinct, in 1675. In the female line, however, Claneboye has been restored as a barony, and is one of the titles of the present Lord Dufferin and Claneboye, the kinsman of Mr. Hans Hamilton just deceased. Mr. Hans Hamilton's ancestors have been for centuries of high note and political importance in the counties of Carlow and Dublin. His grandfather, James Hamilton, Esq., Deputy Prothonotary of the Court of King's Bench in Ireland, married thrice and had thirty-six children. His eldest son was Mr. Hans Hamilton's father, and one of his granddaughters, Harriette Catherine, is the wife of the eminent Indian Commissioner Sir John Laird Mair Lawrence, Bart., G.C.B.

The new duty of £3 3s., with 5 per cent thereon, on beer licenses to retailers keeping victualling-houses, but not selling spirits, took effect yesterday.

ICE: ITS PRODUCTION AND APPLICATION.

For a week or more the thermometer has stood at 75 deg. in the shade. When it stands at 80 deg. then it is that the great demand is made upon the ice-stores. Measured by the mercury in the tube, for every additional degree of heat in the temperature of the air the business of the ice-dealer increases tenfold. The last three years have been most unfavourable to this anti-thermal trade. The population has stood in greater need of seasonable sun than of the gelid gifts of winter; while rain flooded and cold winds blew, little disposition was felt to visit the ice-wells. Stores that have been long laid up have been kept from year to year; and many who think they are cooling themselves with the ice of last winter are in fact indebted to frosts of 1861 and 1862.

In America the trade in ice has always been much more extensive than in this country. It is said that in Boston alone more block ice is consumed than in the whole of this kingdom. The fact is, that it is there employed in winter as well as in summer, it being the fashion with our American cousins to quaff their beverages cold. Boston first started in the ice trade, in 1806. In 1854, 156,540 tons of ice were shipped from Boston, and 20,000 tons from New York, the home consumption of New York being last year about 270,000 tons. A splendid market was open in the South, of course, for the intense heat of those parts made ice an article of the first necessity. A multitude of speculators sprung up, and companies were formed to ship ice to Europe, to India, and China from lakes occupying an elevated situation about eighteen miles from Boston, of which Wenham Lake is one. The sale of ice and snow preserved in the caverns of Vesuvius, and on the more elevated parts of Etna, has long been a considerable branch of trade in Naples and Catania; and its use in the delicious confections of Italy in no small degree conduced to the same practice which has now overspread the West. In the absence of statistics from icebound Russia, we may suppose that during the short period of heat sustained by the inhabitants of the north, they compensate themselves by the use of ice as a luxury, for an unwilling submission to its frigid rule six or eight months out of the twelve. The tale told of certain sportive tendencies shown by the people of St. Petersburg during the severe winter of 1740 show that they can be merry with their fetters even while they wear them. At that date a house was built from the ice of the Neva, 52½ ft. long, 16½ feet wide, and 20 ft. high. The roof was of ice, and, notwithstanding its immense weight, the foundations sustained the burden without perceptible sign of crushing. Before this veritable ice-house, or palace, as it was called, stood six cannons of ice, resting upon carriages and wheels of ice, together with mortars of the same material. These six-pounder pieces were charged with three pounds of powder, and threw iron shot clean through two-inch boards at sixty paces. In this singular case ice not more than 4 in. thick was found to resist the force of the explosion.

We have never heard of any expedition being fitted out from Russia for the capture of icebergs, but we have certainly heard of such a case as this occurring at Boston. One burning summer, when the ice stores were empty and the hearts of the Yankees were melting within them, a ship was sent forth, at the public behest, to seize one of these monsters of the Arctic regions on its passage to the south. The birth and history of these wonderful transparent floating mountains is now a subject of common talk. The snow, which falls thickly on the Arctic islands and continents, being melted in summer, forms collections of fresh water, which soon freezes and increases yearly, until the mass becomes mountainous and rises to the elevation of the surrounding cliffs. The melting of the snow deposited on these elevations adds to their growth, and, by filling up the interstices, renders the whole solid. When such a mass has reached the height of 1000 or 1200 feet, the accumulated weight, assisted by the action of the ocean at its base, plunges into the sea, and by winds and currents is carried southwards, and finally disappears before the influence of the Gulph Stream, which throws an isothermal line from Newfoundland to the coast of Iceland, deflecting it upwards very nearly through twenty degrees of north latitude. Frequently these ponderous crystals hide as much of their proportions below the water as they expose above it, and float, grinding the rocks of the sea bottom as they go, with a force that may perhaps be visible to some future geologists when they shall be exalted to be the proud promontories of a now nameless continent. They carry huge boulders from the Arctic rocks and disperse them over the bed of the North Atlantic, and for the whaler they bear rich provision of fresh water, of which he spoils them. Well, it was for such a prize as this that the little vessel set sail from Boston, nor, if the narrative is to be depended upon, did it sail in vain, for a berg was attacked in high latitudes, hewn in pieces, and carried home with rejoicing.

Our ice comes not from America, as formerly, but from Norway. That which is not imported is, of course, procured from the rivers, ponds, and canals. Every dirty horsepond and stagnant pool near London is laid under tribute during the bitter reign of the winter blast, and, so soon as there is a little "cat's ice" to be seen, collectors set to work with rakes, poles, and scoops to prepare it for those who convey it in all sorts of vehicles to the various wells and stores. No matter how foul the water, ice is ice—dark, manurial water yields transparent ice; and, since no questions are asked, down go these various sorts of portable water into the ice-well to fraternise together. It is perfectly true that the upper stratum of water which is turned to ice may be regarded as distilled; but it is not so far distilled as that, when produced from foul water, it shall be perfectly pure. Although quite transparent, it will still contain a considerable portion of its impurity.

This, together with the refuse of foreign ice, is known as rough ice, and is rather used by fishmongers and in refrigerators than in direct contact with our beverages, for which purposes block ice is reserved. This rough ice is generally sold at 2s. or 3s. a hundredweight. Formerly it was customary for us to depend upon America for the block ice; but of late years our supply has come from Norway, which, though less clear, is less expensive. Certain fiords possessing water of known purity and wholesomeness are leased to such as may be engaged in this trade, and the ice produced may be said to be cultivated, since the inhabitants on the margin of the fiord are engaged to keep the ice free of snow, to watch its formation, and to cut it, when 12 in. or 15 in. thick, into blocks 22 in. square, weighing about 2 cwt. There are large stores on the coast to which these blocks are conveyed, and from these the ships receive their cargoes, the ice being packed neatly, but without any separating media. There is one company which confines itself to this trade—namely, the Wenham Lake Company. They pride themselves on vending a most superlative quality, for which the price charged is uniformly 1d. per lb. This seems a very cheap rate for the pure portable water of a Norwegian fiord, considering the expense incurred in obtaining it, and considering, too, that for every ton sold two tons are imported. We have recently paid a visit to their ice stores under Waterloo Bridge. They occupy five large arches on the Surrey side, and can stow away, in sawdust, some 2000 tons. During the hot weather a busy scene is thus presented at six o'clock in the morning, when the carts are packed and dispatched with supplies for town customers. Declining, as they do, to deal in rough ice, their trade is confined principally amongst the wealthy.

In the afternoon the railway vans arrive, and the packing is resumed for the country trade, at which time each block is put into a bag, with a thick layer of sawdust immediately surrounding it to absorb the liquid and act as a nonconductor. Perhaps the busiest time is when a ship arrives, not that foreign ships are allowed so high up as Waterloo Bridge, though it would be a great convenience to the company if they were. They get no further than the docks, whence they discharge into lighters, which conduct their frigid cargoes nearly to the mouths of the dark caves fitted for their reception. The blocks are received by attendants armed with huge grappling-irons, slid along a platform to a weighing-machine, there estimated in pounds avoirdupoise, and banished to realms of darkness which, for the time being, are illumined by scores of candles. We were shown one arch half full of ice eighteen months' old, the produce not of last winter, but of the previous one. When an arch is filled it is boarded up, and kept as impervious as possible to air; and the entire store is so drained that as fast as water is formed it is carried away.

The consumption of London is something like 50,000 to 60,000 tons of ice, and this trade is divided—unequally, of course—amongst ten or twelve firms. There have recently sprung up in this country important rivals to the natural ice-dealers, which are the artificial ice manufacturers. The former, when they are questioned about the matter, say that they entertain no fear. In the first place, being made so rapidly, it is clouded and less liked for those purposes to which block-ice is usually put, and, in the next, it cannot be made at less than ¾d. 5-14ths, according to the lowest estimate.

For our colonies, and India especially, this invention will prove a saving of at least fifty per cent on the miserable ice which the natives of the hill country contrive to scrape together during cool nights, when the process of evaporation or absorption chances to be vigorous; but in England it is not supposed by the best authorities that it will supersede the Norwegian supplies. The old method of getting ice in India was as follows:—Ice committees were organised for the different cantonments, and these superintended the production of the ice crop upon a large space of ground divided into compartments, and containing innumerable holes fitted with shallow dishes filled with water and covered with wet straw to assist the operation. A clear night and a sharpish breeze are propitious to the formation of a thin coating of ice, the appearance of which is no sooner discovered by the watchers than a cry is given which arouses the sleeping natives, who hurry to seize upon the fickle production before the sun's rays shall come to resolve it again to liquid. Such a mode of making this material has long proved thoroughly inefficient in a climate like that of India, where a constant supply is essential to life, let alone comfort. It is not improbable that the Indian Government may, as a public measure, help to establish ice machines at different large stations in the presidencies; for whilst this invention promises ice four times cheaper than that formed by radiation, it does more, for it produces it at stations where it could not otherwise be obtained. The value of ice for the sick man of India cannot be estimated, while for those in health it is an important preservative. In the hospitals it is used much, but far less than it will be when the supply is increased.

Briefly considered, the invention consists in the evaporation of volatile fluids *in vacuo* at a low temperature, and condensing at a higher temperature by pressure, and water at an ordinary temperature. In the absence of an illustration which was given during the exposition at Kensington, we give a summary of the *modus operandi* in very nearly the words of the manufacturers. Ether, being the only element used (besides brine), is placed in an air-tight vessel, called a refrigerator, and evaporated *in vacuo*. The vacuum is formed and sustained by a double-action pump, which extracts the vapour as it rises and forces it onwards into a large vessel or "condenser," where, under the influence of water at an ordinary temperature and pressure, it gives off its surplus heat and returns again to its fluid state, when it flows back to the refrigerator to be re-evaporated. The ether forms a complete circuit, passing from left to right in a vaporous state, and from right to left in a fluid state. In order that the supply of ether may be regular and neither too much nor too little, a self-regulating valve is placed in connection with the return-pipe from the condenser, which discreetly retards or accelerates its supply to the refrigerator. Thus, on the side where the ether is continually undergoing evaporation a large degree of caloric is absorbed, which is carried off in vapour. The temperature can thus be lowered in the refrigerator to 50 deg. Fah. below freezing-point, while the condenser becomes hot. This excessive amount of cold, being unprofitable in the production of ice, an uncongealable fluid medium—namely, brine—is made to pass over the surface of the refrigerator in a continuous stream, and allowed time to part with its caloric. When it has reached the required temperature it is admitted to a long trough, where it passes completely round moulds made of gun-metal, which are full of the pure water to be solidified. This solidification takes place most quickly at the end of the trough where the brine enters. As it does so the moulds are removed, emptied, refilled with water, and replaced at the opposite end, the others having been forced up by the turn of a screw to make room for them. Some recent ingenious arrangements have been made to quicken the operation and economise the ether; but there is no space now to particularise them. It may, however, be proper to add that the novelty of the process does not consist in the use of ether, which has been known to experimentalists for a long time, but in its economical use. In the machine which makes one ton of ice an hour, and which costs £520, 80 lb. of ether are in circulation, at 1s. 6d. per pound; and the loss is only about 1s. on every ton turned out.

The French showed a machine for icemaking in last year's exhibition, in which they produced the same results with ammonia under pressure as Siebe does with ether *in vacuo*. A great degree of cold is produced also by a mixture of saltpetre and Glauber salts, and there are now manufactured and exported to India, &c., in large quantities, chemical mixtures known as freezing powder, by means of which rough ice can be produced in fifteen minutes, at a cost of 1s. 9d., or about 4d. per lb. This powder, introduced into a little machine, invented by the same person, may be used upon the table to ice wine or water with the greatest celerity. A bottle of champagne may be iced in ten minutes for 3d. So great is the intensity of the cold produced that the sparkling contents of the bottle may be actually transformed into a spongy mass.

Ice is much used in medical practice to reduce fever and stop the flow of blood. Many lives are annually saved by it which are jeopardised by brain fever. In Bartholomew's Hospital about one ton is used every year in fever and other cases. The best block ice is also used by photographers and chemists, as giving them the most purely-distilled water they can obtain. The most novel application of ice of which we have heard, however, is for the preservation of salmon ova. It is supposed that by means of this medium it will be possible to convey the ova of the salmon to Australian waters, there to be hatched.

The manager of the Wenham Lake Company allowed a quantity of these ova to be buried in the ice vault on the 17th of January last. At the end of ninety days—the time taken for the passage to Tasmania—the packet was brought to light, a proportion of the ova, in a perfectly sound condition, were removed, and two thirds of them were successfully hatched. The remainder were taken on the 12th of June (the 144th day), and were shortly afterwards hatched with but small loss. This experiment quite contradicts the old theory that salmon ova, from the time of their emission to that of their being hatched, must be kept in running water. The action of the ice, in fact, is to check development, and we quite expect soon to hear the praises of Tasmanian salmon.

WILLS AND BEQUESTS.

The will of the Right Hon Caroline, Dowager Lady Poltimore, of Upper Brook-street, was proved in London on the 2nd inst. by her son, the Right Hon. Augustus Frederick George Warwick Bampfylde, Baron Poltimore, and William Henry Domville, Esq., the executors. The personalty was sworn under £35,000. The will, with two codicils, was executed in May last, the month in which she died. It contains many specific bequests to the members of her own and her late husband's family, including her brother, Lieut.-Gen. Sir George Buller, K.C.B.; a complimentary legacy to the Earl of Abingdon, one of the trustees, and to Mr. Domville, her executor; to the poor of North Molton, Devon, £500; the poor of Poltimore, £200; and to the Exeter Hospital, £500, appointing her son, Lord Poltimore, residuary legatee.

The will of Lieutenant-Colonel Sir William Lascelles Wraxall, Bart., of Wraxall, Somerset, was proved in London by his nephew, Sir Charles Frederick Lascelles Wraxall, Bart., the sole executor. The testator, Sir William, who attained the age of seventy-two, died at Passy, near Paris, on the 2nd of May last; and, though a British subject, and received his military education at Woolwich, was an officer in the Spanish service. He succeeded to the baronetcy in 1831. His heir and successor is his nephew, Sir Charles Frederick Lascelles Wraxall, Bart., to whom he has bequeathed the whole of his property, real and personal, and all other property over which he had the power of disposition. The will was executed in France, on the 23rd of April, 1863.

The will of Captain Charles Rayley, Esq., R.N., of Southwold, Suffolk, was proved in London by the executors—Mrs. Rayley, the relict; John Blacket, Esq., of Balleen, Kilkenny; and Robert Cunninghame Taylor, Esq., M.A., of Christ Church. The personalty sworn under £35,000. To his relict he has left his property and estates in Southwold absolutely, and a life interest in other estates in Suffolk, which, upon her decease, will be divided into certain portions amongst his nieces and their issue, appointing his relict residuary legatee for life. There are several pecuniary legacies, which are to be paid free of legacy duty.

Mr. Lindsay, M.P., writes to the *Times*:—"I think it due to Mr. Roebuck to say that what he has stated is true, and shall be confirmed by me in Parliament with time, place, and circumstances, when the debate is resumed."

"A SHIP IN DISTRESS BURNING A BLUE LIGHT," BY E. DUNCAN, IN THE EXHIBITION OF THE SOCIETY OF PAINTERS IN WATER COLOURS.

(*Continued from page* 41.)

eminently picturesque. Seen from a distance, its embattled walls, large ruined castle, and numerous towers and spires present great variety of form. Nearer, the Byzantine Duomo, constructed of coloured marbles, the great square, and its fine marble fountain, are splendid objects. The castle and ghetto are romantic in the extreme. It has, besides, a townhall, hospital, several monasteries, silkmills, and distilleries. Down many of the streets run canals of pure water, while the sluggish Adige, with its boats and cattle, add items invaluable to the painter, the rugged peaks of the Tyrolese mountains forming a glorious background to the whole. This is just the subject for this excellent water-colour painter, and he has brought to it the best resources of his art, judiciously heightening the effect of the many towers and spires by representing them flushed with the rays of the declining sun.

Our next Engraving is from a drawing by Mr. S. P. Jackson, a painter in water colours whose works are always commendable for careful fidelity to nature. *Staithe*, the subject of this drawing, is a fishing village in Yorkshire, ten miles north-west of Whitby. The word "staythe" was formerly applied to a quay, or wharf, especially in the old topographies of York, and may explain the origin of the name of this village. The chief natural feature of the place is the headland, seen in the view, and which is somewhat remarkable for its boldness. The village derives another kind of interest from its association with the name of Captain Cook. The great navigator was sent from his native place in the neighbourhood and apprenticed at an early age to a haberdasher of Staiths. A passion for the sea was, however, awakened in him among the humble fishermen, and, to indulge his bent, a discharge from his master was procured, and he was apprenticed to a firm engaged in the coal trade at Whitby. Mr. Jackson proves that he is also infected with a love of the sea. He has represented with evident relish all the picturesque objects and incidents of the sea-coast and fishing life—the vessels and boats, the anchoring and beaching of the same, the little smoky hamlet screened from the wind by the cliff, the low waves breaking and playfully running up the soft sand, with nothing to remind us of the terror and treachery of that cruel northern ocean, save the threat of a passing rain-cloud.

It is difficult for persons in this country—perhaps the more so, if actually engaged in the pastoral employment—to realise the full force and meaning of the text given by Mr. W. J. Webb, in illustration of his carefully painted and remarkable picture, *A Shepherd of Jerusalem*, engraved page 44. The artist quotes the verse from, St. John x. 4:—"And when he putteth forth his own sheep, he goeth before them, and the sheep follow him: for they know his voice." Similar passages, containing images drawn from the relationship of the shepherd and his flock, occur constantly in both the Old and New Testaments. Indeed, all the poetry of Holy Writ, if not actually in the form of an eclogue or idyl, is more essentially pastoral than we can readily apprehend. In memory of the Good Shepherd who "laid down his life for the sheep," our ministers are still "pastors of the flock;" but to whom will this suggest that, in ancient Judea, the shepherd was sometimes actually slain by wild beasts in defending his charge? We drive and worry our sheep with dogs; but, as Mr. Webb represents, to this day in the East the shepherd *leads* his flock. Something like this may, it is true, be witnessed in the management of the great merino flocks of Spain; in France also, and even in Scotland. But it is only among the great Oriental pastoral

"THE REST," BY G. CHESTER, IN THE EXHIBITION OF THE ROYAL ACADEMY.

nations, who derive nearly all their sustenance from their flocks and herds, and who spend their whole lives in tending them, that the relationship so often alluded to in the Bible, the habits thus induced, and the influence they have on the very forms of speech and the imagery of the language, can be fully appreciated. The shepherd of the East not only leads his flock, but he teaches them to answer to names he gives to each when lambs, and thus, individually as well as collectively, they "know" and follow his voice. The shepherd gains the most wonderful influence over them by his constant attention and kindness, and, like this shepherd, by carrying the lambs, especially if weakly, literally "in his bosom." A very remarkable instance of the docility of sheep under this management occurs in a passage of "Philo-Judæus," where they are represented submitting themselves willingly to the hand of the shearer, standing before him in a silent, inclining posture, perfectly unconstrained. What a con-

"THE WANDERER RETURNED," BY HARRISON WEIR, IN THE EXHIBITION OF THE INSTITUTE OF PAINTERS IN WATER COLOURS.

trast this to the noire, confusion, and brutality often witnessed in our modern sheep-shearing! We trust we have said enough to indicate the deep religious suggestiveness of this picture. The artist apparently inclines to the realistic treatment of sacred subjects. The accurate representation of the peculiar lop-eared and long-tailed Syrian breed of sheep, and the view of Jerusalem in the background, seem to prove that he has actually visited the Holy Land, like Mr. Holman Hunt, who with more than a crusader's courage performed a solitary pilgrimage to the shores of the Dead Sea to paint his picture of "The Scapegoat." We have some æsthetic objections to this mode of rendering the historical incidents of the Bible, though we heartily commend the earnestness it implies. Even in regard to the question of fact we believe that the Canaan of the Old Testament or the Romanised Judea of the Gospels cannot be recalled by representing the Palestine of the nineteenth century. However, these objections should not be urged against Mr. Webb's present picture, because he represents no historical incident, but gives a scene the suggestiveness of which is legitimately associated with its literalness.

Mr. Gullick, in his picture illustrating the words from St. Luke, "*And Peter went out and wept bitterly*," engraved on page 44, seems to have discovered a subject in the Gospel narrative which, as far as we are aware, had never been painted. The trial scene and the moment when, at the third crowing of the cock, Christ turned that "look" on Peter which recalled the fulfilment of our Lord's prophecy of his unfaithfulness have been frequently represented, but not the Apostle weeping outside the high priest's palace. That memorable "look" of the Saviour, to which we have just referred, the painter seems to invite us to recall by the steps leading in the background of his picture to a half-opened door communicating, it is no doubt intended, with the "upper room," where the mock trial of our Lord is proceeding. Down these steps the conscience-smitten Apostle has descended. He has had to suppress his feelings as best he may, for in the hall are some of the rabble who went out with "swords and staves" to take Jesus. Among those warming themselves round the "fire they lit in the midst" we catch a glimpse of a Jew fiercely gesticulating to a puzzled Roman soldier; his thumb pointing over his shoulder towards the upper room sufficiently indicates the subject of his malicious tongue. Considerably nearer the door stands a woman with a key. A key in a picture of St. Peter is suggestive and not out of place here, for women have been doorkeepers from time immemorial in the East. But there is evidently a further allusion intended. She is surely the "maid," or "damsel" to whom St. Peter denied Christ, for she still points after him the finger of scorn. Seeing the disciple passing out with a look of convicted guiltiness, her suspicion would naturally be strengthened that he was "also one of them." Out from the doorway and round the angle of the projecting wall the Apostle has, however, passed, and seems to have arrested himself momentarily on the first impression of being alone. Still, even here, everything that might meet his eye is terribly calculated to deepen his remorse. Here the cross is placed in readiness, and against the doorpost and lintel is sprinkled the blood of the Passover—as enjoined in Leviticus. This was the very night of the Passover—that great type of our Lord's sacrifice—and, although the observance of this ceremony was not then general among the Jews, the sprinkling the blood on the walls of the high priest's palace would legitimately indicate his pretension to greater strictness and sanctity. The parchment also relates to the Passover, and likewise identifies the time and place, for it is headed with the words, in old Hebrew (i.e., without the vowel points) "The Passover—Caiaphas the High Priest." The initial letters—on the right of course, Hebrew reading from right to left—are painted red, like the minium initials of old Greek MSS. The introduction of the cross was a bold conception; but the instrument of shame and torture must have been in readiness, for our Saviour was crucified very shortly after. It is recorded that he bore it part of the road to Calvary; and where so likely that it should be placed as outside the palace of his most rancorous enemy and most bigotted judge. It will be noticed that the cross is inverted—in allusion, we presume to the tradition which represents St. Peter to have chosen to be crucified head downwards. The bramble growing near may have supplied the crown of thorns. The aloe is the favourite Eastern emblem of mental bitterness. Early morning is indicated by the lamp still burning under the keystone of the portal and by the low tone throughout, which also suits the scene in other respects. The introduction of the cock was essential to the narrative. All Mr. Gullick's critics unite in commending the expression of repentant anguish in the face, the bowed head, and clasped hands of the principal figure. The tear is just brimming over the eye; but the attitude is not that of prayer, nor does the disciple look heavenwards, for he had not yet apprehended the true nature of Christ's mission.

Mrs. E. M. Ward has selected one of the most touching incidents in the life of the unfortunate Mary Queen of Scots for the subject of the very admirable picture engraved on page 45. In *Mary Queen of Scots' Last Visit to Stirling Castle* the unfortunate Queen, as if feeling a presentiment that she was taking her last farewell of her babe, extracted a solemn pledge from the Earl of Mar (to whose care she had confided him) that he would guard his precious charge from every peril, and never give him up under any pretext without her consent. It was then the custom of the Sovereigns of Scotland to place the heir of the realm, for nurture and education, in the care of some nobleman of high rank. The weeping figure leaning over the cot is the Countess of Mar, Mary's confidential friend, governess or lady-mistress to the Royal infant. It may be interesting to know that the cot was painted from the original, which is still preserved. The ancient embroidered coverlet is a masterpiece of textural imitation. We have more than usual gratification in engraving this picture. We heartily congratulate Mrs. Ward upon her great success in a work the subject of which entitles it to rank as, in the best sense, an historical painting, which yet has afforded full scope for the artist's womanly and domestic feeling, and which are displayed without the slightest exaggeration. A more graceful subject for a female pencil could not have been chosen; and in treating it we believe Mrs. Ward has produced the most important picture yet painted by an English lady. It has unity and completeness as a whole, while parts—and those most important—such as the face of Mary, with its pathetic, appealing expression, and the chubby head of the infant Prince are admirable in the extreme. The colour and other technicalities are hardly less successful than the expression. A contemporary justly remarked in a notice of this picture that Mrs. Ward should, with other of our paintresses, write R.A. after her name, if the academy were as catholic now as it was in the last century, when it opened its ranks to Angelica Kauffmann and Mary Moser. Some of our readers may not remember that Mrs. Ward is granddaughter, daughter, and wife of artists; and, as another rare coincidence, that her married is the same as her maiden name. Mrs. Ward is married to Mr. E. M. Ward, the eminent historical painter, and is the daughter of Mr. George Raphael Ward, the distinguished engraver and miniature-painter, and the granddaughter of Mr. James Ward, the excellent animal-painter whose great bull picture was bought the other day for the National Gallery. Besides this, her aunt was the wife of Jackson, the portrait-painter, and her great-aunt the wife of the unhappy Morland.

The drawing of *A Ship in Distress* by the well-known marine painter Mr. E. Duncan, engraved on page 52, is remarkable for vigorous conception and powerful execution, but still more for the successful though very difficult combination of effects. We should, however, in the first place, endeavour to realise how the vessel drifted in the perilous position Mr. Duncan has represented. It seems, then, from the ragged but not massive character of the clouds crossing the moon that the vessel has been overtaken by bad weather, though not a gale, and to have, as it is called in nautical language, "missed stays," and then, her sails "clued up," to have drifted on to the rocks. In this hopeless extremity she burns "a blue light" as a signal of distress and to show her position to the people assembled on shore. These are evidently supposed to have made a fire with some wreck of tar-barrels, and are firing a rocket across the vessel with a line attached to it for the purpose of enabling the crew, by fixing this to the sinking ship, to establish a communication with the shore and thus save their lives. The yellow, fiery track of the rocket, and the less brilliant but broad red glare of the blazing barrels, with the pale though rather warm light of the rising moon, and the very cold colour of the blue light, form the contrast and variety of natural and artificial coloured light at night to which we have already alluded. The harmonious combination of all these effects is, we repeat—on account of its interest—the peculiar artistic merit of the picture over and above the nautical knowledge and artistic skill displayed in the truth and force with which the terrible situation of the vessel is represented.

Mr. Chester's landscape, *The Rest* (see p. 53), is the most artistic work by this painter we have seen. It is solidly painted, forcible, and rich in colour. It has a freshness and local character which sufficiently indicates study "on the spot," and satisfies the spectator of its fidelity; yet it is wholly free from imitative servility and photographic hardness. It has also—what is becoming more and more rare in our landscape school—the human element of interest, the expression of the artist's sympathy with his subject, that colouring which nature derives from transmission through the individual heart and mind, when these are frankly opened to her influence and the avenues to them are not barred by theory or choked with pride. The first impression conveyed by this landscape is that it is remarkably like Constable, than whom a more genuine lover of nature never lived. There is the same thoroughly rustic unconventional picturesqueness, the same showery English sky. The resemblance is, however, more in subject than style. There is no trace of imitation of the manner of any master; but we understand the scene represented is in the neighbourhood of Petworth—a picturesque district, which Constable actually visited, and where he painted, residing with a namesake, a brewer and an amateur artist, still living. It is the sentiment, however, more than the locality of this picture upon which one would fain linger longest. The title most aptly serves as text. There is dewy repose in the summer cloud-shadows; we fancy we hear the drowsy rustle of the umbrageous trees—all the more audible because the birds are hushed, listening for the coming shower; the lowly cottages nestle among the trees, types of quiet content, true sanctuaries of labour; the sheep take their afternoon "rest" near the still brooklet and up the sheltered avenue; the shepherd-boy lolls over the rail; the foxglove, unswayed by the wind, bows to its own sweet image in the unruffled water. All nature is lulled in transient reverie and repose, soon to awake with new life and vigour, joy, and song.

Our Continental neighbours say that one of the most salient characteristics of the English is the love of animals. The men have their horses and their dogs, and the maids—we will not say "old" ones—have their birds and their cats. To cater for the national taste we have a large class of animal painters, and in no country are so many really excellent artists in this department to be found. Among this large class few names are better known than that of Mr. Harrison Weir, and among the many drawings we have seen by this water-colour painter few have struck us as equal in merit to *The Wanderer Returned*, engraved on page 53. The cat is universally known to be one of the most difficult creatures to paint in the animal world—far more so than the robin and other birds so charmingly represented by Mr. Weir in other drawings from the same exhibition in which this finds a place; and the artist has succeeded perfectly in describing the general character as well as the coat of the cat, and also in the added difficulty of expressing master Tom's mewing for admission to the home he had forsaken.

FINE ARTS.

THE London Stereoscopic Company has just published, by permission of the Prince of Wales, two series of views—twelve large and twelve stereoscopic—of and about Sandringham, his Royal Highness's Norfolk seat. The public feel a very natural interest in everything relating to the Prince and his beautiful young partner, and the gratification of this feeling, even so far as to allow us, as it were, to follow the Royal pair into their domestic retirement from the ceaseless round of public festivity in London, is a gracious and graceful act. In these photographs we see the Prince and Princess and members of their suite in the shooting-jackets and wideawakes, the pork-pie hats and linsey-woolsey petticoats worn in ordinary English country life; we see the preparations for the morning drive, and the unostentatious drawing-room where the quiet evenings are passed. The same company has also issued a set of portraits of the Prince and Princess, together and separate, seated and standing. In point of photographic merit these are scarcely equal to the larger series brought out some time since by Mr. Mayall, chiefly on account of the objectionable pattern on a column in the background and the too obvious arrangement of the drapery about it, which draw off the attention to these accessories. The portraits of the Princess are, nevertheless, especially welcome from the novelty of the attitudes and walking equipment and the very becoming elegance of her indoor dress. The company have also published a series of twenty-five photographs from the wedding presents recently exhibited at South Kensington.

Mr. Marshall Wood, whose colossal bust of the Prince of Wales we lately engraved, has recently finished the model for a bust of the Princess, for which her Royal Highness has given a number of sittings at Marlborough House. We must give to this model similar praise to that we bestowed on the former. Mr. Wood has evidently endeavoured to obtain a scrupulously faithful and exact likeness of the Princess, and he has succeeded in reproducing the contours and proportions of the head, together with those minute and almost evanescent details of form in the features which in this instance alone give individual character. Only great exactitude and delicacy of modelling in the individual parts would have secured resemblance in the whole, for only in these, when examined separately, are the facial angle and the relative spaces of the features and forehead found to differ in the slightest degree from the ideal of modern sculpture since Flaxman—and we take the ideal female head of modern sculpture to be a higher standard of comparison than that of the Greeks, because it gives fuller recognition to the frontal manifestations of intelligence. The head has still a degree of classic character rarely found in nature, and this has suggested the treatment of the hair and drapery. The hair recedes from the forehead in flowing waves rather than ripples; is bound with the Greek fillet, and the knot behind inclosed in the Greek net; the drapery is clasped over one shoulder, as in antique statues. The only part which to us seemed not entirely successful was the mouth—not its general form, but its expression. The play of the muscles at and near the angle of the lip hardly conveys the frankness and sweetness which appear to be—judging ever from the photographs—the prevailing characteristic. As this is only the preparatory model, a hint may be of service in the execution of the work in marble, and, if entitled to consideration, will not be unwelcome to so conscientious an artist. The bust will, we believe, be executed colossal size, and given by the Lord Mayor as a companion to the same sculptor's bust of the Prince for the Mansion House. We may add that a cast of the bust of the Princess, by the celebrated Danish sculptor, M. Jerichau, has been placed in the gallery of the French Exhibition, Pall-mall. Though rather tame and heavy, and wanting in the general delicacy of modelling of Mr. Wood's bust—for which, however, we must make some allowance on account of the plaster material—the sculptor seems to have caught the expression in the lips, which Mr. Wood has at present partly missed.

The mention of the French Gallery reminds us that Mr. Gambart, its enterprising manager, and the well-known print-publisher, who has been of late so energetically prosecuting the piratical photographers who had infringed his copyrights in several popular engravings, has just published a pamphlet on "Piracy of Artistic Copyright," in which he fully exposes the grievance, of which not only publishers but engravers and artists have justly to complain. It is an anomaly of the recent legislation on artistic copyright that while there is a ready and stringent remedy for the piracy of copyright in pictures, other works of art, and photographs, the infringement by photographers of copyright in engravings—which is most easily effected, and should therefore be rendered most easily punishable—is left without easy means of prevention, and with only the old, cumbrous, and expensive means of repression. Mr. Gambart treats the subject very ably and forcibly; and we regret our space does not permit making quotations which would show the great injustice at present suffered. The Society of Arts is, we are glad to know, moving in this matter; and we trust that some efficient means of redress will be devised by Parliament before the close of the present Session. Meanwhile, we would commend Mr. Gambart's pamphlet (which is published by Tegg) to all interested in this important question.

The great picture, the "Martyrdom of Huss," by Lessing, brought from the Dusseldorf Gallery, New York, exhibited in London last year, and reviewed at length in these columns, has found its way back to Germany. It has been purchased by the King of Prussia for 15,000 thalers.

Mr. Frederick Goodall has been elected from the ranks of the Associates to the full honour of Academician. The Royal Academy could not have made a better choice.

NAVAL AND MILITARY INTELLIGENCE.

ADMIRALTY.

Admiral of the Blue F. E. Loch has been appointed to receive a pension of £150 a year, as provided by her Majesty's Order in Council of the 26th of June, 1861, vacant by the death of Admiral the Hon. Sir G. Elliott, K.C.B.; and the name of Admiral Loch has been removed to the reserved Half-pay List accordingly, and, in consequence of this removal, the following promotions, to date the 25th ult., have taken place:—

Vice-Admiral of the Red the Hon. H J. Rous to be Admiral of the Blue.
Vice-Admiral of the White Sir M. Seymour, G.C.B., to be Vice-Admiral of the Red.
Vice-Admiral of the Blue F. T. Michell, C.B., to be Vice-Admiral of the White.
Rear-Admiral of the Red the Hon. G. Grey to be Vice-Admiral of the Blue.
Rear-Admiral of the White Sir A. Milne, K.C.B., to be Rear-Admiral of the Red.
Rear-Admiral of the Blue the Hon. J. Denman to be Rear-Admiral of the White.
Captain H. Lyster to be Rear-Admiral of the Blue.
Retired Vice-Admirals H. T. B. Collier, H. Stanhope, and J. T. Coffin to be retired Admirals, but without increase of pay.

The screw steam-vessel Wolverine of twenty-one guns, is ordered to be launched at Woolwich on the 29th of August next.

The Hydra, paddle steam-vessel, is ordered to be commissioned for surveying service on the coast of Africa.

Colonel E. W. Crofton, C.B., commanding the Royal Artillery in Malta garrison, died, on the 26th ult., at his residence in Valletta.

The second battalion of the 20th Regiment of Foot and the 5th Hussars are ordered to hold themselves in readiness for immediate embarkation at Portsmouth for foreign service.

The Captain's good-service pension placed at the disposal of the First Lord of the Admiralty by the promotion of Capt. Lyster to the rank of Rear-Admiral has been conferred upon Capt. E. C. Tennyson D'Eyncourt.

The arrivals at Aldershott during last week were almost continuous. The division comprises an army of something like 712 officers, 16,000 sergeants, drummers, rank and file, and 4200 horses—being a total of close upon 17,000 well-trained and splendidly-equipped troops of all arms.

The officers of the 92nd Gordon Highlanders, in quarters at Gosport, and recently returned to England from Indian service, have presented to Captain Cammell, Royal Naval Reserve, of the ship Middlesex (the vessel which brought home the head-quarters of the regiment), a silver tankard.

A divisional order has been issued by Colonel W. Nedham, commanding the Royal Artillery in the Chatham district, in which Major-General J. Bloomfield, Inspector-General of the Royal Artillery, conveys to the troops his entire approbation of what he saw during his recent inspection of the first division of the depôt brigade.

On Saturday a detachment of the second battalion of the 19th Regiment, numbering 144 men of all ranks, left Chatham garrison and embarked on board the Leder, at Gravesend, for Dublin, to join the service companies of the 19th Regiment, which corps has been placed under orders to embark for India. The officers who proceeded from Chatham in charge of the detachment were Captain G. Clay and Ensign A. E. F. Brown.

A handsome service of plate has been presented by the officers of the Royal County of Down Regiment to Sergeant Patrick Currin, on his obtaining his discharge. Sergeant Currin served for a period of twenty-five years, during sixteen of which he filled the responsible situation of Mess-Sergeant to the regiment. He is in possession of a medal and clasp for Central India, together with a medal for meritorious service.

The following vessels have been chartered by the Government for the conveyance of troops and stores to India and the colonies—viz., the Conflict, 1170 tons, for Calcutta; the Queen of the North, 824 tons, and the Stamboul, 890 tons, for Bombay; the Albion, 478 tons, for Kurrachee; the Empress, 454 tons, for Mauritius; the Cambrian, 868 tons, for St. Helena; the Victory, 595 tons, for Shanghai; and the Enthusiast, 283 tons, for St. Helena and Ascension.

A notification has been received at Chatham garrison that the following troops will be dispatched to Calcutta during the present season—viz., 1000 officers and men of the second battalion of the 20th Regiment, to embark at Portsmouth; 1000 officers and men of the 36th Regiment, to embark at Cork; and 620 officers and men of the 5th Royal Irish Lancers, to embark at Portsmouth. Orders have also been issued at the Horse Guards for reinforcements of the Royal Artillery to be dispatched with these draughts to the number of upwards of 600 officers and men of all ranks.

THE VOLUNTEER MOVEMENT.

THE WIMBLEDON MEETING.

The meeting for 1863 commenced at one o'clock on Tuesday, with every prospect of a success exceeding that of any previous year. Taking the entries for the Queen's prize as the test, there are this year 1300, against 1100 last year, of whom only 901 went to the butts. There is also much better preparation for them. The number of targets has been increased to sixty, at from forty to fifty of which the marking will be on the Swiss or circular disc principle, the recommendations of which are that it insures increased accuracy of marking, and greatly economises time in cleaning the targets. Last year there was only one target of this kind in operation at Wimbledon; and, as the construction of each entails an expenditure of nearly £6, it follows that in the interval, upon this item alone, the association has spent some hundreds of pounds. The aggregate value of the prize list amounts to £4300 this year, or double the sum total which the association was in a position to offer at its last meeting. There is also a new running-deer target, cast from a sketch by Sir E. Landseer, and a "running man," the figure being that of a volunteer at the double. The camp accommodation is improved, one of the improvements being a good supply of water, the deficiency of which was much felt last year. On Monday 115 officers and 320 privates had intimated their intention to go into camp; last year the numbers were 66 officers and 146 non-commissioned officers and privates. On Monday and Tuesday the volunteers who mean to go into camp were arriving in great numbers, and the camp was alive with the bustle of preparation.

His Royal Highness the Prince of Wales rode to the ground on Monday afternoon, accompanied by Captain Grey, and was received by Lord Ducie, Lord Elcho, and other members of the council, who explained to his Royal Highness the intended proceedings. The Prince then visited the 200-yard range, where he fired several shots from a Whitworth rifle belonging to Lord Elcho. The marking was according to the Swiss system, and the first shot brought out a "centre" from the marker's butt. In every case save one, when the Prince fired an experimental shot from a different rifle, the bullets were, in the marksman's phrase, well "on" the target. But the fact that such crack shots as Lord Bury, Lord Elcho, and Major Holford, who fired at the same range, only succeeded in making "centres" and "outers," showed that there must have been a partial mirage, attributable to the glare of the sun and the swampiness of the intervening hollow. The final bull's-eye made by the Prince of Wales was the only one obtained at this target. The next trial was at a shorter range, but at a moving instead of a stationary target, and here the Highland experiences of the Prince stood him in good stead. Those who have not actually fired at the "running deer" can form no conception of the difficulty of hitting the mark. Appearing to move very slowly, it really travels with the velocity of a railway carriage, and as in its course it describes an arc of a circle, the rate of speed at different points is necessarily various. The artist has made the deer of the dun instead of the red tribe, and there is, consequently, little by which it can be distinguished from the bank behind; but for all that it rarely succeeded in crossing its "corrie" scatheless. At one time the Prince succeeded in planting four bullets successively in the portion of the body forming the centre of the target. The members of the association who were present concurred in declaring that the practice which had been made at this range, if not better, was at least equal, taking the general average of the shots, to that recorded of any single rifle at the meeting of 1862. His Royal Highness used a double-barrelled rifle, made by Mr. Smith, the armourer to the National Rifle Association, and was so well satisfied with its performance that before leaving the ground he gave orders that one should be manufactured specially for him. He further caused it to be understood that he hoped to be present, with the Princess of Wales, on the 13th inst., to witness the match between the Lords and Commons and the contest for the "Alexandra" prize given by the association.

The rival eights, to represent England and Scotland in the match for the St. George's Challenge Vase, have been selected. The Scottish eight are—Captain Horatio Ross, Lord Elcho, Captain Edward Ross, Mr. Hercules Ross, Mr. Colin Ross, the Master of Lovat, Mr. H. Maxwell, and Mr. Ferguson; reserve candidate, Mr. Henry. The English eight are—Viscount Bury (ex officio), Earl Ducie, Captain Heaton, Mr. Martin Ridley Smith, Lieutenant-Colonel Halford; Captain Hawker, South Middlesex Rifle Volunteers; Mr. A. Ashton, and Captain Rowland, 55th Regiment; reserve candidate, Mr. Anthony Salvin.

A field day, under the command of Colonel M'Murdo, in which the Hon. Artillery Company, the London Rifle Brigade, the St. George's, and the Queen's (Westminster) Volunteer Rifles joined, took place last Saturday evening within the inclosure belonging to the National Rifle Association at Wimbledon. The corps first mustered at Wimbledon-green, and consisted of several troops of light horse and four battalions of artillery belonging to the Hon. Artillery Company, under the command of Major Robinson; the London Brigade, numbering about 300, under Lieutenant-Colonel Wardle; the Queen's, about 450, under Lieutenant-Colonel Earl Grosvenor; and the St. George's, mustering over 150, commanded by Colonel Lindsay, Colonel M'Murdo, attended by Lord Colville and Colonel Ibbetson as Aides-de-Camp, came upon the ground a little after seven, and marched the different corps, the artillery preceding, into the inclosure. An enemy was supposed to be advancing on

Digitized by Google

Wimbledon by the Putney and London roads. The St. George's, under Colonel Lindsay, and a field battery of artillery went out as a reconnoitring party. Skirmishers were thrown out, but the enemy being too strong for them, they retired on their supports, who immediately engaged the foe, the artillery opening on him from the left flank. The supports being gradually driven back, the reserves, consisting of the London Brigade, the Queen's, the Light Horse, and the second battery of the Hon. Artillery Company, advanced to their assistance, and succeeded in turning the right flank of the enemy, who made a long détour to the left by the Roehampton-road. The London Brigade, with the St. George's, were then thrown out to intercept him in this direction, the Queen's still acting as supports. The enemy, however, engaged them so hotly that a retreat in excellent order was made through the ranks of the Queen's, who then advanced on the coming foe, keeping up a withering fire with splendid precision, the artillery joining on the right flank. The St. George's and the London Brigade then pushing on, the action became general, and the right flank of the enemy was successfully turned, and he was driven back to his original position. Front was then changed, and the Queen's thrown out as skirmishers, but had to retire, the whole of the supports victoriously charging the imaginary enemy at the double. Colonel M'Murdo then addressed the men, explaining to them the objects of the different evolutions they had gone through, and complimented them on the manner in which they had been performed.

The annual inspection of the 1st Middlesex Volunteer Engineers in infantry drill, under their Lieutenant-Colonel, McLeod of MacLeod, took place in Hyde Park last Saturday. The inspecting officer was Colonel Erskine. The muster was somewhat small, being only about 350; they, however, went through all the battalion movements in a most creditable manner. After the manœuvres were over the men formed square, and were addressed by Colonel Erskine. He said they had performed their work in a very creditable manner.

Last Saturday evening was fixed for the official inspection of the 1st Middlesex Artillery Volunteers, and the place selected for the purpose was the parade-ground of the Wellington Barracks. There was a very good muster of men, under the command of Lieutenant-Colonel Creed. Colonel Smyth, R.A., was the inspecting officer of the day, and the proceedings were commenced by putting the corps through the battalion movements, after which followed the manual and platoon exercises. In all the various movements the men performed their part admirably. But satisfactory as was their performance of these operations, their gun-drill was even more perfect. The manner in which they handled the 18-pounders, the rapidity, steadiness, and certainty of their action, showed that they had not neglected their drill in the past twelve months. The inspection being at an end, Colonel Smyth briefly addressed the corps. He complimented the officers for the efficiency to which they had brought the men, and the men on the attention that he was sure, from what he had seen during the inspection, they must have paid to the instruction and drill they had undergone. He assured them he was highly satisfied with what he had seen, and it would be his duty to report accordingly.

The 2nd Norfolk Administrative Battalion, under the command of Lieutenant-Colonel Sir T. P. Beauchamp, assembled on Thursday and Friday, last week, in Langley Park, the seat of the gallant Baronet, for two days' training and inspection, and were placed under canvas on the occasion. On Friday the battalion was inspected by Colonel M'Murdo. The companies composing the battalion were the Harleston, Captain Holmes commanding; the Diss, Lieutenant Salmon; the Loddon, Lieutenant Gilbert; the Stalham, Lieutenant Burroughes; the Blofield, Lieutenant Jary; the Attleborough, Captain Sir R. J. Buxton; the Wymondham, Captain Gardon; and the Thetford, Lieutenant Davey. Altogether the assembled force comprised twenty-two officers, thirty sergeants, and 260 rank and file. Fifty camp-tents were borrowed from the War Office for the occasion, and in these the volunteers encamped on Thursday night. The whole battalion were entertained at dinner by Sir T. P. Beauchamp, who had also for his guests Lord and Lady Radstock, Lieutenant-General Sir H. Bentinck, Lord Suffield, the Hon. Major and Mrs. Walpole, Lieutenant-Colonel Ibbetson, Mr. R. J. H. Harvey, &c. In the course of a number of speeches in connection with various toasts, Colonel M'Murdo expressed his satisfaction at the prosperous position of the volunteer service; it had now turned the ebb to which it appeared to have receded, and, so far as he could judge, the tide was again flowing. The volunteer service now comprised 160,000 men, of whom 130,000 were riflemen, 80,000 of whom, again, belonged to detached companies seldom able to meet in battalion. If war came to-morrow, the country would have to depend on the 80,000 men composing the scattered corps which formed so large a portion of the volunteer force; and therefore he had come into Norfolk to see the manner in which the volunteers of this part of the country performed their duties. If they understood company drill, and had that cohesion in company which showed that they had paid attention to it, he should be quite satisfied; and he considered them perfect according to their degree, because he could not expect volunteers who could only meet two or three times a year in battalion to attain the position of those who had the advantage of turning out almost at their own doors and forming battalions of 500 or 600 strong. One battalion in London—the Inns of Court—was exceedingly well up in its work; but, under the different circumstances which obtained in Norfolk, he only expected that the men of the county battalions should understand company drill, and that the officers and non-commissioned officers should know their places. In such an event as the invasion of England it was not impossible that the northern coast of Norfolk might be selected as the point for landing. He had come into Norfolk to mark the thews and sinews of the volunteers who would have to oppose such a landing, and he was delighted to see so fine a body of men.

The annual inspection of the 1st Hants Artillery Volunteers, consisting of two batteries, took place on the 29th ult., at their platform on Hamble Common, the inspecting officer being Colonel Domville, of the Royal Artillery. Prizes were awarded to the successful competitors at the end of the day's proceedings. The guns are 24-pounders, the range being 1250 yards, and the precision of the firing was such as to elicit the highest commendation of the inspecting officer. There were forty-four shots fired, and of this number only one went wide of the mark, the others having been so well directed that not one would have missed a vessel moored in the position of the target. One shot fired by Gunner Reed carried away the flagstaff, a second hit the target, and a third fell within a yard of it. The men were afterwards inspected at company drill, and were then marched to Netley, where a dinner was provided for them by Captain Freeman and the officers of the corps. The batteries were under the command of Captain Freeman, the other officers present being Lieutenants Jackson, Smith, and Phillips, and the assistant-surgeon of the brigade, Dr. Orsborn. The whole of the proceedings passed off most satisfactorily, without a casualty of any kind.

A short time ago a challenge was received in England from an Australian battalion of volunteers to shoot an equal number of volunteers in this country—the latter to be selected from the best shooting company of enrolled volunteers for the year ending 1862, the firing to take place at any range not being the range of the respective corps. This challenge was addressed to the council of the National Rifle Association, and it appears that the best shooting company of volunteer rifles in England for the year 1862 was the No. 1 of the Nottingham Robin Hoods. This company has declared its readiness to accept the challenge, and on Saturday morning Lieutenant-Colonel Wright received a letter from the council of the National Rifle Association stating that an answer accepting the challenge had been sent to Australia. The contest will take place in September. The distances are 200, 300, 400, 500, 600, 700, and 800 yards; five shots at each range. The shooting will take place at the same time in England and Australia—ten men from each corps.

THE DISTRESS IN THE NORTH.

The weekly meeting of the Central Executive Committee took place at Manchester on Monday—Sir J. K. Shuttleworth in the chair.

Mr. Maguire, hon. secretary, reported the week's receipts at £6356; balance in the bank, £348,809. He also presented the monthly report, which stated:—"The very great increase of employment which has been afforded in the mills during the past month has enabled no less than forty-seven local committees to suspend operations for the present. From this circumstance I have been unable to obtain returns from their district, but, from reliable information which I have received, I am led to believe that out of 55,362 operatives resident in the districts in which committees acted, about 25,690 are working full time, and 16,801 are on short time. This improvement alone would have been a most satisfactory report; but I am also happy to state that in the districts in which local committees are still continuing their labours there are 2874 more operatives working full time than there were last month. It must not be forgotten that this is in addition to the 13,451 operatives who were reported to have obtained full work during the month of May; and it is now certain that, of those persons usually employed in the mills in the cotton districts, about 234,642 are in full work, 125,097 short time, and 180,729 out of work, against 192,527 full time, 129,741 short time, and 215,512 out of work in the last week of April. No further very great improvement can be anticipated in the state of employment before this time next year, as already it has reached the equivalent of an average of three days' employment a week for the operative population; and as at present there are 256,230 persons in receipt of relief, there is reasonable ground for apprehension that at least an additional 100,000 will have to be supported when the season arrives during which out-door labour will be considerably reduced."

Mr. Parnall presented his weekly report, by which it appeared that, on the 27th ult., there had been a further decrease in the number of persons receiving relief in twenty-seven unions of 3661 persons, making a total decrease, since the 6th of December, of 112,761 persons, and leaving 159,222 chargeable, independent of those receiving relief from the local committees.

Sir J. K. Shuttleworth, in a letter to a contemporary, says that the supply of cotton for the year may be expected to amount to half the old imports; and adds that the difficulties of manufacturing the Indian staple are actually overcome. It is only the price that kills. Of £40,000 now taken in weekly wages he thinks £22,000 may be due to the cotton trade, and £18,000 to casual employment. The latter must naturally be considered as in some degree temporary or precarious; but Sir James then proceeds to inform us that the factory work itself rests on no better basis. It is not a genuine revival of trade. It is only a little "spurt" put on by the energy of a few manufacturers who have adapted their mills to Indian cotton, and who have ventured, even at present prices, to replenish the stocks of goods, which, owing to the stoppage of production, had become very low indeed. But that demand must obviously be limited. The autumn would see it satisfied; and then the factory hands, the field hands, and the vagrants together would all come back upon the relief lists and swell the total of claimants to last year's figures.

CHESS.

TO CORRESPONDENTS.

WEE PAWN, L. M., and Others.—The key moves of Mr. Kling's instructive "Study" are as follows:—

WHITE.	BLACK.	WHITE.	BLACK.
1. R to K B 8th (ch)	R interposes.	6. R to Q 8 3rd	B to Kt 5th (best)
2. R to K B 3rd	R to Kt 5th (best)	7. Kt to Q 7th	B to R 5th (ch)
3. R to Q B 3rd	R to Kt 8th (best)	8. K to Kt 6th	B to R 3rd (ch)
4. R to Q B 4th	R to Kt 5th (best)	9. K to B 7th, &c.	
5. R to Q B sq	R to Kt 8th (best)		

His beautiful Enigma, No. 1330, is solved by 1. R to Q Kt 4th; 2. R to Kt 6th; 3. K to R sq; 4. K to Kt sq, &c.

NORTHERN.—Mate cannot be given in Problem 1008 as you suggest.

C. M., Warrington.—BLINDFOLD CHESSPLAYING.—In ordinary chess play little if any progress beyond a better knowledge of the opening has been made during the last quarter of a century, but in the art of playing *sans voir* the improvement is very remarkable. In the time of Philidor, and down, indeed, to a comparatively recent period, it was thought an almost miraculous achievement for any one to conduct three games simultaneously without the assistance of a chess equipage. In the present day we have seen Mr. Murphy play eight games in this way; and even this performance, astonishing as it seems, has been surpassed by the exploits of Mr. Blackburne and Mr. Paulsen, each of whom has more than once played twelve games blindfold at the same time.

F. R. S.—A list of the members belonging to each of the leading European chess-clubs, from its foundation, would certainly be interesting, but is not very easy of attainment. On the roll of the chess-club formed in St. James-street in 1774, Professor Allen, in his "Life of Philidor," tells us:—"One noble lady (Dr. Franklin's Mrs. Howe) stood by the side of a Church dignitary (the Bishop of Durham), at the head of a list," comprising, "besides unnamed Dukes, Marquises, and Earls, the historical names of Gibbon, Charles James Fox, Lord Mansfield, Erskine, Wedderburne, and the Marquis of Rockingham—of Elliot, the defender of Gibraltar—of Fraser, who met a soldier's death—and Burgoyne, who underwent a soldier's last humiliation at American Saratoga."

P. J., of Paris.—The June number of the Magazine has not yet come to hand; and the Journal, we are sorry to add, is at least two months in arrear.

R. A.—A charming composition, but no novelty. It is found in chess treatises a century old.

R. W. R.—We have received a prospectus of the new Chess periodical you mention, but have no faith in its stability. A well managed English Chess Magazine, edited by an Englishman of competent literary ability and knowledge of the game, would supply an admitted want. A Chess Magazine, professing to be "the organ of English Chess," edited by a foreigner and produced under foreign auspices, has, however, been already tried, and the result was not such as to warrant a repetition of the experiment.

IGNORAMUS.—The expression, *coup de Jarnac*, used by Philidor in his treatise on Chess, is a French phrase, denoting a subtle and unforeseen attack. It had its origin in the memorable duel which was fought in 1547 between François de Vivonne, Lord of La Chataigneraie, and Guy De Chabot, Lord of Jarnac. In this combat De Jarnac, overpowered by the blows of his vigorous opponent, covered his head with his shield, and assuming a crouching attitude contrived to wound La Chataigneraie in the leg, and thus obtained the victory.

SOLUTION OF PROBLEM NO. 1010.

14. R takes B	Castles	32. P to Q B 4th	P to K R 4th
15. Q to Q 4th	B to Q 2nd	33. K takes P	Q to K 5th (ch)
16. Q R to K B sq	Q to Q 3rd	34. Q to K B 3rd	Q takes Q B P
(Threatening to play P to Q 6th, and then to take the K B Pawn.		35. Q to K 3rd (ch)	K to Q sq
		36. Q to Q 2nd	K to Q 2nd
		37. P to K R 3rd	K to Q 3rd
		38. Q to Q Kt 2nd	Q takes Q P (ch)

and White ultimately won the game.

CHESS IN MANCHESTER.

The following Game, which illustrates a variation in the Scotch Opening much in vogue a few years back, is well entitled to consideration. It was played some time since between Mr. STANLEY and Mr. BLACKBURNE.

(*Scotch Gambit.*)

WHITE (Mr. B.)	BLACK (Mr. S.)	WHITE (Mr. B.)	BLACK (Mr. S.)
1. P to K 4th	P to K 4th	11.	K takes Kt
2. Kt to K B 3rd	Kt to Q B 3rd	12. Kt to Q 5th (ch)	Kt takes Kt
3. P to Q 4th	P takes B	13. B to K Kt 4th	Q takes B (ch)
4. Kt takes P	Q to K R 5th	14. K takes Q, &c.)	
(For an analysis of this interesting variation the student is referred to the "Chess Player's Handbook," pp. 171-172. He should see also a game at the same opening, published in the ILLUSTRATED LONDON NEWS of Dec. 7, 1861.)		12. B to K Kt 5th	P to K R 4th
5. Kt to Q Kt 5th	B to Q Kt 5th (ch)	13. Kt takes Q R	Kt to K Kt 5th
6. B to Q 2nd	Q takes K P (ch)	14. B takes Kt	P takes B
7. B to K 2nd	K to Q sq	15. B to K R 4th	P to Q Kt 3rd
8. Castles	Kt to K B 3rd	16. Kt to K 2nd	R takes B
9. Q Kt to Q B 3rd	Q to K R 5th	17. P takes R	P to K Kt 6th
10. P to K Kt 3rd	Q to K R 6th	18. B P takes P	Kt to K Kt 5th
11. Kt takes Q B P		19. R to K B 2nd	B to Q B 4th
(In the game referred to above White now played—	11. B to K Kt 5th.)	20. Kt to Q 4th	B to Q Kt 2nd
11.	Kt to K 4th	21. P to Q B 3rd	Kt takes K R P
(Had he taken the Kt with his King the game would probably have been continued thus:—		22. R takes Kt	Q takes P (ch)
		23. K to B sq	Q takes R
		24. K to K sq	Q takes P (ch)
		25. K to Q 2nd	Q to K B 5th (ch)
		26. K to Q B 2nd	B to K 5th (ch)
		27. K to Kt 3rd	B to Q 4th (ch)
		28. K to B 2nd	

The game was abandoned as a drawn battle.

CHESS ENIGMA.

No. 1338.—By Mr. C. BAYER. (*La Régence.*)

White: K at Q B sq, Q at K B 2nd, B at K R 4th, Kts at Q 4th and Q R 3rd, Ps at Q B 2nd and Q Kt 6th.

Black: K at Q B 6th, Rs at K B 2nd and Q B 5th, Kts at K Kt 5th and K B 8th; Ps at K B 5th, K 3rd, Q B 3rd, and Q R 3rd.

White to play, and mate in four moves.

SCIENTIFIC NEWS.

ACCLIMATISATION.—In the *Annals of Natural History* Dr. J. E. Gray has inserted a copy of the circular on this subject prepared by Mr. Wallace, approved of by a committee formed at the British Association meeting at Cambridge (consisting of Dr. Sclater, Mr. Alfred Newton, Mr. Wallace, and Dr. Gray), and now in course of distribution. The following are some of the points of inquiry to which the attention of persons resident in extra-European countries is especially requested:—1. As to the domesticated animals indigenous to the country, their differences from the wild races, the possibility of domesticating the latter, &c. 2. As to the domesticated animals which have been introduced from other countries, the date of their introduction, food, habits, longevity, fecundity, diseases, &c. 3. Special inquiries relating to the more common domestic animals—viz., sheep, horses, cattle, dogs, ducks, and geese; the capability of forming hybrids, &c.

NITROGEN IN BREAD.—A short time ago M. Barral laid before the French Academy of Sciences a memoir, in which he not only stated that, when in the same state of dryness, there is more nitrogen in the crust of bread than in the crumb, but that crust is more soluble than crumb in water. This last fact was imputed by M. Payen to the transformation of dextrine into starch during baking. M. Barral, in a note to his memoir, reports another important result, established by his researches. From the same weight of dried crust and dried crumb placed in water he has found that the soluble part of the crust gives from 7 to 8 per cent of nitrogen, while that of the crumb gives only from 2 to 3 per cent. The greater solubility of the crust no doubt proceeds from the gluten of the crust having undergone a remarkable transformation through exposure to the temperature of from 392 to 428 deg. Fahr. in the oven during baking. He says that the soluble part of crust possesses more nitrogen than there is in the juice of meat. By way of confirmation, M. Barral introduced some gluten into strong closed glass tubes, and submitted them to a bath of oil, of the temperature of 428 Fahr. In a few seconds the gluten liquefied. This liquefaction, effected under the influence of steam and pressure, gave rise to a disengagement of carbonic acid; for when the tube which contained the liquefied gluten was broken, a slight explosion took place. When the gas causing this explosion was collected, it was found to be carbonic acid, without any trace of nitrogen. The brown liquefied gluten was remarkably alkaline, and endowed with a peculiar odour. After filtration, a yellow precipitate was formed by treatment with acids, and none was produced by treatment with alkalies and alcohol. M. Barral states that he is still pursuing his interesting studies on the chemistry of bread-making.

THE PRESERVATION OF BUILDING MATERIALS is still the subject of the experimental researches of M. Kuhlmann, so well known for his memoirs on the applications of silicates of potash, or water-glass, for the hardening of stone, &c. The efficacy of this material having been found incomplete when applied to old buildings, under the influence of ammoniacal emanations and constant humidity, M. Kuhlmann has tried, in the case of brick walls, a mixture of tar obtained from the distillation of coal, laid on as hot as possible, the wall having been previously heated by placing near it a portable coke fire. This having been found successful, he was induced to experiment with several combinations of coal tar with various mineral substances, such as oxide of iron, obtained from the combustion of iron pyrites; this latter, united with one fourth of its weight of coal-tar, gives a plaster, which, when cold, possesses remarkable hardness and sonorousness. The application of silicious solutions is not suitable for moulded plaster, because, even at the moment of contact, there is an exchange of acids, and a gelatinous solution is produced, which forms on the surface of the plaster an impermeable layer, and thus prevents the silica from penetrating into the centre. In regard to the application of bituminous substances for the preservation of plaster, M. Kuhlmann states that the chemical properties of the plaster, instead of being an obstacle to its hardening and unalterability, as in the case of silicatisation, is, on the contrary, very favourable to these effects. In a recent communication to the French Academy of Sciences, he gives many details, and expresses great hopes of the preservation of many public buildings and monuments from the injurious action of frost and damp by means of the combination of gas-tar with plaster and other substances. He thinks also that the phenomena attending these combinations well deserve the study of geologists in relation to the history of many of the transformations which have taken place on the crust of the earth.

THE ELECTRIC THERMOMETER has been recently employed by M. Becquerel in determining the temperature of the earth at great depths, and the details of his experiments are given in the *Comptes Rendus* of the French Academy. The electric thermometer in its simplest form is a closed circuit composed of an iron wire and a copper wire soldered at their points of junction, and in which is found either a galvanometer keeping zero perfectly, or, better still, a magnetometer solidly fixed, with divers accessories, such as apparatus for heating or cooling the free solder, thermometers, lenses, &c. When the temperature is the same at the two solderings the magnetised needle rests at zero; when there is a change of temperature there is a deviation. If one of the solderings is placed in a spot where the temperature cannot be observed with a thermometer, then, by raising or lowering that of the other soldering, until the needle shall arrive at zero, the observer will be assured that this temperature is the same as that which was unknown. Thus, by giving to the metallic wires sufficient diameters, the temperature at great depths may be observed. Care must be taken that the temperatures given by the solderings are the same as those of the thermometers placed beside them. The operation requires a deep-bored well, a thermo-electric cable, a galvanometer, and other apparatus; in all which M. Becquerel was liberally aided by M. Rouland, the late French Minister of Public Instruction. On examining the earth at Paris M. Becquerel found—1, That, without going out of the tertiary basin of Paris, the invariable stratum is not of the same thickness; 2, That we can rigorously determine the march of the propagation of heat in the soil and the position of the invariable stratum; and, 3, That at the Jardin des Plantes, from the depth of 26 to 36 metres, the temperature is constant, as it is also from 16 to 21 metres. He states that in passing from one stratum to another the temperature seemed to change, and thinks that, consequently, it will be possible to determine with great exactness the propagation of solar heat in the earth. Since this new mode of observation indicates changes of temperatures less than the tenth of a degree, M. Becquerel considers it to be highly desirable that experiments should be made at depths of 100 or even of 200 metres, in order to learn the nature of the strata, the infiltration of waters, chemical reactions, and other causes which influence the distribution of heat in the crust of the earth, and what are the modifications which it undergoes with the weather—a distribution, the effects of which may react on the temperature of the soil, and, consequently, on the climate. This is one of the grandest questions in terrestrial physics which a philosopher can propose to himself to solve, and well worthy of fixing his attention.

THE HERRING.—Some extracts from the report of the Royal Commission (consisting of Professors Lyon Playfair and Huxley, and Lieutenant-Colonel Maxwell) appear in the *Edinburgh Philosophical Journal*, and contain some interesting particulars respecting the natural history of this valuable fish. It is found in four conditions:—1, Fry or sill; 2, Maties or fat herring; 3, Full herring; 4, Shotten, or spent herring. Adult full herrings generally vary in length from ten to fifteen inches; they may vary, it is said, from seven to seventeen inches. Their food consists of small crustacea and fish, and particularly sand eels, while in the matie condition they feed voraciously. Their enemies are fish (cod, ling, &c.); birds (gulls and gannets); marine mammals (porpoise, and other cetacea); and man. In 1861 there were in Scotland, and that part of England over which the Fishery Board have jurisdiction, 42,751 fishermen and boys engaged in the herring fishery. The total take of the year would give about 20,000 herrings for each of these persons, or nearly 900,000,000 for the whole! This vast number sinks into insignificance if compared with the total destruction effected by agencies over which man has no control. Consider the destruction of large herring by cod and ling alone. It is a very common thing to find a codfish with six or seven large herrings in his stomach, of which not one has remained long enough to be digested. If, in order to be safe, we allow a codfish only two herrings per diem, and let him feed on herrings for only seven months of the year, then—2 herrings × 210 days = 420 herrings—his allowance during that time; and fifty codfish will equal one fisherman in destructive power. But the quantity of cod and ling taken in 1861, and registered by the Fishery Board, was over 80,000 cwt. On an average thirty codfish go to 1 cwt. of the dried fish. Hence, at least 2,400,000 codfish were caught in 1861. But, if fifty codfish equal one fisherman, 2,400,000 will equal 48,000 fishermen. In other words, the cod and ling caught on the Scotch coasts in 1861, if they had been left in the water, would have caught as many herrings as a number of fishermen equal to all those in Scotland, and six thousand more, in the same year.

A NEW GAS FURNACE for scientific purposes has been constructed by Mr. G. Gore, with the view of employing only ordinary coal gas and atmospheric air, dispensing with the use of bellows, blowing apparatus, tall chimney, or valves requiring frequent attention. It is figured and described by Mr. Gore in the *Philosophical Magazine*. It consists of a cylinder of fire-clay, about 9 in. high and 6 in. diameter, open at both ends, with a hole in its side near the bottom to lead into the chimney. It is covered with a movable plate of fire-clay with a hole in its centre for the introduction of the crucible or of substances to be melted. This hole is closed by a perforated plug of fire-clay for access to the contents of the crucible, and that again is closed by another stopper of clay. A chimney of sheet iron, about five or six feet high, kept upright by a ring of iron, is attached to the top of the furnace. The fire-clay cylinder is inclosed in a sheet-iron casing with a bottom of iron, to which are fixed three iron legs. Inside the larger cylinder is another fire-clay cylinder or cupola with open ends and with three projections of fire-clay for supporting a crucible, which is kept steady by means of three marbles. The gas-burner is a thin metal cylinder deeply corrugated at its upper end, with the corrugations diminishing to nothing at its lower end. For details of the management of this furnace we must refer our readers to Mr. Gore's description. He says that the chief conditions for its successful use are "sufficient gas, proper regulation of gas to air, and a suitable degree of draught." Mr. Gore states that it will readily melt half a pound of copper or six ounces of iron. It requires from twenty to thirty minutes to acquire its highest temperature, and then the entrance part of the chimney exhibits a faint red heat in daylight. If it exhibit much more than this the draught is too powerful. This furnace is protected by patent, and may be obtained of the maker, E. W. Ball, Islington, Birmingham.

NEW BOOKS.

13, Great Marlborough-street.

HURST and BLACKETT'S NEW WORKS.

DR. MOUAT'S ADVENTURES AND RESEARCHES AMONG THE ANDAMAN ISLANDERS. With Illustrations. 16s.
MR. FLEMING'S TRAVELS ON HORSEBACK IN MANTCHU TARTARY. With Map and 50 Illustrations.
LORD WILLIAM LENNOX'S FIFTY YEARS' BIOGRAPHICAL REMINISCENCES. 2 v.
THE WANDERER IN WESTERN FRANCE. By G. T. LOWTH, Esq. Illustrated by the Hon. T. Eliot Yorke, M.P.
MISTRESS AND MAID. By the Author of "John Halifax." Illustrated by Millais. 5s bound.
THE NEW AND POPULAR NOVELS.
MARY LINDSAY. By the Lady EMILY PONSONBY.
CHURCH AND CHAPEL. By the Author of "No Church." "Owen, a Waif," &c. 3 v.
LOST AND SAVED. By the Hon. Mrs. NORTON. Fourth Edition, with a letter from the Author. 3 v.
RESPECTABLE SINNERS. By Mrs. BROTHERTON.
VICISSITUDES OF A GENTLEWOMAN. 3 v.

Now ready, three volumes, post 8vo,

ROMOLA. By GEORGE ELIOT, Author of "Adam Bede," "The Mill on the Floss," "Scenes of Clerical Life," and "Silas Marner."
SMITH, ELDER, and Co., 65, Cornhill.

Now ready, with Six Portraits, engraved on Steel, 2 vols., demy 8vo, 32s.,

QUEENS OF SONG. Being Memoirs of some of the most celebrated Female Vocalists who have appeared on the lyric stage from the earliest days of the Opera to the present time. To which is added a chronological list of all the operas that have been performed in Europe. By ELLEN CREATHORNE CLAYTON.
SMITH, ELDER, and Co., 65, Cornhill.

Just published, 1 vol. 4to, half morocco, 9s.,

TRANSLATIONS. By LORD LYTTELTON and the Right Hon. W. E. GLADSTONE. Second Edition, VI., and 206 pp.
BERNARD QUARITCH, 15, Piccadilly, London.

Price 1s.; per post, 1s. 2d.; or abridged copy, 2 stamps,

MILES ON ARTIFICIAL TEETH, as best adapted for Mastication, Speech, Appearance, and on Stopping Teeth. To be had of the Author, EDWD. MILES, Surgeon-Dentist, 15, Liverpool-street Bishopsgate-church, City, London.

DECALCOMANIE—The new and elegant Art of Instantly Transferring Designs to China, Silk, Wood, &c. Instructions, post-free, 6d. Designs in every variety from 1s. per sheet. STAINED WINDOWS (Diaphanie). Instructions post-free, 8d.—WM. BARNARD, Artistic Repository, 59, Connaught-terrace, London, W.

50,000 BIBLES, Prayer-books, and Church Services, Altars, Juvenile Books, and Standard Authors on Sale, in every variety of binding, at JOHN FIELD'S Great Bible Warehouse, 65, Regent's-quadrant.

A GUINEA PRAYER-BOOK for 6s. 6d. The PICTORIAL BOOK of COMMON PRAYER, large type, with 600 beautiful engravings, and bound in antique style, only 6s. 6d.; or post-free for 7s. This splendid volume only to be had at JOHN FIELD'S, 65, Regent's-quadrant.

THREE HUNDRED BIBLE STORIES, with nearly 300 Bible Pictures, a Pictorial Sunday Book for the Young, handsomely bound, price 4s. 6d., published at 12s., post-free from FIELD'S Great Bible Warehouse, 65, Regent's-quadrant.

FIELD'S GUINEA FAMILY BIBLE.—Large type, best binding, beautiful plates, and 50,000 references—a Matchless Volume. The Largest Stock in the World, from 4s. to 10 guineas. Field's Great Bible Warehouse, 65, Regent's-quadrant.

NO CHARGE MADE FOR STAMPING PAPER and ENVELOPES with Arms, Crest, or Monograms plain. Rodrigues' Cream-laid Envelopes, 4d. per 100; Cream-laid Note, full size, five quires for 6d. At HENRY RODRIGUES', 42, Piccadilly.

WEDDING and BIRTHDAY PRESENTS. Dressing-cases, Travelling-bags, Despatch-boxes, Writing-cases, Jewel-cases, Mounted and Ormoulu Suites for the Writing-table; and a choice variety of useful Elegancies suitable for presents, at RODRIGUES'S well-known Establishment, 42, Piccadilly.

WEDDING CARDS and ENVELOPES Printed and Stamped in Silver, with Arms or Crest, in the latest fashion. Card Plate elegantly engraved and 100 Superfine Cards printed for 4s. 6d. At HENRY RODRIGUES', 42, Piccadilly.

CARTE DE VISITE PORTRAIT ALBUMS from 5s. to 10 guineas. Carte de Visite Portraits of the Royal Family and Distinguished Persons of all nations. Single Portraits, 1s. 6d.—At RODRIGUES', 42, Piccadilly. Catalogues post-free.

ONE HUNDRED PHOTOGRAPHIC SCRAPS (all different), for Albums and Scrapbooks, sent post-free for 7s. 9d. in postage-stamps; or 300 (all different) for 14s. post-free. Address JOHN JERRARD, 172, Fleet-street, E.C. N.B. These packets will contain many photographs that have never been included in the parcels at the same price before. The trade supplied.

BINDING THE ILLUSTRATED LONDON NEWS.—Subscribers and Purchasers can have their VOLUMES BOUND in the appropriate Covers, with gilt edges, at 5s. per volume, by sending them, carriage-paid, with Post Office order payable to LEIGHTON, SON, and HODGE, 13, Shoe-lane, London. The only Binders authorised by the Proprietors.

LARGE PICTURES, presented by the ILLUSTRATED LONDON NEWS, framed in BOLD GILT FRAME, with Glass and Backboard, complete. Price 3s.
LONDON STEREOSCOPIC and PHOTOGRAPHIC COMPANY, 54, Cheapside, and 110, Regent-street.
A SET of 12 SANDRINGHAM STEREOGRAPHS, with portraits of T.R.H. the Prince and Princess. Price 20s.
See Review, "Times," June 5.
P. O. Orders payable to JOHN JENNINGS, Cashier.

PENCILS, BLACK LEAD, and COLOURED CHALKS.
A. W. FABER'S POLYGRADE LEAD PENCILS, sold by all Stationers and Artists' Colourmen.
Sole Agents, HEINTZMANN & ROCHUSSEN, 9, Friday-street, E.C.

SPECIAL PRIZE MEDAL for the BEST SEWING-MACHINE awarded to W. F. THOMAS.—These celebrated Machines are adapted for both manufacturing and family use, and will stitch, hem, bind, gather, &c. Catalogues and samples of the work may be had on application to W. F. Thomas and Co., 66, Newgate-street, and Regent-circus, Oxford-street, London.

GUNS.—E. M. REILLY and CO. invite attention to their extensive stock of double guns and double rifles, breech and muzzle loading. Secondhand guns at reduced prices, &c.—315 and 502, Oxford-street, London.

"RECONNOITERER" GLASS, 9s. 6d.! Weighs 8 oz., is achromatic, and so strong that ships, houses, trees, &c., ten miles off; Jupiter's Moons, &c., are distinctly seen by it; and when used as a landscape glass is valuable on a twenty-five mile radius. "I think the Reconnoiterer very good."—The Marquis of Carmarthen. "I never before met an article that so completely answered its maker's recommendation."—F. H. Fawkes, Esq., Farnley, Otley. "Regarding the glasses supplied by Messrs. Salom, I am well pleased with them."—From a report by the Head Gamekeeper of the Marquis of Breadalbane. "The economy of price is not secured at the cost of efficiency. We have carefully tried it at an 800-yard rifle-range against all the glasses possessed by the members of the corps, and found it fully equal to any, although they had cost more than four times its price."—The Field. Post-free, 10s. 10d. The Hythe Glass, showing bullet marks at 1200 yards, 31s. 6d. These Glasses are only to be had direct from SALOM and CO., 98, Princes-street, Edinburgh, who have no agents.

DEERSTALKING and YACHTING TELESCOPES, one to five guineas.—W. and J. BURROW, Malvern; London: Arnold, 72, Baker-street; and Wales and Co., 55, Cheapside.

TO LADIES.—RICHLY-PERFORATED TISSUE, for Stove Aprons, 3 stamps per packet. Green Tissue Ivy Leaves, for ornamenting Chimney-glasses, 18 stamps per set of 72 slips, post-free.—R. PETERS, Tovil, Maidstone.

NEW MUSIC.

HARVEST HOME. BY G. B. ALLEN.

MY OWN DEAR NATIVE FIELDS. Contralto Song, from this successful Cantata. Price 3s.
METZLER and Co., 37, 38, 35, and 36, Great Marlborough-street, W.

HARVEST HOME VALSE. By DE GASPARD. Beautifully Illustrated. Price 4s. Played by all the bands.
METZLER and Co., 37, 38, 35, and 36, Great Marlborough-street, W.

HARVEST HOME QUADRILLE. By COOTE. Illustrated. Price 4s. Played by Coote's Band with great success.
METZLER and Co., 37, 38, 35, and 36, Great Marlborough-street, W.

KUHE'S HARVEST HOME. Transcription for the Piano of Airs from this successful Cantata. Price 4s.
METZLER and Co., 37, 38, 35, and 36, Great Marlborough-street, W.

KUHE'S SLUMBER, MINE OWN. Transcription for the Piano of this popular Song. Price 2s.
METZLER and Co., 37, 38, 35, and 36, Great Marlborough-street, W.

VIRGINIA GABRIEL'S "DREAMLAND."

SLUMBER, MINE OWN. This popular Song may be had in C or in E flat. Price 2s. 6d.
METZLER and Co., 37, 38, 35, and 36, Great Marlborough-street, W.

MDME. OURY'S "PURITANI." Fantasia for the Piano, as played by the Composer. Price 5s.
METZLER and Co., 37, 38, 35, and 36, Great Marlborough-street, W.

THE POPULAR CONTRALTO SONG,

A WILD, WET NIGHT. Composed by IGNACE GIBSONE. Price 2s. 6d.
W. METZLER and Co., 37, 38, 35, and 36, Great Marlborough-st., W.

BALFE'S NEW SONG.

I HAVE BEEN WITH THE ROSE. Sung by Mdme. Lemmens-Sherrington with the greatest success. Price 2s.
METZLER and Co., 37, 38, 35, and 36, Great Marlborough-street, W.

HATTON'S NEW SONG.

CHILDREN. Words by LONGFELLOW. Sung by Miss Palmer. Price 2s. 6d.
METZLER and Co., 37, 38, 35, and 36, Great Marlborough-street, W.

H. SMART'S NEW SONG.

WHEN WE WERE SITTING SIDE BY SIDE. Suited to most voices—highest note E flat. Price 2s. 6d.
METZLER and Co., 37, 38, 35, and 36, Great Marlborough-street, W.

DREAMLAND. The favourite Airs from this successful Cantata, arranged in one book for the Piano, by H. W. GOODBAN. Price 5s.
METZLER and Co., 37, 38, 35, and 36, Great Marlborough-street, W.

NOTICE.—HALF-PRICE.—All Music, and the best Editions, at half the published price, sent post-free for postage-stamps or Post Office order.
HOPWOOD and CREW, 42, New Bond-street, W.

The prettiest drawing-room piece is

GANZ'S SOUVIENS TOI, Mélodie chantante. Price 3s. 6d.
"A most pleasing morceau, equally simple and elegant."—Illustrated News.—HOPWOOD and CREW, 42, New Bond-street.

Performed by Command at the

GRAND BALL given by H.R.H. the PRINCE OF WALES, at Marlborough House, June 29th, by Coote and Tinney's Band.

Cologne Quadrilles, by	..	..	..	..	Coote.

Domino Galop..	..	..	..	..	Coote.
Village Rose Valse	..	..	..	..	Coote.

HOPWOOD and CREW, Music Publishers, 42, New Bond-street.

INTRODUCING THE DANISH NATIONAL AIR,

COOTE'S PRINCESS ALEXANDRA VALSES. Price 4s. Illustrated with a splendid Portrait in Colours, respectfully inscribed to H.R.H. the Prince of Wales.
HOPWOOD and CREW, 42, New Bond-street.

THE LATEST EXCITEMENT.

COOTE'S FAIRY VISIONS. Illustrated. Price 4s., Solo or Duet. One of this Composer's happiest ideas, sparkling and dansante.—HOPWOOD and CREW, 42, New Bond-st.

THE BEST SET OF LANCERS ARE

COOTE'S CURE LANCERS. Price 4s. Introducing "The Pilgrim of Love," "My Pretty Page," "So Early in the Morning," "The Cure," and other popular Airs. A real merry set. No dance programme complete without the Cure. Always redemanded.—HOPWOOD and CREW, 42, New Bond-street.

COOTE'S VILLAGE-BELLS POLKA. Price 2s. One of the very best published, and will excell in popularity the celebrated "Great Eastern," by the same Composer.
HOPWOOD and CREW, 42, New Bond-street.

CONTINUED SUCCESS.

COOTE'S PASSION FLOWER VALSE. Price 4s., Solo or Duet. Performed by all the Bands in the United Kingdom.—HOPWOOD and CREW, 42, New Bond-street.

SUNG BY WAMBOLD, ALWAYS REDEMANDED.

I WAIT TO HEAR THY SWEET GOOD-NIGHT. Serenade. (Jenny Lind's Song.) Price 2s. 6d.
HOPWOOD and CREW, 42, New Bond-street.

BUCKLEY'S BEAUTIFUL BALLAD,

I'D RATHER BE A VIOLET. Price 2s. 6d. The melody is simple and beautiful, and bids fair to rival in popularity "Come where the moonbeams linger," by the same Composer. Price 2s. 6d.—HOPWOOD and CREW, 42, New Bond-street.

FRED. BUCKLEY'S NEW SONG FOR CONTRALTO,

LEAF BY LEAF THE ROSES FALL. Price 2s. 6d. "A really beautiful melody."—Review.
HOPWOOD and CREW, 42, New Bond-street.

NEW DRAWING-ROOM MUSIC.

KUHE'S I'D CHOOSE TO BE A DAISY, price 2s. 6d. Also, by the same Composer, VIOLETS; and OH, IF I HAD SOME ONE TO LOVE ME, price 3s. 6d. each.
HOPWOOD and CREW, 42, New Bond-street.

C. M. E. OLIVER'S NEW BALLAD,

OH! BLOW ME A KISS ON THE WIND. Price 2s. 6d. One of the best of this Composer's pretty songs.
HOPWOOD and CREW, 42, New Bond-street.

WORDS BY LONGFELLOW.

THE RIVER. By C. M. E. OLIVER. Price 2s. 6d. A very pleasing ballad, beautifully illustrated.
HOPWOOD and CREW, 42, New Bond-street.

PRINCESS ALICE MAZURKA and WALTZ. By Miss OLIVER. 3s.
All Among the Barley. Waltz, 3s. 6d.; Galop, 2s. 6d.
Sydney Smith's Tarantella, Mountain Stream, Lily of the Valley, Frelschütz, Cascade, Village Festival, and Mazurka des Ulans, ea. 4s.
AUGENER and Co., 86, Newgate-street.

AUGENER and CO.'S CIRCULATING MUSICAL LIBRARY. Annual Subscription, Two guineas.
London: 86, Newgate-street, and 4A, Tottenham-court-road. Brighton: 6, New-road. Prospectuses on application.

ENGLISH CONCERTINAS, by LACHENAL, Full Compass, with all the latest Improvements, warranted for Hot Climates, and to keep well in Tune, from Two guineas, with Case, Lock and Key, &c.
HOPWOOD and CREW, 42, New Bond-street.

MIDLAND RAILWAY.

MAIZENA, of all competing articles, obtained Two, and the only, Prize Medals in its Class, with the superlative recommendation of the jury, "Exceedingly excellent for food." Maizena forms not only a cheap and substantial diet for the strong, but a most nourishing regimen for the sick. Dr. Lankester says, "I can confidently recommend maizena as an article of diet for children and invalids." Obtainable of all first-class Grocers, with directions for making a score of exquisite dishes. 1 lb. 8d., ½lb. 4d.

BROWN and POLSON'S

PATENT CORN FLOUR.
Packets 8d.
Its superiority to all other kinds is well known.
The second quality is confidently recommended, and is labelled
INDIAN CORN FLOUR,
which may be obtained as cheap as the American qualities, none of which are sold in America for more than 6d.

LETTERS PATENT 1822. PRIZE MEDAL 1862.

ROBINSON'S PATENT GROATS is the most valuable preparation for making pure and delicate Gruel. Modern chemistry has shown that this food is easy of digestion and rich in nutriment.
ROBINSON'S PATENT BARLEY makes a delicious custard pudding, directions for which have been given by Mons. C. E. Francatelli. It is appreciated as a non-inflammatory drink, is excellent for mothers nursing, and has been used with great success for rearing children by hand.
KEEN, ROBINSON, BELLVILLE and CO.
Garlick-hill, London.

KEEN'S GENUINE MUSTARD,
There are many qualities of Mustard sold.
Obtain Keen's Genuine Mustard and full approval is guaranteed.
FIRST MANUFACTURED, 1742.
Sold by the Trade from the Cask, and in 1 lb. and ½ lb. canisters.
KEEN, ROBINSON, BELLVILLE, and CO.,
Garlick-hill, Cannon-street, London.

OSWEGO

PREPARED CORN,
for
Puddings, Custards, Blanc-Manges, &c.
Manufactured and Perfected by
T. KINGSFORD and SON,
of Oswego, State of New York.
It is the original preparation from the farina of maize, established 1848, commands the highest price from the trade, and offers the best value to the consumer.
It is a quarter stronger than any of the imitations, has a finer grain, and is more delicate.
The Oswego has the natural golden tinge, and not the chalk white produced by artificial process.
KEEN, ROBINSON, BELLVILLE, and CO.,
Garlick Hill, London.

BORWICK'S is the BAKING POWDER for Bread, Pastry, and Puddings. Sold everywhere in Packets, 1d., 2d., 4d., and 6d.; and in patent Boxes, 1s., 2s. 6d., and 5s.

GLENFIELD PATENT STARCH, used in the Royal Laundry, and awarded the Prize Medal for its Superiority.

THE ILLUSTRATED LONDON NEWS.

No. 1213.—VOL. XLIII. SATURDAY, JULY 18, 1863. WITH A SUPPLEMENT, FIVEPENCE

WORKING MEN'S CLUBS.

WISDOM and philanthropy do not always go hand in hand. The best impulses of the heart are too frequently frustrated by the mistakes of the head. Many a social reform, the object of which commands general approbation, has utterly failed—some have even done more harm than good, owing to a singular want of adaptation of the means to the end. Human nature can never be successfully treated, especially with a view to refine and elevate it, unless the complex motives by which it is governed are consulted as well as understood. The idea, once almost universally prevalent, but now, happily, passing away, that man might be fashioned into any conceivable pattern of intellectual and moral beauty by a kind of millwork process, the machinery of which is driven by a sufficient central power, for a long time pervaded and vitiated the greater number of the plans which philanthropists set on foot for the regeneration of society. They forgot that character is a growth, not a manufacture; and, forgetting the radical, we may say the essential, difference between the one and the other, they naturally relied upon the formative effects of pressure rather than upon the influences which stimulate development. Even to this day the error is not wholly and everywhere corrected, and one occasionally sees projects for the benefit of what are called "the working classes" which overlook two very important elements necessary to be considered in the solution of every social problem; the first, that classes, whether they be designated upper, middle, or lower, are made up of individuals alike only so far as their condition is concerned, while in all other respects—in taste, in temper, in capacity, in tendency—they differ from each other as widely as if they belonged to no special class whatever; and the second, that all durable reforms affecting human character must result from the expansion, exercise, and consolidation of what is *within* a man, and cannot be secured by any perfection of *outside* contrivance or force.

These observations are favourably illustrated, and, indeed, have been suggested, by an item in the news of the week to which we venture to bespeak the attention of our readers. On the 11th inst., under the presidency of Lord Brougham, one of the most sagacious as well as disinterested and venerable of the social reformers of the present age, the first annual meeting of "The Working Men's Club and Institute Union" was held in the large room belonging to the Royal Society at Burlington House. The report of the union, read by Mr. H. Solly, its indefatigable secretary, constituted the groundwork of the speeches afterwards delivered by Lord Lyttelton, Mr. J. Heywood, the Hon. W. Cowper, M.P., the Rev. P. D. Maurice, Mr. T. Hughes, the noble chairman, and others, among whom we may make honourable mention of a Mr. Brady, a working man from Pimlico. It is not to the manly

"BRICK COURT, MIDDLE TEMPLE, APRIL, 1774," BY EYRE CROWE, IN THE EXHIBITION OF THE ROYAL ACADEMY.—SEE PAGE 60.

Digitized by Google

eloquence of the speakers but to the principal features of the scheme to the furtherance of which it was devoted that we ask a moment's notice; and we do so chiefly with a view to commend to public consideration and suffrage the principles of wise philanthropic action which it embodies.

The want which the Union has been organised to meet, or, more correctly speaking, to stimulate, guide, and assist those to meet who are the special subjects of it, is as urgent as it is notorious. All who know anything of the social condition and habits of the working men of this country know that they suffer incalculable disadvantage from the fact that in their walk of life one of the most powerful cravings of human nature, and one which might minister quite as much to their improvement as to their gratification—namely, easy and daily recreative intercourse with their fellows—can only be indulged under circumstances which expose them to baneful temptations. Recreation of some sort they must have. Their homes, for the most part, cannot supply it. Cramped for room, deficient in most of the accommodations necessary to comfort, ill ventilated, ill lighted, intolerably close in summer, inadequately warmed in winter, fit neither for solitary reading nor for cheerful converse with friends, the abodes of those whom severe toil throughout the livelong day has already predisposed to self-indulgence and lively companionship offer them but few attractions. There are needed for the better men of this class places of resort within easy distance, in which they may obtain, away from the demoralising influences of the public-house, precisely the same kind of advantages as gentlemen usually find in their clubs. Working men not less than others require to meet each other, sometimes for business, sometimes for conversation, sometimes for refreshment, or amusement, or mental improvement. And, until quite lately, such meetings could nowhere be arranged but in connection with a certain amount of expenditure in intoxicating beverages. This Union, we are told, has been organised for the purpose of rescuing workpeople from this special disadvantage of their position—an object which few will deny to be both pressing and praiseworthy.

We learn from the year's report of operations, and from the speeches based upon it, that the Union undertakes to do nothing for the class whose benefit it seeks, which they can more properly do for themselves. It does not assume the responsibility of starting clubs such as we have briefly described; it does not support them when started; it does not pretend to manage them. In a few cases it has given a money contribution towards the outfit, but even this is felt by many members to be of very questionable utility. Its business is to put working men themselves in the way of securing to their use all the social appliances required by their position. It leaves it to them to find the necessary means, to prescribe the rules and conditions, and to govern the interests of these institutions. It acts chiefly with the view of awakening local attention to the desirableness of establishing such clubs, of assisting them, when formed, by personal visits, correspondence, and the counsels of experience, and of developing the capacities for usefulness of all the clubs throughout the kingdom, by co-operating one with another and with a common central establishment. This is just the kind of aid which the working classes will most readily recognise and appreciate—aid which is stimulative and regulative of their own self-reliant exertions. They do not like to be treated, as Mr. Brady remarked, "as mere children in leading-strings." They are thankful for such guidance as may be vouchsafed to them; but they are little inclined to surrender their interests to the management of others, particularly of others who but imperfectly understand them. Show them how they can help themselves, and you confer upon them a boon far more valuable than any amount of assistance which supersedes their own efforts.

"Philanthropists," said the Hon. W. Cowper, "were beginning to discover that they must not only attend to the religious requirements of the age, but also to its amusements." This is true; but it does not express the whole truth. To have done that it should have been added, "and philosophers are at last discerning that the manner in which people set about doing good to others is even more important than the substance of it." To carry the weakly is not always, not often, the best service you can render them; to induce and assist them to walk alone is the fittest blessing they are capable of receiving. Too much fussiness has been the besetting sin of philanthropists—too strong a disposition to meddle and govern. Even in ministering to man's want of amusement it would be quite possible to undermine his independence; and we are not sure that the tendencies of the age in that direction have not increased the mischiefs they sought to cure. We have been sometimes fearful lest there should be fostered in the spirit of our people a feeling akin to that which prompted the degenerate Roman populace to demand *panem et circenses*. Anything which helps to dispel that fear by showing that it is groundless will receive our welcome. For this reason, even more than for the important object it seeks to accomplish, we have drawn the notice of our readers to this attempt to establish "working men's clubs." The mode in which its promoters have planned and have hitherto conducted their enterprise presents a favourable example, we think, of that modest reticence which men who aim at the welfare of their fellow-men by means of a scheme of benevolence are too apt to forget.

The Union, we are informed, has met with a fair measure of success. It has been but a year in existence, and only nine months in working order, but it has already accomplished quite enough to prove its qualifications for doing much more. We sincerely wish it a prosperous career. It would conduce to a far more desirable social revolution than can be precisely anticipated were every operative, handicraftsman, mechanic, or skilled labourer of any sort, wherever his work might lie, able, as Lord Brougham phrased it, "to find, not only social intercourse and improvement, but rational recreation, without the evils of the public-house." "I believe," said Mr. Cowper, "the amusements of a people do more to influence their character than the sermons to which they listen." "Workmen," he subsequently added, "may be divided into two classes—thinkers and drinkers. These clubs, he felt assured, would enlarge the former and greatly diminish the latter." We hope his prediction will be verified.

FOREIGN AND COLONIAL NEWS.

FRANCE.

The Emperor is living quietly at Vichy. M. Fould is with him.

The Empress drove into Paris on Sunday to visit Princess Clotilda, at the Palais Royal, on her return from Egypt. On Monday her Majesty presided over a Council of Ministers held at St. Cloud.

The Duke of Hamilton died on Wednesday at Paris. His Grace left England only a few days ago in his usual health, but he had scarcely arrived in Paris when he was seized with congestion of the brain, which proved fatal. He was in his fifty-second year.

The bakers of Paris have been informed by the authorities that they may withdraw all their remaining stock of flour from the Grenier de Réserve, with the exception of twenty sacks each, which will not be given up till after the 1st of September next, when all restrictions on the baking trade will cease.

The welcome intelligence of the surrender of Mexico reached the Emperor at Vichy at about eight o'clock yesterday se'nnight, and was by his orders immediately published in the town. On the following night, in Paris, the public buildings and theatres were brilliantly illuminated, and even several private houses were also lighted up. The Mexican garrison evacuated the city on the 30th of May, and thereupon the principal leaders of the Church party sent a deputation to General Forey, offering their allegiance to the Emperor Napoleon. Accordingly, on the 5th, a division of the French army entered and occupied the city, and the whole army was to follow in a few days. The Queen of Spain and the Kings of Prussia, Holland, and Portugal have sent their congratulations to the Emperor on the taking of Mexico.

PRUSSIA.

The King will, it is said, leave Carlsbad on the 18th (to-day), and reach Gastein after an easy journey of about three days' duration. His Majesty intends residing there about three weeks, and will then visit the Queen of Prussia at Baden-Baden, remaining till the end of August. The King will then return to Berlin to be present at the autumnal military manœuvres.

On Thursday week the Queen arrived at Brussels on a visit to the King of the Belgians. Her Majesty, who was received at the railway station by the Duke of Brabant, paid a short visit to Laeken, and proceeded to Germany on the same evening.

The provisional committee of the Statistical Congress, about to meet in Berlin, has resolved to request the Crown Prince to become patron of the Congress, and to open its session.

Some of the German journals have published versions of a remarkable correspondence which has passed between the King of Prussia and his son, the Crown Prince. In this correspondence the Crown Prince urges his father not to break the laws, and declares that the spirit of the Constitution has been violated; and, in a letter to Count Bismarck, he protests against the decree respecting the press, which he considers illegal and prejudicial to the interests of the country and the Royal family. After the Crown Prince's speech at Dantzic, the King—who had previously remonstrated with his son, and urged him to show "coolness towards our pretended men of progress," and to "extol the doctrine of the Conservatives"—warmly censured his son's language, and required him to pledge himself to refrain from such declarations in future, under pain of a recall to Berlin, with a possible removal from his command. In his reply the Crown Prince declares that he cannot conscientiously retract or qualify his utterances respecting "resolutions which compromise his future and that of his children;" but he is willing to maintain silence, and to live wherever his father pleases as a stranger to politics, while his military and political employments are at his father's disposal. To this answer the King rejoined that he did not wish his son to abstain from speaking frankly to his father, but only to preserve silence towards every one else.

THE POLISH INSURRECTION.

The English, Austrian, and French notes to Russia on the Polish question have been published.

In the opinion of her Majesty's Government the Poles will not be satisfied by mere declarations of good intentions or even the enactment of some wise laws; and Russia is asked to concede the following measures as "the bases of pacification:"—1. Complete and general amnesty. 2. National representation, with powers similar to those which are fixed by the charter of the 15th (27th) of November, 1815. 3. Poles to be named to public offices in such a manner as to form a distinct national administration, having the confidence of the country. 4. Full and entire liberty of conscience; repeal of the restrictions imposed on Catholic worship. 5. The Polish language recognised in the kingdom as the official language, and used as such in the administration of the law and in education. 6. The establishment of a regular and legal system of recruiting. Her Majesty's Government further recommend a provisional suspension of arms to be proclaimed by the Czar; and a conference of the eight Powers—England, France, Austria, Russia, Prussia, Spain, Sweden, and Portugal—who signed the Treaty of Vienna.

The Austrian note recommends the "six points" proposed by England, and declares that Austria does not object to a congress of the eight Powers which signed the Treaty of Vienna.

In all the despatches the "six points" may be said to be absolutely identical. But the reference to the treaties of 1815 appears to be more direct in the French despatch than has been hitherto supposed. Speaking of the six points, M. Drouyn de Lhuys says that "they are only in strict conformity with the stipulations which bind the Russian Government with respect to Poland." And, again, the words of Prince Gortschakoff are quoted, which admit that "the present troubles may affect the tranquillity of the States between whom the separate treaties of the 3rd of May, 1815, were concluded, as well as all those who signed the general transaction of the 9th of June." *La France* says of the French note that it has all the firmness of the English despatch without its stiffness, and all the moderation of the Austrian despatch without its weakness.

A protest against the arrest of Archbishop Felinski was read on the 12th inst. in all the churches of Warsaw. Monsignor Rzewski, the Archbishop's representative, has voluntarily resigned his office. Orders have been issued that all the churches throughout the kingdom are to be draped with black and that no bells are to be rung. Arrests of several clergymen took place on the 12th. The Bishop of Wilna, Monsignor Krazinski, having published a pastoral expressing sympathy with the insurrection, has been transported to Nijni-Novgorod, whence he will be sent to Wiatka. Intelligence received from Warsaw states that Marquis Wielopolski has been dismissed and replaced by General Berg.

Various engagements between the Poles and the Russians continue to be reported. The invasion of Volhynia by the Poles of Galicia turned out a miserable failure. The details given by the correspondents of the daily papers of the lives lost and blood shed in this mad attempt are distressing. A great part of the men composing Wysocki's expedition were vagabonds—the refuse of the Polish towns, who fled at the first onset. According to the *Times'* correspondent, the raid was as unjustifiable as it was impossible. Wierzbicki, by a manœuvre, whereby he deceived the Russians, has succeeded in penetrating into the interior of the government of Lublin, and has effected a junction with Rucki's insurgent corps. Czengery has left Kielce, whither considerable forces have been despatched against him. Etiquette is operating with a flying column of gendarmerie in Sandomir, Pogusz, and Stobnick.

General Mouravieff, the military Governor of Wilna, has issued a decree ordering that all moneys taken by the insurgents from the State or communal treasuries shall be refunded within ten days by the Polish land proprietors in each district. Forced sales are to take place on the estates of those who refuse to comply with the order. A despatch, dated yesterday, from Cracow, says:—"The Russians have arrested many landowners in the kingdom of Poland. They have also hung M. Gaczowski at Kielce and M. Wisniewski at Radom, with seven others. An order has been issued prohibiting persons from travelling from one village to another without a passport."

AUSTRIA

The solemn opening of the Transylvanian Diet took place on Thursday. The Imperial rescript, declaring the union of Hungary with Transylvania null and void, and confirming the new Constitution of Transylvania as suited to present circumstances, was most favourably received by the members. The Diet resolved upon sending an address of thanks to the Emperor.

AMERICA.

GREAT BATTLE AT GETTYSBURG, PENNSYLVANIA.

An engagement extending over several days has been fought in Pennsylvania between the picked armies of the rival federations. According to accounts previously received the Confederate Commander-in-Chief was reported to be massing his troops on the line of the Cumberland Valley Railroad, between Chambersburg and Carlisle, and at the same time the Northern army, under the leadership of its newly-appointed chief, General Meade (General Hooker having resigned), was known to be advancing by way of Frederick and Middleburg towards the Pennsylvanian frontier. From this intelligence it was apparent that the meeting between the two armies could not be far distant, and that it would probably take place on the confines of Pennsylvania. Such has proved to be the case. The divisions forming the advanced columns of the Federal army were met by a subdivision of the Confederate army on the morning of Wednesday, the 1st of July, on the western side of the small town of Gettysburg. An engagement followed, which resulted in the defeat of the Federal troops. So far as we can gather from the telegraphic summary but two divisions of the Northern army were engaged—one commanded by Reynolds and the other by Howard. The former, having taken up a position on a wooded ridge to the west of Gettysburg, was, whilst thus placed, attacked by the Confederates. The Federal troops were in the first instance successful. But after a short time fortune changed sides. The right wing of the Federals was turned, and when, after two hours' fighting, Howard came to the aid of Reynolds, he found it impossible to regain the position on the right which had been taken by the Confederates. He, however, brought his troops to the front, when General Ewell came up with a force of 25,000 men, and succeeded in placing the Federals under a cross fire. Both flanks were then turned, and the Federal troops retired through Gettysburg after having sustained considerable loss. The Confederates took possession of the town, and so terminated the engagement of the 1st of July. It was, however, but the prelude to a far more terrible one on the succeeding day. It is described as having been one of the bloodiest battles of the war, and, even judging from the meagre details which have reached us, we can readily believe in the justice of the description.

On the morning of the 2nd the main body of the Federal army, under Meade, joined the divisions which, after the battle of the preceding day, had taken up a position to the south of Gettysburg. In the course of the forenoon of that day Meade arranged his troops for the battle which he knew to be imminent. His right wing rested on a cemetery to the south of the town, and was composed of the first and eleventh corps of his army. The left wing, which was commanded by Sickles, rested on the crest of a hill, and the battle front of the army had a north-western aspect. In the afternoon General Sickles made a reconnoissance in force, which brought his troops into collision with the Confederates, and shortly afterwards the engagement became general. The Southern forces rushed to the attack with their usual impetuosity. On the right the Federals were obliged to retire, but it was only for a time. They rallied and recovered their previous position. On the left the Confederates drove their opponents over the crest of the hill on which they were placed, and down the opposite side. But the left wing of the Federal army, like the right, again succeeded in regaining its previous position. When the sun set the battle-field was covered with slain; but the relative positions of the two armies remained unaltered. In the course of the night the Confederates renewed the engagement, but with little result. At eight o'clock on the evening of the 3rd the Federal General reported that the Confederates had opened a heavy fire against his left and centre, which they maintained for three hours without intermission; and that subsequently they had twice assaulted the Federal position, but with ill success. No later intelligence had been received in New York when the mail left.

THE NEW FEDERAL COMMANDER-IN-CHIEF.

The *New York Tribune* gives some particulars of Major-General G. S. Meade, promoted to the chief command of the army of the Potomac, in room of General Hooker, who was relieved from the command at his own request, being "impressed with the belief that his usefulness as a commander was impaired":—

"General Meade was born in Spain in 1816; entered the Military Academy at West Point from the district of Columbia, and was graduated there in 1835, and appointed second Lieutenant in the 3rd Artillery; resigned his commission, October 26, 1836; was appointed Second Lieutenant in the Topographical Engineers, May 19, 1842; was brevetted First Lieutenant for gallantry at Monterey, in 1846; became First Lieutenant in August, 1851; Captain, May 19, 1856; and Brigadier-General of Volunteers, August 31, 1861. In June, 1862, he was promoted to a majority in the Engineer Corps, which rank he still holds in the newly-organised Engineer Corps of the regular army. Few officers have performed more arduous duties or rendered more distinguished and faithful service to the country since the commencement of the war. In the seven days' fight before Richmond General Meade was struck by a ball, which entered his side and passed through his body, making a severe and painful wound. Under tender and skilful treatment he rapidly recovered, and it was scarcely known that he had left his couch when he was in his saddle, ready to take part in the sanguinary battle of South Mountain and Antietam. In these engagements he commanded the Pennsylvania Reserves—a corps whose reputation for courage and discipline has been surpassed by none. He was with that corps in the battles at Drainsville, on the Chickahominy, and in Maryland. When General Hooker was wounded at Antietam General McClellan placed General Meade in command of the corps which had just been deprived of its heroic leader. During the action General Meade received a slight contusion from a spent grapeshot, and had two horses killed under him. He distinguished himself greatly during the battle, being in the thickest of the fight, encouraging his men by his deeds of daring and valour. At Fredericksburg he maintained his reputation for coolness, courage, and skill, winning the unstinted applause of the army and the hearty congratulations of a grateful and appreciative people."

GENERAL WAR NEWS.

General French has abandoned Maryland Heights, destroying all the fortifications, and has moved to co-operate with General Meade. The city of Carlisle, a few miles from Harrisburg, had been shelled by a small Confederate force. Business in Philadelphia is entirely suspended, and the Pennsylvanian collieries are closed. General Dana has issued a proclamation stating that the Confederate strategy was sufficiently understood to make it certain that Philadelphia was their object, and urging the people to arm for defence. The Mayor of Philadelphia has called upon the people no longer to close their eyes to the startling danger and disgrace hanging over the State and city. The defences of Baltimore are manned by 10,000 citizens, and all arms have been taken from private persons. Martial law has been proclaimed in Baltimore and Western Maryland. The Governor of New Jersey has again called out the militia to go to the aid of Pennsylvania.

The War Department issued an order on the 28th ult., offering a bounty of 400 dollars, and one month's pay of thirteen dollars in advance, to all the volunteers between the ages of eighteen and forty-five whose term of service has expired or is about to expire, and who will re-enlist for three years or the war.

The bridge across the Susquehannah at Columbia, burnt by the Federals to prevent the Confederate advance, is said to have cost 1,000,000 dollars.

General Dix, who had assumed the command of the Federal army on the peninsula, had taken possession of White House and sent out a cavalry force. This force had cut the railway bridge over the South Anna, and had penetrated to within nine miles of Richmond. They captured several prisoners, including General Fitzhugh Lee, who was lying ill at a private house.

Digitized by Google

In Kentucky and Ohio much alarm existed in consequence of the advance of Generals Pegram and Marshall, with 15,000 men, through Cumberland Gap.

In Tennessee General Rosecrantz had commenced a forward movement, and had driven the Confederates to Tullahoma. Bragg's forces had retreated in a demoralised condition from Tullahoma to Winchester, leaving behind them a large quantity of provisions and some guns.

The news from the Mississippi is of a doubtful character. The defenders of Vicksburg are said to be showing great activity, and General Johnston had advanced to within a short distance of Grant's army. Johnston is said to have received reinforcements from Bragg, and to be perfecting arrangements to attack General Grant. The bombardment of Port Hudson continues. The place, however, was considered impregnable; and it was believed that the siege would have to be raised. The Confederate Generals Marmaduke, Price, and Kirby Smith have got possession of several points along the banks of the Mississippi, and would probably attempt to seize Milliken's Bend and obstruct the navigation. The Confederates were very active in the neighbourhood of New Orleans, which was evidently in jeopardy. In Louisiana the Confederates were gradually reoccupying the places taken not long since by the Federals.

President Davis has called upon the Confederates for troops for home defences, to replace Lee's invading army.

The story of the Tacony and her crew is one of romance. Lieutenant Read was detailed early in May from the Confederate steamer Florida, formerly the Oreto, one of the Liverpool built war-steamers, to take command of the brig Tacony, with an armament of one howitzer and a crew of about twenty-five men. Sailing close along the northern coast, he captured and burnt vessel after vessel, many of them of value. He lured them sometimes to approach him by a signal of distress. The ravage he committed was great, and a fleet of war-vessels was in pursuit of him. At length he captured a schooner, which he thought would better answer his purpose, and, transferring his armament to her, burned the Tacony. Thus he hoped longer to elude his pursuers. But a still bolder project occurred to him, the seizure of a revenue cutter, the Caleb Cushing, which lay in the harbour of Portland, Maine. He accomplished this owing to a favouring accident on the night of the 20th ult., and put to sea. The loss of the Cushing being discovered the following morning, the citizens hastily manned two steamers, started in pursuit, and succeeded in overtaking her. After a few shots had been exchanged Lieutenant Reed set fire to the Cushing and returned to the Archer, which was afterwards captured by the steamers. All the ransom bonds of prizes released by the Tacony were found on board.

AUSTRALIA.

(From our own Correspondent.)

MELBOURNE, May 26.

FULFILLAL almost to the hour, on Sunday, the 10th inst., the English March mail arrived, and with it the intelligence of the marriage of his Royal Highness the Prince of Wales. The news having been anxiously expected, it had no sooner been received than it was posted from one end of Victoria to the other. Church bells were set a ringing in the evening, and on the following morning, in every town and hamlet and on every goldfield, with a unanimity and spontaneousness which indicate at once the depth and the extent of the loyalty of her Majesty's subjects in this part of the world, committees were formed, and active steps taken to testify in a becoming manner Victoria's appreciation of the happy event. It was at first decided that the celebration should take place on the following Thursday; but this decision had no sooner been arrived at than it became apparent, owing to the extent and nature of the preparations, that it would be quite impossible to have them completed by that day. Tuesday, the 19th inst., was accordingly fixed upon, and Government not only proclaimed it a holiday, but they sanctioned the vote of £1000 from the public funds to supplement the sum set apart by the City Council to promote the rejoicings. Everyone set to work in right earnest to make a creditable display on Tuesday. Gasfittings of all kinds rose to a fabulous price, until at last they were to be had for neither love nor money; and those citizens who are skilled in the work appertaining to public illuminations could make their own terms, £3 a day being the remuneration generally demanded. Bunting was collected from every quarter, and the extent and variety of our resources in this way were soon made apparent in the quantity of gay flags, with common and uncommon devices, which speedily flaunted in the breeze, spanning our leading thoroughfares and filling our streets from end to end. In Melbourne especially the illuminations were to be made the grand feature in Tuesday's rejoicings, and, if money and skill could secure the desired result, it was evident that Melbourne was determined to do something of which it need not feel ashamed. The banks were particularly lavish in their use of gas-piping, and the devices on some of those establishments were so comprehensive and brilliant that it is questionable whether they were excelled even in London. All the Government buildings were more or less decorated, but upon the Parliament Houses and the new Treasury were concentrated the greatest exertions to produce an effective illumination. On the Bourke-street front of the former were mounted the letters "A. E. A.," interlaced, surmounted by a crown of gigantic size, the letters being 16 ft. high and 30 ft. wide; while the crown was 16 ft. by 20 ft. The piping forming this device was perforated with 30,000 holes. The Treasury illuminations indicated the fine outlines of the building, with the circular heads of the window recesses; there were also a crown and a set of Prince of Wales's feathers in the centre. Mottoes, sometimes quaint, but always good-humoured, were exhibited on many public and private buildings. Transparencies, high-coloured and attractive, but in many instances evincing less taste than loyalty, appeared in windows, in front of buildings, and at street corners, and garlands of shrubs and flowers decorated every house. In fact, nothing but the time—one short week—seemed to limit the extent to which the Victorians were resolved to go in their rejoicings.

The weather previous to the 19th had been all that could be desired, but, unfortunately, on the morning of the grand day it commenced to rain, and so continuous and heavy was the wet that the postponement of the rejoicings was mooted. After due consultation among the authorities, however, it was resolved that a postponement was in every respect undesirable. The different programmes were accordingly proceeded with. A tent had been erected in the Government House Reserve for the accommodation of his Excellency Sir Henry Barkly; and to this point it was decided that the procession, headed by the Mayor and Corporation of Melbourne, should wend its way. Notwithstanding the inclemency of the weather, the procession was numerous and varied, consisting, as it did, of corporate bodies, friendly and benevolent societies, masons, watermen, workmen, and school children. Addresses of congratulation upon the auspicious event, and expressive of attachment to the Throne, were presented to his Excellency, to be forwarded by him for presentation to her Majesty and to the Prince of Wales. The rain prevented the fulfilment of that part of the programme which included the sports and games in the Reserve; but this omission was amply made up for by the heartiness with which the eating and drinking part of the business was performed. In many parts of the city and suburbs whole bullocks had been roasted, oceans of beer had been provided, with no end of bread and other substantials. The wet seemed but to add zest to the loyalty of the people, for never before in Australia was there such an exhibition of hilarious excitement and joyous goodwill. Cheer after cheer rose amidst drenching rain, and the wet and mud were taken to as heartily as if they were a necessary ingredient in the day's enjoyment. In the afternoon the rain subsided, and now the illuminations were looked forward to; but, unfortunately, they too were doomed to only a partial success, for with the cessation of the rain came a comparatively high wind, which would persist, during the earlier part of the evening at least, in extinguishing the gas. The streets were crowded with people on foot and in vehicles, and the greatest good humour—notwithstanding the mud—everywhere prevailed. Towards midnight the wind somewhat abated, and then it was that the brilliancy of the city was seen to advantage.

The illumination having been of such short duration, and the weather so disagreeable, it was agreed almost spontaneously to allow the gasfittings to remain and the flags to fly until after to-day, when the anniversary of her Majesty's birthday is to be celebrated. Yesterday was a holiday, and so is to-day; and at this moment there is as much merry-making as there was on the 19th inst., although the weather is very little better than it was then. As the mail closes in a few minutes (10 a.m.), I cannot speculate upon what sort of a night we shall have; but I submit that such intense and heartfelt loyalty should meet with a better meteorological acknowledgment than that with which it was rewarded on Tuesday last.

His Excellency Sir Henry Barkly gave a grand banquet on Tuesday, to which were invited the Ministry, members of Parliament, and most of the leading citizens. In several of our places of worship sermons were preached appropriate to the occasion; and at all the benevolent and charitable institutions, as well as at the gaols and hulks, the inmates were made partakers of the general rejoicing.

The colony, however, is not to rest contented with the expressions of its loyalty by bunting and gaslights; committees have been already formed for the collection of subscriptions for the presentation of a bridal gift to Princess Alexandra. It has not yet been decided what form the present will assume; but it will be something worthy of the occasion and of the colony. The ladies, too, are organising means for the presentation of a gift exclusively from themselves.

The people of Sydney have fixed the 11th of June as the day upon which they are to celebrate the Royal marriage. This will enable them to get the benefit of our gaslittings and bunting.

War has again broken out in New Zealand. As might have been expected, the natives have recommenced hostilities. On the 4th inst. a party of ten of the 57th Regiment, while escorting stores to Tataraimaka, was fired upon by some Maoris in ambush, and eight of the poor fellows were killed. Sir George Grey had received timely notice that there would be a rising of the natives on that day; but the warning was disregarded and no precautionary measures were taken. A week after the massacre Sir George gave up, by proclamation, the land in dispute—the Waitara block—and, according to the latest advices, the troops were being withdrawn from it. General Cameron is said to have tendered his resignation in disgust; but it was not accepted, and he has been empowered by the Governor to act unfettered. Preparations were being made for a severe struggle, the militia and volunteers at Taranaki having been called out. The troops have gone to the spot where the murder was committed, and the land has since been confiscated. The following is a list of the officers and men thus so savagely butchered:—Assistant Surgeon Hope, M.B.; Lieutenant Tragett, 57th Regiment; Colour-Sergeant Ellers, ditto; Sergeant Hill, ditto; and Privates Kelly, Flynn, Macarthy, and Banks, ditto. They had been shot down without a moment's notice, and their bodies had been all horribly mutilated, and those of the officers stripped of nearly all their clothes. The tragedy has cast a gloom over the whole settlement. Dr. Hope was rising in his profession, and had lately received a Staff appointment. Lieutenant Tragett was a B.A., and the only son of the Rev. T. H. Tragett, of Romsey, Hampshire. It is probable that all the regular troops will be draughted from the different colonies to New Zealand.

METROPOLITAN NEWS.

Senor Frederico H. Hemming has been approved of as Consul-General in London for the Republic of Venezuela.

Dr. Henry Wylde has been elected to the chair of professor of music at Gresham College, in the room of Professor E. Taylor, deceased.

On Monday evening the members of the East India United Service Club entertained Captains Speke and Grant, the discoverers of the source of the Nile, at a sumptuous banquet—the first public dinner given by the club—at Willis's Rooms. One hundred and sixty gentlemen were present.

Last year there were in the metropolis 2637 known thieves at large. The highway robberies and personal attacks, including, it may be presumed, garottings, numbered last year more than double those of the previous year. There were 13,298 crimes committed, and 5415 persons apprehended.

Negotiations are, it is said, going on between the Alexandra Park Company and Messrs. Kelk and Lucas for the purchase of every part of the Exhibition building, except the picture-galleries, for a North London Crystal Palace at Muswell-hill. The work of demolition is therefore suspended.

The Royal Dramatic College Fête and Fancy Fair at the Crystal Palace will take place on Saturday next, and will be repeated on the following Monday. A special performance in aid of the funds of the college is announced at the Haymarket for Wednesday next, the 22nd inst.

The gold medal for swimming to be offered annually by Sir William Fraser (the committee of the Royal Humane Society to be the adjudicators of the prize) will be competed for, for the first time, at Hammersmith, on Wednesday evening next. No professional swimmers will be allowed to compete. A prize for the second man will be given by the London Swimming Club.

On Sunday forenoon a fire broke out in the German Fancy Fair, Langham-place. Mr. Whittaker's valuable and curious collection of foreign birds, reptiles, &c., has also been destroyed, and several valuable pictures. The fire extended to the neighbouring premises, where much valuable property also was destroyed, twelve horses being more or less damaged. The steam fire-engines rendered valuable service, and finally prevented the fire from extending further: it does not appear how it originated.

A meeting took place at the St. Giles Mission Hall, Five Dials, in connection with the Bloomsbury Chapel, on Tuesday, for the purpose of presenting the Rev. Mr. M'Cree with a testimonial from the congregation of that place and others. This reverend gentleman has for the last fourteen years been most unremitting in his zealous exertions to alleviate the sufferings of the poor in this locality. The testimonial consisted of a beautifully-designed bookcase, a suite of drawing room chairs, an elegantly bound book containing a testimonial, and a purse of money.

A conversazione was held on Wednesday night, at the rooms of the Royal Institute of British Architects, by the invitation of the president, Professor Donaldson, and the council. Among the numerous objects of art were a choice and extensive collection of architectural drawings, including the competition designs for the Prince Consort memorial, by Messrs. G. G. Scott, Professor Donaldson, F. C. Hardwick, James Pennethorne, Charles Barry, Edward M. Barry, and M. D. Wyatt; a portrait of C. R. Cockerell, Esq., R.A., past president, painted expressly for the Institute by W. Boxall, Esq., R.A., an exquisite bust of Venus, by John Gibson, R.A.; and various bronzes, ivories, tapestries, and other works of art.

A movement which has been for some time past in progress, with a view to establish a printers' orphan asylum, is, we are glad to learn, at length organised, and the arrangements to carry out that laudable object sufficiently matured to justify the commencement of operations. At a meeting of the committee which had been appointed, held on Monday, it was announced that Mr. T. Brettle had become a life subscriber at twenty-five guineas, and that there were also twenty-five life subscribers of two guineas, four annual subscribers of one guinea, and eighty-eight annual subscribers of five shillings. The report was adopted, and, other formal business having been disposed of, the meeting adjourned to the 10th of August.

Last Saturday evening three metropolitan corps—namely, the 20th, the 37th, and the 39th Middlesex—were officially inspected in Regent's Park; the two former corps, in combination, by Colonel M'Murdo, and the latter by Colonel Morris. The 20th, under command of Lieutenant-Colonel Biggs and Major Bowyer, and the 37th, commanded by Major Corrie, took up their position in front of Holford House, in a space kept by the 19th Middlesex; whilst the 40th (Central London) kept the ground for the 39th, which corps was under the command of Lieutenant-Colonel Penton. There was an immense concourse of spectators, and the regiments having gone through their evolutions in a most satisfactory manner, Colonel M'Murdo expressed his satisfaction, as did also Colonel Morris, and both promised to make a favourable report to the War Office.

The foundation-stone of the Warehousemen and Clerks' new Schools at Caterham, in place of the old ones at New Cross, which were inadequate to the wants of the institution, was laid on Saturday by the Prince of Wales, the Bishop of Winchester officiating at the special service. At a collation which followed speeches were made by Earl Russell and Lord Brougham, the latter of whom was much cheered, and a list of subscriptions amounting to £3000 was announced, besides £5000 found in the 800 purses deposited on the foundation-stone. Among the names of the donors were those of the large City firms, Messrs. Bradbury, Greatorex, and Co., for £500; Messrs. Leaf and Co., for £500; Messrs. Copestake, Moore, and Co., £250; Mr. Morley, £250; Mr. Greatorex, £250; and many others of a character worthy of the merchant princes of the city of London.

The first annual meeting of the friends and promoters of the Working Men's Clubs and Institutes was held last Saturday at Burlington House—Lord Brougham in the chair. The meeting was also attended by Lord Lyttelton, the Hon. Mr. Cowper, M.P., Sir William Erskett, Rev. F. D. Maurice, and several ladies. The objects of this club—which are to furnish opportunities of rational recreation, amusement, and conversation; in fact, to do for the working classes what the club system does for the rich—were well set forth by the various speakers; and it was stated that it is considered an essential matter that wherever a club is instituted the committee shall consist of bona fide working men. The report was of a most satisfactory kind. The friends afterwards dined at the Whittington Club, under the presidency of Lord Lyttelton. The accounts for the year showed receipts amounting to £750, and a balance, after deducting the expenditure and liabilities, of £175.

Last week the births of 1983 children—989 boys and 994 girls—were registered in London. In the ten corresponding weeks of the years 1853-62 the average number (corrected) was 1777.——The deaths in London last week were 1257. This return exhibits an increase of 100 deaths on that of the previous week; and it is also higher than any weekly number returned since the end of May. The average number derived from corresponding weeks in 1853-62, and corrected for increase of population, is 1170. At the present time scarlatina is the most fatal of all the epidemic diseases, and the deaths from it in the week rose to 113, while those from diphtheria declined to seven. Smallpox was returned in 55 cases; seven of these deaths are stated to have occurred to persons who had been vaccinated, but it frequently happens in such cases that the evidence of successful performance of the operation is not much to be depended on. Diarrhœa has been increasing lately, as is usual in the summer months; and last week the deaths from it rose to 91. There were also ten from cholera, chiefly "cholera infantum." A widow died at the age of 99 years.

A general court of the governors of St. Thomas's Hospital was held on Wednesday afternoon—Alderman Sir John Musgrove in the chair. The principal business before the meeting was to consider the report of the grand committee of the 11th of July, which recommended that power should be given to them to purchase either the Stangate site for £100,000, or Bethlehem Hospital, as they in their discretion should decide, subject to the approval of the governors. The adoption of the report was moved by the chairman, and supported, in the course of a discussion which took place upon various amendments, by Mr. Tite, Mr. Alderman Phillips, Mr. Goldsmid, and other members. The principal of these amendments was moved by Mr. Adams, to the effect that the present temporary site should be purchased, and the building of a new hospital at once commenced. Another amendment was proposed by Mr. Alderman Lawrence, that the minutes be received but not adopted; and another by Major Lyon, giving power to the committee to purchase the land opposite the Houses of Parliament, provided the sum did not exceed £80,000. All the amendments were negatived by considerable majorities, and the original resolution (approving the grand committee's report) declared carried, thirty-nine governors holding up their hands in its favour.

LAW AND POLICE.—A cause was heard on Tuesday in the Westminster County Court, in which Miss Sibley sued the Hon. Mrs. Norton for salary, as the governess of the lady's grandchildren. Mrs. Norton conducted her own case, and there was considerable altercation between her and the plaintiff. The chief dispute was on a question of the housekeeping accounts, which the governess had to keep, but which an accountant said were in confusion. Mrs. Norton asserted that on one occasion she gave the governess £15; the latter maintained it was but £5. The verdict of the jury was that "they could not state whether the sum in dispute was paid or not," which was held by the Court to be a verdict for the plaintiff. Mrs. Norton gave notice of appeal.

The long-pending judicial investigation at the Middlesex Sessions into the riot at Clerkenwell Gardens terminated last Saturday in a verdict of "Guilty" against all the defendants. The sentence on Messrs. Herbert, Birkett, Saville, and Shawcross was that they pay a fine of £50 each, and provide sureties to keep the peace for the next twelve months; Mr. M'Dougall was fined £20, with smaller sureties; and Mr. Mott was mulcted in £10, and bound over in his own recognisances.

At the Central Criminal Court, on Tuesday, there were two trials for murder. Thomas Leadbitter was charged with the murder of his wife, in the Borough-road, Southwark, and acquitted on the ground of insanity. Mary Anne Payne was also charged with the murder of her child, a boy two years old; and she, too, was acquitted on the ground of insanity.

Two persons—Mr. John Cooper, a tradesman in Lambeth, and the Rev. Richard Hibbs, a clergyman of the Church of England, were taken up by the police for preaching in Waterloo-place on Sunday, and charged, next day, at the Bow-street Police Court, with obstructing the footpath. Mr. Cooper was cautioned and discharged. Mr. Hibbs said he wished to try the question of legal right, and his case was adjourned.

The death by fire of Miss Goff, of Cumberland-place, Hyde Park, led to a Coroner's inquest, and the verdict was "That the deceased was burnt to death through the accidental spilling on her light muslin dress of ignited brandy, and that the said death arose through misfortune." The Coroner said it was much to be regretted that the process for rendering the materials of ladies' dresses uninflammable was not generally understood and used by the public. Either of three substances—phosphate of ammonia, tungstate of soda, and sulphate of ammonia—could be mixed in the starch, and at the cost of 1d. a dress deaths from fire would be rendered, in point of fact, impossible. Articles of apparel subjected to the action of these agents would, if they burnt at all, only smoulder, and in no case could they blaze up in the sudden and terrible manner described in the present instance.

CHURCH AND UNIVERSITIES.

The Dean and Chapter of Durham are taking steps to establish a meeting of choirs at their cathedral on the 10th of September.

Mr. Brown, who some time since retired from the firm of Longman and Co., of Paternoster-row, has given £1000 for a stained-glass window in St. Paul's Cathedral.

The paragraph in our last Number, copied from the daily papers, stating that Mr. Alcock, M.P., has promised £3000 towards the endowment of a new bishopric for Southwark, is incorrect.

The Bishop of Ripon consecrated, on Tuesday week, a new church at Startforth, in the room of the dilapidated old one. The cost is £1700, and the church will accommodate 226 persons in the nave and chancel, exclusive of a west gallery for school-children. His Lordship subsequently consecrated an addition to the churchyard.

Llysewen Church, Brecknockshire, was reopened last week, after being entirely rebuilt by Mr. Buckeridge, architect, at a cost of £1000. The Bishop of St. David's preached the sermon, which was followed by the Holy Eucharist, when upwards of fifty persons communicated. The church was very prettily decorated with evergreens and flowers.

Huntley Church, Gloucestershire, having been rebuilt, with the exception of the tower, on a scale of nearly double its former size, has been consecrated. The entire cost has been borne by the Incumbent, the Rev. Daniel Capper, Mr. Teulon being the architect. The building accommodates 700 persons, and is of a highly ornamental character within and without.

Testimonials have recently been presented as follows:—To the Bishop of Goulburn, from the Vicar, clergy, and laity of Islington, a silver epergne, inscribed, "From a few affectionate friends in England," together with a purse of £200. Rev. John Wilson, on leaving the curacy of Hindley, a silver inkstand, by the teachers and scholars of his Sunday-school.

A portion of the west window of Epsom College Chapel has been filled with glass by O'Conner, representing St. John the Baptist, St. John the Evangelist, Elijah, and Isaiah. The figures of St. Peter and St. Paul, Moses and David, are to follow. The whole is intended as a memorial of the late Prince Consort, and has received the gracious approval of her Majesty.

On Tuesday the annual festival of the choirs comprised in the Bakewell district of the Lichfield Diocesan Choral Association was held in the parish church of All Saints, Bakewell. A goodly company of the attendant clergy sat down to luncheon with Dr. Vaughan and Archdeacon Hill at the vicarage, and the choristers had a substantial repast supplied them in the girls' National Schoolroom, between morning and evening prayer.

The new church of St. Margaret, at Bramley, Leeds, the foundation-stone of which was laid by the Vicar, Canon Athay, about two years ago, was consecrated on Thursday week. The architects are Messrs. Perkin and Backhouse, the style Geometrical Decorated, the accommodation for 1000 persons, and the present cost £4500, though £1500 more will be required to fully complete the work. The Bishop of Ripon preached.

The Bishop of St. David's lately consecrated the new memorial church of St. Barnabas, at Penboyr, in the county of Cardigan. It was built at the cost of the Earl of Cawdor, in furtherance of a wish expressed by the late Earl that a church should be erected on that part of the estates. It is intended to contain 250 sittings, and was designed by Mr. D. Brandon, of London, in the Early English period of architecture.

A meeting of Archæologists was held in the Church of St. Bartholomew the Great on Monday. The principal speakers were the Rev. Thomas Hugo, on the Records of the Monastery; Mr. J. H. Parker, on the Architectural Peculiarities of the Church; and Mr. Beresford Hope, on the Proposed Restoration of the same. More than eleven hundred pounds has been subscribed towards placing the ancient nave in a state of substantial repair. The entire cost is estimated at £1400.

On Monday week the foundation-stone of a new church was laid in Clearwell village, Gloucestershire, by the Dowager Countess of Dunraven, of Clearwell Court. The land has been given, and the whole cost of the structure will be defrayed, by the Countess; and it is the third time within the last six years that this lady has laid the foundation-stones, in this her native village, of institutions for its benefit—viz., the national schools, the parsonage, and now the new Church of St. Peter, each of which has been endowed or provided by the Countess.

PREFERMENTS AND APPOINTMENTS.—The Rev. H. Owen, Rector of Llangefni, Anglesea, to be Rural Dean of Malltraeth. Rev. A. S. Wilde, Rector of Louth, to be Prebend of Nassington in Lincoln Cathedral. *Rectories:* The Rev. W. Andrews to Postwick; Rev. J. Chalmers to Oxcombe; Rev. A. Fane to Fulbeck; Rev. C. W. Foster to Wickersley, Yorkshire; Rev. C. W. Ross to Gretcham. *Vicarage:* The Rev. G. H. Woodcock to North Willingham. *Incumbency:* The Rev. R. J. Bird to St. Bartholomew's, Gray's-inn-road. *Chaplaincies:* The Rev. A. Brook, Vicar of East Retford, to the Bishop of London; Rev. H. W. Tayler to H.M.S. Canopus; Rev. G. Warren to the Presidency of Madras; Rev. C. Woodward to the Freemasons' School, Battersea-rise. *Perpetual Curacies:* The Rev. J. Jones to Llanarmon, Mynidd Mawr, Denbigh; Rev. L. R. Jacob to Llanllugan, Montgomeryshire; Rev. P. S. Wilson to West Pinchbeck. *Curacies:* The Rev. P. A. Amherst to Kettering; Rev. E. H. S. Bower to Cuckington with Stoke Trister; Rev. T. Clarke to St. Andrew's, Manchester; Rev. C. U. Dasent to Anderby with Cumbrworth; Rev. R. Daunt to Farnworth; Rev. H. B. Jones to St. Margaret, Whalley Range; Rev. H. P. Lazenby to Thistleton, Rutland; Rev. A. S. Mallett to St. Andrew's, Manchester; Rev. J. B. Mitchell to East Stoke with Syerston; Rev. G. Nash to St. Michael, Louth; Rev. N. Neville to Langar with Barnston; Rev. O. G. D. Perrott to St. Mary, Marlborough; Rev. G. W. Petherick to St. Bartholomew, Salford; Rev. E. F. Quarrington to Stoke; Rev. W. J. Randell to St. James's, Pentonville, London; Rev. W. Walsh to South Ormsby with Driby; Rev. G. F. Williamson to Thrussington; Rev. C. N. Wyld to Chilton Foliat. The Rev. G. W. Robinson to be Lecturer of Barnby Marsh, Howden, Yorkshire.—*Guardian.*

THE UNIVERSITIES AND PUBLIC SCHOOLS.—A benefaction of £1000 having been offered to Oxford University, the interest to be given as a prize for an English poem on a sacred subject, which shall be awarded once in every three years, the subject proposed for 1866 is "Sinai." The compositions must consist of not less than 60 nor more than 300 lines.

The examination of candidates at the Eton College election for the Foundation will commence on Thursday morning next.

The "Domum" at Winchester College is fixed for Monday, and the annual Wykehamic ball for the following day.

The Rev. T. H. Stokoe, M.A., Lincoln College, Oxford, Assistant Master of Clifton College, has been appointed to the head mastership of Richmond Grammar School, Yorkshire. There were nearly fifty candidates.

The annual speeches and distribution of prizes at Sir Roger Cholmeley's School, Highgate, took place on Wednesday week. According to the wording of many old Cholmeleians who were present, it was the best speech day within the memory of the oldest of them; and the Bishop of Lichfield, who presided in the absence of the Visitor, the Bishop of London, stated in his address that he had been at three others within the last fortnight, but that these excelled them all. The speeches being over, the Bishop of Lichfield announced Tatham to be the Exhibitioner, and also the winner of the gold medal for Latin hexameters. The Chaplain-General of the Forces presented Miss Gaunt's prize for mathematics. Lord Dartmouth presented his own prizes for general proficiency to Beaumont; for Greek iambics to Beaumont; for Latin prose to Tatham; French prize to Beaumont and Leach; German prize to Gaskell.

THE NATIONAL PRINCE CONSORT MEMORIAL.

We give in this week's Impression an important and carefully-executed view of the design recently adopted by her Majesty for the national memorial of her lamented Consort. Apart from the interest which attaches to its purpose, it has a special character as being the most important and elaborate work of monumental art in modern times. To make the project more intelligible to our readers it may be useful to recapitulate its history.

When the first impulse of grief was subsiding which the death of his Royal Highness the late Prince Consort had excited throughout the country, a common feeling seemed to suggest the adoption of some fitting mode of perpetuating the memory of a Prince whose life among us may be described in the most unaffected terms as one of eminent private virtue and public usefulness. Accordingly, a committee of influential men met for this purpose, under the presidency of the then Lord Mayor, Mr. Cubitt. From their deliberations, and the tone of the public press, the idea of erecting a monolithic obelisk in a conspicuous part of the metropolis seemed to find great favour, though public opinion was freely expressed as to the unfitness of adopting a pre-Christian form and type of monument as a memorial of an eminently Christian Prince. A Royal Commission, composed of the Earl of Derby, the Earl of Clarendon, Sir Charles Eastlake, President of the Royal Academy of Arts, and the Lord Mayor of London, was appointed by the Queen to investigate the obelisk scheme; and the result of their consultations was a report to her Majesty in which such a form of monument was recommended to be abandoned in consequence of the insuperable difficulties which seemed to surround the project—the chief one being the hopelessness of procuring a monolith of sufficient size in a durable material. The commission appended a suggestion that her Majesty should appoint a council of the most eminent artists of the day to investigate the subject and report as to the most fitting and practicable form which the monument to the Prince Consort should assume. The ultimate result was a competition between seven of the architects who had composed the deliberative council; and in January last they accordingly completed their work, and a magnificent series of designs was laid before her Majesty, who, in conjunction with the members of the commission, selected the design which we now publish. The architect, as the public are aware, is Mr. George Gilbert Scott, R.A. The drawing we engrave has been prepared under his immediate supervision, by one of his draughtsmen, for illustration in our pages. The cost of the work is reckoned at about £120,000. The site is at the westernmost end of Rotten Row, near Kensington Gardens, and opposite the gardens of the Royal Horticultural Society.

We understand that the practical execution of the design is to be commenced forthwith; and we can but reiterate the feeling of our contemporaries, as expressed at the time of the competition, that this magnificent design may be worthily and speedily realised, and that the Queen may find in that consummation, and in the interest felt by her loyal and attached people, some substantial consolation for her irreparable loss.

We extract from the *Builder* a technical description of the design:—"The leading idea is founded on what is of necessity its most important and central object—the statue of the Prince himself; and the great aim has been to add dignity to this statue, and to render the design expressive of the sentiment with which it is regarded. The statue—which is in a sitting posture, representing the Prince as clothed in the robes of the Order of the Garter, and is placed in an elevated position on a raised platform—is overshadowed by a vast and gorgeous canopy, not so much for physical protection as for the enhancement of its dignity. To carry out this view the canopy is treated almost with the richness of a shrine, or (one may say) of those imaginary structures of which ancient shrines took the form of the models. It is about 30ft. square, and is supported at the angles by groups of columns of polished granite. The material for the mass of the structure is not yet determined; but the aim is that it shall unite brilliancy with durability. Whatever the material may be, it will form but a groundwork for richer inlayings. The gables and spandrils will be filled in with mosaic pictures relating, probably, to scenes in the life of the Prince Consort; and other parts will be enriched by decorations in gilt and enamelled bronze, polished stones (such as crystals and cornelians), and other objects calculated to add to its brilliancy and beauty. The tabernacle-work, or flèche, rising from the roof of the canopy, as well as the covering of the roof itself and the cresting of the gables, will be wholly of gilt and enamelled metal-work, which, in the hands of Mr. Skidmore, may be expected worthily to exemplify this special branch of the art-progress of our day. The canopy rises from a lofty and solid basement or podium, which is surrounded with sculpture in high relief, representing, in figures of life-size, the history of the arts of painting, sculpture, architecture, and music; something after the manner of Delaroche's *hémicycle des beaux arts*. On pedestals projecting from the angles of this *podium* are groups illustrative of others of the arts and occupations of peace, as commerce, agriculture, manufactures, and engineering; and on larger pedestals, at the extreme angles of the flights of steps which surround the platform, are groups having reference to the contributions of the four quarters of the globe to the International Exhibitions. The detached figures which decorate the canopy itself represent the principal sciences and the Christian virtues; while the whole design is terminated by a richly-gemmed cross supported by angels. The square of the base of the platform will be between 130 and 140 ft., and the entire height of the monument about 150 ft."

OBITUARY OF EMINENT PERSONS.

GENERAL SIR JAMES LILLYMAN CALDWELL, G.C.B.

Sir James L. Caldwell, G.C.B., of Beachlands, Isle of Wight, a General in the Army, and Colonel-Commandant, R.E., who died at Beachlands, Ryde, on the 28th ult., was the son of Major Arthur Caldwell, of the Bengal Engineers, and nephew of the late General Sir Alexander Caldwell, G.C.B. He was born on the 22nd of November, 1770, and married, on the 18th of February, 1794, Mrs. Johnston, daughter of M. Maliard, of Dôle, in France, and relict of Richard Johnston, Esq., by whom he had a son, Arthur, who died in 1843, and a daughter, Maria, widow of Edward Sullivan, Esq., third son of Sir Richard Sullivan, first Baronet, of Thames Ditton, Surrey. Sir James Caldwell was appointed to the Royal (Madras) Engineers in 1788, and went through a long and distinguished career. He served in the war against Tippoo in 1790, and was in the attack on Tippoo's camp, and in the storming and capture of Bangalore, and in two battles near Seringapatam. He subsequently captured several Indian fortresses, and shared in the glories of the first siege of Seringapatam, the battle of Mallavelly, and in the final capture of Seringapatam, when he was severely wounded on the breach where Tippoo Sultaun himself was slain. Caldwell subsequently, as Commanding Engineer, took part in the capture of the Mauritius. He became a General in 1854, and a Colonel-Commandant of Engineers in 1862.

JAMES HANS HAMILTON, ESQ.

James Hans Hamilton, Esq., of Abbotstown and Holmpatrick, in the county of Dublin, D.L., J.P., and late M.P. for that county, was the only son of Hans Hamilton, Esq., M.P. for the county of Dublin for thirty years, by his second wife, Anne, daughter of Hugh Henry Mitchell, Esq., of Dublin. He was born in 1810, and was educated at Eton and Christchurch, Oxford. He was first elected to represent the county of Dublin in Parliament in 1841, and he continued in that representation with undiminished credit from that time until ill health compelled him to resign his seat only a few months ago. In politics Mr. Hamilton was a stanch Conservative; but, while he maintained his political principles with unwavering constancy and firmness, he won the respect and gratitude even of his opponents by his kind and conciliatory demeanour, and by his numerous acts of practical benevolence. Mr. Hamilton married, in 1833, Caroline, daughter of John F. Trant, Esq., of Dovea, in the county of Tipperary, and niece, maternally, of Sir Henry Brooke, first Baronet, of Cole Brooke, in the county of Fermanagh, by whom, who died in 1845, he had issue. Mr. Hamilton's demise occurred in London on the 29th ult. His son and successor, Ion Trant Hamilton, Esq., is one of the present member of Parliament for the county of Dublin, having been so elected lately, on his father's retirement. This family of Hamilton springs from a brother of Sir James Hamilton, Serjeant-at-Law, who was created Viscount Claneboye, and with whose grandson that viscountcy and the earldom of Clanbrassil became extinct, in 1675. In the female line, however, Claneboye has been restored as a barony, and is one of the titles of the present Lord Dufferin and Claneboye, the kinsman of Mr. Hans Hamilton just deceased. Mr. Hans Hamilton's ancestors have been for centuries of high note and political importance in the counties of Carlow and Dublin. His grandfather, James Hamilton, Esq., Deputy Prothonotary of the Court of King's Bench in Ireland, married thrice and had thirty-six children. His eldest son was Mr. Hans Hamilton's father, and one of his granddaughters, Harriette Catherine, is the wife of the eminent Indian Commissioner Sir John Laird Mair Lawrence, Bart., G.C.B.

The new duty of £3 3s., with 5 per cent thereon, on beer licenses to retailers keeping victualling-houses, but not selling spirits, took effect yesterday.

ICE: ITS PRODUCTION AND APPLICATION.

For a week or more the thermometer has stood at 75 deg. in the shade. When it stands at 80 deg. then it is that the great demand is made upon the ice-stores. Measured by the mercury in the tube, for every additional degree of heat in the temperature of the air the business of the ice-dealer increases tenfold. The last three years have been most unfavourable to this anti-thermal trade. The population has stood in greater need of seasonable sun than of the gelid gifts of winter; while rain flooded and cold winds blew, little disposition was felt to visit the ice-wells. Stores that have been long laid up have been kept from year to year; and many who think they are cooling themselves with the ice of last winter are in fact indebted to frosts of 1861 and 1862.

In America the trade in ice has always been much more extensive than in this country. It is said that in Boston alone more block ice is consumed than in the whole of this kingdom. The fact is, that it is there employed in winter as well as in summer, it being the fashion with our American cousins to quaff their beverages cold. Boston first started in the ice trade, in 1806. In 1854, 156,540 tons of ice were shipped from Boston, and 20,000 tons from New York, the home consumption of New York being last year about 270,000 tons. A splendid market was open in the South, of course, for the intense heat of those parts made ice an article of the first necessity. A multitude of speculators sprung up, and companies were formed to ship ice to Europe, to India, and China from lakes occupying an elevated situation about eighteen miles from Boston, of which Wenham Lake is one. The sale of ice and snow preserved in the caverns of Vesuvius, and on the more elevated parts of Etna, has long been a considerable branch of trade in Naples and Catania; and its use in the delicious confections of Italy in no small degree conduced to the same practice which has now overspread the West. In the absence of statistics from icebound Russia, we may suppose that during the short period of heat sustained by the inhabitants of the north, they compensate themselves by the use of ice as a luxury, for an unwilling submission to its frigid rule six or eight months out of the twelve. The tale told of certain sportive tendencies shown by the people of St. Petersburg during the severe winter of 1740 show that they can be merry with their fetters even while they wear them. At that date a house was built from the ice of the Neva, 52½ ft. long, 16½ feet wide, and 20 ft. high. The roof was of ice, and, notwithstanding its immense weight, the foundations sustained the burden without perceptible sign of crushing. Before this veritable ice-house, or palace, as it was called, stood six cannons of ice, resting upon carriages and wheels of ice, together with mortars of the same material. These six-pounder pieces were charged with three pounds of powder, and threw iron shot clean through two-inch boards at sixty paces. In this singular case ice not more than 4 in. thick was found to resist the force of the explosion.

We have never heard of any expedition being fitted out from Russia for the capture of icebergs, but we have certainly heard of such a case as this occurring at Boston. One burning summer, when the ice stores were empty and the hearts of the Yankees were melting within them, a ship was sent forth, at the public behest, to seize one of these monsters of the Arctic regions on its passage to the south. The birth and history of these wonderful transparent floating mountains is now a subject of common talk. The snow, which falls thickly on the Arctic islands and continents, being melted in summer, forms collections of fresh water, which soon freezes and increases yearly, until the mass becomes mountainous and rises to the elevation of the surrounding cliffs. The melting of the snow deposited on these elevations adds to their growth, and, by filling up the interstices, renders the whole solid. When such a mass has reached the height of 1000 or 1200 feet, the accumulated weight, assisted by the action of the ocean at its base, plunges into the sea, and by winds and currents is carried southwards, and finally disappears before the influence of the Gulph Stream, which throws an isothermal line from Newfoundland to the coast of Iceland, deflecting it upwards very nearly through twenty degrees of north latitude. Frequently these ponderous crystals hide as much of their proportions below the water as they expose above it, and float, grinding the rocks of the sea bottom as they go, with a force that may perhaps be visible to some future geologists when they shall be exalted to be the proud promontories of a now nameless continent. They carry huge boulders from the Arctic rocks and disperse them over the bed of the North Atlantic, and for the whaler they bear rich provision of fresh water, of which he spoils them. Well, it was for such a prize as this that the little vessel set sail from Boston, nor, if the narrative is to be depended upon, did it sail in vain, for a berg was attacked in high latitudes, hewn in pieces, and carried home with rejoicing.

Our ice comes not from America, as formerly, but from Norway. That which is not imported is, of course, procured from the rivers, ponds, and canals. Every dirty horsepond and stagnant pool near London is laid under tribute during the bitter reign of the winter blast, and, so soon as there is a little "cat's ice" to be seen, collectors set to work with rakes, poles, and scoops to prepare it for those who convey it in all sorts of vehicles to the various wells and stores. No matter how foul the water, ice is ice—dark, manurial water yields transparent ice; and, since no questions are asked, down go these various sorts of portable water into the ice-well to fraternise together. It is perfectly true that the upper stratum of water which is turned to ice may be regarded as distilled; but it is not so far distilled as that, when produced from foul water, it shall be perfectly pure. Although quite transparent, it will still contain a considerable portion of its impurity.

This, together with the refuse of foreign ice, is known as rough ice, and is rather used by fishmongers and in refrigerators than in direct contact with our beverages, for which purposes block ice is reserved. This rough ice is generally sold at 2s. or 3s. a hundredweight. Formerly it was customary for us to depend upon America for the block ice; but of late years our supply has come from Norway, which, though less clear, is less expensive. Certain fiords possessing water of known purity and wholesomeness are leased to such as may be engaged in this trade, and the ice produced may be said to be cultivated, since the inhabitants on the margin of the fiord are engaged to keep the ice free of snow, to watch its formation, and to cut it, when 12 in. or 15 in. thick, into blocks 22 in. square, weighing about 2 cwt. There are large stores on the coast to which these blocks are conveyed, and from these the ships receive their cargoes, the ice being packed neatly, but without any separating media. There is one company which confines itself to this trade—namely, the Wenham Lake Company. They pride themselves on vending a most superlative quality, for which the price charged is uniformly 1d. per lb. This seems a very cheap rate for the pure portable water of a Norwegian fiord, considering the expense incurred in obtaining it, and considering, too, that for every ton sold two tons are imported. We have recently paid a visit to their ice stores under Waterloo Bridge. They occupy five large arches on the Surrey side, and can stow away, in sawdust, some 2000 tons. During the hot weather a busy scene is thus presented at six o'clock in the morning, when the carts are packed and dispatched with supplies for town customers. Declining, as they do, to deal in rough ice, their trade is confined principally amongst the wealthy.

In the afternoon the railway vans arrive, and the packing is resumed for the country trade, at which time each block is put into a bag, with a thick layer of sawdust immediately surrounding it to absorb the liquid and act as a nonconductor. Perhaps the busiest time is when a ship arrives, not that foreign ships are allowed so high up as Waterloo Bridge, though it would be a great convenience to the company if they were. They get no further than the docks, whence they discharge into lighters, which conduct their frigid cargoes nearly to the mouths of the dark caves fitted for their reception. The blocks are received by attendants armed with huge grappling-irons, slid along a platform to a weighing-machine, there estimated in pounds avoirdupoise, and banished to realms of darkness which, for the time being, are illumined by scores of candles. We were shown one arch half full of ice eighteen months' old, the produce not of last winter, but of the previous one. When an arch is filled it is boarded up, and kept as impervious as possible to air; and the entire store is so drained that as fast as water is formed it is carried away.

The consumption of London is something like 50,000 to 60,000 tons of ice, and this trade is divided—unequally, of course—amongst ten or twelve firms. There have recently sprung up in this country important rivals to the natural ice-dealers, which are the artificial ice manufacturers. The former, when they are questioned about the matter, say that they entertain no fear. In the first place, being made so rapidly, it is clouded and less liked for those purposes to which block-ice is usually put, and, in the next, it cannot be made at less than ¾d. 5-14ths, according to the lowest estimate.

For our colonies, and India especially, this invention will prove a saving of at least fifty per cent on the miserable ice which the natives of the hill country contrive to scrape together during cool nights, when the process of evaporation or absorption chances to be vigorous; but in England it is not supposed by the best authorities that it will supersede the Norwegian supplies. The old method of getting ice in India was as follows:—Ice committees were organised for the different cantonments, and these superintended the production of the ice crop upon a large space of ground divided into compartments, and containing innumerable holes fitted with shallow dishes filled with water and covered with wet straw to assist the operation. A clear night and a sharpish breeze are propitious to the formation of a thin coating of ice, the appearance of which is no sooner discovered by the watchers than a cry is given which arouses the sleeping natives, who hurry to seize upon the fickle production before the sun's rays shall come to resolve it again to liquid. Such a mode of making this material has long proved thoroughly inefficient in a climate like that of India, where a constant supply is essential to life, let alone comfort. It is not improbable that the Indian Government may, as a public measure, help to establish ice machines at different large stations in the presidencies; for whilst this invention promises ice four times cheaper than that formed by radiation, it does more, for it produces it at stations where it could not otherwise be obtained. The value of ice for the sick man of India cannot be estimated, while for those in health it is an important preservative. In the hospitals it is used much, but far less than it will be when the supply is increased.

Briefly considered, the invention consists in the evaporation of volatile fluids *in vacuo* at a low temperature, and condensing at a higher temperature by pressure, and water at an ordinary temperature. In the absence of an illustration which was given during the exposition at Kensington, we give a summary of the *modus operandi* in very nearly the words of the manufacturers. Ether, being the only element used (besides brine), is placed in an air-tight vessel, called a refrigerator, and evaporated *in vacuo*. The vacuum is formed and sustained by a double-action pump, which extracts the vapour as it rises and forces it onwards into a large vessel or "condenser," where, under the influence of water at an ordinary temperature and pressure, it gives off its surplus heat and returns again to its fluid state, when it flows back to the refrigerator to be re-evaporated. The ether forms a complete circuit, passing from left to right in a vaporous state, and from right to left in a fluid state. In order that the supply of ether may be regular and neither too much nor too little, a self-regulating valve is placed in connection with the return-pipe from the condenser, which discreetly retards or accelerates its supply to the refrigerator. Thus, on the side where the ether is continually undergoing evaporation a large degree of caloric is absorbed, which is carried off in vapour. The temperature can thus be lowered in the refrigerator to 50 deg. Fah. below freezing-point, while the condenser becomes hot. This excessive amount of cold, being unprofitable in the production of ice, an uncongealable fluid medium—namely, brine—is made to pass over the surface of the refrigerator in a continuous stream, and allowed time to part with its caloric. When it has reached the required temperature it is admitted to a long trough, where it passes completely round moulds made of gun-metal, which are full of the pure water to be solidified. This solidification takes place most quickly at the end of the trough where the brine enters. As it does so the moulds are removed, emptied, refilled with water, and replaced at the opposite end, the others having been forced up by the turn of a screw to make room for them. Some recent ingenious arrangements have been made to quicken the operation and economise the ether; but there is no space now to particularise them. It may, however, be proper to add that the novelty of the process does not consist in the use of ether, which has been known to experimentalists for a long time, but in its economical use. In the machine which makes one ton of ice an hour, and which costs £520, 80 lb. of ether are in circulation, at 1s. 6d. per pound; and the loss is only about 1s. on every ton turned out.

The French showed a machine for icemaking in last year's exhibition, in which they produced the same results with ammonia under pressure as Siebe does with ether *in vacuo*. A great degree of cold is produced also by a mixture of saltpetre and Glauber salts, and there are now manufactured and exported to India, &c., in large quantities, chemical mixtures known as freezing powder, by means of which rough ice can be produced in fifteen minutes, at a cost of 1s. 9d., or about 4d. per lb. This powder, introduced into a little machine, invented by the same person, may be used upon the table to ice wine or water with the greatest celerity. A bottle of champagne may be iced in ten minutes for 3d. So great is the intensity of the cold produced that the sparkling contents of the bottle may be actually transformed into a spongy mass.

Ice is much used in medical practice to reduce fever and stop the flow of blood. Many lives are annually saved by it which are jeopardised by brain fever. In Bartholomew's Hospital about one ton is used every year in fever and other cases. The best block ice is also used by photographers and chemists, as giving them the most purely-distilled water they can obtain. The most novel application of ice of which we have heard, however, is for the preservation of salmon ova. It is supposed that by means of this medium it will be possible to convey the ova of the salmon to Australian waters, there to be hatched.

The manager of the Wenham Lake Company allowed a quantity of these ova to be buried in the ice vault on the 17th of January last. At the end of ninety days—the time taken for the passage to Tasmania—the packet was brought to light, a proportion of the ova, in a perfectly sound condition, were removed, and two thirds of them were successfully hatched. The remainder were taken on the 12th of June (the 144th day), and were shortly afterwards hatched with but small loss. This experiment quite contradicts the old theory that salmon ova, from the time of their emission to that of their being hatched, must be kept in running water. The action of the ice, in fact, is to check development, and we quite expect soon to hear the praises of Tasmanian salmon.

WILLS AND BEQUESTS.

The will of the Right Hon Caroline, Dowager Lady Poltimore, of Upper Brook-street, was proved in London on the 2nd inst. by her son, the Right Hon. Augustus Frederick George Warwick Bampfylde, Baron Poltimore, and William Henry Domville, Esq., the executors. The personalty was sworn under £35,000. The will, with two codicils, was executed in May last, the month in which she died. It contains many specific bequests to the members of her own and her late husband's family, including her brother, Lieut.-Gen. Sir George Buller, K.C.B.; a complimentary legacy to the Earl of Abingdon, one of the trustees, and to Mr. Domville, her executor; to the poor of North Molton, Devon, £500; the poor of Poltimore, £200; and to the Exeter Hospital, £500, appointing her son, Lord Poltimore, residuary legatee.

The will of Lieutenant-Colonel Sir William Lascelles Wraxall, Bart., of Wraxall, Somerset, was proved in London by his nephew, Sir Charles Frederick Lascelles Wraxall, Bart., the sole executor. The testator, Sir William, who attained the age of seventy-two, died at Passy, near Paris, on the 2nd of May last; and, though a British subject, and received his military education at Woolwich, was an officer in the Spanish service. He succeeded to the baronetcy in 1831. His heir and successor is his nephew, Sir Charles Frederick Lascelles Wraxall, Bart., to whom he has bequeathed the whole of his property, real and personal, and all other property over which he had the power of disposition. The will was executed in France, on the 23rd of April, 1863.

The will of Captain Charles Rayley, Esq., R.N., of Southwold, Suffolk, was proved in London by the executors—Mrs. Rayley, the relict; John Blacket, Esq., of Balleen, Kilkenny; and Robert Cunninghame Taylor, Esq., M.A., of Christ Church. The personalty sworn under £35,000. To his relict he has left his property and estates in Southwold absolutely, and a life interest in other estates in Suffolk, which, upon her decease, will be divided into certain portions amongst his nieces and their issue, appointing his relict residuary legatee for life. There are several pecuniary legacies, which are to be paid free of legacy duty.

Mr. Lindsay, M.P., writes to the *Times*:—"I think it due to Mr. Roebuck to say that what he has stated is true, and shall be confirmed by me in Parliament with time, place, and circumstances, when the debate is resumed."

"A SHIP IN DISTRESS BURNING A BLUE LIGHT," BY E. DUNCAN, IN THE EXHIBITION OF THE SOCIETY OF PAINTERS IN WATER COLOURS.

(*Continued from page 41.*)

eminently picturesque. Seen from a distance, its embattled walls, large ruined castle, and numerous towers and spires present great variety of form. Nearer, the Byzantine Duomo, constructed of coloured marbles, the great square, and its fine marble fountain, are splendid objects. The castle and ghetto are romantic in the extreme. It has, besides, a townhall, hospital, several monasteries, silkmills, and distilleries. Down many of the streets run canals of pure water, while the sluggish Adige, with its boats and cattle, add items invaluable to the painter, the rugged peaks of the Tyrolese mountains forming a glorious background to the whole. This is just the subject for this excellent water-colour painter, and he has brought to it the best resources of his art, judiciously heightening the effect of the many towers and spires by representing them flushed with the rays of the declining sun.

Our next Engraving is from a drawing by Mr. S. P. Jackson, a painter in water colours whose works are always commendable for careful fidelity to nature. *Staithe*, the subject of this drawing, is a fishing village in Yorkshire, ten miles north-west of Whitby. The word "staythe" was formerly applied to a quay, or wharf, especially in the old topographies of York, and may explain the origin of the name of this village. The chief natural feature of the place is the headland, seen in the view, and which is somewhat remarkable for its boldness. The village derives another kind of interest from its association with the name of Captain Cook. The great navigator was sent from his native place in the neighbourhood and apprenticed at an early age to a haberdasher of Staiths. A passion for the sea was, however, awakened in him among the humble fishermen, and, to indulge his bent, a discharge from his master was procured, and he was apprenticed to a firm engaged in the coal trade at Whitby. Mr. Jackson proves that he is also infected with a love of the sea. He has represented with evident relish all the picturesque objects and incidents of the sea-coast and fishing life—the vessels and boats, the anchoring and beaching of the same, the little smoky hamlet screened from the wind by the cliff, the low waves breaking and playfully running up the soft sand, with nothing to remind us of the terror and treachery of that cruel northern ocean, save the threat of a passing rain-cloud.

It is difficult for persons in this country—perhaps the more so, if actually engaged in the pastoral employment—to realise the full force and meaning of the text given by Mr. W. J. Webb, in illustration of his carefully painted and remarkable picture, *A Shepherd of Jerusalem*, engraved page 44. The artist quotes the verse from, St. John x. 4:—"And when he putteth forth his own sheep, he goeth before them, and the sheep follow him: for they know his voice." Similar passages, containing images drawn from the relationship of the shepherd and his flock, occur constantly in both the Old and New Testaments. Indeed, all the poetry of Holy Writ, if not actually in the form of an eclogue or idyl, is more essentially pastoral than we can readily apprehend. In memory of the Good Shepherd who "laid down his life for the sheep," our ministers are still "pastors of the flock;" but to whom will this suggest that, in ancient Judea, the shepherd was sometimes actually slain by wild beasts in defending his charge? We drive and worry our sheep with dogs; but, as Mr. Webb represents, to this day in the East the shepherd *leads* his flock. Something like this may, it is true, be witnessed in the management of the great merino flocks of Spain; in France also, and even in Scotland. But it is only among the great Oriental pastoral

"THE REST," BY G. CHESTER, IN THE EXHIBITION OF THE ROYAL ACADEMY.

nations, who derive nearly all their sustenance from their flocks and herds, and who spend their whole lives in tending them, that the relationship so often alluded to in the Bible, the habits thus induced, and the influence they have on the very forms of speech and the imagery of the language, can be fully appreciated. The shepherd of the East not only leads his flock, but he teaches them to answer to names he gives to each when lambs, and thus, individually as well as collectively, they "know" and follow his voice. The shepherd gains the most wonderful influence over them by his constant attention and kindness, and, like this shepherd, by carrying the lambs, especially if weakly, literally "in his bosom." A very remarkable instance of the docility of sheep under this management occurs in a passage of "Philo-Judæus," where they are represented submitting themselves willingly to the hand of the shearer, standing before him in a silent, inclining posture, perfectly unconstrained. What a con-

"THE WANDERER RETURNED," BY HARRISON WEIR, IN THE EXHIBITION OF THE INSTITUTE OF PAINTERS IN WATER COLOURS.

trast this to the noise, confusion, and brutality often witnessed in our modern sheep-shearing! We trust we have said enough to indicate the deep religious suggestiveness of this picture. The artist apparently inclines to the realistic treatment of sacred subjects. The accurate representation of the peculiar lop-eared and long-tailed Syrian breed of sheep, and the view of Jerusalem in the background, seem to prove that he has actually visited the Holy Land, like Mr. Holman Hunt, who with more than a crusader's courage performed a solitary pilgrimage to the shores of the Dead Sea to paint his picture of "The Scapegoat." We have some æsthetic objections to this mode of rendering the historical incidents of the Bible, though we heartily commend the earnestness it implies. Even in regard to the question of fact we believe that the Canaan of the Old Testament or the Romanised Judea of the Gospels cannot be recalled by representing the Palestine of the nineteenth century. However, these objections should not be urged against Mr. Webb's present picture, because he represents no historical incident, but gives a scene the suggestiveness of which is legitimately associated with its literalness.

Mr. Gullick, in his picture illustrating the words from St. Luke, "*And Peter went out and wept bitterly*," engraved on page 44, seems to have discovered a subject in the Gospel narrative which, as far as we are aware, had never been painted. The trial scene and the moment when, at the third crowing of the cock, Christ turned that "look" on Peter which recalled the fulfilment of our Lord's prophecy of his unfaithfulness have been frequently represented, but not the Apostle weeping outside the high priest's palace. That memorable "look" of the Saviour, to which we have just referred, the painter seems to invite us to recall by the steps leading in the background of his picture to a half-opened door communicating, it is no doubt intended, with the "upper room," where the mock trial of our Lord is proceeding. Down these steps the conscience-smitten Apostle has descended. He has had to suppress his feelings as best he may, for in the hall are some of the rabble who went out with "swords and staves" to take Jesus. Among those warming themselves round the "fire they lit in the midst" we catch a glimpse of a Jew fiercely gesticulating to a puzzled Roman soldier; his thumb pointing over his shoulder towards the upper room sufficiently indicates the subject of his malicious tongue. Considerably nearer the door stands a woman with a key. A key in a picture of St. Peter is suggestive and not out of place here, for women have been doorkeepers from time immemorial in the East. But there is evidently a further allusion intended. She is surely the "maid," or "damsel" to whom St. Peter denied Christ, for she still points after him the finger of scorn. Seeing the disciple passing out with a look of convicted guiltiness, her suspicion would naturally be strengthened that he was "also one of them." Out from the doorway and round the angle of the projecting wall the Apostle has, however, passed, and seems to have arrested himself momentarily on the first impression of being alone. Still, even here, everything that might meet his eye is terribly calculated to deepen his remorse. Here the cross is placed in readiness, and against the doorpost and lintel is sprinkled the blood of the Passover—as enjoined in Leviticus. This was the very night of the Passover—that great type of our Lord's sacrifice—and, although the observance of this ceremony was not then general among the Jews, the sprinkling the blood on the walls of the high priest's palace would legitimately indicate his pretension to greater strictness and sanctity. The parchment also relates to the Passover, and likewise identifies the time and place, for it is headed with the words, in old Hebrew (i.e., without the vowel points) "The Passover—Caiaphas the High Priest." The initial letters—on the right of course, Hebrew reading from right to left—are painted red, like the minium initials of old Greek MSS. The introduction of the cross was a bold conception; but the instrument of shame and torture must have been in readiness, for our Saviour was crucified very shortly after. It is recorded that he bore it part of the road to Calvary; and where so likely that it should be placed as outside the palace of his most rancorous enemy and most bigotted judge. It will be noticed that the cross is inverted—in allusion, we presume to the tradition which represents St. Peter to have chosen to be crucified head downwards. The bramble growing near may have supplied the crown of thorns. The aloe is the favourite Eastern emblem of mental bitterness. Early morning is indicated by the lamp still burning under the keystone of the portal and by the low tone throughout, which also suits the scene in other respects. The introduction of the cock was essential to the narrative. All Mr. Gullick's critics unite in commending the expression of repentant anguish in the face, the bowed head, and clasped hands of the principal figure. The tear is just brimming over the eye; but the attitude is not that of prayer, nor does the disciple look heavenwards, for he had not yet apprehended the true nature of Christ's mission.

Mrs. E. M. Ward has selected one of the most touching incidents in the life of the unfortunate Mary Queen of Scots for the subject of the very admirable picture engraved on page 45. In *Mary Queen of Scots' Last Visit to Stirling Castle* the unfortunate Queen, as if feeling a presentiment that she was taking her last farewell of her babe, extracted a solemn pledge from the Earl of Mar (to whose care she had confided him) that he would guard his precious charge from every peril, and never give him up under any pretext without her consent. It was then the custom of the Sovereigns of Scotland to place the heir of the realm, for nurture and education, in the care of some nobleman of high rank. The weeping figure leaning over the cot is the Countess of Mar, Mary's confidential friend, governess or lady-mistress to the Royal infant. It may be interesting to know that the cot was painted from the original, which is still preserved. The ancient embroidered coverlet is a masterpiece of textural imitation. We have more than usual gratification in engraving this picture. We heartily congratulate Mrs. Ward upon her great success in a work the subject of which entitles it to rank as, in the best sense, an historical painting, which yet has afforded full scope for the artist's womanly and domestic feeling, and which are displayed without the slightest exaggeration. A more graceful subject for a female pencil could not have been chosen; and in treating it we believe Mrs. Ward has produced the most important picture yet painted by an English lady. It has unity and completeness as a whole, while parts—and those most important—such as the face of Mary, with its pathetic, appealing expression, and the chubby head of the infant Prince are admirable in the extreme. The colour and other technicalities are hardly less successful than the expression. A contemporary justly remarked in a notice of this picture that Mrs. Ward should, with other of our paintresses, write R.A. after her name, if the academy were as catholic now as it was in the last century, when it opened its ranks to Angelica Kauffmann and Mary Moser. Some of our readers may not remember that Mrs. Ward is granddaughter, daughter, and wife of artists; and, as another rare coincidence, that her married is the same as her maiden name. Mrs. Ward is married to Mr. E. M. Ward, the eminent historical painter, and is the daughter of Mr. George Raphael Ward, the distinguished engraver and miniature-painter, and the granddaughter of Mr. James Ward, the excellent animal-painter whose great bull picture was bought the other day for the National Gallery. Besides this, her aunt was the wife of Jackson, the portrait-painter, and her great-aunt the wife of the unhappy Morland.

The drawing of *A Ship in Distress* by the well-known marine painter Mr. E. Duncan, engraved on page 52, is remarkable for vigorous conception and powerful execution, but still more for the successful though very difficult combination of effects. We should, however, in the first place, endeavour to realise how the vessel drifted in the perilous position Mr. Duncan has represented. It seems, then, from the ragged but not massive character of the clouds crossing the moon that the vessel has been overtaken by bad weather, though not a gale, and to have, as it is called in nautical language, "missed stays," and then, her sails "clued up," to have drifted on to the rocks. In this hopeless extremity she burns "a blue light" as a signal of distress and to show her position to the people assembled on shore. These are evidently supposed to have made a fire with some wreck of tar-barrels, and are firing a rocket across the vessel with a line attached to it for the purpose of enabling the crew, by fixing this to the sinking ship, to establish a communication with the shore and thus save their lives. The yellow, fiery track of the rocket, and the less brilliant but broad red glare of the blazing barrels, with the pale though rather warm light of the rising moon, and the very cold colour of the blue light, form the contrast and variety of natural and artificial coloured light at night to which we have already alluded. The harmonious combination of all these effects is, we repeat—on account of its interest—the peculiar artistic merit of the picture over and above the nautical knowledge and artistic skill displayed in the truth and force with which the terrible situation of the vessel is represented.

Mr. Chester's landscape, *The Rest* (see p. 53), is the most artistic work by this painter we have seen. It is solidly painted, forcible, and rich in colour. It has a freshness and local character which sufficiently indicates study "on the spot," and satisfies the spectator of its fidelity; yet it is wholly free from imitative servility and photographic hardness. It has also—what is becoming more and more rare in our landscape school—the human element of interest, the expression of the artist's sympathy with his subject, that colouring which nature derives from transmission through the individual heart and mind, when these are frankly opened to her influence and the avenues to them are not barred by theory or choked with pride. The first impression conveyed by this landscape is that it is remarkably like Constable, than whom a more genuine lover of nature never lived. There is the same thoroughly rustic unconventional picturesqueness, the same showery English sky. The resemblance is, however, more in subject than style. There is no trace of imitation of the manner of any master; but we understand the scene represented is in the neighbourhood of Petworth—a picturesque district, which Constable actually visited, and where he painted, residing with a namesake, a brewer and an amateur artist, still living. It is the sentiment, however, more than the locality of this picture upon which one would fain linger longest. The title most aptly serves as text. There is dewy repose in the summer cloud-shadows; we fancy we hear the drowsy rustle of the umbrageous trees—all the more audible because the birds are hushed, listening for the coming shower; the lowly cottages nestle among the trees, types of quiet content, true sanctuaries of labour; the sheep take their afternoon "rest" near the still brooklet and up the sheltered avenue; the shepherd-boy lolls over the rail; the foxglove, unswayed by the wind, bows to its own sweet image in the unruffled water. All nature is lulled in transient reverie and repose, soon to awake with new life and vigour, joy, and song.

Our Continental neighbours say that one of the most salient characteristics of the English is the love of animals. The men have their horses and their dogs, and the maids—we will not say "old" ones—have their birds and their cats. To cater for the national taste we have a large class of animal painters, and in no country are so many really excellent artists in this department to be found. Among this large class few names are better known than that of Mr. Harrison Weir, and among the many drawings we have seen by this water-colour painter few have struck us as equal in merit to *The Wanderer Returned*, engraved on page 53. The cat is universally known to be one of the most difficult creatures to paint in the animal world—far more so than the robin and other birds so charmingly represented by Mr. Weir in other drawings from the same exhibition in which this finds a place; and the artist has succeeded perfectly in describing the general character as well as the coat of the cat, and also in the added difficulty of expressing master Tom's mewing for admission to the home he had forsaken.

FINE ARTS.

THE London Stereoscopic Company has just published, by permission of the Prince of Wales, two series of views—twelve large and twelve stereoscopic—of and about Sandringham, his Royal Highness's Norfolk seat. The public feel a very natural interest in everything relating to the Prince and his beautiful young partner, and the gratification of this feeling, even so far as to allow us, as it were, to follow the Royal pair into their domestic retirement from the ceaseless round of public festivity in London, is a gracious and graceful act. In these photographs we see the Prince and Princess and members of their suite in the shooting-jackets and wideawakes, the pork-pie hats and linsey-woolsey petticoats worn in ordinary English country life; we see the preparations for the morning drive, and the unostentatious drawing-room where the quiet evenings are passed. The same company has also issued a set of portraits of the Prince and Princess, together and separate, seated and standing. In point of photographic merit these are scarcely equal to the larger series brought out some time since by Mr. Mayall, chiefly on account of the objectionable pattern on a column in the background and the too obvious arrangement of the drapery about it, which draw off the attention to these accessories. The portraits of the Princess are, nevertheless, especially welcome from the novelty of the attitudes and walking equipment and the very becoming elegance of her indoor dress. The company have also published a series of photographs from the wedding presents recently exhibited at South Kensington.

Mr. Marshall Wood, whose colossal bust of the Prince of Wales we lately engraved, has recently finished the model for a bust of the Princess, for which her Royal Highness has given a number of sittings at Marlborough House. We must give to this model similar praise to that we bestowed on the former. Mr. Wood has evidently endeavoured to obtain a scrupulously faithful and exact likeness of the Princess, and he has succeeded in reproducing the contours and proportions of the head, together with those minute and almost evanescent details of form in the features which in this instance alone give individual character. Only great exactitude and delicacy of modelling in the individual parts would have secured resemblance in the whole, for only in these, when examined separately, are the facial angle and the relative spaces of the features and forehead found to differ in the slightest degree from the ideal of modern sculpture since Flaxman—and we take the ideal female head of modern sculpture to be a higher standard of comparison than that of the Greeks, because it gives fuller recognition to the frontal manifestations of intelligence. The head has still a degree of classic character rarely found in nature, and this has suggested the treatment of the hair and drapery. The hair recedes from the forehead in flowing waves rather than ripples; is bound with the Greek fillet, and the knot behind inclosed in the Greek net; the drapery is clasped over one shoulder, as in antique statues. The only part which to us seemed not entirely successful was the mouth—not its general form, but its expression. The play of the muscles at and near the angle of the lip hardly conveys the frankness and sweetness which appear to be—judging ever from the photographs—the prevailing characteristic. As this is only the preparatory model, a hint may be of service in the execution of the work in marble, and, if entitled to consideration, will not be unwelcome to so conscientious an artist. The bust will, we believe, be executed colossal size, and given by the Lord Mayor as a companion to the same sculptor's bust of the Prince for the Mansion House. We may add that a cast of the bust of the Princess, by the celebrated Danish sculptor, M. Jerichau, has been placed in the gallery of the French Exhibition, Pall-mall. Though rather tame and heavy, and wanting in the general delicacy of modelling of Mr. Wood's bust—for which, however, we must make some allowance on account of the plaster material—the sculptor seems to have caught the expression in the lips, which Mr. Wood has at present partly missed.

The mention of the French Gallery reminds us that Mr. Gambart, its enterprising manager, and the well-known print-publisher, who has been of late so energetically prosecuting the piratical photographers who had infringed his copyrights in several popular engravings, has just published a pamphlet on "Piracy of Artistic Copyright," in which he fully exposes the grievance, of which not only publishers but engravers and artists have justly to complain. It is an anomaly of the recent legislation on artistic copyright that while there is a ready and stringent remedy for the piracy of copyright in pictures, other works of art, and photographs, the infringement by photographers of copyright in engravings—which is most easily effected, and should therefore be rendered most easily punishable—is left without easy means of prevention, and with only the old, cumbrous, and expensive means of repression. Mr. Gambart treats the subject very ably and forcibly; and we regret our space does not permit making quotations which would show the great injustice at present suffered. The Society of Arts is, we are glad to know, moving in this matter; and we trust that some efficient means of redress will be devised by Parliament before the close of the present Session. Meanwhile, we would commend Mr. Gambart's pamphlet (which is published by Tegg) to all interested in this important question.

The great picture, the "Martyrdom of Huss," by Lessing, brought from the Dusseldorf Gallery, New York, exhibited in London last year, and reviewed at length in these columns, has found its way back to Germany. It has been purchased by the King of Prussia for 15,000 thalers.

Mr. Frederick Goodall has been elected from the ranks of the Associates to the full honour of Academician. The Royal Academy could not have made a better choice.

NAVAL AND MILITARY INTELLIGENCE.

ADMIRALTY.

Admiral of the Blue F. E. Loch has been appointed to receive a pension of £150 a year, as provided by her Majesty's Order in Council of the 25th of June, 1851, vacant by the death of Admiral the Hon. Sir G. Elliott, K.C.B.; and the name of Admiral Loch has been removed to the reserved Half-pay List accordingly, and, in consequence of this removal, the following promotions, to date the 25th ult., have taken place:—

Vice-Admiral of the Red the Hon. H. J. Rous to be Admiral of the Blue.
Vice-Admiral of the White Sir M. Seymour, G.C.B., to be Vice-Admiral of the Red.
Vice-Admiral of the Blue F. T. Michell, C.B., to be Vice-Admiral of the White.
Rear-Admiral of the Red the Hon. G. Grey to be Vice-Admiral of the Blue.
Rear-Admiral of the White Sir A. Milne, K.C.B., to be Rear-Admiral of the Red.
Rear-Admiral of the Blue the Hon. J. Denman to be Rear-Admiral of the White.
Captain H. Lyster to be Rear-Admiral of the Blue.
Retired Vice-Admirals H. T. B. Collier, H. Stanhope, and J. T. Coffin to be retired Admirals, but without increase of pay.

The screw steam-vessel Wolverine of twenty-one guns, is ordered to be launched at Woolwich on the 29th of August next.

The Hydra, paddle steam-vessel, is ordered to be commissioned for surveying service on the coast of Africa.

Colonel E. W. Crofton, C.B., commanding the Royal Artillery in Malta garrison, died, on the 26th ult., at his residence in Valletta.

The second battalion of the 20th Regiment of Foot and the 5th Hussars are ordered to hold themselves in readiness for immediate embarkation at Portsmouth for foreign service.

The Captain's good-service pension placed at the disposal of the First Lord of the Admiralty by the promotion of Capt. Lyster to the rank of Rear-Admiral has been conferred upon Capt. E. C. Tennyson D'Eyncourt.

The arrivals at Aldershott during last week were almost continuous. The division comprises an army of something like 712 officers, 16,000 sergeants, drummers, rank and file, and 4200 horses—being a total of close upon 17,000 well-trained and splendidly-equipped troops of all arms.

The officers of the 92nd Gordon Highlanders, in quarters at Gosport, and recently returned to England from Indian service, have presented to Captain Cammell, Royal Naval Reserve, of the ship Middlesex (the vessel which brought home the head-quarters of the regiment), a silver tankard.

A divisional order has been issued by Colonel W. Nedham, commanding the Royal Artillery in the Chatham district, in which Major-General J. Bloomfield, Inspector-General of the Royal Artillery, conveys to the troops his entire approbation of what he saw during his recent inspection of the first division of the dépôt brigade.

On Saturday a detachment of the second battalion of the 19th Regiment, numbering 144 men of all ranks, left Chatham garrison and embarked on board the Leder, at Gravesend, for Dublin, to join the service companies of the 19th Regiment, which corps has been placed under orders to embark for India. The officers who proceeded from Chatham in charge of the detachment were Captain G. Clay and Ensign A. E. F. Brown.

A handsome service of plate has been presented by the officers of the Royal County of Down Regiment to Sergeant Patrick Currin, on his obtaining his discharge. Sergeant Currin served for a period of twenty-five years, during sixteen of which he filled the responsible situation of Mess-Sergeant to the regiment. He is in possession of a medal and clasp for Central India, together with a medal for meritorious service.

The following vessels have been chartered by the Government for the conveyance of troops and stores to India and the colonies—viz., the Conflict, 1170 tons, for Calcutta; the Queen of the North, 824 tons, and the Stamboul, 890 tons, for Bombay; the Albion, 478 tons, for Kurrachee; the Empress, 454 tons, for Mauritius; the Cambrian, 868 tons, for St. Helena; the Victory, 595 tons, for Shanghai; and the Enthusiast, 283 tons, for St. Helena and Ascension.

A notification has been received at Chatham garrison that the following troops will be dispatched to Calcutta during the present season—viz., 1000 officers and men of the second battalion of the 20th Regiment, to embark at Portsmouth; 1000 officers and men of the 36th Regiment, to embark at Cork; and 620 officers and men of the 5th Royal Irish Lancers, to embark at Portsmouth. Orders have also been issued at the Horse Guards for reinforcements of the Royal Artillery to be dispatched with these draughts to the number of upwards of 600 officers and men of all ranks.

THE VOLUNTEER MOVEMENT.

THE WIMBLEDON MEETING.

The meeting for 1863 commenced at one o'clock on Tuesday, with every prospect of a success exceeding that of any previous year. Taking the entries for the Queen's prize as the test, there are this year 1300, against 1100 last year, of whom only 901 went to the butts. There is also much better preparation for them. The number of targets has been increased to sixty, at from forty to fifty of which the marking will be on the Swiss or circular disc principle, the recommendations of which are that it insures increased accuracy of marking, and greatly economises time in cleaning the targets. Last year there was only one target of this kind in operation at Wimbledon; and, as the construction of each entails an expenditure of nearly £6, it follows that in the interval, upon this item alone, the association has spent some hundreds of pounds. The aggregate value of the prize list amounts to £4300 this year, or double the sum total which the association was in a position to offer at its last meeting. There is also a new running-deer target, cast from a sketch by Sir E. Landseer, and a "running man," the figure being that of a volunteer at the double. The camp accommodation is improved, one of the improvements being a good supply of water, the deficiency of which was much felt last year. On Monday 115 officers and 320 privates had intimated their intention to go into camp; last year the numbers were 66 officers and 146 non-commissioned officers and privates. On Monday and Tuesday the volunteers who mean to go into camp were arriving in great numbers, and the camp was alive with the bustle of preparation.

His Royal Highness the Prince of Wales rode to the ground on Monday afternoon, accompanied by Captain Grey, and was received by Lord Ducie, Lord Elcho, and other members of the council, who explained to his Royal Highness the intended proceedings. The Prince then visited the 200-yard range, where he fired several shots from a Whitworth rifle belonging to Lord Elcho. The marking was according to the Swiss system, and the first shot brought out a "centre" from the marker's butt. In every case save one, when the Prince fired an experimental shot from a different rifle, the bullets were, in the marksman's phrase, well "on" the target. But the fact that such crack shots as Lord Bury, Lord Elcho, and Major Holford, who fired at the same range, only succeeded in making "centres" and "outers," showed that there must have been a partial mirage, attributable to the glare of the sun and the swampiness of the intervening hollow. The final bull's-eye made by the Prince of Wales was the only one obtained at this target. The next trial was at a shorter range, but at a moving instead of a stationary target, and here the Highland experiences of the Prince stood him in good stead. Those who have not actually fired at the "running deer" can form no conception of the difficulty of hitting the mark. Appearing to move very slowly, it really travels with the velocity of a railway carriage, and as in its course it describes an arc of a circle, the rate of speed at different points is necessarily various. The artist has made the deer of the dun instead of the red tribe, and there is, consequently, little by which it can be distinguished from the bank behind; but for all that it rarely succeeded in crossing its "corrie" scatheless. At one time the Prince succeeded in planting four bullets successively in the portion of the body forming the centre of the target. The members of the association who were present concurred in declaring that the practice which had been made at this range, if not better, was at least equal, taking the general average of the shots, to that recorded of any single rifle at the meeting of 1862. His Royal Highness used a double-barrelled rifle, made by Mr. Smith, the armourer to the National Rifle Association, and was so well satisfied with its performance that before leaving the ground he gave orders that one should be manufactured specially for him. He further caused it to be understood that he hoped to be present, with the Princess of Wales, on the 13th inst., to witness the match between the Lords and Commons and the contest for the "Alexandra" prize given by the association.

The rival eights, to represent England and Scotland in the match for the St. George's Challenge Vase, have been selected. The Scottish eight are—Captain Horatio Ross, Lord Elcho, Captain Edward Ross, Mr. Hercules Ross, Mr. Colin Ross, the Master of Lovat, Mr. H. Maxwell, and Mr. Ferguson; reserve candidate, Mr. Henry. The English eight are—Viscount Bury (ex officio), Earl Ducie, Captain Heaton, Mr. Martin Ridley Smith, Lieutenant-Colonel Halford; Captain Hawker, South Middlesex Rifle Volunteers; Mr. A. Ashton, and Captain Rowland, 55th Regiment; reserve candidate, Mr. Anthony Salvin.

A field day, under the command of Colonel M'Murdo, in which the Hon. Artillery Company, the London Rifle Brigade, the St. George's, and the Queen's (Westminster) Volunteer Rifles joined, took place last Saturday evening within the inclosure belonging to the National Rifle Association at Wimbledon. The corps first mustered at Wimbledon-green, and consisted of several troops of light horse and four battalions of artillery belonging to the Hon. Artillery Company, under the command of Major Robinson; the London Brigade, numbering about 300, under Lieutenant-Colonel Wardle; the Queen's, about 450, under Lieutenant-Colonel Earl Grosvenor; and the St. George's, mustering over 150, commanded by Colonel Lindsay, Colonel M'Murdo, attended by Lord Colville and Colonel Ibbetson as Aides-de-Camp, came upon the ground a little after seven, and marched the different corps, the artillery preceding, into the inclosure. An enemy was supposed to be advancing on

Digitized by Google

Wimbledon by the Putney and London roads. The St. George's, under Colonel Lindsay, and a field battery of artillery went out as a reconnoitring party. Skirmishers were thrown out, but the enemy being too strong for them, they retired on their supports, who immediately engaged the foe, the artillery opening on him from the left flank. The supports being gradually driven back, the reserves, consisting of the London Brigade, the Queen's, the Light Horse, and the second battery of the Hon. Artillery Company, advanced to their assistance, and succeeded in turning the right flank of the enemy, who made a long detour to the left by the Roehampton-road. The London Brigade, with the St. George's, were then thrown out to intercept him in this direction, the Queen's still acting as supports. The enemy, however, engaged them so hotly that a retreat in excellent order was made through the ranks of the Queen's, who then advanced on the coming foe, keeping up a withering fire with splendid precision, the artillery joining on the right flank. The St. George's and the London Brigade then pushing on, the action became general, and the right flank of the enemy was successfully turned, and he was driven back to his original position. Front was then changed, and the Queen's threw out as skirmishers, but had to retire, the whole of the supports victoriously charging the imaginary enemy at the double. Colonel M'Murdo then addressed the men, explaining to them the objects of the different evolutions they had gone through, and complimented them on the manner in which they had been performed.

The annual inspection of the 1st Middlesex Volunteer Engineers in infantry drill, under their Lieutenant-Colonel, McLeod of MacLeod, took place in Hyde Park last Saturday. The inspecting officer was Colonel Erskine. The muster was somewhat small, being only about 350; they, however, went through all the battalion movements in a most creditable manner. After the manœuvres were over the men formed square, and were addressed by Colonel Erskine. He said they had performed their work in a very creditable manner.

Last Saturday evening was fixed for the official inspection of the 1st Middlesex Artillery Volunteers, and the place selected for the purpose was the parade-ground of the Wellington Barracks. There was a very good muster of men, under the command of Lieutenant-Colonel Creed. Colonel Smyth, R.A., was the inspecting officer of the day, and the proceedings were commenced by putting the corps through the battalion movements, after which followed the manual and platoon exercises. In all the various movements the men performed their part admirably. But satisfactory as was their performance of these operations, their gun-drill was even more perfect. The manner in which they handled the 18-pounders, the rapidity, steadiness, and certainty of their action, showed that they had not neglected their drill in the past twelve months. The inspection being at an end, Colonel Smyth briefly addressed the corps. He complimented the officers for the efficiency to which they had brought the men, and the men on the attention that he was sure, from what he had seen during the inspection, they must have paid to the instruction and drill they had undergone. He assured them he was highly satisfied with what he had seen, and it would be his duty to report accordingly.

The 2nd Norfolk Administrative Battalion, under the command of Lieutenant-Colonel Sir T. P. Beauchamp, assembled on Thursday and Friday, last week, in Langley Park, the seat of the gallant Baronet, for two days' training and inspection, and were placed under canvas on the occasion. On Friday the battalion was inspected by Colonel M'Murdo. The companies composing the battalion were the Harleston, Captain Holmes commanding; the Diss, Lieutenant Salmon; the Loddon, Lieutenant Gilbert; the Stalham, Lieutenant Burroughes; the Blofield, Lieutenant Jary; the Attleborough, Captain Sir R. J. Buxton; the Wymondham, Captain Gurdon; and the Thetford, Lieutenant Davey. Altogether the assembled force comprised twenty-two officers, thirty sergeants, and 260 rank and file. Fifty camp-tents were borrowed from the War Office for the occasion, and in these the volunteers encamped on Thursday night. The whole battalion were entertained at dinner by Sir T. P. Beauchamp, who had also for his guests Lord and Lady Radstock, Lieutenant-General Sir H. Bentinck, Lord Suffield, the Hon. Major and Mrs. Walpole, Lieutenant-Colonel Ibbetson, Mr. R. J. H. Harvey, &c. In the course of a number of speeches in connection with various toasts, Colonel M'Murdo expressed his satisfaction at the prosperous position of the volunteer service; it had now turned the ebb to which it appeared to have receded, and, so far as he could judge, the tide was again flowing. The volunteer service now comprised 160,000 men, of whom 130,000 were riflemen, 80,000 of whom, again, belonged to detached companies seldom able to meet in battalion. If war came to-morrow, the country would have to depend on the 80,000 men composing the scattered corps which formed so large a portion of the volunteer force; and therefore he had come into Norfolk to see the manner in which the volunteers of this part of the country performed their duties. If they understood company drill, and had that cohesion in company which showed that they had paid attention to it, he should be quite satisfied; and he considered them perfect according to their degree, because he could not expect volunteers who could only meet two or three times a year in battalion to attain the position of those who had the advantage of turning out almost at their own doors and forming battalions of 500 or 600 strong. One battalion in London—the Inns of Court—was exceedingly well up in its work; but, under the different circumstances which obtained in Norfolk, he only expected that the men of the county battalions should understand company drill, and that the officers and non-commissioned officers should know their places. In such an event as the invasion of England it was not impossible that the northern coast of Norfolk might be selected as the point for landing. He had come into Norfolk to mark the thews and sinews of the volunteers who would have to oppose such a landing, and he was delighted to see so fine a body of men.

The annual inspection of the 1st Hants Artillery Volunteers, consisting of two batteries, took place on the 29th ult., at their platform on Hamble Common, the inspecting officer being Colonel Domville, of the Royal Artillery. Prizes were awarded to the successful competitors at the end of the day's proceedings. The guns are 24-pounders, the range being 1250 yards, and the precision of the firing was such as to elicit the highest commendation of the inspecting officer. There were forty-four shots fired, and of this number only one went wide of the mark, the others having been so well directed that not one would have missed a vessel moored in the position of the target. One shot fired by Gunner Reed carried away the flagstaff, a second hit the target, and a third fell within a yard of it. The men were afterwards inspected at company drill, and were then marched to Netley, where a dinner was provided for them by Captain Freeman and the officers of the corps. The batteries were under the command of Captain Freeman, the other officers present being Lieutenants Jackson, Smith, and Phillips, and the assistant-surgeon of the brigade, Dr. Orsborn. The whole of the proceedings passed off most satisfactorily, without a casualty of any kind.

A short time ago a challenge was received in England from an Australian battalion of volunteers to shoot an equal number of volunteers in this country—the latter to be selected from the best shooting company of enrolled volunteers for the year ending 1862, the firing to take place at any range not being the range of the respective corps. This challenge was addressed to the council of the National Rifle Association, and it appears that the best shooting company of volunteer rifles in England for the year 1862 was the No. 1 of the Nottingham Robin Hoods. This company has declared its readiness to accept the challenge, and on Saturday morning Lieutenant-Colonel Wright received a letter from the council of the National Rifle Association stating that an answer accepting the challenge had been sent to Australia. The contest will take place in September. The distances are 200, 300, 400, 500, 600, 700, and 800 yards; five shots at each range. The shooting will take place at the same time in England and Australia—ten men from each corps.

THE DISTRESS IN THE NORTH.

The weekly meeting of the Central Executive Committee took place at Manchester on Monday—Sir J. K. Shuttleworth in the chair.

Mr. Maguire, hon. secretary, reported the week's receipts at £6356; balance in the bank, £348,809. He also presented the monthly report, which stated:—"The very great increase of employment which has been afforded in the mills during the past month has enabled no less than forty-seven local committees to suspend operations for the present. From this circumstance I have been unable to obtain returns from their district, but, from reliable information which I have received, I am led to believe that out of 55,362 operatives resident in the districts in which committees acted, about 25,690 are working full time, and 16,801 are on short time. This improvement alone would have been a most satisfactory report; but I am also happy to state that in the districts in which local committees are still continuing their labours there are 2874 more operatives working full time than there were last month. It must not be forgotten that this is in addition to the 13,451 operatives who were reported to have obtained full work during the month of May; and it is now certain that, of those persons usually employed in the mills in the cotton districts, about 234,642 are in full work, 125,097 short time, and 180,729 out of work, against 192,527 full time, 129,741 short time, and 215,512 out of work in the last week of April. No further very great improvement can be anticipated in the state of employment before this time next year, as already it has reached the equivalent of an average of three days' employment a week for the operative population; and as at present there are 256,230 persons in receipt of relief, there is reasonable ground for apprehension that at least an additional 100,000 will have to be supported when the season arrives during which out-door labour will be considerably reduced."

Mr. Farnall presented his weekly report, by which it appeared that, on the 27th ult., there had been a further decrease in the number of persons receiving relief in twenty-seven unions of 3661 persons, making a total decrease, since the 6th of December, of 112,761 persons, and leaving 159,222 chargeable, independent of those receiving relief from the local committees.

Sir J. K. Shuttleworth, in a letter to a contemporary, says that the supply of cotton for the year may be expected to amount to half the old imports; and adds that the difficulties of manufacturing the Indian staple are actually overcome. It is only the price that kills. Of £40,000 now taken in weekly wages he thinks £22,000 may be due to the cotton trade, and £18,000 to casual employment. The latter must naturally be considered as in some degree temporary or precarious; but Sir James then proceeds to inform us that the factory work itself rests on no better basis. It is not a genuine revival of trade. It is only a little "spurt" put on by the energy of a few manufacturers who have adapted their mills to Indian cotton, and who have ventured, even at present prices, to replenish the stocks of goods, which, owing to the stoppage of production, had become very low indeed. But that demand must obviously be limited. The autumn would see it satisfied; and then the factory hands, the field hands, and the vagrants together would all come back upon the relief lists and swell the total of claimants to last year's figures.

CHESS.

TO CORRESPONDENTS.

WEE PAWN, L. M., and Others.—The key moves of Mr. Kling's instructive "Study" are as follows:—

WHITE.	BLACK.	WHITE.	BLACK.
1. R to K B 8th (ch)	R interposes.	6. R to Q B 3rd	R to Kt 5th (best)
2. R to K B 3rd	R to Kt 5th (best)	7. Kt to Q 7th	R to R 5th (ch)
3. R to Q B 3rd	R to Kt 8th (best)	8. K to Kt 6th	R to R 3rd (ch)
4. R to Q B 4th	R to Kt 5th (best)	9. K to B 7th, &c.	
5. R to Q B sq	R to Kt 8th (best)		

His beautiful Enigma, No. 1330, is solved by 1. R to Q Kt 4th; 2. R to Kt 6th; 3. K to R sq; 4. K to Kt sq, &c.

NORTHERN.—Mate cannot be given in Problem 1008 as you suggest.

C. M., Warrington.—BLINDFOLD CHESSPLAYING.—In ordinary chess play little if any progress beyond a better knowledge of the opening has been made during the last quarter of a century, but in the art of playing *sans voir* the improvement is very remarkable. In the time of Philidor, and down, indeed, to a comparatively recent period, it was thought an almost miraculous achievement for any one to conduct three games simultaneously without the assistance of a chess equipage. In the present day we have seen Mr. Murphy play eight games in this way; and even this performance, astonishing as it seems, has been surpassed by the exploits of Mr. Blackburne and Mr. Paulsen, each of whom has more than once played twelve games blindfold at the same time.

F. R. S.—A list of the members belonging to each of the leading European chess-clubs, from its foundation, would certainly be interesting, but is not very easy of attainment. On the roll of the chess-club formed in St. James-street in 1774, Professor Allen, in his "Life of Philidor," tells us:—"One noble lady (Dr. Franklin's Mrs. Howe) stood by the side of a Church dignitary (the Bishop of Durham), at the head of a list," comprising, "besides uncounted Dukes, Marquises, and Earls, the historical names of Gibbon, Charles James Fox, Lord Mansfield, Erskine, Wedderburne, and the Marquis of Rockingham—of Elliot, the defender of Gibraltar—of Fraser, who met a soldier's death—and Burgoyne, who underwent a soldier's last humiliation at American Saratoga."

P. J., of Paris.—The June number of the Magazine has not yet come to hand; and the Journal, we are sorry to add, is at least two months in arrear.

R. A.—A charming composition, but no novelty. It is found in chess treatises a century old.

R. W. B.—We have received a prospectus of the new Chess periodical you mention, but have no faith in its stability. A well managed English Chess Magazine, edited by an Englishman of competent literary ability and knowledge of the game, would supply an admitted want. A Chess Magazine, professing to be "the organ of English Chess," edited by a foreigner and produced under foreign auspices, has, however, been already tried, and the result was not such as to warrant a repetition of the experiment.

IGNORAMUS.—The expression, *coup de Jarnac*, used by Philidor in his treatise on Chess, is a French phrase, denoting a subtle and unforeseen attack. It had its origin in the memorable duel which was fought in 1547 between François de Vivonne, Lord of La Chataigneraie, and Guy De Chabot, Lord of Jarnac. In this combat De Jarnac, overpowered by the blows of his vigorous opponent, covered his head with his shield, and assuming a crouching attitude contrived to wound La Chataigneraie in the leg, and thus obtained the victory.

SOLUTION OF PROBLEM NO. 1010.

WHITE.	BLACK.	WHITE.	BLACK.
1. B to K R 4th (ch)	R takes B (best)	3. Kt to K 6th (dis. ch)	K to Kt sq, or R sq, or B 3rd, Kt 3rd, or R 3rd
2. Q to Q R 7th	K takes R, or (*a*)	4. Q to K Kt 7th.	Mate.

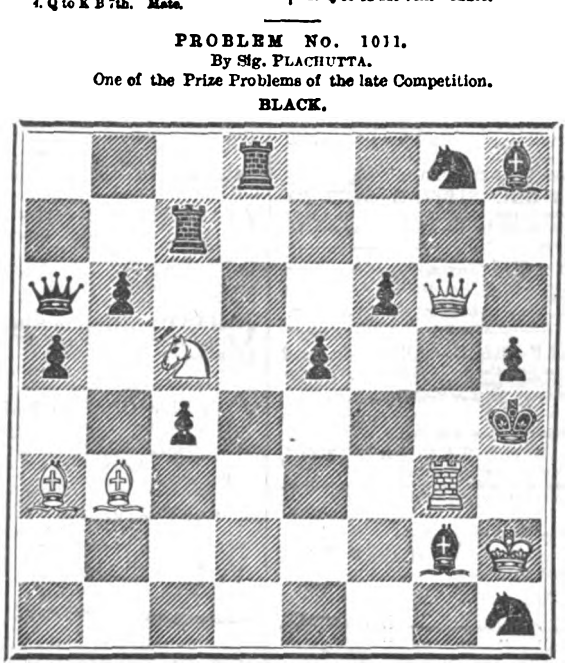
(*a*) 2. If any other move then—
3. Kt to K 8th (ch) B takes Kt
4. Q to K B 7th. Mate.

PROBLEM NO. 1011.

By Sig. PLACHUTTA.

One of the Prize Problems of the late Competition.

BLACK.



WHITE.

White to play, and mate in five moves.

CHESS IN LONDON.

A good Game in last Year's Tourney, between Messrs. PAULSEN and DUBOIS.

(*K Bishop's Gambit.*)

BLACK (Mr. P.)	WHITE (Mr. D.)	BLACK (Mr. P.)	WHITE (Mr. D.)
1. P to K 4th	P to K 4th	17. Q to K B 2nd	P to K B 4th
2. P to K B 4th	P takes P	18. R to K B 3rd	R to K B 3rd
3. B to Q B 4th	Kt to K B 3rd	19. R to K sq	P to K B 5th
(This is a very old though little used defence. It may be adopted safely, but the result is generally a dull game.)		20. R to Q 3rd	
4. Kt to Q B 3rd		(The intention of Black, apparently, was to follow this move with Rook to K 6th.)	
(He may also play 4. P to K 5th, but in that case the second player can preserve the Gambit Pawn.)		20.	K to B sq
4.	Kt to Q B 3rd	21. K to R sq	P to Q Kt 3rd
5. Kt to K B 3rd	B to Q Kt 5th	22. Q to K B 3rd	Q R to K sq
6. Castles	P to Q 3rd	23. R takes R (ch)	B takes R
7. Kt to Q 5th	Kt takes Kt	24. P to Q Kt 4th	Q to K 4th
8. P takes Kt	Kt to K 4th	25. K to Kt sq	B to K R 4th
9. Kt takes Kt	P takes Kt	26. Q to K B 2nd	B to K 7th
10. P to Q 4th	Q to K 2nd	27. R to Q 4th	P to K B 6th
11. P to Q B 3rd		(White plays this portion of the game very cleverly.)	
(This appears to be better than taking the K B Pawn with Bishop, though that move has its merits, if correctly followed up.)		28. B to Q 3rd	B takes B
11.	B to Q 3rd	29. R takes B	P takes K Kt P
12. P takes K P	B takes P	30. R to K B 3rd	K to K 2nd
13. B takes K B P	B takes B	31. R takes R	P takes R
14. R takes B	Castles	32. P to Q B 4th	P to K B 4th
15. Q to Q 4th	B to Q 2nd	33. K takes P	Q to K 5th (ch)
16. Q R to K B sq	Q to Q 3rd	34. Q to K B 3rd	Q takes Q B P
(Threatening to play P to Q 6th, and then to take the K B Pawn.		35. Q to K 3rd (ch)	K to Q sq
		36. Q to Q 2nd	K to Q 2nd
		37. P to K R 3rd	K to Q 3rd
		38. Q to Q Kt 2nd	Q takes Q P (ch)
		and White ultimately won the game.	

CHESS IN MANCHESTER.

The following Game, which illustrates a variation in the Scotch Opening much in vogue a few years back, is well entitled to consideration. It was played some time since between Mr. STANLEY and Mr. BLACKBURNE.

(*Scotch Gambit.*)

WHITE (Mr. B.)	BLACK (Mr. S.)	WHITE (Mr. B.)	BLACK (Mr. S.)
1. P to K 4th	P to K 4th	11.	K takes Kt
2. Kt to K B 3rd	Kt to Q B 3rd	12. Kt to Q 5th (ch)	Kt takes Kt
3. P to Q 4th	P takes B	13. B to K Kt 4th	Q takes B (ch)
4. Kt takes P	Q to K R 5th	14. K takes Q, &c.)	
(For an analysis of this interesting variation the student is referred to the "Chess Player's Handbook," pp. 171-172. He should see also a game at the same opening, published in the ILLUSTRATED LONDON NEWS of Dec. 7, 1861.)		12. B to K Kt 5th	P to K R 4th
		13. Kt takes Q R	Kt to K Kt 5th
5. Kt to Q Kt 5th	B to Q Kt 5th (ch)	14. B takes Kt	P takes B
6. B to Q 2nd	Q takes K P (ch)	15. B to K R 4th	P to Q Kt 3rd
7. B to K 2nd	K to Q sq	16. Kt to K 2nd	R takes B
8. Castles	Kt to K B 3rd	17. P takes R	P to K Kt 6th
9. Q Kt to Q B 3rd	Q to K R 5th	18. B P takes P	Kt to K Kt 5th
10. P to K Kt 3rd	Q to K R 6th	19. R to K B 2nd	B to Q B 4th
11. Kt takes Q B P		20. Kt to Q 4th	B to Q Kt 2nd
(In the game referred to above White now played—	11. B to K Kt 5th.)	21. P to Q B 3rd	Kt takes K R P
11.	Kt to K 4th	22. R takes Kt	Q takes P (ch)
(Had he taken the Kt with his King the game would probably have been continued thus:—		23. K to B sq	Q takes R
		24. K to K sq	Q takes P (ch)
		25. K to Q 2nd	Q to K B 5th (ch)
		26. K to Q B 2nd	B to K 5th (ch)
		27. K to Kt 3rd	B to Q 4th (ch)
		28. K to B 2nd	

The game was abandoned as a drawn battle.

CHESS ENIGMA.

No. 1338.—By Mr. C. BAYER. (*La Régence.*)

White: K at Q B sq, Q at K B 2nd, B at K R 4th, Kts at Q 4th and Q R 3rd, Ps at Q B 2nd and Q Kt 6th.

Black: K at Q B 6th, Rs at K B 2nd and Q B 5th, Kts at K Kt 5th and K B 8th; Ps at K B 5th, K 3rd, Q B 3rd, and Q R 3rd.

White to play, and mate in four moves.

SCIENTIFIC NEWS.

ACCLIMATISATION.—In the *Annals of Natural History* Dr. J. E. Gray has inserted a copy of the circular on this subject prepared by Mr. Wallace, approved of by a committee formed at the British Association meeting at Cambridge (consisting of Dr. Sclater, Mr. Alfred Newton, Mr. Wallace, and Dr. Gray), and now in course of distribution. The following are some of the points of inquiry to which the attention of persons resident in extra-European countries is especially requested:—1. As to the domesticated animals indigenous to the country, their differences from the wild races, the possibility of domesticating the latter, &c. 2. As to the domesticated animals which have been introduced from other countries, the date of their introduction, food, habits, longevity, fecundity, diseases, &c. 3. Special inquiries relating to the more common domestic animals—viz., sheep, horses, cattle, dogs, ducks, and geese; the capability of forming hybrids, &c.

NITROGEN IN BREAD.—A short time ago M. Barral laid before the French Academy of Sciences a memoir, in which he not only stated that, when in the same state of dryness, there is more nitrogen in the crust of bread than in the crumb, but that crust is more soluble than crumb in water. This last fact was imputed by M. Payen to the transformation of dextrine into starch during baking. M. Barral, in a note to his memoir, reports another important result, established by his researches. From the same weight of dried crust and dried crumb placed in water he has found that the soluble part of the crust gives from 7 to 8 per cent of nitrogen, while that of the crumb gives only from 2 to 3 per cent. The greater solubility of the crust no doubt proceeds from the gluten of the crust having undergone a remarkable transformation through exposure to the temperature of from 392 to 428 deg. Fahr. in the oven during baking. He says that the soluble part of crust possesses more nitrogen than there is in the juice of meat. By way of confirmation, M. Barral introduced some gluten into strong closed glass tubes, and submitted them to a bath of oil, of the temperature of 428 Fahr. In a few seconds the gluten liquefied. This liquefaction, effected under the influence of steam and pressure, gave rise to a disengagement of carbonic acid; for when the tube which contained the liquefied gluten was broken, a slight explosion took place. When the gas causing this explosion was collected, it was found to be carbonic acid, without any trace of nitrogen. The brown liquefied gluten was remarkably alkaline, and endowed with a peculiar odour. After filtration, a yellow precipitate was formed by treatment with acids, and none was produced by treatment with alkalies and alcohol. M. Barral states that he is still pursuing his interesting studies on the chemistry of bread-making.

THE PRESERVATION OF BUILDING MATERIALS is still the subject of the experimental researches of M. Kuhlmann, so well known for his memoirs on the applications of silicates of potash, or water-glass, for the hardening of stone, &c. The efficacy of this material having been found incomplete when applied to old buildings, under the influence of ammoniacal emanations and constant humidity, M. Kuhlmann has tried, in the case of brick walls, a mixture of tar obtained from the distillation of coal, laid on as hot as possible, the wall having been previously heated by placing near it a portable coke fire. This having been found successful, he was induced to experiment with several combinations of coal tar with various mineral substances, such as oxide of iron, obtained from the combustion of iron pyrites; this latter, united with one fourth of its weight of coal-tar, gives a plaster, which, when cold, possesses remarkable hardness and sonorousness. The application of silicious solutions is not suitable for moulded plaster, because, even at the moment of contact, there is an exchange of acids, and a gelatinous solution is produced, which forms on the surface of the plaster an impermeable layer, and thus prevents the silica from penetrating into the centre. In regard to the application of bituminous substances for the preservation of plaster, M. Kuhlmann states that the chemical properties of the plaster, instead of being an obstacle to its hardening and unalterability, as in the case of silicatisation, is, on the contrary, very favourable to these effects. In a recent communication to the French Academy of Sciences, he gives many details, and expresses great hopes of the preservation of many public buildings and monuments from the injurious action of frost and damp by means of the combination of gas-tar with plaster and other substances. He thinks also that the phenomena attending these combinations well deserve the study of geologists in relation to the history of many of the transformations which have taken place on the crust of the earth.

THE ELECTRIC THERMOMETER has been recently employed by M. Becquerel in determining the temperature of the earth at great depths, and the details of his experiments are given in the *Comptes Rendus* of the French Academy. The electric thermometer in its simplest form is a closed circuit composed of an iron wire and a copper wire soldered at their points of junction, and in which is found either a galvanometer keeping zero perfectly, or, better still, a magnetometer solidly fixed, with divers accessories, such as apparatus for heating or cooling the free solder, thermometers, lenses, &c. When the temperature is the same at the two solderings the magnetised needle rests at zero; when there is a change of temperature there is a deviation. If one of the solderings is placed in a spot where the temperature cannot be observed with a thermometer, then, by raising or lowering that of the other soldering, until the needle shall arrive at zero, the observer will be assured that this temperature is the same as that which was unknown. Thus, by giving to the metallic wires sufficient diameters, the temperature at great depths may be observed. Care must be taken that the temperatures given by the solderings are the same as those of the thermometers placed beside them. The operation requires a deep-bored well, a thermo-electric cable, a galvanometer, and other apparatus; in all which M. Becquerel was liberally aided by M. Rouland, the late French Minister of Public Instruction. On examining the earth at Paris M. Becquerel found—1, That, without going out of the tertiary basin of Paris, the invariable stratum is not of the same thickness; 2, That we can rigorously determine the march of the propagation of heat in the soil and the position of the invariable stratum; and, 3, That at the Jardin des Plantes, from the depth of 26 to 36 metres, the temperature is constant, as it is also from 16 to 21 metres. He states that in passing from one stratum to another the temperature seemed to change, and thinks that, consequently, it will be possible to determine with great exactness the propagation of solar heat in the earth. Since this new mode of observation indicates changes of temperatures less than the tenth of a degree, M. Becquerel considers it to be highly desirable that experiments should be made at depths of 100 or even of 200 metres, in order to learn the nature of the strata, the infiltration of waters, chemical reactions, and other causes which influence the distribution of heat in the crust of the earth, and what are the modifications which it undergoes with the weather—a distribution, the effects of which may react on the temperature of the soil, and, consequently, on the climate. This is one of the grandest questions in terrestrial physics which a philosopher can propose to himself to solve, and well worthy of fixing his attention.

THE HERRING.—Some extracts from the report of the Royal Commission (consisting of Professors Lyon Playfair and Huxley, and Lieutenant-Colonel Maxwell) appear in the *Edinburgh Philosophical Journal*, and contain some interesting particulars respecting the natural history of this valuable fish. It is found in four conditions:—1, Fry or sill; 2, Maties or fat herring; 3, Full herring; 4, Shotten, or spent herring. Adult full herrings generally vary in length from ten to fifteen inches; they may vary, it is said, from seven to seventeen inches. Their food consists of small crustacea and fish, and particularly sand eels, while in the matie condition they feed voraciously. Their enemies are fish (cod, ling, &c.); birds (gulls and gannets); marine mammals (porpoise, and other cetacea); and man. In 1861 there were in Scotland, and that part of England over which the Fishery Board have jurisdiction, 42,751 fishermen and boys engaged in the herring fishery. The total take of the year would give about 20,000 herrings for each of these persons, or nearly 900,000,000 for the whole! This vast number sinks into insignificance if compared with the total destruction effected by agencies over which man has no control. Consider the destruction of large herring by cod and ling alone. It is a very common thing to find a codfish with six or seven large herrings in his stomach, of which not one has remained long enough to be digested. If, in order to be safe, we allow a codfish only two herrings per diem, and let him feed on herrings for only seven months of the year, then—2 herrings × 210 days = 420 herrings—his allowance during that time; and fifty codfish will equal one fisherman in destructive power. But the quantity of cod and ling taken in 1861, and registered by the Fishery Board, was over 80,000 cwt. On an average thirty codfish go to 1 cwt. of the dried fish. Hence, at least 2,400,000 codfish were caught in 1861. But, if fifty codfish equal one fisherman, 2,400,000 will equal 48,000 fishermen. In other words, the cod and ling caught on the Scotch coasts in 1861, if they had been left in the water, would have caught as many herrings as a number of fishermen equal to all those in Scotland, and six thousand more, in the same year.

A NEW GAS FURNACE for scientific purposes has been constructed by Mr. G. Gore, with the view of employing only ordinary coal gas and atmospheric air, dispensing with the use of bellows, blowing apparatus, tall chimney, or valves requiring frequent attention. It is figured and described by Mr. Gore in the *Philosophical Magazine*. It consists of a cylinder of fire-clay, about 9 in. high and 6 in. diameter, open at both ends, with a hole in its side near the bottom to lead into the chimney. It is covered with a movable plate of fire-clay with a hole in its centre for the introduction of the crucible or of substances to be melted. This hole is closed by a perforated plug of fire-clay for access to the contents of the crucible, and that again is closed by another stopper of clay. A chimney of sheet iron, about five or six feet high, kept upright by a ring of iron, is attached to the top of the furnace. The fire-clay cylinder is inclosed in a sheet-iron casing with a bottom of iron, to which are fixed three iron legs. Inside the larger cylinder is another fire-clay cylinder or cupola with open ends and with three projections of fire-clay for supporting a crucible, which is kept steady by means of three marbles. The gas-burner is a thin metal cylinder deeply corrugated at its upper end, with the corrugations diminishing to nothing at its lower end. For details of the management of this furnace we must refer our readers to Mr. Gore's description. He says that the chief conditions for its successful use are "sufficient gas, proper regulation of gas to air, and a suitable degree of draught." Mr. Gore states that it will readily melt half a pound of copper or six ounces of iron. It requires from twenty to thirty minutes to acquire its highest temperature, and then the entrance part of the chimney exhibits a faint red heat in daylight. If it exhibit much more than this the draught is too powerful. This furnace is protected by patent, and may be obtained of the maker, E. W. Ball, Islington, Birmingham.

"RECONNOITERER" GLASS, 9s. 6d. Weighs 8 oz., is achromatic, and so strong that ships, houses, trees, &c., ten miles off; Jupiter's Moons, &c., are distinctly seen by it; and when used as a landscape glass is valuable on a twenty-five mile radius. "I think the Reconnoiterer very good."—The Marquis of Carmarthen. "I never before met an article that so completely answered its maker's recommendation."—F. H. Fawkes, Esq., Farnley, Otley. "Regarding the glasses supplied by Messrs. Salom, I am well pleased with them."—From a report by the Head Gamekeeper of the Marquis of Breadalbane. "The economy of price is not secured at the cost of efficiency. We have carefully tried it at an 800-yard rifle-range against all the glasses possessed by the members of the corps, and found it fully equal to any, although they had cost more than four times its price."—The Field. Post-free, 10s. 10d. The Hythe Glass, showing bullet marks at 1200 yards, 31s. 6d. These Glasses are only to be had direct from SALOM and CO., 98, Princes-street, Edinburgh, who have no agents.

LETTERS PATENT 1852. PRIZE MEDAL 1862.

ROBINSON'S PATENT GROATS is the most valuable preparation for making pure and delicate Gruel. Modern chemistry has shown that this food is easy of digestion and rich in nutriment.
ROBINSON'S PATENT BARLEY makes a delicious custard pudding, directions for which have been given by Mons. C. E. Francatelli. It is appreciated as a non-inflammatory drink, is excellent for mothers nursing, and has been used with great success for rearing children by hand.
KEEN, ROBINSON, BELLVILLE and CO.,
Garlick-hill, London.

KEEN'S GENUINE MUSTARD,
There are many qualities of Mustard sold.
Obtain Keen's Genuine Mustard and full approval is guaranteed.
FIRST MANUFACTURED, 1742.
Sold by the Trade from the Cask, and in 1lb. and ½lb. canisters.
KEEN, ROBINSON, BELLVILLE, and CO.,
Garlick-hill, Cannon-street, London.

OSWEGO

PREPARED CORN,
for
Puddings, Custards, Blanc-Mange, &c.
Manufactured and Perfected by
T. KINGSFORD and SON,
of Oswego, State of New York.
It is the original preparation from the farina of maize, established 1848, commands the highest price from the trade, and offers the best value to the consumer.
It is a quarter stronger than any of the imitations, has a finer grain, and is more delicate.
The Oswego has the natural golden tinge, and not the chalk white produced by artificial process.
KEEN, ROBINSON, BELLVILLE, and CO.,
Garlick Hill, London.

BORWICK'S is the BAKING POWDER for Bread, Pastry, and Puddings. Sold everywhere in Packets, 1d., 2d., 4d., and 6d.; and in patent Boxes, 1s., 2s. 6d., and 5s.

GLENFIELD PATENT STARCH,
used in the Royal Laundry,
and awarded the Prize Medal
for its Superiority.

THE ILLUSTRATED LONDON NEWS.

No. 1213.—VOL. XLIII. SATURDAY, JULY 18, 1863. WITH A SUPPLEMENT, FIVEPENCE

WORKING MEN'S CLUBS.

WISDOM and philanthropy do not always go hand in hand. The best impulses of the heart are too frequently frustrated by the mistakes of the head. Many a social reform, the object of which commands general approbation, has utterly failed—some have even done more harm than good, owing to a singular want of adaptation of the means to the end. Human nature can never be successfully treated, especially with a view to refine and elevate it, unless the complex motives by which it is governed are consulted as well as understood. The idea, once almost universally prevalent, but now, happily, passing away, that man might be fashioned into any conceivable pattern of intellectual and moral beauty by a kind of millwork process, the machinery of which is driven by a sufficient central power, for a long time pervaded and vitiated the greater number of the plans which philanthropists set on foot for the regeneration of society. They forgot that character is a growth, not a manufacture; and, forgetting the radical, we may say the essential, difference between the one and the other, they naturally relied upon the formative effects of pressure rather than upon the influences which stimulate development. Even to this day the error is not wholly and everywhere corrected, and one occasionally sees projects for the benefit of what are called "the working classes" which overlook two very important elements necessary to be considered in the solution of every social problem; the first, that classes, whether they be designated upper, middle, or lower, are made up of individuals alike only so far as their condition is concerned, while in all other respects—in taste, in temper, in capacity, in tendency—they differ from each other as widely as if they belonged to no special class whatever; and the second, that all durable reforms affecting human character must result from the expansion, exercise, and consolidation of what is *within* a man, and cannot be secured by any perfection of *outside* contrivance or force.

These observations are favourably illustrated, and, indeed, have been suggested, by an item in the news of the week to which we venture to bespeak the attention of our readers. On the 11th inst., under the presidency of Lord Brougham, one of the most sagacious as well as disinterested and venerable of the social reformers of the present age, the first annual meeting of "The Working Men's Club and Institute Union" was held in the large room belonging to the Royal Society at Burlington House. The report of the union, read by Mr. H. Solly, its indefatigable secretary, constituted the groundwork of the speeches afterwards delivered by Lord Lyttelton, Mr. J. Heywood, the Hon. W. Cowper, M.P., the Rev. P. D. Maurice, Mr. T. Hughes, the noble chairman, and others, among whom we may make honourable mention of a Mr. Brady, a working man from Pimlico. It is not to the manly

Digitized by Google

eloquence of the speakers but to the principal features of the scheme to the furtherance of which it was devoted that we ask a moment's notice; and we do so chiefly with a view to commend to public consideration and suffrage the principles of wise philanthropic action which it embodies.

The want which the Union has been organised to meet, or, more correctly speaking, to stimulate, guide, and assist those to meet who are the special subjects of it, is as urgent as it is notorious. All who know anything of the social condition and habits of the working men of this country know that they suffer incalculable disadvantage from the fact that in their walk of life one of the most powerful cravings of human nature, and one which might minister quite as much to their improvement as to their gratification—namely, easy and daily recreative intercourse with their fellows—can only be indulged under circumstances which expose them to baneful temptations. Recreation of some sort they must have. Their homes, for the most part, cannot supply it. Cramped for room, deficient in most of the accommodations necessary to comfort, ill ventilated, ill lighted, intolerably close in summer, inadequately warmed in winter, fit neither for solitary reading nor for cheerful converse with friends, the abodes of those whom severe toil throughout the livelong day has already predisposed to self-indulgence and lively companionship offer them but few attractions. There are needed for the better men of this class places of resort within easy distance, in which they may obtain, away from the demoralising influences of the public-house, precisely the same kind of advantages as gentlemen usually find in their clubs. Working men not less than others require to meet each other, sometimes for business, sometimes for conversation, sometimes for refreshment, or amusement, or mental improvement. And, until quite lately, such meetings could nowhere be arranged but in connection with a certain amount of expenditure in intoxicating beverages. This Union, we are told, has been organised for the purpose of rescuing workpeople from this special disadvantage of their position—an object which few will deny to be both pressing and praiseworthy.

We learn from the year's report of operations, and from the speeches based upon it, that the Union undertakes to do nothing for the class whose benefit it seeks, which they can more properly do for themselves. It does not assume the responsibility of starting clubs such as we have briefly described; it does not support them when started; it does not pretend to manage them. In a few cases it has given a money contribution towards the outfit, but even this is felt by many members to be of very questionable utility. Its business is to put working men themselves in the way of securing to their use all the social appliances required by their position. It leaves it to them to find the necessary means, to prescribe the rules and conditions, and to govern the interests of these institutions. It acts chiefly with the view of awakening local attention to the desirableness of establishing such clubs, of assisting them, when formed, by personal visits, correspondence, and the counsels of experience, and of developing the capacities for usefulness of all the clubs throughout the kingdom, by co-operating one with another and with a common central establishment. This is just the kind of aid which the working classes will most readily recognise and appreciate—aid which is stimulative and regulative of their own self-reliant exertions. They do not like to be treated, as Mr. Brady remarked, "as mere children in leading-strings." They are thankful for such guidance as may be vouchsafed to them; but they are little inclined to surrender their interests to the management of others, particularly of others who but imperfectly understand them. Show them how they can help themselves, and you confer upon them a boon far more valuable than any amount of assistance which supersedes their own efforts.

"Philanthropists," said the Hon. W. Cowper, "were beginning to discover that they must not only attend to the religious requirements of the age, but also to its amusements." This is true; but it does not express the whole truth. To have done that it should have been added, "and philosophers are at last discerning that the manner in which people set about doing good to others is even more important than the substance of it." To carry the weakly is not always, not often, the best service you can render them; to induce and assist them to walk alone is the fittest blessing they are capable of receiving. Too much fussiness has been the besetting sin of philanthropists—too strong a disposition to meddle and govern. Even in ministering to man's want of amusement it would be quite possible to undermine his independence; and we are not sure that the tendencies of the age in that direction have not increased the mischiefs they sought to cure. We have been sometimes fearful lest there should be fostered in the spirit of our people a feeling akin to that which prompted the degenerate Roman populace to demand *panem et circenses*. Anything which helps to dispel that fear by showing that it is groundless will receive our welcome. For this reason, even more than for the important object it seeks to accomplish, we have drawn the notice of our readers to this attempt to establish "working men's clubs." The mode in which its promoters have planned and have hitherto conducted their enterprise presents a favourable example, we think, of that modest reticence which men who aim at the welfare of their fellow-men by means of a scheme of benevolence are too apt to forget.

The Union, we are informed, has met with a fair measure of success. It has been but a year in existence, and only nine months in working order, but it has already accomplished quite enough to prove its qualifications for doing much more. We sincerely wish it a prosperous career. It would conduce to a far more desirable social revolution than can be precisely anticipated were every operative, handicraftsman, mechanic, or skilled labourer of any sort, wherever his work might lie, able, as Lord Brougham phrased it, "to find, not only social intercourse and improvement, but rational recreation, without the evils of the public-house." "I believe," said Mr. Cowper, "the amusements of a people do more to influence their character than the sermons to which they listen." "Workmen," he subsequently added, "may be divided into two classes—thinkers and drinkers. These clubs, he felt assured, would enlarge the former and greatly diminish the latter." We hope his prediction will be verified.

FOREIGN AND COLONIAL NEWS.

FRANCE.

The Emperor is living quietly at Vichy. M. Fould is with him.

The Empress drove into Paris on Sunday to visit Princess Clotilda, at the Palais Royal, on her return from Egypt. On Monday her Majesty presided over a Council of Ministers held at St. Cloud.

The Duke of Hamilton died on Wednesday at Paris. His Grace left England only a few days ago in his usual health, but he had scarcely arrived in Paris when he was seized with congestion of the brain, which proved fatal. He was in his fifty-second year.

The bakers of Paris have been informed by the authorities that they may withdraw all their remaining stock of flour from the Grenier de Réserve, with the exception of twenty sacks each, which will not be given up till after the 1st of September next, when all restrictions on the baking trade will cease.

The welcome intelligence of the surrender of Mexico reached the Emperor at Vichy at about eight o'clock yesterday se'nnight, and was by his orders immediately published in the town. On the following night, in Paris, the public buildings and theatres were brilliantly illuminated, and even several private houses were also lighted up. The Mexican garrison evacuated the city on the 30th of May, and thereupon the principal leaders of the Church party sent a deputation to General Forey, offering their allegiance to the Emperor Napoleon. Accordingly, on the 5th, a division of the French army entered and occupied the city, and the whole army was to follow in a few days. The Queen of Spain and the Kings of Prussia, Holland, and Portugal have sent their congratulations to the Emperor on the taking of Mexico.

PRUSSIA.

The King will, it is said, leave Carlsbad on the 18th (to-day), and reach Gastein after an easy journey of about three days' duration. His Majesty intends residing there about three weeks, and will then visit the Queen of Prussia at Baden-Baden, remaining till the end of August. The King will then return to Berlin to be present at the autumnal military manœuvres.

On Thursday week the Queen arrived at Brussels on a visit to the King of the Belgians. Her Majesty, who was received at the railway station by the Duke of Brabant, paid a short visit to Laeken, and proceeded to Germany on the same evening.

The provisional committee of the Statistical Congress, about to meet in Berlin, has resolved to request the Crown Prince to become patron of the Congress, and to open its session.

Some of the German journals have published versions of a remarkable correspondence which has passed between the King of Prussia and his son, the Crown Prince. In this correspondence the Crown Prince urges his father not to break the laws, and declares that the spirit of the Constitution has been violated; and, in a letter to Count Bismarck, he protests against the decree respecting the press, which he considers illegal and prejudicial to the interests of the country and the Royal family. After the Crown Prince's speech at Dantzic, the King—who had previously remonstrated with his son, and urged him to show "coolness towards our pretended men of progress," and to "extol the doctrine of the Conservatives"—warmly censured his son's language, and required him to pledge himself to refrain from such declarations in future, under pain of a recall to Berlin, with a possible removal from his command. In his reply the Crown Prince declares that he cannot conscientiously retract or qualify his utterances respecting "resolutions which compromise his future and that of his children;" but he is willing to maintain silence, and to live wherever his father pleases as a stranger to politics, while his military and political employments are at his father's disposal. To this answer the King rejoined that he did not wish his son to abstain from speaking frankly to his father, but only to preserve silence towards every one else.

THE POLISH INSURRECTION.

The English, Austrian, and French notes to Russia on the Polish question have been published.

In the opinion of her Majesty's Government the Poles will not be satisfied by mere declarations of good intentions or even the enactment of some wise laws; and Russia is asked to concede the following measures as "the bases of pacification:"—1. Complete and general amnesty. 2. National representation, with powers similar to those which are fixed by the charter of the 15th (27th) of November, 1815. 3. Poles to be named to public offices in such a manner as to form a distinct national administration, having the confidence of the country. 4. Full and entire liberty of conscience; repeal of the restrictions imposed on Catholic worship. 5. The Polish language recognised in the kingdom as the official language, and used as such in the administration of the law and in education. 6. The establishment of a regular and legal system of recruiting. Her Majesty's Government further recommend a provisional suspension of arms to be proclaimed by the Czar; and a conference of the eight Powers—England, France, Austria, Russia, Prussia, Spain, Sweden, and Portugal—who signed the Treaty of Vienna.

The Austrian note recommends the "six points" proposed by England, and declares that Austria does not object to a congress of the eight Powers which signed the Treaty of Vienna.

In all the despatches the "six points" may be said to be absolutely identical. But the reference to the treaties of 1815 appears to be more direct in the French despatch than has been hitherto supposed. Speaking of the six points, M. Drouyn de Lhuys says that "they are only in strict conformity with the stipulations which bind the Russian Government with respect to Poland." And, again, the words of Prince Gortschakoff are quoted, which admit that "the present troubles may affect the tranquillity of the States between whom the separate treaties of the 3rd of May, 1815, were concluded, as well as all those who signed the general transaction of the 9th of June." *La France* says of the French note that it has all the firmness of the English despatch without its stiffness, and all the moderation of the Austrian despatch without its weakness.

A protest against the arrest of Archbishop Felinski was read on the 12th inst. in all the churches of Warsaw. Monsignor Rzewaski, the Archbishop's representative, has voluntarily resigned his office. Orders have been issued that all the churches throughout the kingdom are to be draped with black and that no bells are to be rung. Arrests of several clergymen took place on the 12th. The Bishop of Wilna, Monsignor Krazinski, having published a pastoral expressing sympathy with the insurrection, has been transported to Nijni-Novgorod, whence he will be sent to Wiatka. Intelligence received from Warsaw states that Marquis Wielopolski has been dismissed and replaced by General Berg.

Various engagements between the Poles and the Russians continue to be reported. The invasion of Volhynia by the Poles of Galicia turned out a miserable failure. The details given by the correspondents of the daily papers of the lives lost and blood shed in this mad attempt are distressing. A great part of the men composing Wysocki's expedition were vagabonds—the refuse of the Polish towns, who fled at the first onset. According to the *Times'* correspondent, the raid was as unjustifiable as it was impossible. Wierzbicki, by a manœuvre, whereby he deceived the Russians, has succeeded in penetrating into the interior of the government of Lublin, and has effected a junction with Rucki's insurgent corps. Czengery has left Kielce, whither considerable forces have been dispatched against him. Fiquette is operating with a flying column of gendarmerie in Sandomir, Pogusz, and Stobnick.

General Mouravieff, the military Governor of Wilna, has issued a decree ordering that all moneys taken by the insurgents from the State or communal treasuries shall be refunded within ten days by the Polish land proprietors in each district. Forced sales are to take place on the estates of those who refuse to comply with the order. A despatch, dated yesterday, from Cracow, says:—"The Russians have arrested many landowners in the kingdom of Poland. They have also hung M. Gaczowski at Kielce and M. Wisniewski at Radom, with seven others. An order has been issued prohibiting persons from travelling from one village to another without a passport."

AUSTRIA

The solemn opening of the Transylvanian Diet took place on Thursday. The Imperial rescript, declaring the union of Hungary with Transylvania null and void, and confirming the new Constitution of Transylvania as suited to present circumstances, was most favourably received by the members. The Diet resolved upon sending an address of thanks to the Emperor.

AMERICA.

GREAT BATTLE AT GETTYSBURG, PENNSYLVANIA.

An engagement extending over several days has been fought in Pennsylvania between the picked armies of the rival federations. According to accounts previously received the Confederate Commander-in-Chief was reported to be massing his troops on the line of the Cumberland Valley Railroad, between Chambersburg and Carlisle, and at the same time the Northern army, under the leadership of its newly-appointed chief, General Meade (General Hooker having resigned), was known to be advancing by way of Frederick and Middleburg towards the Pennsylvanian frontier. From this intelligence it was apparent that the meeting between the two armies could not be far distant, and that it would probably take place on the confines of Pennsylvania. Such has proved to be the case. The divisions forming the advanced columns of the Federal army were met by a subdivision of the Confederate army on the morning of Wednesday, the 1st of July, on the western side of the small town of Gettysburg. An engagement followed, which resulted in the defeat of the Federal troops. So far as we can gather from the telegraphic summary but two divisions of the Northern army were engaged—one commanded by Reynolds and the other by Howard. The former, having taken up a position on a wooded ridge to the west of Gettysburg, was, whilst thus placed, attacked by the Confederates. The Federal troops were in the first instance successful. But after a short time fortune changed sides. The right wing of the Federals was turned, and when, after two hours' fighting, Howard came to the aid of Reynolds, he found it impossible to regain the position on the right which had been taken by the Confederates. He, however, brought his troops to the front, when General Ewell came up with a force of 25,000 men, and succeeded in placing the Federals under a cross fire. Both flanks were then turned, and the Federal troops retired through Gettysburg after having sustained considerable loss. The Confederates took possession of the town, and so terminated the engagement of the 1st of July. It was, however, but the prelude to a far more terrible one on the succeeding day. It is described as having been one of the bloodiest battles of the war, and, even judging from the meagre details which have reached us, we can readily believe in the justice of the description.

On the morning of the 2nd the main body of the Federal army, under Meade, joined the divisions which, after the battle of the preceding day, had taken up a position to the south of Gettysburg. In the course of the forenoon of that day Meade arranged his troops for the battle which he knew to be imminent. His right wing rested on a cemetery to the south of the town, and was composed of the first and eleventh corps of his army. The left wing, which was commanded by Sickles, rested on the crest of a hill, and the battle front of the army had a north-western aspect. In the afternoon General Sickles made a reconnoissance in force, which brought his troops into collision with the Confederates, and shortly afterwards the engagement became general. The Southern forces rushed to the attack with their usual impetuosity. On the right the Federals were obliged to retire, but it was only for a time. They rallied and recovered their previous position. On the left the Confederates drove their opponents over the crest of the hill on which they were placed, and down the opposite side. But the left wing of the Federal army, like the right, again succeeded in regaining its previous position. When the sun set the battle-field was covered with slain; but the relative positions of the two armies remained unaltered. In the course of the night the Confederates renewed the engagement, but with little result. At eight o'clock on the evening of the 3rd the Federal General reported that the Confederates had opened a heavy fire against his left and centre, which they maintained for three hours without intermission; and that subsequently they had twice assaulted the Federal position, but with ill success. No later intelligence had been received in New York when the mail left.

THE NEW FEDERAL COMMANDER-IN-CHIEF.

The *New York Tribune* gives some particulars of Major-General G. S. Meade, promoted to the chief command of the army of the Potomac, in room of General Hooker, who was relieved from the command at his own request, being "impressed with the belief that his usefulness as a commander was impaired":—

"General Meade was born in Spain in 1816; entered the Military Academy at West Point from the district of Columbia, and was graduated there in 1839, and appointed second Lieutenant in the 3rd Artillery; resigned his commission, October 26, 1836; was appointed Second Lieutenant in the Topographical Engineers, May 19, 1842; was brevetted First Lieutenant for gallantry at Monterey, in 1846; became First Lieutenant in August, 1851; Captain, May 19, 1856; and Brigadier-General of Volunteers, August 31, 1861. In June, 1862, he was promoted to a majority in the Engineer Corps, which rank he still holds in the newly-organised Engineer Corps of the regular army. Few officers have performed more arduous duties or rendered more distinguished and faithful service to the country since the commencement of the war. In the seven days' fight before Richmond General Meade was struck by a ball, which entered his side and passed through his body, making a severe and painful wound. Under tender and skilful treatment he rapidly recovered, and it was scarcely known that he had left his couch when he was in his saddle, ready to take part in the sanguinary battle of South Mountain and Antietam. In these engagements he commanded the Pennsylvania Reserves—a corps whose reputation for courage and discipline has been surpassed by none. He was with that corps in the battles at Drainsville, on the Chickahominy, and in Maryland. When General Hooker was wounded at Antietam General M'Clellan placed General Meade in command of the corps which had just been deprived of its heroic leader. During the action General Meade received a slight contusion from a spent grapeshot, and had two horses killed under him. He distinguished himself greatly during the battle, being in the thickest of the fight, encouraging his men by his deeds of daring and valour. At Fredericksburg he maintained his reputation for coolness, courage, and skill, winning the unstinted applause of the army and the hearty congratulations of a grateful and appreciative people."

GENERAL WAR NEWS.

General French has abandoned Maryland Heights, destroying all the fortifications, and has moved to co-operate with General Meade. The city of Carlisle, a few miles from Harrisburg, had been shelled by a small Confederate force. Business in Philadelphia is entirely suspended, and the Pennsylvanian collieries are closed. General Dana has issued a proclamation stating that the Confederate strategy was sufficiently understood to make it certain that Philadelphia was their object, and urging the people to arm for defence. The Mayor of Philadelphia has called upon the people no longer to close their eyes to the standing danger and disgrace hanging over the State and city. The defences of Baltimore are manned by 10,000 citizens, and all arms have been taken from private persons. Martial law has been proclaimed in Baltimore and Western Maryland. The Governor of New Jersey has again called out the militia to go to the aid of Pennsylvania.

The War Department issued an order on the 28th ult., offering a bounty of 400 dollars, and one month's pay of thirteen dollars in advance, to all the volunteers between the ages of eighteen and forty-five whose term of service has expired or is about to expire, and who will re-enlist for three years or the war.

The bridge across the Susquehannah at Columbia, burnt by the Federals to prevent the Confederate advance, is said to have cost 1,000,000 dollars.

General Dix, who had assumed the command of the Federal army on the peninsula, had taken possession of White House and sent out a cavalry force. This force had cut the railway bridge over the South Anna, and had penetrated to within nine miles of Richmond. They captured several prisoners, including General Fitzhugh Lee, who was lying ill at a private house.

Digitized by Google

In Kentucky and Ohio much alarm existed in consequence of the advance of Generals Pegram and Marshall, with 15,000 men, through Cumberland Gap.

In Tennessee General Rosencranz had commenced a forward movement, and had driven the Confederates to Tullahoma. Bragg's forces had retreated in a demoralised condition from Tullahoma to Winchester, leaving behind them a large quantity of provisions and some guns.

The news from the Mississippi is of a doubtful character. The defenders of Vicksburg are said to be showing great activity, and General Johnston had advanced to within a short distance of Grant's army. Johnston is said to have received reinforcements from Bragg, and to be perfecting arrangements to attack General Grant. The bombardment of Port Hudson continues. The place, however, was considered impregnable; and it was believed that the siege would have to be raised. The Confederate Generals Marmaduke, Price, and Kirby Smith have got possession of several points along the banks of the Mississippi, and would probably attempt to seize Milliken's Bend and obstruct the navigation. The Confederates were very active in the neighbourhood of New Orleans, which was evidently in jeopardy. In Louisiana the Confederates were gradually reoccupying the places taken not long since by the Federals.

President Davis has called upon the Confederates for troops for home defences, to replace Lee's invading army.

The story of the Tacony and her crew is one of romance. Lieutenant Read was detailed early in May from the Confederate steamer Florida, formerly the Oreto, one of the Liverpool built war-steamers, to take command of the brig Tacony, with an armament of one howitzer and a crew of about twenty-five men. Sailing close along the northern coast, he captured and burnt vessel after vessel, many of them of value. He lured them sometimes to approach him by a signal of distress. The ravage he committed was great, and a fleet of war-vessels was in pursuit of him. At length he captured a schooner, which he thought would better answer his purpose, and, transferring his armament to her, burned the Tacony. Thus he hoped longer to elude his pursuers. But a still bolder project occurred to him, the seizure of a revenue cutter, the Caleb Cushing, which lay in the harbour of Portland, Maine. He accomplished this owing to a favouring accident on the night of the 26th ult., and put to sea. The loss of the Cushing being discovered the following morning, the citizens hastily manned two steamers, started in pursuit, and succeded in overtaking her. After a few shots had been exchanged Lieutenant Reed set fire to the Cushing and returned to the Archer, which was afterwards captured by the steamers. All the ransom bonds of prizes released by the Tacony were found on board.

AUSTRALIA.

(From our own Correspondent.)

MELBOURNE, May 26.

FUNCTUAL almost to the hour, on Sunday, the 10th inst., the English March mail arrived, and with it the intelligence of the marriage of his Royal Highness the Prince of Wales. The news having been anxiously expected, it had no sooner been received than it was posted from one end of Victoria to the other. Church bells were set a ringing in the evening, and on the following morning, in every town and hamlet and on every goldfield, with a unanimity and spontaneousness which indicate at once the depth and the extent of the loyalty of her Majesty's subjects in this part of the world, committees were formed, and active steps taken to testify in a becoming manner Victoria's appreciation of the happy event. It was at first decided that the celebration should take place on the following Thursday; but this decision had no sooner been arrived at than it became apparent, owing to the extent and nature of the preparations, that it would be quite impossible to have them completed by that day. Tuesday, the 19th inst., was accordingly fixed upon, and Government not only proclaimed it a holiday, but they sanctioned the vote of £1000 from the public funds to supplement the sum set apart by the City Council to promote the rejoicings. Everyone set to work in right earnest to make a creditable display on Tuesday. Gas-fittings of all kinds rose to a fabulous price, until at last they were to be had for neither love nor money; and those citizens who are skilled in the work appertaining to public illuminations could make their own terms, £3 a day being the remuneration generally demanded. Bunting was collected from every quarter, and the extent and variety of our resources in this way were soon made apparent in the quantity of gay flags, with common and uncommon devices, which speedily flaunted in the breeze, spanning our leading thoroughfares and filling our streets from end to end. In Melbourne especially the illuminations were to be made the grand feature in Tuesday's rejoicings, and, if money and skill could secure the desired result, it was evident that Melbourne was determined to do something of which it need not feel ashamed. The banks were particularly lavish in their use of gas-piping, and the devices on some of those establishments were so comprehensive and brilliant that it is questionable whether they were excelled even in London. All the Government buildings were more or less decorated, but upon the Parliament Houses and the new Treasury were concentrated the greatest exertions to produce an effective illumination. On the Bourke-street front of the former were mounted the letters "A. E. A.," interlaced, surmounted by a crown of gigantic size, the letters being 16ft. high and 30ft. wide; while the crown was 16ft. by 20ft. The piping forming this device was perforated with 30,000 holes. The Treasury illuminations indicated the fine outlines of the building, with the circular heads of the window recesses; there were also a crown and a set of Prince of Wales's feathers in the centre. Mottoes, sometimes quaint, but always good-humoured, were exhibited on many public and private buildings. Transparencies, high-coloured and attractive, but in many instances evincing less taste than loyalty, appeared in windows, in front of buildings, and at street corners, and garlands of evergreens and flowers decorated every house. In fact, nothing but the time—one short week—seemed to limit the extent to which the Victorians were resolved to go in their rejoicings.

The weather previous to the 19th had been all that could be desired, but, unfortunately, on the morning of the grand day it commenced to rain, and so continuous and heavy was the wet that the postponement of the rejoicings was mooted. After due consultation among the authorities, however, it was resolved that a postponement was in every respect undesirable. The different programmes were accordingly proceeded with. A tent had been erected in the Government House Reserve for the accommodation of his Excellency Sir Henry Barkly; and to this point it was decided that the procession, headed by the Mayor and Corporation of Melbourne, should wend its way. Notwithstanding the inclemency of the weather, the procession was numerous and varied, consisting, as it did, of corporate bodies, friendly and benevolent societies, masons, watermen, workmen, and school children. Addresses of congratulation upon the auspicious event, and expressive of attachment to the Throne, were presented to his Excellency, to be forwarded by him for presentation to Her Majesty and to the Prince of Wales. The rain prevented the fulfilment of that part of the programme which included the sports and games in the Reserve; but this omission was amply made up for by the heartiness with which the eating and drinking part of the business was performed. In many parts of the city and suburbs whole bullocks had been roasted, oceans of beer had been provided, with no end of bread and other substantials. The wet seemed but to add zest to the loyalty of the people, for never before in Australia was there such an exhibition of hilarious excitement and joyous goodwill. Cheer after cheer rose amidst drenching rain, and the wet and mud were taken to as heartily as if they were a necessary ingredient in the day's enjoyment. In the afternoon the rain subsided, and now the illuminations were looked forward to; but, unfortunately, they too were doomed to only a partial success, for with the cessation of the rain came a comparatively high wind, which would persist, during the earlier part of the evening at least, in extinguishing the gas. The streets were crowded with people on foot and in vehicles, and the greatest good humour—notwithstanding the mud—everywhere prevailed. Towards midnight the wind somewhat abated, and then it was that the brilliancy of the city was seen to advantage.

The illumination having been of such short duration, and the weather so disagreeable, it was agreed almost spontaneously to allow the gas-fittings to remain and the flags to fly until after to-day, when the anniversary of her Majesty's birthday is to be celebrated. Yesterday was a holiday, and so is to-day; and at this moment there is as much merry-making as there was on the 19th inst., although the weather is very little better than it was then. As the mail closes in a few minutes (10 a.m.), I cannot speculate upon what sort of a night we shall have; but I submit that such intense and heartfelt loyalty should meet with a better meteorological acknowledgment than that with which it was rewarded on Tuesday last.

His Excellency Sir Henry Barkly gave a grand banquet on Tuesday, to which were invited the Ministry, members of Parliament, and most of the leading citizens. In several of our places of worship sermons were preached appropriate to the occasion; and at all the benevolent and charitable institutions, as well as at the gaols and hulks, the inmates were made partakers of the general rejoicing.

The colony, however, is not to rest contented with the expressions of its loyalty by bunting and gaslights; committees have been already formed for the collection of subscriptions for the presentation of a bridal gift to Princess Alexandra. It has not yet been decided what form the present will assume; but it will be something worthy of the occasion and of the colony. The ladies, too, are organising means for the presentation of a gift exclusively from themselves.

The people of Sydney have fixed the 11th of June as the day upon which they are to celebrate the Royal marriage. This will enable them to get the benefit of our sunshine and bunting.

War has again broken out in New Zealand. As might have been expected, the natives have recommenced hostilities. On the 4th inst. a party of ten of the 57th Regiment, while escorting stores to Tataraimaka, was fired upon by some Maories in ambush, and eight of the poor fellows were killed. Sir George Grey had received timely notice that there would be a rising of the natives on that day; but the warning was disregarded and no precautionary measures were taken. A week after the massacre Sir George gave up, by proclamation, the land in dispute—the Waitara block—and, according to the latest advices, the troops were being withdrawn from it. General Cameron is said to have tendered his resignation in disgust; but it was not accepted, and he has been empowered by the Governor to act unfettered. Preparations were being made for a severe struggle, the militia and volunteers at Taranaki having been called out. The troops have gone to the spot where the murder was committed, and the land has since been confiscated. The following is a list of the officers and men thus so savagely butchered:—Assistant Surgeon Hope, M.B.; Lieutenant Tragett, 57th Regiment; Colour-Sergeant Ellers, ditto; Sergeant Hill, ditto; and Privates Kelly, Flynn, Macarthy, and Banks, ditto. They had been shot down without a moment's notice, and their bodies had been all horribly mutilated, and those of the officers stripped of nearly all their clothes. The tragedy has cast a gloom over the whole settlement. Dr. Hope was rising in his profession, and had lately received a Staff appointment. Lieutenant Tragett was a B.A., and the only son of the Rev. T. H. Tragett, of Romsey, Hampshire. It is probable that all the regular troops will be draughted from the different colonies to New Zealand.

METROPOLITAN NEWS.

Senor Frederico H. Hemming has been approved of as Consul-General in London for the Republic of Venezuela.

Dr. Henry Wylde has been elected to the chair of professor of music at Gresham College, in the room of Professor E. Taylor, deceased.

On Monday evening the members of the East India United Service Club entertained Captains Speke and Grant, the discoverers of the source of the Nile, at a sumptuous banquet—the first public dinner given by the club—at Willis's Rooms. One hundred and sixty gentlemen were present.

Last year there were in the metropolis 2637 known thieves at large. The highway robberies and personal attacks, including, it may be presumed, garottings, numbered last year more than double those of the previous year. There were 13,298 crimes committed, and 5415 persons apprehended.

Negotiations are, it is said, going on between the Alexandra Park Company and Messrs. Kelk and Lucas for the purchase of every part of the Exhibition building, except the picture-galleries, for a North London Crystal Palace at Muswell-hill. The work of demolition is therefore suspended.

The Royal Dramatic College Fête and Fancy Fair at the Crystal Palace will take place on Saturday next, and will be repeated on the following Monday. A special performance in aid of the funds of the college is announced at the Haymarket for Wednesday next, the 22nd inst.

The gold medal for swimming to be offered annually by Sir William Fraser (the committee of the Royal Humane Society to be the adjudicators of the prize) will be competed for, for the first time, at Hammersmith, on Wednesday evening next. No professional swimmers will be allowed to compete. A prize for the second man will be given by the London Swimming Club.

On Sunday forenoon a fire broke out in the German Fancy Fair, Langham-place. Mr. Whittaker's valuable and curious collection of foreign birds, reptiles, &c., has also been destroyed, and several valuable pictures. The fire extended to the neighbouring premises, where much valuable property also was destroyed, twelve houses being more or less damaged. The steam fire-engines rendered valuable service, and finally prevented the fire from extending further: it does not appear how it originated.

A meeting took place at the St. Giles Mission Hall, Five Dials, in connection with the Bloomsbury Chapel, on Tuesday, for the purpose of presenting the Rev. Mr. M'Cree with a testimonial from the congregation of that place and others. This reverend gentleman has for the last fourteen years been most unremitting in his zealous exertions to alleviate the sufferings of the poor in this locality. The testimonial consisted of a beautifully-designed bookcase, a suite of drawing room chairs, an elegantly bound book containing a testimonial, and a purse of money.

A conversazione was held on Wednesday night, at the rooms of the Royal Institute of British Architects, by the invitation of the president, Professor Donaldson, and the council. Among the numerous objects of art were a choice and extensive collection of architectural drawings, including the competition designs for the Prince Consort memorial, by Messrs. G. G. Scott, Professor Donaldson, F. C. Hardwick, James Pennethorne, Charles Barry, Edward M. Barry, and M. D. Wyatt; a portrait of C. R. Cockerell, Esq., R.A., past president, painted expressly for the Institute by W. Boxall, Esq., R.A., an exquisite bust of Venus, by John Gibson, R.A.; and various bronzes, ivories, tapestries, and other works of art.

A movement which has been for some time past in progress, with a view to establish a printers' orphan asylum, is, we are glad to learn, at length organised, and the arrangements to carry out that laudable object sufficiently matured to justify the commencement of operations. At a meeting of the committee which had been appointed, held on Monday, it was announced that Mr. T. Brettle had become a life subscriber at twenty-five guineas, and that there were also twenty-five life subscribers of two guineas, four annual subscribers of one guinea, and eighty-eight annual subscribers of five shillings. The report was adopted, and other formal business having been disposed of, the meeting adjourned to the 10th of August.

Last Saturday evening three metropolitan corps—namely, the 20th, the 37th, and the 39th Middlesex—were officially inspected in Regent's Park; the two former corps, in combination, by Colonel M'Murdo, and the latter by Colonel Morris. The 20th, under command of Lieutenant-Colonel Bigge and Major Bowyer, and the 37th, commanded by Major Corrie, took up their position in front of Holford House, in a space kept by the 19th Middlesex; whilst the 40th (General London) kept the ground for the 39th, which corps was under the command of Lieutenant-Colonel Penton. There was an immense concourse of spectators, and the regiments having gone through their evolutions in a most satisfactory manner, Colonel M'Murdo expressed his satisfaction, as did also Colonel Morris, and both promised to make a favourable report to the War Office.

The foundation-stone of the Warehousemen and Clerks' new Schools at Caterham, in place of the old ones at New Cross, which were inadequate to the wants of the institution, was laid on Saturday by the Prince of Wales, the Bishop of Winchester officiating at the special service. At a collation which followed speeches were made by Earl Russell and Lord Brougham, the latter of whom was much cheered, and a list of subscriptions amounting to £3000 was announced, besides £5000 found in the 800 purses deposited on the foundation-stone. Among the names of the donors were those of the large City firms, Messrs. Bradbury, Greatorex, and Co., for £500; Messrs. Leaf and Co., for £500; Messrs. Copestake, Moore, and Co., £200; Mr. Morley, £250; Mr. Greatorex, £250; and many others of a character worthy of the merchant princes of the city of London.

The first annual meeting of the friends and promoters of the Working Men's Clubs and Institutes was held last Saturday at Burlington House—Lord Brougham in the chair. The meeting was also attended by Lord Lyttelton, the Hon. Mr. Cowper, M.P., Sir William Eckett, Rev. F. D. Maurice, and several ladies. The objects of this club—which are to furnish opportunities of rational recreation, amusement, and conversation; in fact, to do for the working classes what the club system does for the rich—were well set forth by the various speakers; and it was stated that it is considered an essential matter that wherever a club is instituted the committee shall consist of bona fide working men. The report was of a most satisfactory kind. The friends afterwards dined at the Whittington Club, under the presidency of Lord Lyttelton. The accounts for the year showed receipts amounting to £730, and a balance, after deducting the expenditure and liabilities, of £175.

Last week the births of 1983 children—989 boys and 994 girls—were registered in London. In the ten corresponding weeks of the years 1853-62 the average number (corrected) was 1777.——The deaths in London last week were 1287. This return exhibits an increase of 100 deaths on that of the previous week; and it is also higher than any weekly number returned since the end of May. The average number derived from corresponding weeks in 1853-62, and corrected for increase of population, is 1170. At the present time scarlatina is the most fatal of all the epidemic diseases, and the deaths from it in the week rose to 113, while those from diphtheria declined to seven. Smallpox was returned in 55 cases; seven of these deaths are stated to have occurred to persons who had been vaccinated, but it frequently happens in such cases that the evidence of successful performance of the operation is not much to be depended on. Diarrhœa has been increasing briskly, as is usual in the summer months; and last week the deaths from it rose to 91. There were also ten from cholera, chiefly "cholera infantum." A widow died at the age of 99 years.

A general court of the governors of St. Thomas's Hospital was held on Wednesday afternoon—Alderman Sir John Musgrove in the chair. The principal business before the meeting was to consider the report of the grand committee of the 11th of July, which recommended that power should be given to them to purchase either the Stangate site for £100,000, or Bethlehem Hospital, as they in their discretion should decide, subject to the approval of the governors. The adoption of the report was moved by the chairman, and supported, in the course of a discussion which took place upon various amendments, by Mr. Tite, Mr. Alderman Phillips, Mr. Garland, and other members. The principal of these amendments was moved by Mr. Adams, to the effect that the present temporary site should be purchased, and the building of a new hospital at once commenced. Another amendment was proposed by Mr. Alderman Lawrence, that the minutes be received but not adopted; and another by Major Lyon, giving power to the committee to purchase the land opposite the Houses of Parliament, provided the sum did not exceed £80,000. All the amendments were negatived by considerable majorities, and the original resolution (approving the grand committee's report) declared carried, thirty-nine governors holding up their hands in its favour.

LAW AND POLICE.—A cause was heard on Tuesday in the Westminster County Court, in which Miss Sibley sued the Hon. Mrs. Norton for salary, as the governess of the lady's grandchildren. Mrs. Norton conducted her own case, and there was considerable altercation between her and the plaintiff. The chief dispute was on a question of the housekeeping accounts, which the governess had to keep, but which an accountant said were in confusion. Mrs. Norton asserted that on one occasion she gave the governess £15; the latter maintained it was but £5. The verdict of the jury was that "they could not state whether the sum in dispute was paid or not," which was held by the Court to be a verdict for the plaintiff. Mrs. Norton gave notice of appeal.

The long-pending judicial investigation at the Middlesex Sessions into the riot at Cremorne Gardens terminated last Saturday in a verdict of "Guilty" against all the defendants. The sentence on Messrs. Herbert, Birkett, Saville, and Shawcross was that they pay a fine of £50 each, and provide sureties to keep the peace for the next twelve months; Mr. M'Dougall was fined £20, with smaller sureties; and Mr. Mott was mulcted in £10, and bound over in his own recognisances.

At the Central Criminal Court, on Tuesday, there were two trials for murder. Thomas Leadbitter was charged with the murder of his wife, in the Borough-road, Southwark, and acquitted on the ground of insanity. Mary Anne Payne was also charged with the murder of her child, a boy two years old; and she, too, was acquitted on the ground of insanity.

Two persons—Mr. John Cooper, a tradesman in Lambeth, and the Rev. Richard Hibbs, a clergyman of the Church of England, were taken up by the police for preaching in Waterloo-place on Sunday, and charged, next day, at the Bow-street Police Court, with obstructing the footpath. Mr. Cooper was cautioned and discharged. Mr. Hibbs said he wished to try the question of legal right, and his case was adjourned.

The death by fire of Miss Goff, of Cumberland-place, Hyde Park, led to a Coroner's inquest, and the verdict was "That the deceased was burnt to death through the accidental spilling on her light muslin dress of ignited brandy, and that the said death arose through misfortune." The Coroner said it was much to be regretted that the process for rendering the materials of ladies' dresses uninflammable was not generally understood and used by the public. Either of three substances—phosphate of ammonia, tungstate of soda, and sulphate of ammonia—could be mixed in the starch, and at the cost of 1d. a dress deaths from fire would be rendered, in point of fact, impossible. Articles of apparel subjected to the action of these agents would, if they burnt at all, only smoulder, and in no case could they blaze up in the sudden and terrible manner described in the present instance.

CHURCH AND UNIVERSITIES.

The Dean and Chapter of Durham are taking steps to establish a meeting of choirs at their cathedral on the 10th of September.

Mr. Brown, who some time since retired from the firm of Longman and Co., of Paternoster-row, has given £1000 for a stained-glass window in St. Paul's Cathedral.

The paragraph in our last Number, copied from the daily papers, stating that Mr. Alcock, M.P., has promised £3000 towards the endowment of a new bishopric for Southwark, is incorrect.

The Bishop of Ripon consecrated, on Tuesday week, a new church at Startforth, in the room of the dilapidated old one. The cost is £1700, and the church will accommodate 226 persons in the nave and chancel, exclusive of a west gallery for school-children. His Lordship subsequently consecrated an addition to the churchyard.

Llysŵen Church, Brecknockshire, was reopened last week, after being entirely rebuilt by Mr. Buckeridge, architect, at a cost of £1000. The Bishop of St. David's preached the sermon, which was followed by the Holy Eucharist, when upwards of fifty persons communicated. The church was very prettily decorated with evergreens and flowers.

Huntley Church, Gloucestershire, having been rebuilt, with the exception of the tower, on a scale of nearly double its former size, has been consecrated. The entire cost has been borne by the Incumbent, the Rev. Daniel Capper, Mr. Teulon being the architect. The building accommodates 700 persons, and is of a highly ornamental character within and without.

Testimonials have recently been presented as follows:—To the Bishop of Goulburn, from the Vicar, clergy, and laity of Islington, a silver epergne, inscribed, "From a few affectionate friends in England," together with a purse of £200. Rev. John Wilson, on leaving the curacy of Hindley, a silver inkstand, by the teachers and scholars of his Sunday-school.

A portion of the west window of Epsom College Chapel has been filled with glass by O'Connor, representing St. John the Baptist, St. John the Evangelist, Elijah, and Isaiah. The figures of St. Peter and St. Paul, Moses and David, are to follow. The whole is intended as a memorial of the late Prince Consort, and has received the gracious approval of her Majesty.

On Tuesday the annual festival of the choirs comprised in the Bakewell district of the Lichfield Diocesan Choral Association was held in the parish church of All Saints, Bakewell. A goodly company of the attendant clergy sat down to luncheon with Dr. Vaughan and Archdeacon Hill at the vicarage, and the choristers had a substantial repast supplied them in the girls' National Schoolroom, between morning and evening prayer.

The new church of St. Margaret, at Bramley, Leeds, the foundation-stone of which was laid by the Vicar, Canon Atlay, about two years ago, was consecrated on Thursday week. The architects are Messrs. Perkin and Backhouse, the style Geometrical Decorated, the accommodation for 1000 persons, and the present cost £4500, though £1500 more will be required to fully complete the work. The Bishop of Ripon preached.

The Bishop of St. David's lately consecrated the new memorial church of St. Barnabas, at Penboyr, in the county of Cardigan. It was built at the cost of the Earl of Cawdor, in furtherance of a wish expressed by the late Earl that a church should be erected on that part of the estates. It is intended to contain 250 sittings, and was designed by Mr. D. Brandon, of London, in the Early English period of architecture.

A meeting of Archæologists was held in the Church of St. Bartholomew the Great on Monday. The principal speakers were the Rev. Thomas Hugo, on the Records of the Monastery; Mr. J. H. Parker, on the Architectural Peculiarities of the Church; and Mr. Beresford Hope, on the Proposed Restoration of the same. More than eleven hundred pounds has been subscribed towards placing the ancient nave in a state of substantial repair. The entire cost is estimated at £1400.

On Monday week the foundation-stone of a new church was laid in Clearwell village, Gloucestershire, by the Dowager Countess of Dunraven, of Clearwell Court. The land has been given, and the whole cost of the structure will be defrayed, by the Countess; and it is the third time within the last six years that this lady has laid the foundation-stones, in this her native village, of institutions for its benefit—viz., the national schools, the parsonage, and now the new Church of St. Peter, each of which has been endowed or provided by the Countess.

PREFERMENTS AND APPOINTMENTS.—The Rev. H. Owen, Rector of Llangefni, Anglesea, to be Rural Dean of Malltraeth. Rev. A. S. Wilde, Rector of Louth, to be Prebend of Nassington in Lincoln Cathedral. *Rectories:* The Rev. W. Andrews to Postwick; Rev. J. Chalmers to Oxcombe; Rev. A. Fane to Fulbeck; Rev. C. W. Foster to Wickersley, Yorkshire; Rev. C. W. Rees to Greetham. *Vicarage:* The Rev. G. H. Wooldcock to North Willingham. *Incumbacy:* The Rev. R. J. Bird to St. Bartholomew's, Gray's-inn-road. *Chaplaincies:* The Rev. A. Brook, Vicar of East Retford, to the Bishop of London; Rev. H. W. Tayler to H.M.S. Canopus; Rev. G. Watson to the Presidency of Madras; Rev. C. Woodward to the Freemasons' School, Battersea-rise. *Perpetual Curacies:* The Rev. J. Jones to Llanarmon, Mynidd Mawr, Denbigh; Rev. L. R. Jacob to Llanllugan, Montgomeryshire; Rev. P. S. Wilson to West Pinchbeck. *Curacies:* The Rev. P. A. Amherst to Kettering; Rev. E. H. S. Bower to Cuckington with Stoke Trister; Rev. T. Clarke to St. Andrew's, Manchester; Rev. C. U. Dasent to Anderby with Cumberworth; Rev. R. Daunt to Farnworth; Rev. H. B. Jones to St. Margaret, Whaley Range; Rev. H. P. Lazenby to Thistleton, Rutland; Rev. A. S. Mallett to St. Andrew's, Manchester; Rev. J. B. Mitchell to Kirk Stoke with Syerston; Rev. G. Nash to St. Michael, Louth; Rev. N. Neville to Langar with Barnston; Rev. O. G. D. Perrott to St. Mary, Marlborough; Rev. G. W. Petherick to St. Bartholomew, Salford; Rev. E. F. Quarrington to Stoke; Rev. W. J. Rundell to St. James's, Pentonville, London; Rev. W. Walsh to South Ormsby with Driby; Rev. G. F. Williamson to Thrussington; Rev. C. N. Wild to Chilton Foliatt. The Rev. G. W. Robinson to be Lecturer of Barnby March, Howden, Yorkshire.—*Guardian.*

THE UNIVERSITIES AND PUBLIC SCHOOLS.—A benefaction of £1000 having been offered to Oxford University, the interest to be given as a prize for an English poem on a sacred subject, which shall be awarded once in every three years, the subject proposed for 1864 is "Sinai." The compositions must consist of not less than 60 nor more than 300 lines.

The examination of candidates at the Eton College election for the Foundation will commence on Thursday morning next.

The "Domum" at Winchester College is fixed for Monday, and the annual Wykehamic ball for the following day.

The Rev. T. H. Stokoe, M.A., Lincoln College, Oxford, Assistant Master of Clifton College, has been appointed to the head mastership of Richmond Grammar School, Yorkshire. There were nearly fifty candidates.

The annual speeches and distribution of prizes at Sir Roger Cholmeley's School, Highgate, took place on Wednesday week. According to the verdict of many old Cholmeleyans who were present, it was the best speech day within the memory of the oldest of them; and the Bishop of Lichfield, who presided in the absence of the Visitor, the Bishop of London, stated in his address that he had been at three others within the last fortnight, but this excelled them all. The speeches being over, the Bishop of Lichfield announced Tetham to be the Exhibitioner, and also the winner of the gold medal for Latin hexameters. The Chaplain-General of the Forces presented Miss Gantt's prize for mathematics. Lord Dartmouth presented his own prizes for general proficiency to Beaumont; for Greek iambics to Beaumont; for Latin prose to Tatham; French prize to Beaumont and Leach; German prize to Gaskell.

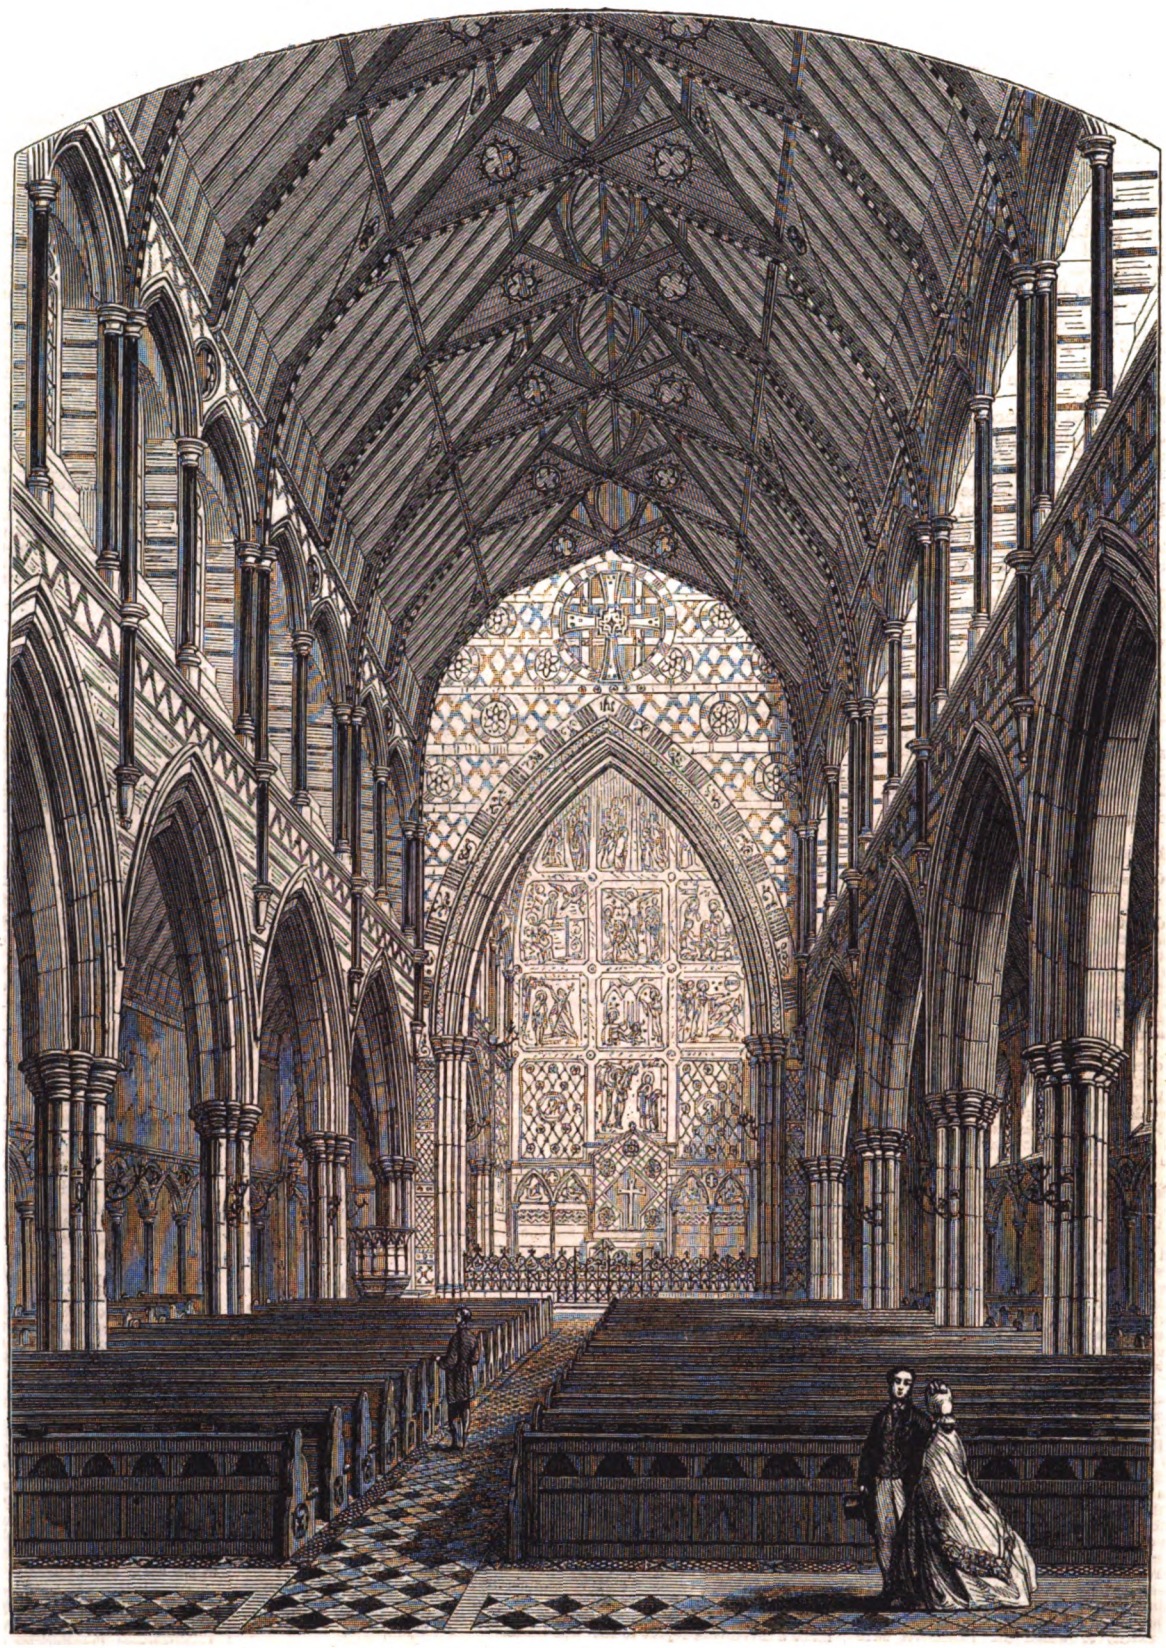
CHURCH OF ST. ALBAN, HOLBORN.

THE Bishop of London, a short time ago, consecrated the church of St. Alban, Holborn, which was built and endowed at a cost of, it is said, about £35,000, by Mr. John Gellibrand Hubbard, M.P., a director of the Bank of England. St. Alban's is one of the finest of the new churches in London, and presents many features of great interest to artists as well as to churchmen. The necessity for a church in this neighbourhood may be inferred from the fact that the building is bounded on the east by Leather-lane, on the west by Gray's-inn-lane, on the north by Baldwin's-gardens, and on the south by Brook-street. A lower class of population cannot exist; but it is gratifying to know that since the assignment of the new district out of St. Andrew's parish to the Rev. A. H. Mackonochie and his staff of fellow-workers there has been a perceptible improvement. Some years ago, Mr. Hubbard being anxious to build a free church in a poor district of London, Lord Leigh gave him a site at the end of Brook-street, and upon that the church stands, the parsonage being built on ground bought by Mr. Hubbard himself. Mr. Butterfield was the architect, and Messrs. Myers and Co., were the builders.

The whole of the building, outside and inside, is in the main of London ordinary bricks, relieved by stone, red and grey, the piers, arches, and windows of the church being of stone. The style is early Gothic. There are a nave and aisles, and chancel and aisles, and a porch at the west end of unusually large dimensions, into which the principal doorways open. Over the principal door (in Baldwin's-gardens) is an inscription to the effect that the church is wholly free and unappropriated, and over that approached from Brook-street the following:—"† To the glory of God, and in memory of S. Alban, martyr, upon a site given by William Henry, second Baron Leigh, this church is erected by a merchant of London." The font, a very handsome one, is of Derbyshire marble, inlaid with white marble; and the shafts are of Languedoc marble on a base of black Irish marble. The nave and aisles open from the font; the nave is 70 ft. long and 32 ft. wide, and measures 30 ft. to the ridge; the aisles are 9 ft. wide, and ornamented with an arcade on red clay shafts. The walls are of alabaster inlaid with coloured marbles. Under the west window, which is grisaille with coloured borders, there is an inscription:—"I acknowledge one baptism for the remission of sins." The grand feature, however, of the church are ten frescoes executed by Mr. F. Preedy, from designs by the late Mr. Henry Styleman L'Estrange, of Hunstanton Hall, Norfolk. They are painted in party colours by the water-glass process, like Mr. Maclise's frescoes at the Houses of Parliament, on stone columns rubbed with lime which had been quickening for twenty years. The handsome reredos is of four arcades, surmounted with evangelistic emblems. Over the altar, of oak, on which are two candlesticks, is a white marble cross, enframed in alabaster. The organ, by Mr. Holditch, is in the south choral aisle; the seats, to accommodate about eight hundred persons, are of oak, as is also the pulpit, the base of which is stone, with red clay shafts. There is a brass lectern and faldstool.



CHURCH OF ST. ALBAN, HOLBORN.

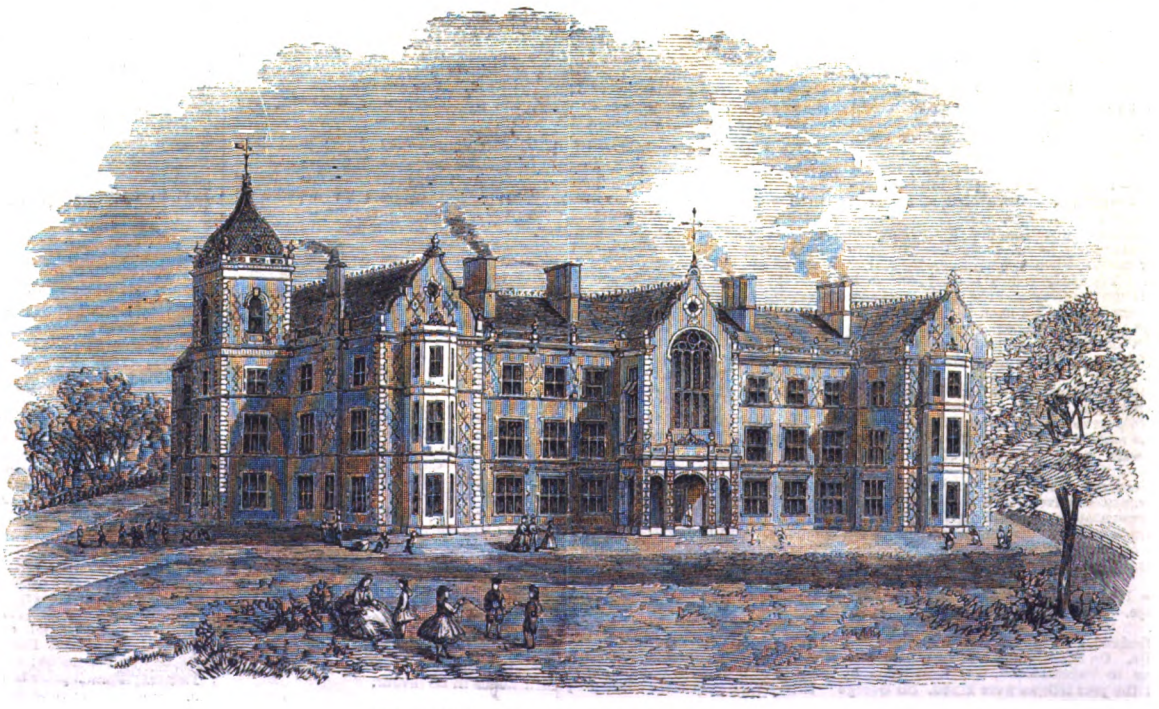
THE JEWS' HOSPITAL, LOWER NORWOOD.

THE Jews' Hospital, Mile-end, one of the oldest charitable institutions of the Jews in England, was established, in the year 1806, as an asylum for the aged, and for the education, maintenance, and teaching handicrafts to youth of both sexes. Large sums were collected by its founders, Messrs. B. and A. Goldsmid, considerable legacies have been bequeathed to it; the benevolent family of Rothschild have greatly benefited it; and the members of the community generally have at all times given it their support.

The dilapidated state of the buildings, not originally intended for their present purposes, induced the committee to recommend to the general body of governors and subscribers that a new and more commodious edifice should be erected. For this purpose Mr. and Mrs. Barnet Meyers presented the institution with eight acres at Lower Norwood, upon which the new building is erected; and valuable gifts have also been made by other members of the community. The change from the present crowded situation of the hospital to so eligible a site as Norwood will, it is hoped, prove advantageous to the institution and to the community generally. The excavations and concrete foundations have been very considerable, in consequence of the levels and nature of the soil. The finishings of the plinths, doors, windows, balustrades, quoins, and entrance are of Portland cement, except the windows of the synagogue, which are of Bath stone. The basement floors are finished with Seyssel asphalte, the entrance-hall with encaustic tiles, and the corridors and principal passages with red and blue terro-metallic tiles, brick arches being turned to receive the tiling, to render these portions fireproof, corresponding with the staircases and landings, which are of stone. The wings which form the north and south sides of the building are, with the tower, the only portions basemented. The dining-hall has an open timber roof, with lantern and ventilation. The walls are lined with panelled dado finishings, and the chimney-openings have handsome Caen stone chimneypieces, with stone fenders and suitable stoves. The principal staircase is lighted by a stained-glass window, containing Scriptural subjects, presented by Mr. Faudel, the chairman. Over the hall, &c., is the synagogue, with a gallery, having an open timber roof. The lower part of the synagogue is approached from the landing of the principal staircase and the corridors of the one-pair floor, and the galleries from the corridors of the two-pair floor. The wings of each floor are for dormitories, bedrooms, lavatories, and wardrobes; the portion between the wings and synagogue are intended for masters', matrons', and assistants' apartments. The approach to the building is from Knight's Hill Road; the entrance-gateway being the gift of Mr. Henry Keeling, the treasurer.

The foundation-stone was laid in June, 1861, by Sir Anthony Rothschild, Bart.; and the building consecrated February 26th, 1863, by the Chief Rabbi, the Rev. Dr. Adler.

The buildings were erected by Mr. John Willson, and the finishings executed by Mr. Charles Fish, from the designs of Messrs. Tillott and Chamberlain, architects, Gresham-street, City. The cost for erecting, furnishing, and fitting was £25,000.



THE JEWS' HOSPITAL, LOWER NORWOOD.

VIEWS IN MELBOURNE.

MR. EDWARD HAIGH (of the firm of Moira and Haigh) having lately returned from Australia, is now exhibiting a collection of photographic views taken by him in and about Melbourne, at their gallery, Lower Seymour-street, Portman-square. They are all remarkable for their wonderful delicacy and artistic effect. Many of them resemble highly finished sepia drawings in the purity and tenderness of their tints and in the absence of photographic hardness.

THE HOUSES OF ASSEMBLY.

When completed, the Houses of Assembly, Melbourne, will be a very fine mass of building, and worthy of the colony. We give a view of them as they now stand: it will be probably some years before sufficient funds are forthcoming to complete the whole design. As will be seen, a different and much more simple style of architecture has been chosen that that used for our Parliament Houses.

The centre portion of the building between the columns is occupied by the library for the use of the members of Assembly. This is not the same as the public Library of Melbourne, which one day promises to be among the most extensive libraries of the world. The principal entrance is at present considerably in the rear of the building.

The stone used is brought from Tasmania; it is excellent in colour, and very much resembles our Portland stone. The building stands at the top of Bourke-street, and commands a fine view of the city.

THE BOTANIC GARDENS.

The Botanic Gardens, Melbourne, of which we give an Illustration, taken from the above-named collection, are delightfully situated on the banks of the River Yarra Yarra, the windings of which may be seen in the middle distance of the picture. These gardens are about a mile from the city, and are very tastefully laid out: the undulating nature of the ground adds to their beauty. A great variety of trees and shrubs are cultivated in the gardens; among the former are some fine specimens of the gum-tree, which, indeed, were on the ground before the colony existed. Several of these picturesque trees appear in the foreground of the view. Roses grow in the greatest profusion and beauty; in fact, nearly every description of flower is to be found, either in the hothouses or in the open air. But these are not the only attractions of the gardens; the acclimatisation of birds is largely carried on here. A very extensive aviary has been erected, and a large swamp or lagune is filled with wild fowl and aquatic birds of various kinds. The thrush, skylark, and blackbird are now permanently established in the colony. The Botanic Gardens are a favourite resort of the citizens of Melbourne, and horticultural fêtes take place three or four times in the year, very much after the fashion of those in the mother country.

Dr. Mueller, whose name stands high on the list of accomplished botanists, is the curator and director of the gardens, and to his taste and knowledge they owe a large measure of their success. He lives in the very midst of his labours.

"BRICK COURT, MIDDLE TEMPLE—APRIL, 1774."

IN the picture we have engraved from the Royal Academy Exhibition, the painter, Mr. Eyre Crowe, has represented the scene in Brick-court, Temple, on the morning of the death of Oliver Goldsmith, as described by Mr. Forster in his excellent biography. Goldsmith had chambers for some ten years in the Temple—first, in Garden-court, from the windows of which (as he says in his "Animated Nature") he loved to watch the colony of rooks established in Temple Gardens; and, afterwards, at No. 2, Brick-court, over the chambers of Blackstone, who was then finishing volume four of his "Commentaries,"

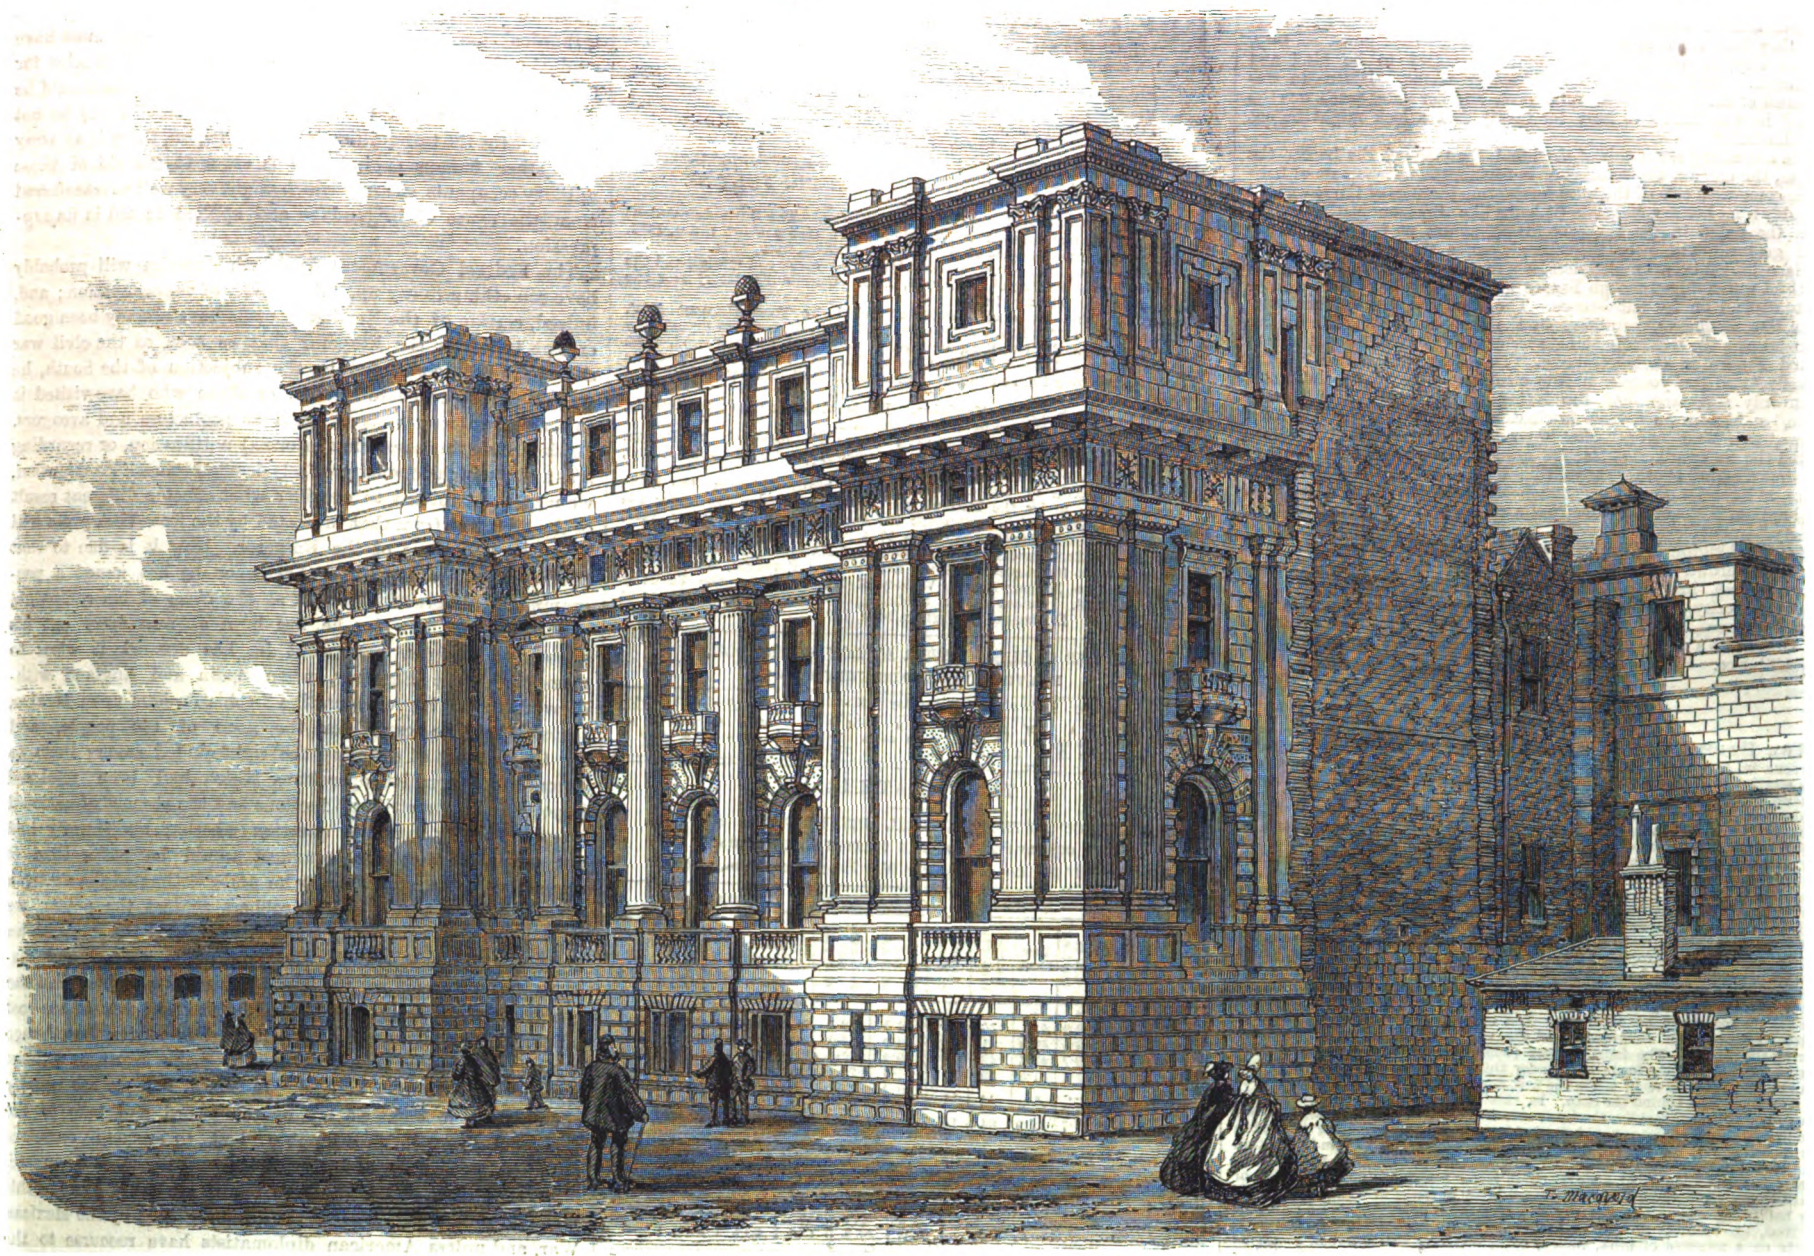
VIEWS IN MELBOURNE, AUSTRALIA.



THE HOUSES OF ASSEMBLY.

Here poor Goldsmith died of brain fever, aggravated probably by the fear of pecuniary distress, at the comparatively early age of forty-six. Mrs. Carter, in a letter to Mrs. Vesey on the event, expressed herself as "sincerely glad to hear he has no family, so his loss will not be felt in domestic life." And in reference to this remark occurs the passage in Mr. Forster's "Life of Goldsmith" which Mr. Crowe has so admirably illustrated. "The respectable and learned old lady," writes Mr. Forster, "could not possibly know in what other *undo*-mestic ways it might be felt. The staircase of Brick-court is said to

THE BOTANIC GARDENS—MELBOURNE IN THE DISTANCE.—SEE PRECEDING PAGE.

have been filled with mourners the reverse of domestic; women without a home, without domesticity of any kind, with no friend but him they had come to weep for; outcasts of that great, solitary, wicked city, to whom he had never forgotten to be kind and charitable. And he had domestic mourners too. His coffin was reopened at the request of Miss Horneck and her sister (such was the regard he was known to have for them) that a lock might be cut from his hair."

It is a touching scene this of the blind, the maimed, the Lascar, the beggar, the outcast, the wandering musician, the unfortunate of both sexes, come with two of the most fascinating beauties of the time, and probably some literary magnate (it looks like Johnson just alighting from the sedan in the background) to mourn at the door of the dead genius. The poor flageolet-player to the left, sitting with his face buried between his knees, is a direct allusion to Goldsmith's youthful wanderings through France with nothing but his flute-playing to depend on for subsistence. The Miss Horneck and her sister (then Mrs. Bunbury), mentioned in the passage quoted, had for five years been on the most affectionate terms with Goldsmith, and he had visited France in their company. The elder was called "Little Comedy," and the younger at the commencement of the intimacy, when only seventeen, had the loving sobriquet of the "Jessamy Bride," and exerted a strange fascination over Goldsmith. "Heaven knows," says Mr. Forster, "what impossible dreams may at times have visited the awkward, unattractive man of letters! But whether at any time aspiring to other regard than his genius and simplicity might claim, at least for these the sisters heartily liked him; and, perhaps, the happiest hours of the later years of his life were passed in their society."

Mr. Washington Irving, in his "Life of Goldsmith," has copied the hint thrown out by Mr. Forster, and, colouring many other circumstances, has, apparently without anything approaching sufficient authority, constructed therefrom what some may deem a very pretty romance, making the "Jessamy Bride" the very centre of all Goldsmith's hopes and thoughts subsequently to their first acquaintance.

SCIENTIFIC NEWS.

THE HABITS OF THE AYE-AYE, received at the Zoological Gardens in August last, are described by Mr. A. D. Bartlett in a paper read at a meeting of the Zoological Society and inserted in the *Annals of Natural History*, from which we select a few particulars. The animal on the voyage produced a young one, which only lived ten days. She was in poor condition on its arrival, but soon began to feed freely, and rapidly gained strength, as shown by the destruction of the woodwork of its cage. She sleeps during the day, and only at night exhibits any activity, when she crawls about, gnawing the timber when it is perfectly dark. On the production of a light she does not exhibit any signs of uneasiness, but stretches out her arm and tries to touch the lamp with her long fingers. She frequently hangs by her hind legs, and in this position cleans and combs out her large tail, using the slender hook-like third finger with great rapidity, reminding one strongly of the movements of the large bats (Pteropus). This skeleton-like finger is used with great address in cleaning her face and picking the corners of the eyes, mouth, nose, ears, and other parts of her body; during these operations the other fingers are frequently partially closed. In feeding, the left hand only is used, although she has the full use of her right one. The mode of taking her food requires careful attention, in consequence of the very rapid movement of the hand during the process. The fourth finger (which is the longest and largest) is thrust forward into the food; the slender third finger is raised upwards and backwards above the rest; while the first finger or thumb is lowered, so as to be seen below and behind the chin. In this position the hand is drawn backwards and forwards rapidly, the inner side of the fourth finger passing between the lips, the head of the animal being held sideways, thus depositing the food in the mouth at each movement; the tongue, jaws, and lips are kept in full motion all the time. Sometimes the animal will advance and lap from the dish like a cat; but this is unusual. Mr. Bartlett never heard her utter any cry or produce any vocal sound during the many hours at night in which he watched her habits, nor did she appear shy or angry at his presence. With reference to food, she exhibits no inclination to take any kind of insects, but feeds freely on a mixture of milk, honey, eggs, and any thick, sweet, glutinous fluid, rejecting mealworms, grasshoppers, the larvæ of wasps, and all similar objects. Consequently, Mr. Bartlett is inclined to think that this animal is not insectivorous. Its large and powerful teeth led him to infer that it may possibly wound trees and cause them to discharge their juices into the cavity made by its teeth and that upon this fluid it probably feeds. This appears the more likely, as our specimen returns frequently to the same spot on the tree which she has previously injured.

A REMARKABLE CHANGE OF FORM IN METALS, caused by successive heating and cooling, is the subject of a paper in the new number of the *Proceedings of the Royal Society* by Lieutenant-Colonel H. Clerk, who was led to experiment on the subject in consequence of the following circumstance:—When, a short time ago, the workmen at the Royal Arsenal, Woolwich, were about to shoe a wheel with a hooptire, to which it was necessary to give a bevel of about three eighths of an inch, one of the men suggested that the bevel could be given by heating the tire red hot and then immersing it one half its depth in cold water. This was tried and found to answer perfectly; that portion of the tire which was out of the water being reduced in diameter. The tire was 3 in. wide, ½ in. thick, and 4 ft. 2 in. in diameter. As this result was curious and not generally known, Colonel Clerk considered it desirable to institute some further experiments, in order to try how far, by successive heatings and coolings, this change of form could be augmented, and also whether the same effect could be produced on other metals than wrought iron. The experiments were made on cylinders of wrought iron of different dimensions, both hollow and solid—immersed, some to one half of their depth, others to two thirds; also on similar cylinders of cast iron, steel, tin, zinc, and gun metal. With wrought iron the heatings and castings could be repeated from fifteen to twenty times before the metal showed any signs of separation; but with cast iron, after the fifth heating, the metal was cracked; and the hollow cylinder separated all round just below the water-line after the second heating. Cast steel stood twenty heatings, but was very much cracked all over its surface. As respects the change of form of cast iron and steel, the result was similar to that in wrought iron, but not nearly so large in amount. The cast iron did not return to its original dimensions; but the smallest diameter was about 1 in. above the water-line. Tin showed no change of form, there being apparently no intermediate state between the melting point and absolute solidity. Brass, gun metal, and zinc showed the effect slightly; but, instead of a contraction just above the water-line, there was an expansion or bulging. The remarkable forms assumed by the metals under the above-mentioned treatment are shown in wood engravings.

ACTION OF HEAT ON LIQUIDS.—Some researches of Professor Donny, of Ghent, on this subject induced Mr. W. R. Grove, Q.C., F.R.S., to investigate the question, and, in consequence, give a lecture to the Chemical Society describing his experiments, of which we give a few notes. Water, it is well known, boils quietly in an open saucepan; but it was found to behave very differently when heated in a long glass tube drawn out to a fine point, which, permitting the escape of steam, did not allow the water again to absorb the gases of the atmosphere; under these circumstances the "bumping" or concussions, which are also to be noticed in the distillation of sulphuric acid, were observed. When, further, the air-pump is employed to facilitate the extraction of the air from the water, and the upper portion of the glass tube cut off with a file, it may happen that the renewed application of heat will induce a sudden and violent escape of vapour, amounting almost to explosion. Again, a flask containing a little hot water was placed under the receiver of an air-pump in connection with a platinum wire, which could be heated to a tolerably constant temperature beneath the surface of the water by means of an external galvanic battery. On exhausting the air, it was found that the ebullition occurred only at intervals; often a minute would elapse, and then a burst of vapour would almost eject the contents of the flask; but, this over, the water again became perfectly tranquil, and remained so for another minute, when another tumultuous ebullition occurred, to be succeeded by a period of rest. The same phenomenon was repeated at such regular intervals that the apparatus might almost have served as an indicator of time. In Mr. Grove's opinion, there was a parallel between the kind of ebullition here noticed and that observed in the geysers or boiling springs of Iceland. In both cases a column of water, partially deprived of air, was exposed to an external source of heat, and an uninterrupted kind of ebullition induced in consequence. In proof of the extreme difficulty of expelling air or dissolved gas from water, Mr. Grove described the following experiment:—A long glass tube, closed at one extremity, was bent in the middle nearly to a right angle; the closed limb was then half filled with water, from which, by long boiling, the air was supposed to have been expelled; the remaining space in the tube was then completely filled with olive oil, and the opened extremity dipped into a basin of the same. Heat was then applied to the tube until the water boiled, and this temperature maintained for a considerable time. Each bubble of steam which left the surface of the water passed through the column of oil, becoming smaller and smaller during its ascent; but never did it condense without leaving a microscopic bubble of gas, which at length accumulated so that it could be examined. This bubble was found to be pure nitrogen. Similar experiments were made with bromine, chloride of iodine, &c. The general conclusion Mr. Grove derived from his experiments was to the effect that water had a very powerful affinity for the gases of the atmosphere; that, by several processes, the oxygen could be eliminated, but that the nitrogen resisted all attempts to expel it from solution—so much so, that it might be doubted whether chemically pure water (a compound of two elements only) had ever been prepared; and, further, that ebullition (as applied to water) under all circumstances, consisted merely in the production and disengagement of bubbles of aqueous vapour formed upon a nucleus of permanent gas.

On the 20th inst. will be published,

CALENDAR FOR THE WEEK ENDING JULY 25.

SUNDAY, July 19.—Seventh Sunday after Trinity. The Scots defeated at Halidon Hill, and Edward Balliol made King (for a short time), 1333. Princess Augusta, Duchess of Mecklenburg-Strelitz, born, 1822.

MONDAY, 20.—Margaret, Virgin and Martyr, 278. Victory of Reading and the Spaniards over the French at Baylen, 1808. Garibaldi's victory over the Neapolitans at Melazzo, 1860.

TUESDAY, 21.—The order of Jesuits abolished by Pope Clement XIV. (Ganganelli), 1773. Battle of the Pyramids: the Mamelukes defeated by Napoleon (termed "the King of Fire"); Lower Egypt conquered, 1798. Inauguration of Leopold I., first King of Belgium, 1831. Victory of the Confederates over the Federals at Manassas or Bull Run; panic flight of the latter, 1861.

WEDNESDAY, 22.—St. Mary Magdalen. Battle of Salamanca: the French, under Marmont, defeated by Wellington, 1812.

THURSDAY, 23.—Battle of Shrewsbury: Henry IV. defeated the Percys, Hotspur slain, 1403. The citadel of Ghuznee stormed by Sir John Keane, 1839. Moon's first quarter, 9 h. 32 min. p.m.

FRIDAY, 24.—Battle of Harlaw: sanguinary battle between the Scots Lowland army under the Earl of Mar, and the Highlanders under the Lord of the Isles, which established the superiority of the former, 1411. Gibraltar taken by Sir George Rooke, 1704.

SATURDAY, 25.—St. James the Elder, Apostle and Martyr. Battle of Ourique: Count Alfonso Henriques hailed the first King of Portugal, after totally defeating the Moors, 1139. Victory of Napoleon over the Turks at Aboukir, 1799. Defeat of the Schleswig-Holsteiners by the Danes at Idstedt, 1850. Duchess of Cambridge born, 1797.

FINE-ART SUPPLEMENT.

ILLUSTRATIONS OF THE WIMBLEDON PRIZE MEETING.

The Supplement of

THE ILLUSTRATED LONDON NEWS

for SATURDAY NEXT, JULY 25, will include Engravings of the following Pictures in the Royal Academy Exhibition:—

"The Fiery Cross," by J. L. Brodie.
"A Sick Call," by M. J. Lawless.
"La Toilette des Morts," by E. M. Ward, R.A.
"Sunday Morning—Betyingen, Knetensburg," by Miss E. Osborn.
"The Young Shipwright," by L. Duncan.

The Number will contain, among other Engravings, Portraits of the late W. Mulready, Esq., R.A.; and of the newly-elected Royal Academicians, William Boxall, Esq., Henry Weekes, Esq., and F. Goodal, Esq. And of Mr. Henry Le Jeune, A.R.A. Also, Illustrations of some of the most interesting Scenes and Incidents at the WIMBLEDON PRIZE MEETING, including a Portrait of Sergeant Roberts, of the 12th Shropshire, Winner of the Queen's Prize.

Price of the Number and Supplement, Fivepence; Stamped, 6d.

TO CONTINENTAL SUBSCRIBERS.—Mr. Ludwig Denicke, Leipsic, has been appointed our Special Agent for Germany. Terms of Subscription at Leipsic—including four Double Numbers and the Christmas Number—One Year, 8 Thalers 20 Sgr.; Half-year, 4 Thalers 10 Sgr.; per Quarter, 2 Thalers 5 Sgr.

THE ILLUSTRATED LONDON NEWS.

LONDON: SATURDAY, JULY 18, 1863.

FRANCE has Mexico. The capital was virtually won at La Puebla, and the north-western march of the French was all but unopposed. It is, however, due to the military character of our gallant neighbours to add that they lost no time in improving their victory, and hastened to seize points at which a determined resistance might have been offered with disastrous results to themselves. They pushed forward with energy, and the Imperial eagle has dethroned the eagle and serpent. The Sovereigns of the old world have been somewhat in haste to congratulate the "Parvenu;" but there *is* matter for congratulation in this success. We have from the outset expressed our conviction that a French occupation of Mexico must do good—not unalloyed good, it is true; but the imposition of anything like order and law upon a people utterly unaccustomed to either cannot fail to lay the seeds of a civilisation that will bear fruit in good season. We look with neither real nor affected horror upon the operations of the French in Mexico. At the very lowest, they are police operations of a salutary character, but we have hope that they will prove to be something nobler and better. We therefore hope, also, that the so-called national party, which could never be consolidated while peaceful and honest reform was to be done, but which was promptly welded into a formidable conspiracy against a reformer from abroad, will discover that further resistance is useless, and will accept the lessons which the Tuileries schoolmaster has undertaken to teach. Those who see in this Mexican conquest a tyrannical suppression of the liberties of a people must have studied to little purpose the disgraceful history of Mexico for the last quarter of a century. It was time that she should be taken in hand, and, if the force under General Forey be not sufficient for the tranquillisation of the region, there is an army in another famous capital that is eager to get rid of those military occupants, an army which might very well be transferred from the cause of brigandage and applied to aid in its suppression.

The Federal Government in North America will probably have something to say upon the subject of the occupation; and, indeed, certain of the Northern organs have already been good enough to inform the Emperor that as soon as the civil war shall have been concluded by the subjection of the South, he will do well to evacuate Mexico, or those who have visited it as conquerors may visit it again as protectors and avengers. Setting aside this somewhat informal notification, or regarding it as a hint which does not precisely demand immediate attention, we may be permitted to consider what effect a different result of the civil war from that indicated by the New York press will have upon the plans of the Emperor. Now it is due to that Sovereign to bear in mind that when he has issued a programme he always adverts to it at the close of his campaign, and points out how far he has been able to carry out his announced designs, and what he has deemed it wiser to abandon. The Emperor, when Spain and England withdrew from active co-operation in his designs upon Mexico, stated that he came for the good of the people, and for the purpose of enabling the rightminded among them to execute regenerative operations which had been rendered impossible by the strife of factions and the absence of national ideas. Passing over the question whether his Majesty had not supposed that the conquest would be easier than it turned out to be, and whether he under-estimated the strength of the hatred which unites robbers against the police, we may give him credit for having conducted the war with an undaunted vigour, and in the face of a general and discouraging readiness on the part of Europe to believe that the campaign was disastrous. He holds Mexico; but it has cost much. We mean nothing disrespectful in saying that France is not more ready than England to make sacrifices without securing some form of reward. It is true that we are usually cheated the moment we lay by the sword and take to the pen; but we do our humble best to recoup ourselves the losses we sustain, and France is generally more fortunate. Now, the Americans, North and South, are out of court in this matter. We all know what the Union gained by the Mexican War, and unless American diplomatists have recourse to the Monroe doctrine (incorrectly so termed, by-the-way), and declare that European Powers have nothing to say on the soil of the New World—a logic against which England has the very best reason to protest—it is not for fellow-citizens of the Californians and Texans to object upon principle to any concession which a regenerated Mexico may make in gratitude to her French regenerator. But supposing that the South should establish its claim to recognition, and the rumour should be true that a French General has in his portfolio powers to publish such recognition in the great square of Mexico on the part of France, the relations of the Emperor and of Mr. Davis will take a new aspect. Clearly, the sentiment of Southern gratitude, to use a gracious form of words in lieu of a cynical one, will take a distinct form, and between the kindness of the recognised Confederation and of the regenerate Mexico the Emperor may find himself obliged to accept the reward of his goodness. In plainer terms, a permanent French settlement in Mexico may be among the things of the future; perhaps an incipient Algiers.

As regards the Mexicans themselves, we believe that such a result of the war would be a benefit. The French are not good colonists, but they are an admirable police. They, when in earnest to put down brigands (such brigands not having had their poniards blessed at St. Peter's) do the work effectually, and, as under the stern old Romans, "the robber is smothered in his cave or stabbed at its mouth." But it is with a higher class of ruffianism that France will have to deal also, and with a fierce system of robbery and jobbery which sends its agents into Government houses, and works ambidextrously with proclamations and with pistols. A new organisation will have to be devised and carried out, and the astounded Mexicans will have to learn that law does not mean law conditionally on its exponent holding a long knife; but means a rule to be obeyed silently and punctually by all people and under all circumstances. We admit that to hope that this lesson will be learned in a hurry is a hope in the spirit of the stage direction in a late wit's proposal to dramatise Lord Macaulay's History—"Enter St. Augustine: a pause of five-and-twenty minutes while he converts the Britons to Christianity." But the lesson will be taught in time. The Arabs of Algeria have at length been made to comprehend that they are to recover a debt by putting the defendant into a court and not into a fire.

But as regards England. There is a swarm of little red marks on the right of the map of North America which indicates that England has an interest in knowing all about new settlers between 10 deg. and 30 deg. and 60 deg. and 110 deg. Well, we incline to think that, should the Emperor decide on a permanent occupation, we might have a worse neighbour. We should have an ally, and one who professes, and, as we believe, with truth, to consider England and France as the natural leaders of the world, and Powers with whom it would be insanity to quarrel, when, united, they have the world at their disposal. There is another reason or two why a French settlement in Mexico would not be disadvantageous to us, and we think that England will have no cause to object to the congratulations of our Queen being added to those of the other Sovereigns.

THE COURT.

The Queen continues at Osborne, in good health. Her Majesty has signified her intention of making a short tour upon the Continent early in August. The Queen will travel incog., under the title of "Duchess of Lancaster," and will maintain the strictest privacy. Her Majesty, after paying a visit of a day to the King of the Belgians, will proceed direct to the Castle of Rosenau, near Coburg, the birthplace of the late Prince Consort, which the Duke of Coburg has kindly placed at her disposal. The Queen's stay abroad will probably not exceed four weeks.

On Sunday the Queen, Princess Helena, and Princess Louisa attended Divine service at Whippingham Church. The Rev. G. Trothero officiated.

On Wednesday the New Zealand chiefs (whose portraits are given in our Journal this day) had the honour of an interview with her Majesty. The chiefs were accompanied by Mr. Jenkins, Government interpreter, and two other residents in New Zealand. The Duke of Newcastle was present. The chiefs crossed over from Southampton in her Majesty's yacht Fairy, which was sent to meet them. The Queen, accompanied by Princesses Helena and Beatrice and Prince Leopold, and attended by the Hon. Mrs. Bruce, the Hon. Beatrice Byng, and the gentlemen in waiting, received the chiefs in the council-room, where they were severally presented by Mr. Jenkins, and had the honour of kissing her Majesty's hand. The heads of tribes then addressed the Queen through the interpreter. Her Majesty received the chiefs in the most gracious and friendly manner, and both accepted from and presented to them several valuable presents. After partaking of luncheon, the whole of the party went on board the Victoria and Albert, which was lying off Osborne, and proceeded to Portsmouth.

The Queen and the Royal family and the Princess of Leiningen have during the week taken daily walks and drives in the vicinity of Osborne.

THE PRINCE AND PRINCESS OF WALES.

The Prince and Princess arrived at Frogmore at the end of last week.

On Saturday the Prince, attended by Lieutenant-General Knollys, Lord Mount-Edgcumbe, and Captain Grey, went to Caterham and laid the foundation-stone of the new building to be erected for the Warehousemen and Clerks' Schools.

On Sunday morning the Prince and Princess attended Divine service at the parish church of St. John. Their Royal Highnesses occupied the pew previously used by the late Duchess of Kent. The Rev. Thomas Rooke, the Rev. J. Stone, and the Rev. R. J. Simpson were the officiating clergymen. In the afternoon the Prince and Princess, attended by the Marchioness of Carmarthen and Captain Grey, drove in the Great Park.

On Monday the Prince and Princess arrived at Marlborough House from Frogmore. At twelve o'clock their Royal Highnesses proceeded to Wimbledon, attended by the Marchioness of Carmarthen, Lieutenant-General Knollys, and Captain Grey, and were present at the rifle-shooting of the National Rifle Association. The Prince and Princess on the same day visited the Duchess of Cambridge. In the evening their Royal Highnesses honoured the Princess' Theatre with their presence.

On Tuesday the Prince and Princess, accompanied by the Duke of Cambridge and Princess Mary, and attended by the Marchioness of Carmarthen, Lieutenant-General Knollys, and Captain Grey, paid a visit to the camp at Aldershott, and were present at a review of the troops in camp. The Prince and Princess returned to Frogmore from Aldershott.

The visit of the Prince and Princess to Leeds will take place on the 3rd of August. The inauguration of the new Townhall will take place on the following day, at which their Royal Highnesses will be present. The Prince and Princess after the ceremony will proceed to Ripon and to Studley Royal, the seat of Earl De Grey and Ripon.

His Royal Highness the Duke of Cambridge and a numerous circle have been invited to partake of the hospitalities at Goodwood during the race week.

The Prince and Princess de Joinville, and the Duke de Penthièvre, attended by M. Fauvel, have returned to the Clarendon Hotel from Tunbridge-wells.

His Excellency the Belgian Minister and Mdme. Van de Weyer and family have left Grosvenor-square for New Lodge, Windsor Forest.

The Duke and Duchess of Marlborough have left St. James's-square for Blenheim Palace.

The Duke of Leinster arrived at his residence on Carlton House-terrace on Tuesday, from Carton House, Ireland.

The majority of the Marquis of Hastings will be celebrated with great rejoicings in Leicestershire next week. The festivities will open on Monday; and on Wednesday, Thursday, and Friday, Donnington Park, the family seat near Derby, will be the scene of continuous hospitalities.

The Marquis and Marchioness of Drogheda left town a few days since on a yachting excursion.

The Marchioness of Waterford has left town for Ireland.

Earl and Countess Grey left town on Thursday for their seat in Northumberland.

The Earl and Countess of Carnarvon have left town for their seat, High Clere, Berks.

The Earl and Countess of Darnley have left town for Cobham Park for the season.

The Earl and Countess of Zetland left town on Monday for Paris. The noble Earl will return for Goodwood races.

The Earl and Countess of Ailesford have left town for Paris.

Earl Brownlow and Lady Marian Alford returned to town on Saturday from Ashbridge Park, Hertfordshire.

The Earl of Dudley has left Dudley House for his shooting quarters in Inverness-shire.

The Earl of Brecknock left town on Tuesday for the family seat, Wilderness Park, Sevenoaks.

The Earl of Wilton returned to town on Monday from Cowes. After Goodwood races the noble Earl will return to the Isle of Wight for the Royal Yacht Squadron regatta.

Viscount and Viscountess Palmerston and the Hon. Misses Jocelyn returned to Cambridge House on Monday from Brocket Hall.

Viscount and Viscountess Holmesdale left town on Saturday for their seat, Linton Park, Staplehurst.

Viscount and Viscountess Clifden have arrived at their residence in Whitehall, from their villa at Wimbledon, for her Ladyship's accouchement.

Viscount and Viscountess Newport have left town for Western House, Staffordshire.

Viscountess Jocelyn returned to town on Wednesday from Osborne.

Viscountess Walden left town on Wednesday for the Continent.

Baron and Baroness Meyer de Rothschild have left their residence in Piccadilly, on a Continental tour.

Lord and Lady Cremorne left town a few days since on a tour in Germany.

FASHIONABLE ENTERTAINMENTS.

The Duchess of Wellington gave a grand concert on Wednesday evening, at Apsley House, which was honoured with the presence of the Duke of Cambridge, Princess Mary, the Prince and Princess of Saxe-Weimar, Prince Frederick of Holstein, the Princess of Servia, the Prince Teano, the Prince and Princess Bandini, the Prince and Princess Frasso Dentice, and a distinguished circle of the aristocracy. The musical entertainment embraced the talent of Mdme. Grisi, Mdme. Alboni, Mdme. Miolan-Carvalho, Signori Ronconi, Baragli, Ciampi, Graziani, and Gardoni. Signor Costa presided at the pianoforte.

The Duchess of Buccleuch gave a brilliant ball on Monday evening, at Selton House, which was numerously and fashionably attended.

The Marquis and Marchioness of Westminster gave a dinner party on Tuesday evening, at Grosvenor House.

The Countess of Derby held a reception on Monday evening at her residence in St. James's-square, which was attended by a large and distinguished circle. Previous to the assembly the noble Earl and Countess entertained at dinner Prince and Princess Edward of Saxe-Weimar, the Marquis and Marchioness of Abercorn, and Lady Georgiana Hamilton, the Earl of Ashtesley, &c.

The Countess De Grey gave a dancing party on Tuesday evening, at her residence in Carlton-gardens. The Duke of Cambridge, Princess Mary, Prince and Princess Edward of Saxe Weimar, and a large number of other distinguished visitors were present.

The Countess of Stradbroke received a numerous party of guests on Saturday evening at her residence in Belgrave-square. Previous to the assembly the Earl and Countess entertained a select party at dinner.

The Earl and Countess of Malmesbury gave a dinner-party on Saturday evening at their residence in Stratford-place.

Sir Robert and Lady Emily Peel entertained a select party at dinner on Saturday at their mansion in Whitehall-gardens.

Lady Marian Alford had the honour of entertaining at dinner on Monday evening, at her residence, Prince's-gate, the Duchess of Cambridge and Princess Mary. A select circle had the honour to meet their Royal Highnesses.

Sir Henry and Lady Sophia Des Vœux gave a dinner-party on Monday evening, at their residence in Berkeley-square.

Mrs. Villebois had an afternoon musical party on Saturday, at her residence in Belgrave-square, at which the Duchess of Cambridge and Princess Mary were present.

Miss Burdett Coutts gave an afternoon party on Thursday. The Duchess of Cambridge, Princess Mary, and a select circle were present.

His Royal Highness the Duke of Cambridge, as Field Marshal Commanding-in-Chief, had a levée on Saturday afternoon at the Horse Guards. About seventy officers paid their respects to his Royal Highness.

THE TOURNAMENT AT CREMORNE.

VAUXHALL by daylight, before the *villegiatura* of Simpson, first and unlearnest of M.C.s, had been swept away and the Royal property laid out in building lots, was the most striking type of all that was tawdry and garish. It was the reverse of a medal; it was the wrong side of a rich piece of tapestry. In traversing Vauxhall by daylight you felt like one who trod alone a banquet-hall deserted: lights fled, garlands dead, and all, save yourself, departed. What a coarse daub of scene-painting the panorama in the Waterloo ground looked! What a commonplace flavour of South Lambeth there was about the famed Italian walk! How gloomy and naked looked the skeleton firework frames! You became aware that the statuary, which by night looked like alabaster and Parian marble, fresh from Phidias's chisel, was only composed of broken-nosed plaster casts from Leather-lane. You observed that the "fifty thousand additional lamps" were not five hundred in number; that the glasses were always dirty and sometimes broken, and smelt of rancid oil. The bowers where you took supper last night were degraded to the proportions and appearance of rabbit-hutches; the trees were blackened with London soot; you came to look on the Hermit in his cave as an impostor at a pound a week, and at the gipsy fortune-teller as a female rogue and vagabond well deserving of the treadmill. The shell-shaped orchestra was patently a mass of rickety boards, sham gilding, and slovenly arabesques; and the musicians who discoursed such sweet music in the balmy summer nights were only a knot of red-nosed fiddlers in battered cocked hats. In a word, Vauxhall by daylight destroyed all your illusions. It was dreadfully prosaic. To make it poetical you wanted Mr. Simpson in evening dress and with an opera hat under his arm; you wanted 'rack punch, lobster salad, moonlight, catherine wheels, roman candles, cold chicken, and the bright eyes of your cousin from the country.

There is about Cremorne Gardens, the successor to old Vauxhall, a general appearance of rural beauty and horticultural symmetry decidedly favourable to their being viewed by daylight. Moreover, from four or five o'clock in the afternoon till long after dusk Paterfamilias, and Materfamilias, and all their little olive-branches may, with perfect propriety, resort to its umbrageous avenues, or wander through its sparkling parterres. Finally, there is attached to Cremorne a certain demesne known as the Ashburnham Ground, which is not exactly Cremorne, but an offshoot, or messuage, or succursal, or appanage to it, and may be safely patronised by those who think a public garden somewhat of a naughty place. In this Ashburnham Ground, covered in, and very prettily draped with the flags of all nations and a variety of heraldic trophies and allegorical devices, some of which appeared to have had a semi-Scandinavian origin and to have already done duty on London Bridge when the Prince of Wales and his bride elect made their public entrance into the metropolis, there was first introduced to the public, on Wednesday, the 8th of July, a grand chivalric and mediæval tournament, *à l'instar* of the renowned tilting-match lately held in the Imperial riding-school at Vienna.

A tournament by daylight would seem but a perilous experiment—at least, in modern times; for it is, of course, difficult to divest a pageant which has become an anachronism from the tinsel trappings and tawdry splendour of a theatrical spectacle. Our middle-aged readers will recollect the Eglinton tournament—when the present Duchess of Somerset, then Lady Seymour, was the Queen of Beauty—when the wild Marquis of Waterford was one of the Knights—and the Emperor of the French, then Prince Louis Napoleon Bonaparte, one of the Squires. A sum of money which, on the Continent, might be considered a princely fortune, was spent over Lord Eglinton's great passage of arms; but the meteorological influences were unpropitious. In plainer English, it rained cats and dogs. The Black Knight was compelled to throw a mackintosh over his armour; the Squire of Dames took refuge under an umbrella; the jesters were drenched to the skin; the heralds found their trumpets so damp that they could not bring a flourish from them; and the Queen of Beauty retired to her bower with a cold in her head.

The weather was more favourable to Mr. E. T. Smith on the momentous Wednesday in question. In fact, so clear was the sky and so bright the afternoon sun, that the roof of the Ashburnham Pavilion might have been removed, or the entire ceremony adjourned to the adjacent Cremorne without the slightest damage being done to knightly panoply or the radiant attire of noble chatelaines. The proceedings commenced with a grand procession, numbering over three hundred persons, of heralds, seneschals, men-at-arms, arbalisters, timbaliers, squires, yeomen, pages, and banner-bearers, clad in an almost endless variety of shining armour and mediæval gear. It was, in truth, a most gorgeous masquerade of morions, casques, visors, shields, pennons, guidons, battle-axes, burnished and inlaid armour, spears and partisans, plumes and broidered scarves, silk, velvet, bullion, and jewels. Above all, the procession assumed an air of reality, and was devoid of any marked theatrical aspect. The pages, indeed, were of the softer sex, and were, perhaps, no strangers to the choreographic stage; but they bore themselves bravely, and looked as much like boys as ever they possibly could. The Tournament King and the Tournament Queen of Beauty, who appeared in the procession on magnificently-caparisoned palfreys, having dismounted and ascended a tapestried tribune, the lists were opened by solemn proclamation of the heralds, and the jousting began. First there were trials of skill between the knights of England, France, Russia, Prussia, Holland, Denmark, and Poland, all clad in armour of proof and bestriding mettlesome chargers draped in emblazoned housings. There was tilting at the ring, and at the quintain (the old Turk's head effigy), and javelin-casting at targets placed on the ground, by knights riding swiftly by; and, finally, there was a grand mêlée, or general combat of *preux chevaliers* on each side of the lists, ending in one of the combatants being, for form's sake, unhorsed, and his triumphant antagonist receiving the prize from the Queen of Beauty. These martial exercises were enlivened by the strains of bands of music, and by the intermittent facetiæ of a party of jesters, who bethwacked one another with bladders in the most approved Wamba-like manner. The tournament was witnessed by a crowded array of rank and fashion; and, now that it is fairly started, the attendance of the general public will doubtless compensate Mr. E. T. Smith for the large outlay and the time and trouble bestowed on this singular revival of a bygone pastime. If we might venture on a word of advice, it would be to vary the entertainment a little by single combats between the knights, mounted or on foot, and by trials of strength or *jongleric* between the jesters and minstrels. On the first day the bill of fare was rather meagre, and the effect—after the excitement caused by the procession had passed off—monotonous.

COLUMN FOR THE CURIOUS.

The Corporation of London has just received a most valuable addition to its library at the Guildhall. It will be recollected that during the late conflagration at the Dutch Church in Austin-friars the fine library was fortunately saved. This collection of books and MSS. was made by Maria Dubois, a pious lady, and was placed at the west end of the church, over the screen, in an apartment in-cribed thus:—"Ecclesiæ Londino-Belgicæ Bibliotheca, extructa sumptibus Mariæ Dubois, 1659." Additions to the collation were made from time to time by the Dutch Ambassadors, the Dutch East India Company, and the wealthy members of the congregation. Its autographic treasures include a very interesting collection of letters of the early ecclesiastical Reformers—among others, of Erasmus, Calvin, and Peza, Bucer, Peter Martyr; Grindal, Archbishop of Canterbury; Vizet; John a Lasco, the first minister of the Dutch Church in London; Bullinger, and of John Fox, the martyrologist; likewise letters of the principal founders of the Dutch Republic, including the Prince of Orange, afterwards William I.; Sir Philip de Marinix, Count d'Aldegonde, the Admiral of the Dutch fleet. One collection alone contains 272 original letters to Abraham Ortelius, geographer to Philip II. of Spain, from the chief learned and scientific men of the age. Here are also portrait-etchings of Albert Durer, by himself; Ortelius Christopher Plantin, printer of the polyglot Bible; of Cardinal Ximenes, Gerard Mercator, William Camden, Dr. John Dee, the great Lord Burghley; the Earls of Leicester, Sussex, and Lincoln; several of the English Bishops of those times, and of the Lord Mayors of London; also the Ten Commandments, believed to be in the handwriting of Rubens. The library principally consists of early theological works in Latin, German, Dutch, and English; good editions of the classics; illuminated Bibles; Blaew's "View of the different Continental States in 1649, and the Embassy to China in 1670"—in all about 2000 volumes, and with the old fittings complete. This great accession of treasures will necessitate the enlargement of the library at Guildhall. It now consists of narrow but well-kept apartments, the quiet of which, in the heart of a great city, almost reminds one of a monastic cell.

The recent Royal visits to the halls of certain of the City companies have led to some statements of their histories which are not in accordance with fact. Thus, the Mercers' has been referred to as "the most ancient of all the great leading companies." But several are of greater antiquity, although the Mercers' company takes precedence of rank, as enumerated in the following note to the *Times*:—

Order of Precedence.	Charter granted.	Order of Precedence.	Charter granted.
No. 1. Mercers	1393	No. 19. Bakers	1307
No. 2. Grocers	1345	No. 25. Saddlers	1280
No. 4. Fishmongers ..	1384	No. 26. Carpenters	1349
No. 5. Goldsmiths } ..	1327	No. 42. Weavers	1164
No. 6. Skinners }		No. 88. Parish Clerks ..	1232

It will thus be seen the "Weavers" enjoy the privilege of being the first to whom a charter was granted of any of the City guilds.

A curious story of a portrait has been communicated to the *City Press*. It will be recollected that after the liberation of Wilkes and the condemnation of general warrants by Lord Camden, his Lordship's portrait was painted by Sir Joshua Reynolds and placed upon the walls of the Guildhall; it bears this inscription, which Lord Brougham has well described as "simple, chaste, and true:"—"In honorem tanti viri Angliæ libertatis lege assertoris" (in honour of so eminent a man, assertor by the law of English liberty). The portrait has long been removed from the Guildhall, and is now in the reading-room adjoining; and a recent examination of the picture has led to the discovery that the original head and shoulders have been cut away, and *another head and shoulders substituted;* the inserted portion being instantly detected by any one standing close under the picture. The questions hence arise, how can this mutilation have been perpetrated? and what has become of the Chief Justice's head and shoulders?

Evidences in illustration of pre-historic times continue to accumulate. At the meeting of the Archæological Institute, on the 3rd inst., Sir J. Clarke Jervoise, M.P., gave an account of extensive vestiges of the ancient forest of Bere, near his property in Hampshire. He exhibited a plan of a remarkable fortified site—a camp, surrounded by concentric circular trenches, evidently of a very early period; and described certain singular beds of burnt flints, locally known as *milk stones*, from the colour of the calcined surface. They lay in large quantities in the clay. Sir J. Jervoise thinks it possible that these flints might have been used, when heated, for some purposes of cookery, in like manner as the South Sea Islanders are said to have heated water in gourds, or wooden vessels, by means of heated stones thrown into them. Mr. Albert Way described the traces of a similar culinary expedient in very primitive times, noticed by him in the excavation of certain singular dwellings on the estates of the Hon. W. O. Stanley, near Holyhead. Lord Talbot called attention to the importance of investigating even the most obscure vestiges of pre-historic times. The agency of fire had, doubtless, been made available for purposes now difficult to demonstrate. He adverted to the extraordinary remains known as vitrified forts, of which examples, although less familiar to the antiquary than those in Scotland, exist in Ireland; and he had lately received from an antiquary of note in France, Captain Prevost, a very curious memoir on certain similar fortresses existing in that country.

In the *Archæologia*, vol. xxxix, part 1, just issued, Mr. Evans's "Account of further Discoveries of Flint Implements in the Drift," read to the Society of Antiquaries May 16, 1861, is printed *in extenso*, reaching to nearly thirty pages, illustrated with several prints of groups of the implements, well engraved. Mr. Evans refers to a discovery recorded by Mr. Frere, in the thirteenth volume of the *Archæologia*, as "incontestable evidence of a discovery of this nature *some sixty years ago*, when but little advance had been made in the science of geology; and Mr. Frere's suggestion, that the situation in which the weapons were found may tempt us to refer them to a very remote period indeed," was fully borne out by the facts which Mr. Evans was able to adduce, the whole tendency of the evidence being to establish a far greater antiquity of the human race than was consistent with our ordinary chronology. At the close of his paper Mr. Evans refers to one point well worthy of observation, which belongs rather to the antiquary than the geologist:—

> That is, to determine whether the character of the implements discovered in one locality is in all respects the same as it is in those of some other place, or whether well-defined distinctions may be drawn between them.
>
> Let not antiquaries neglect the new field that is opened for their researches. The deposits in which the implements are likely to be found, the post-glacial drift, and more particularly the freshwater pleistocene drift, containing elephant remains, occurs in nearly all parts of England, more especially along the course of all our largest rivers. It needs only diligent and careful observation to trace out fuller evidence of the existence and method of living of man when he was the joint tenant of this country with the mammoth, the rhinoceros, the hippopotamus, and the great carnivorous occupants of the caves at that remote period when the drift which lines the slopes of our great river valleys was formed; and ere long I am confident that this will have been done in many other places in England besides those which I have already enumerated.

This new part of the *Archæologia* is otherwise rich in its contents, including four papers on Holbein and painters contemporary with him; and papers on "Roman Remains and Mediæval Burial;" and the "Brick Architecture of North Germany," profusely illustrated.

M. Riley's translations of the "Chronicles of the Mayors and Sheriffs of London," 1188 to 1274, and the "French Chronicle of London," 1259 to 1343, have appeared. They disclose almost every item of information that has survived as to the history of the English capital during their respective periods. The first is attributed to Fitz-Thedmar, Alderman of London, in the reign of Henry III.; the French Chronicle had already been translated by the Camden Society: its version of the legend of Fair Rosamond, in its very earliest form, is very curious.

In the Adolphus collection of books and pamphlets, recently sold, the Rev. Mr. Dillon's (the Chaplain's) account of the Lord Mayor's Visit to Oxford brought the large sum of £81. We remember a copy, last year, in Paternoster-row, for 12s. It is a thin post 8vo volume, nicknamed "Lord Wenables's Voyage to discover the Source of the Thames." This book is a piece of simplicity, not sly quizzing. Soon after publication it was "bought up" and suppressed. The account of the Lord Mayor Johnson's View of the Thames in 1846, in the ILLUSTRATED LONDON NEWS, No. 224, is the most circumstantial record of such a visit as will probably never be repeated. It was a gay succession of feasting, which cost the City many hundreds of pounds,

THE PUBLIC SCHOOLS MATCH: 200 YARDS RANGE

THE COUNTIES' MATCH 600 YARDS.

Digitized by Google

WIMBLEDON PRIZE-MEETING.

THE operation of settling down having been successfully achieved at Wimbledon Common on Monday week—on which day, as stated in our last Number, the Prince of Wales visited the ground and made some excellent shooting—the regular work of the meeting began on Tuesday, the 7th, when a match between Lancashire, Gloucester, and Middlesex was played, at 600 and 800 yards. The contest was carried on with great spirit, with the following result:—Lancashire made 656 points; Gloucestershire, 566; and Middlesex, 565: Liverpool and Bristol thus beating London. [We give an Illustration of the Counties Match at the 600 yards range.] The Competition between Cambridge and Oxford for the National Rifle Association bronze medal resulted in victory to the former, Cambridge scoring 310 (of which 74 points were won by Captain E. Ross), and Oxford 286. The sharp crack of Enfield and small-bore was unremitting from 1.30 p.m. until the darkness of the evening had so far advanced as to make good shooting difficult. The running deer, sighting, and pool targets were steadily patronised.

The Public Schools competition, on Wednesday, for the Ashburton challenge shield, caused great excitement and a large number of the "upper ten thousand" witnessed the match. [We give an Engraving of the Public Schools Match at the 200 yards range. There were eleven representatives of each of the following schools:—Eton, Rugby, Cheltenham, Winchester, Harrow, and Marlborough. The ranges were 200 and 500 yards, five shots at each distance. Eton won the Ashburton challenge shield; and Mr. Deedes, of Winchester, Earl Spencer's cup, value £20, which was competed for by the best eleven from each school. This prize was won last year and the year before by Eton. Harrow was the winner of the Ashburton challenge shield for two previous years. The Winchester College corps is only composed of forty members. The following is the total number of marks obtained by each of the schools:—Eton, 246; Rugby, 230; Marlborough, 224; Harrow, 229; Cheltenham, 193; and Winchester, 223. The winners on both sides were hoisted and carried by their comrades round the ground. In shooting for the association prize, Captain Heaton, Adjutant of the 3rd Manchester Rifles, made seven bull's-eyes out of seven shots at 200 yards, and in firing for Lord Vernon's prize made three cartons at an 8-inch bull's-eye at 600 yards out of ten shots. For the extra series of prizes Mr. H. G. Ross, at 800 yards, made five bull's-eyes and two centres. Captain Field, of the Hon. Artillery Company, won the Middlesex bronze medal. Among the events of the day were the shooting for the House of Lords' prize, first stage, and the Queen's prize, first stage. During Tuesday and Wednesday five of the markers were hurt—one of them seriously, the sight of an eye being destroyed—by the fragments of the balls recoiling from the target, and the Duke of Cambridge forthwith issued some stringent regulations for the government of the competitors, which were strictly enforced.

On Thursday the shooting for the Queen's prize was continued, as also the competition for the Lords' and extra prizes. As regards the question of marking, General Hay and Colonel Steele, of the Coldstream Guards, which corps has hitherto attended the butts, issued a notice at noon that they could not undertake the responsibility of allowing the men to continue to mark by the disc system. Lord Elcho having called upon the members of the Victoria corps, who were encamped on the ground, to act as markers, they and several other corps came forward. No accidents took place this day. Lord Elcho and Lord Ducie marked at one of the disc butts all the afternoon, to assure themselves of their safety. The accidents hitherto are attributed to the Guardsmen not being sufficiently cautious, and to the butts being rather too close together.

The weather was very hot on Friday, but the haze was not favourable for shooting. Probably owing to this cause, the average of the shooting was not so high as was anticipated, though one or two remarkable scores were made. The first stage of the Queen's prize was concluded.

On Saturday the Prince of Wales's prize, value £100, was won by Private A. Rumball, 3rd Herts, who made a total score of 58 marks in seventeen shots at the 200, 500, and 600 yard ranges. The St. George's challenge cup, value £250, presented for annual competition to the volunteer battalions of Great Britain by Lieutenant-Colonel the Hon. C. H. Lindsay, on behalf of the members of the St. George's Rifles, was won by Private Jopling, of the South Middlesex corps, who was the winner of the Queen's prize the year before last. In addition to the honour of holding the vase on behalf of the corps for the term of one year, he is entitled to £5 and the gold jewel of St. George. The winner scored 32, five others being only one behind him. The ties of the first stage Queen's prize were shot off, and the following are the successful competitors:—Private Whisker, 2nd Essex (winner of the silver medal); Sergeant Millward, 1st Gloucester (St. George's); Private Miller, 1st Gloucester; Corporal Winser, 3rd Kent; Captain Henderson, 2nd Cornwall; Private Ridler, 1st Gloucester; Private Page, 26th Kent; Private Phillips, 1st Shropshire; Sergeant Allen, 23rd Somerset; Corporal Worth, 8th Warwick; Private March, 12th Norfolk; Sergeant Bingham, 1st Gloucester; Private Adamson, 47th Lancashire; Corporal Marshall, 6th Lincoln; Ensign Bland, 8th Lancashire; Colour-Sergeant Gale, 10th Surrey; Private Richardson, 10th Norfolk; Private Crawford, 16th Renfrew; Private Fidler, 5th Isle of Wight; Sergeant Graham, 2nd Wilts; Sergeant Benning, 2nd Bedford; Corporal Coldcleugh, 7th Durham; Private Wyatt, 1st City of London; Sergeant Marriner, 9th Middlesex; Private Mackenzie, London Scottish; Sergeant Smith, 15th Derby; Sergeant Curtis, 15th Glamorgan; Corporal Whitehouse, 3rd Leicester; Corporal Brooks, 12th Middlesex; Private Redhead, 3rd Gloucestershire; Sergeant Darley, 9th Leicester; Corporal Clithero, 9th Lincoln; Private Ellis, 8th Surrey; Corporal Allen, 14th Wilts; Captain Russell, 29th Kent; Corporal Taylor, 21st Middlesex; Private Richardson, 5th Lincolnshire; Lieutenant Brougham, 13th Stafford; Private Trotter, 4th West York; Private Berkley, 2nd Tower Hamlets; Lieutenant Deavan, 17th Glamorgan; Sergeant Haines, 16th Surrey; Private Murray, 1st Mid Lothian; Major Pinpon, 13th Sussex; Private Bazley, 3rd Cambridge; Private Cree, London Scottish; Private Avis, 1st Devon; Captain Brooks, 10th Leicester; Private Chuter, 25th Surrey; Private Coles, 1st Notts; Lieutenant Watson, 1st Newcastle; Private Haughton, 5th Norfolk; Private Garwood, 15th Norfolk; Corporal Kettle, 16th Stafford; Private Betts, 1st Warwick; Private Roberts, 12th Shropshire; Corporal White, 39th Middlesex; Private Kersey, 20th Middlesex; Private Walters, 1st Edinburgh; Private Read, 14th Suffolk. The first thirty of these win a Whitworth rifle and £5 each, and the remaining thirty £5 each. The Whitworths were distributed to the competitors for the Queen's prize, and Lord Ducie instructed them in the details of that weapon at the sighting target. Captain Herbert, of the Coldstream Guards, made the following score at the running deer:—For fifty shots he made eight bulls'-eyes—two consecutive—twenty-six centres, ten outers, and six misses. Up to Saturday evening nearly 80,000 rounds had been sold at 6d. per ten rounds; and the consumption of spirits was also large, the "sack" bearing an undue proportion to the "bread," as might be expected in the dog days. Amongst the bye amusements the sweepstakes were very popular, including shooting at the deer, the volunteer, and the soldier, all running.

On Sunday morning the volunteers, Guardsmen, police, and others in camp at Wimbledon paraded at half-past ten o'clock, and marched to the grand stand for Divine service. A temporary pulpit, covered with the union jack, was erected facing the stand, and the Rev. T. Hanly Ball, Lecturer of St. Mary's, Wimbledon, officiated as Chaplain. The brass band of the G division of police took part in those portions of the service admitting musical accessories. The Guards were ranged in one compartment of the stand, the volunteers, camp attendants, &c., in the centre, and the police on the left. Lord and Lady Ann Elcho, Colonels Luard and Bewes, Captain Ruxton, and others, were present.

The Prince and Princess of Wales visited the shooting-ground at Wimbledon on Monday, and watched for a time the match between eleven members of the House of Lords and eleven of the House of Commons. The Peers were defeated, the Commons scoring 460 points against their 423. In the contest between Cambridge and Oxford, the former won. The Alexandra prize, a cup value £50, or money, at the option of the winner, so named by the association in honour of her Royal Highness the Princess of Wales, was shot for in seven shots at the 600 yards range by thirty winners of the Enfield all comers' prize, 200 yards; and thirty of 500 and 600 yards. Private Mackenzie, of the 15th Middlesex, became the winner, making a total score of 22 points. The other shooting of the day resulted in the winning of some of the lesser prizes, whilst progress was made in some of the greater matches. The ties for the secondary prizes in connection with the St. George's challenge vase and the entire competition terminated as follows:—Private Jopling (South Middlesex), the challenge vase and gold jewel; Private Johnson (2nd Stafford), silver jewel; Sergeant Robinson (7th Middlesex), bronze cross; Corporal Croucher (6th Tower Hamlets), photograph of vase. A good deal of amusement was caused by Lord Elcho being disqualified from shooting for any of the general prizes, because in firing he hit the wrong target.

The grand event of Tuesday was the shooting for the second stage for the Queen's prize. This commenced punctually at gunfire in the morning: the men being divided into four squads at the long ranges on the north side of the common. It was soon manifest, from the practice at the first range of 800 yards, that much better shooting would be made than had been the case in the previous year. Men rolled off bull's-eyes and centres as quickly as a picked squad would have done with Enfield rifles at 500. The weather was less unfavourable than on the day the 600 yards was shot. The competitors continued firing all day, exciting very little attention until the evening drew on. Then a few distinguished visitors strolled up to the firing-points, which by this time were pretty well surrounded by interested riflemen and friends of the men. General Hay watched with interest the rapid progress which his pupils were making in the use of his favourite weapon. Lord Elcho, Lord Grosvenor, and Lord Radstock saw the last few rounds fired, and waited until the momentous question was decided. The victor, Sergeant Roberts, of the 12th Shropshire Volunteers, finished a splendid score of 65 marks, or three over an average of centres, in the first squad that had concluded firing. So high a score was at once looked upon as certain to gain the prize; but, as another squad drew towards a close, Serjeant Graham stood at 61 with a shot to go. The excitement became considerable when he knelt down, as it was believed that if he got a bull's-eye he would win, though tying in marks, from occupying a higher place in the sixty. This point, however, was soon decided by his falling to score the required number, thus leaving Roberts the undisputed winner of what so many have coveted and keenly contested. Mr. Roberts's marks at the different ranges were:—

800 Yards.	900 Yards.	1000 Yards.	Total.
4 4 4 3 3 3 2—23 ..	4 4 4 3 3 4 4—26 ..	2 3 0 2 4 3 2—16 ..	65

The next highest score, that of Sergeant Graham, 2nd Wilts, was as follows:—

800 Yards.	900 Yards.	1000 Yards.	Total.
4 3 2 4 4 3 4—24 ..	4 2 4 2 4 4 3—24 ..	2 3 0 2 3 3 3—16 ..	64

The following are winners of all comers' prizes at 200 yards:—Captain Thatcher, £50; Lieutenant Burt, £40; Lieutenant Brougham, £20; Gibbs, Bristol, £20; Mitford, Jeffrey, Wilson, Halford, Beasley, and Ryrie, £10 each; Lord Bury, Comte de Gendre, Hitchcock, Austle, Palmer, Gregg, Burra, Murray, Muir, and Baker, £5 each. In the 500, all comers', Captain Heaton and Sergeant Smith, Victorias, were tied. They did not shoot off, and divided the first and second prizes, £50 and £40. Evans and Lord Fielding, £20 each; Austin, Ashton, Ellson, Baker, Crockart, and Ferguson, £10 each; Rigby, Kinnear, Astley, Master of Lovat, Yates, Cade, Little, Padwick, Brazil, and Gibb, £5 each. At 600 yards, Lord Fielding, £50; M'Cavenay, £40; Heaton and Martin, £20 each; Halsall, Kemp, Brown, Holloway, Dawson, and Burr, £10 each; Fenton, Lessop, Ross, Seymour, Lathbury, Starkey, Halford, Grey, Astley, and Smith, £5 each. For the first series extra prizes the following is a list of winners in order of merit:—Sergeant Cunliffe, Fletcher, Evans, Ross, Atkinson, Ashton, Banting, Lord Wharncliffe, Farquharson, and Winser.

The shooting on Wednesday was excellent, particularly that for the Albert prize, consisting of a cup, value £100, or £100 in money. The competitors for this prize were confined to the winners of the sixty all comers' prizes, who have nearly all been compelled to shoot off ties at unusually high figures. The winner of the Albert prize was Mr. Martin Smith (Victorias), whose shooting at the 1000 yards' range was as nearly perfection as it is possible for shooting to be. Beginning with an outer, he steadily improved at each shot, drawing the three centres, which he next obtained, gradually nearer and nearer the bull's-eye, in which he planted the remaining three out of seven shots. He won with 73 points eight more than the number made by the winner of the Queen's. The following is Sergeant M. Smith's score:—

800 Yards.	900 Yards.	1000 Yards.	Total.
3 3 2 4 4 4 4—24	4 4 3 4 4 4 3—26	2 3 3 3 4 4 4—23	73

The next best score was that of Ensign Brazill, 61st Lancashire:—

800 Yards.	900 Yards.	1000 Yards.	Total.
3 2 4 4 4 4 4—25	4 3 3 4 4 3 3—24	4 3 4 3 3 2 2—21	70

The excellence of all the shooting at Wimbledon, that of losers as well as that of winners, has never been surpassed. Last year, when the new mode of marking was adopted, Mr. Pixley carried off the Queen's prize. He made 43 up to 600 yards, and 44 up to 1000 yards—giving a total of 87. This year Sergeant Roberts scored 40 in the first stage, and 65 in the second—giving a total of 105. Last year the lowest score of the forty who were to compete in the second stage was 37; this year the lowest score of the sixty who competed was 40. Again, in shooting through the final ranges, that is from 800 to 1000 yards, last year the lowest score of the forty was 19; this year the lowest score of the sixty competitors was 36. Last year thirteen men out of forty retired from the contest; this year sixteen out of sixty retired. It will be seen that the shooting of the present year surpasses that of last in every respect. In the match between the Lords and Commons the same improvement is visible. Last year the Lords scored 411, and the Commons 349; this year the Commons scored 460, and the Lords 423. Lord Wharncliffe made 47 last year, the highest score in his squad; this year he made 51—the utmost he could have made was 56—and he is still in a majority of one over Lord Bury and Earl Ducie. This year the Commons made only six misses, last year twenty-six; this year the Lords made twenty misses, last year they made eighteen. These facts show that, even allowing for fine weather, there has been during the past twelvemonth a great improvement in shooting, both with the Enfield and the small bore.

The review of volunteers at Wimbledon on Saturday (to-day) will commence at five o'clock p.m. The following corps have received the permission of the Secretary of State for War to attend:—The Honourable Artillery Company, 1st Middlesex Artillery Volunteers, 1st ditto Engineers, 1st City of London ditto, 1st Middlesex (Victoria) Rifle Volunteer Corps, 2nd ditto (South), 4th ditto, 9th ditto (West), 19th ditto, 20th ditto, 22nd ditto (Queen's), 23rd ditto (Inns of Court), 28th ditto (London Irish), 29th ditto, 36th ditto, 38th ditto (Artists), 39th ditto (the Finsbury Rifle Corps), 40th ditto (Central London Rifle Rangers), 47th ditto, 2nd Administrative Battalion Middlesex, 7th ditto, 1st Surrey (South London), 10th ditto, 12th ditto, 19th ditto, 23rd ditto, 1st Administrative Battalion Surrey, 2nd ditto, 1st City of London, 2nd ditto, 3rd ditto, 2nd Tower Hamlets, 4th ditto, 6th ditto, 8th ditto, 1st Administrative Battalion Tower Hamlets.

LIVERPOOL JULY MEETING.—MONDAY.

Sefton Handicap.—Cerintha, 1. Don't Come Late, 2.
Sefton Stakes.—Barchettina walked over.
Sweepstakes of 10 sovs.—Confidence, 1. Virginia, 2. Antipodes, 3.
Bentinck Testimonial Handicap Stakes.—Johnny Armstrong, 1. Misfortune, 2.
Tyro Stakes.—Virginia, 1. Lady Mary, 2. Pretty Girl f., 3.
Selling Stakes.—Boeotian, 1. Gaiety, 2. Gun Trick, 3.
Great Lancashire Produce Stakes.—Lady Mary, 1. Lord Adolphus, 2.

TUESDAY.

The Welter Cup.—True Heart, 1. Cutler, 2.
The Mersey Stakes.—Persuasion, 1. Pretty Girl f., 2. Practitioner, 3.
The Liverpool Cup.—The Knave, 1. Dr. Syntax, 2. Flytrap, 3.
A Free Handicap Plate of 30 sovs.—Misfortune, 1. Fig, 2. Boeotian, 3.
A Sweepstakes of 10 sovs. each.—Sabra c., 1. Gertrude, 2.
The Aintree Plate.—Antipodes, 1. Cutler, 2.

WEDNESDAY.

Knowsley Dinner Stakes.—Le Marechal walked over.
Handicap of 5 sovs.—Hesper, 1. Confidence, 2. Coronet, 3.
Stanley Stakes.—Livingstone, 1. Practitioner, 2. Appenine, 3.
Selling Race.—Coronet, 1. Kill-or-Cure, 2. Antipodes, 3.
Molyneux Cup.—Johnny Armstrong, 1. Fairwater, 2. Cistercian, 3.
Knowsley Stakes.—Young Rapid, 1. Corinthian Tom, 2. Acolyte, 3.
Liverpool St. Leger.—Borealis, 1. Fanfaron, 2. Bonny Bell, 3.
Her Majesty's Plate.—Caller Ou walked over.

ABINGDON RACES.—TUESDAY.

Trial Stakes.—Umpire, 1. Queen of Trumps, 2. Golden Dust, 3.
Nursery Plate.—Wangle Eye, 1. Sensation, 2. Measure for Measure, 3.
Handicap Sweepstakes.—Grey Hen h., 1, Overture, 2. Dirt Cheap, 3.
Marcham Park Stakes.—Curie, 1. Foie de Gras, 2. Souveraine, 3.
Maiden Two-Year-Old Stakes.—Echo, 1. Agatha, 2. Mulberry, 3.
Berkshire Stakes.—Gavazzi, 1. Rubicon, 2. The Monk, 3.
Ladies' Plate.—Grisette, 1. Sanita, 2. Wee Aggie, 3.
Craven (free) Handicap.—The Principal, 1. The Baron of Avon, 2. Alcibiade, 3.

WEDNESDAY.

Handicap Sweepstakes.—Lufra, 1. Surbiton Hill, 2. Petit Oiseau, 3.
Abingdon Stakes.—Crisis, 1. Faith, 2. Agatha, 3.
Handicap Sweepstakes.—Peru, 1. Gasconade, 2. Foie de Gras, 3.
Stand Plate.—Gipsy Girl, 1. Sanita, 2. Blanche of Lancaster, 3.
Sweepstakes of 3 sovs.—Nancy, 1. Rapture, 2. Bright Whim, 3.
Culham Stakes.—Mermaid, 1. Princess Vocqsal, 2. Barmaid, 3.

STAMFORD RACES.—THURSDAY.

Stamford Leger.—Tippler, 1. Taje, 2.
Sweepstakes of 50 sovs.—Midnight Mass, 1. Chaperon, 2. Alliance, 3.
Burghley Stakes.—Millionaire, 1. Grimston, 2. Harlequin, 3.

HUNGERFORD RACES.—THURSDAY.

Craven Stakes.—Principal, 1. Rhœbus, 2. Peru, 3.
Berks and Wilts Stakes.—Lavender, 1. Flirtation, 2.
Selling Stakes.—Surbiton Hill, 1. Sanita, 2.
Handicap Sweepstakes.—Lufra, 1. Lord of the Manor, 2.
Ladies' Plate.—Overture, 1. Champagne, 2.

PONTEFRACT RACES.—THURSDAY.

Nottingley Stakes.—Little Stag, 1. Saragossa, 2. Theobalds, 3.
Members' Plate.—Charles Fox, 1. Devotee, 2. Luna, 3.
West Riding Handicap.—Dictator, 1. Captain Crow, 2. Charles Fox, 3.
Speculation Plate.—Balderstone, 1. Ville Gratura, 2.

The Conservative Land Society, which has been in existence but twelve years, have expended £750,000 in the purchase of land.

Advices from the Republic of Liberia state that at the election on the 5th of May Mr. Daniel B. Warner was chosen President for two years, and Mr. James W. Priest vice-president.

There are over seven hundred gold and silver mining companies in Nevada territory, with capitals ranging between two hundred and fifty thousand to five million dollars.

It is arranged that the court-martial on Colonel Crawley shall take place at Chelsea Hospital in the first week in October, at which time it is expected that the parties ordered home by the last mail will arrive from India.

On Tuesday, by the afternoon's tide, her Majesty's ship Majestic, Captain E. A. Inglefield, left her moorings in the Mersey, and proceeded to sea on her summer cruise. It is expected that she will be absent from Liverpool about two months.

The Kingstown regatta took place on Wednesday. First race (1st prize), a piece of plate, valued at 60 guineas: Phryne, 1st; Surf, 2nd; Vindex, 3rd. Second race (2nd prize), a purse of 30 sovs.: Thought, 1st. Third race (3rd prize), a purse of 15 sovs.: Glide, 1st; Ripple, 2nd. Gig Race: Princess Alexandra won, belonging to the Kingstown Rowing Club.

The Belfast people intend to erect a stately clock-tower as the local memorial to Prince Albert. At a meeting of the subscribers, held on Monday, it was decided to vigorously proceed with the scheme. £1600 has been subscribed, and the Corporation have agreed to present the clock. A town's meeting is about to be held to raise the balance of the required sum.

A number of Liverpool merchants have addressed Lord Russell for an amendment of the Foreign Enlistment Act. They urge that it should be made more stringent, that it has proved inefficacious, and that to set an example of a lax fulfilment of neutral duties will be highly injurious to England. Lord Russell answers that it is efficacious enough, in his opinion, for all necessary purposes.

The Queen has appointed Harry Thomas Alfred Rainals, Esq., British Vice-Consul at Copenhagen, to be her Majesty's Consul at the Island of St. Croix. Her Majesty has approved of M. de Roubaix as Consul-General, and of M. Louis Goldmann as Second Consul, at the Cape of Good Hope, for the Sultan; the Queen has also approved of M. Louis Goldmann as Consul at Cape Town for the King of Denmark.

SKETCHES IN PARLIAMENT.

WHEN the last book containing the last votes on the Civil Service Estimates is submitted, with a certain emphasis, to the House of Commons at a morning sitting, every one knows that it means the beginning of the end of the Session. Thenceforth, all Parliamentary proceedings are spasmodic, if not galvanic, in their nature; and the Prime Minister, sometimes perhaps reckoning a little without his host, thinks he can deal with the thinning ranks on all sides pretty much as he pleases. At this time there comes over those members who for some unaccountable reasons linger in town a sort of horror of long debates in the abstract; but nevertheless—probably for want of other amusement or occupation in those who find the House of Commons always the best, now the only, club in which any one is to be found—desultory discussions go on till all sorts of hours in the morning, and three nights out of the week the sittings are cut short by counts out at near two o'clock. This state of things gives some clue to the mystery of an agitation which has been going on lately for the improvement and enlargement of the members' refreshment-rooms, which, however, has been ridiculed out of the house by some gentlemen who, it is to be presumed, are ascetic, teetotal, or, at any rate, unclubable—to use the Johnsonian word. In the good old times, when "Bellamy's" was a part of the British Constitution, members "refreshed," they did not "dine," within the purlieus of the house. Simplicity prevailed, from the uncarpeted but snowy floor to the plain but inimitable chop or steak, in an apartment which was in some degree akin to the establishments in the City, where men sustain nature, and no more, in the brief intervals of business. Members then did their work in the house, and their lounging and dining at their clubs proper. As matters are now constituted, the arrangements of a club, in all senses, are carried out within a few yards of the door of the house; and an ill-organised attempt has been made to transplant fashionable dining into a place where only a third of its frequenters are fashionable. It would be quite possible to provide adequately for this third, but as the other two thirds, on occasions when a full House is gathered and a division takes place about seven o'clock, rush to the nearest point where dinner of any sort can be had, failure is the necessary result. We put it to those gentlemen who complain of the accommodation afforded them, what club in London could at once serve dinners to two hundred clamorous postulants? The blunder is in attempting finery where comfort only is required; and from the discussions which have recently taken place we think we see symptoms of a return to the modest excellence of "Bellamy's," and the abolition of pseudo-gastronomic arrangements which are, to those of Brooke's and White's, "Hyperion to a Satyr." At any rate, it may be observed that a debate on "entrées" and "vintages," and demands of public money for their adequate supply to members of Parliament, is curiously infelicitous when it follows or precedes a discussion as to how half a million of starving operatives are to be got through the winter on the minimum of food, fire, and clothing.

It was said of Booth, the actor, that, although a very little man, when he enacted great tragic parts, he contrived to look six feet high. Mr. Roebuck has acquired something of this art. When he rides on the whirlwind and directs the storm which he raises in the House of Commons he ceases to appear small, either bodily or mentally, and that solely because of his consummate self-belief. His confidence in himself naturally is great; but it is sustained and magnified into sublimity—which, however, is always in danger of toppling over into the other proverbial extreme—by his confidence that he is the incarnation of English character and English policy. Not too generally accepted before, this estimate of himself has been rudely shaken of late by Mr. Roebuck's migration into the atmosphere of Courts, not of Kings merely, but of Emperors. His phraseology now might become a Lord Chamberlain; and we should not wonder if he has learned perfectly the trick of walking backwards. In the recent scenes in the house which arose out of the self-constituted diplomatic mission of two simple (in more senses than one so far as regards this particular matter) members of Parliament to the Emperor of the French, nothing was so evident as Mr. Roebuck's solemn belief that he was only following out his mission as *the* representative man of all England. One can fancy the grim humour with which the Emperor fooled such an ambassador to the top of his bent. Indeed, it seems to us that his ironical acceptance of Mr. Roebuck in the character he had assumed was the height of genteel (Imperial) comedy; and if, as is probable, the Emperor was not unwilling that a silly presumption should be punished, doubtless he has obtained his desire; for the result, as it came about in the House, was palpable—when men ceased to laugh they condemned and repudiated the whole business; and we suspect there was but one dissentient listener to the pointed and grave lecture which the Prime Minister delivered on the vice of amateur diplomacy, and that was Mr. Roebuck himself.

If in his case the sensation was serio-comic, in that of Mr. Lindsay it was altogether comic. The consciousness that he was in an absurd situation, into which he had been drawn rather than sought, was full upon that gentleman. No sense of personal dignity, real or false, sustained him in a position of sore trial. He seemed rather nervous at its being known that he had an "entrée" of some sort to the Tuileries (of course, not the back stairs), but rather implied, nevertheless, that his comings and goings between the Emperor and Lord Cowley (with whom, as he said, he had sometimes occasion to dine) were condescensions on his part, and only rendered endurable by a sense of pure patriotism and an eye to the shipping interest. How he did flounder and go in zigzag circles about a secret which he was dying to reveal, and which he thought would raise him at once into sensational importance; which was ever trembling on the very rough end of his tongue, and which every one thought was about to be blurted out, just at the moment that he sat down. To be sure, there were some sceptical witnesses of the contortion apparently necessary to prevent his breaking confidence, who were of opinion that he had, in fact, nothing to tell, and that he was only endeavouring, in his awkward but decidedly canny way, to assume an air of forced secretiveness to persuade people that he was the depository of vast but undigested plans, which were as yet only appreciable by Emperors, Ambassadors, and Lindsays.

What is the most important question of the day? Is it cotton, is it Poland, is it America, is it the refreshment of members of Parliament, is it the matter of precedence between Scotland and Ireland, or is it the duty on fire insurance? When a member of the House of Commons addresses himself to mankind he may be excused if he makes an immensely long speech, if he indulges in calculations and estimates which sound in thousands of millions, and if he contrives to beat the Government on a division. All this and much more did Mr. Sheridan do the other night, when he brought forward his annual motion for reducing the tax on insurances from fire, which, as we have hinted, he treated as the first question of the times. The self-belief of this gentleman is quite as complete as that of Mr. Roebuck; but, whereas in the latter it manifests itself in a querulous, scolding assertion, in the former it assumes an *aplomb*, and a settled ease, evinced by a flinty expression of countenance, a stereotyped supercilious smile, and a measured utterance, which, in combination, prove that cool assurance is as much in favour with Mr. Sheridan as fire insurance. Certainly, one sympathises with the evident irritation from which Mr. Gladstone suffers when this gentleman is speaking; and, as we suspect, Mr. Gladstone had to undergo peculiar mortification on this particular occasion. From certain indications we believe that it was intended to meet Mr. Sheridan in the way which would be most annoying to him—that is, by leaving his monster speech unanswered and proceeding at once to a division. For this, we think, preparation had been duly made at the time he sat down; for it is believed that Mr. Brand communicated to Mr. Gladstone that he had men enough on the premises then for a majority for Government, but that many of them said if there were any more long speeches they would go away. Accordingly, Mr. Gladstone did not spring up, as was expected of him; but one of his most impish tormenters in Parliament did—that is, Mr. Hubbard intervened. The antagonism between this gentleman and the Chancellor of the Exchequer is complete, and no one is more ready with criticism on Ministerial finance, or with inexplicable and fanciful fiscal schemes of his own, than Mr. Hubbard. It is hardly possible to conceive, and quite impossible to describe, the manner in which this honourable member flows on, half hour after half hour, in a string of neat sentences, which have a clear, clinking sound to the ear, but which convey no accurate meaning or intelligible statement

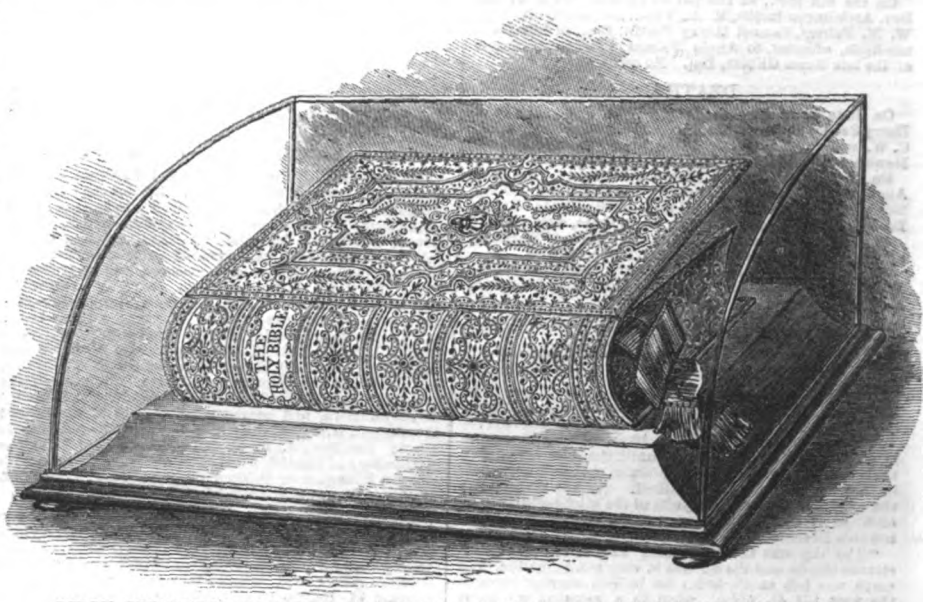
THE ALBERT MEMORIAL DRINKING-FOUNTAIN AT QUEENSBURY (LATE QUEENSHEAD), YORKSHIRE.

taining engraved and illuminated gun-metal plates—that on the north having reference to the illustrious object of the monument, in these words:—"In memory of Albert, Prince Consort of her Majesty Queen Victoria, who died December 14, A.D. 1861. This monument was erected by John Foster and Son, Whitsuntide, 1863." Over the inscription the arms of the Prince are blazoned in their true colours, on a lozenge-shaped shield, with his crown and motto, "Treu und Fest," above. The plate on the south side contains the armorial bearings, crest, and motto of John Foster, Esq. Under these panels are fixed two ornamental water taps, opening by means of push valves, which are intended to supply to the inhabitants of Queensbury water for domestic purposes gratuitously; and above the panels, on each side of the monument, is a semi-octagonal niche, with polished serpentine shafts at the outer angles, with carved stone capitals, from which rise crocketed canopies to the height of the open lantern under the spire. The arches and spandrils are richly carved and moulded, two of the mouldings in each of the former being enriched with the dog-tooth ornament, peculiar to the period, and the heads of the niches are groined. Four draped female figures occupy these niches, representing respectively—Industry, Fine Arts, Literature, and Agriculture, all so well encouraged and fostered by the illustrious Prince during his lifetime. Above these the monument takes an octagonal form to a further height of 8 ft.; at each angle is a polished red Aberdeen granite shaft, bisected by a moulded stone stringcourse, and terminated by carved capitals. The lower part of the octagon is solid, the sides being diapered between the shafts; the upper part is open, with the exception of a single central octagonal shaft of stone, which rises within the lantern thus formed to support the spire. The soffit of the lantern is groined. The granite shafts support eight trefoil arches and canopies, richly moulded, and terminating in carved finials. The spire then rises from between the canopies to a height of 17½ ft., including the finial, which is 2 ft. 7 in. long. The plan of the spire is octagonal, with plain angles; the lower half being panelled on each face with trefoil head; and about midway is a moulded belt, with small trefoil sinkings. The upper part of the diagonal buttresses has, on each face, three-quarter shafts, with carved capitals, supporting a small trefoil arcade, above which the buttresses shelve off into the body of the monument, and molded crocketed pinnacles, 7 ft. 4 in. long, form the terminals.

The site of the monument has been well chosen. It stands at one corner of the square formed by the intersection of the turnpike road leading from Leeds to Halifax, and from Brighouse to Denholmegate, a portion of the field adjoining having been appropriated and added to the road. The whole has been carried out from the designs, and under the superintendence, of Mr. E. Milnes, architect, of Bradford.



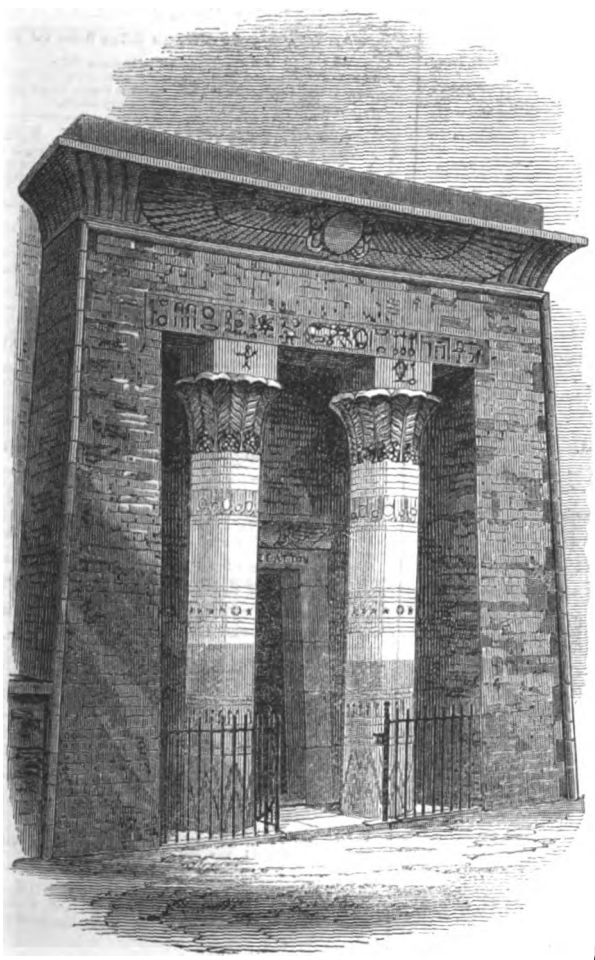
BIBLE PRESENTED TO THE PRINCESS OF WALES BY THE PURE LITERATURE SOCIETY.

FREEMASONS' HALL, BOSTON, LINCOLNSHIRE.

OUR Illustration is from a photograph by Luigi Cella, of Boston, of the portico of the hall, the design for which was taken from the Temple of Dandour, one of the smallest temples in Nubia. The two cylindrical pillars are copies from the grand porticos at Edfou and Philæ. The bases of the pillars are formed of leaves, and the capitals of palm leaves and fruit. The shafts are decorated with symbols—five pointed stars and crosses—and the abacus of each column and the tablature are enriched with hieroglyphic decorations. Overspreading the entrance as well as the cove of the cornice is the winged sphere and aspa.

The interior of the building has recently been decorated at great cost. The walls are of a chocolate colour, with ornaments in gold bronze, and the before-mentioned symbols in gold, whilst the ceiling, which is domed like that of the Temple at Philæ, is of a Royal blue, studded with stars.

The foundation-stone of this building was laid, with masonic honours, on the 20th of April, 1860, by the Rev. Charles Nairn, P.P.D.G., Master of Lincolnshire.



PORTICO OF THE FREEMASONS' HALL, BOSTON, LINCOLNSHIRE.

PURE LITERATURE SOCIETY.

A SOIREE of the members and friends of this society was held a short time ago at Willis's Rooms. The attendance was numerous, and among those present were the Earl of Shaftesbury, the Countess of Castle-Stuart, Lord Charles and Lady Russell, Lord and Lady Rayleigh, Lady E. Stuart, Lady Bryant, the Bishop of St. Asaph, the Bishop of Mauritius, the Dean of Perth, the Rev. Sir Nicholas and Lady and Miss Chinnery, Sir Thomas and Lady Lloyd, Sir Thomas and Lady Hogg, Sir F. Crossley; the Hon. A. Kinnaird, M.P.; the Hon. Mrs. Lefroy, and Admiral and Mrs. Harcourt. The Pure Literature Society was formed, under the presidency of the Earl of Shaftesbury, to facilitate the diffusion throughout the country of literature of a moral and unexceptionable—or, as its name indicates, of a "pure"—character. Upwards of two thousand volumes of various works selected by the society were displayed in the room, as well as a large number of engravings of a scriptural and a moral character. The work to which the greatest interest attached was a magnificently-bound volume of the "Illustrated Family Bible," just published by Messrs. Cassell, Petter, and Galpin, intended for presentation by the society to the Princess of Wales. The volume is superbly bound in levant blue morocco, elaborately ornamented with gold in the Harleian style, inlaid in various-coloured moroccos, after the style of a volume belonging to Charles II, now in the library at Crewe Hall. In the centre of each side of the cover the arms of the Prince and Princess of Wales are emblazoned. The edges of the book are gilt and worked in harmony with the design of the cover. The inner joints are of leather, inlaid in colours corresponding with those of the binding of the cover, and the lining is of rich watered crimson silk, with borders worked in gold. The meeting was addressed in the course of the evening by the Bishop of St. Asaph, Lord Charles Russell, the Bishop of Mauritius; the Hon. Mr. Kinnaird, M.P.; John M'Gregor and G. H. H. Oliphant-Ferguson, Esqrs., the hon. secretaries of the society.

RACE-CUPS FOR CHINA.

SEVERAL silver presentation race-cups of graceful designs, manufactured by Messrs. Sarl and Sons, goldsmiths, Cornhill, have recently been forwarded to Hong-Kong and Shanghai. We select four of them for illustration.

THE MILITARY CUP. THE CONTRIBUTION CUP. THE GARRISON PLATE. THE LEGATION CUP.

RACE-PLATE FOR CHINA.

THE MILITARY PLATE

consists of a silver-gilt cup, exquisitely modelled, with racing subjects chased in dead silver in low relief, the cover having full-length figures of horse and jockey in full costume, and bearing the following inscription:—"Shanghai Races, Autumn Meeting, 1862. Military plate presented by the officers of H.B.M.'s Regts. at Shanghai. Won by 'Godolphin,' the property of Alexander Cock, Esq. Ridden by Captain Wortham, R.A." This cup stands upon an ebony base, with silver-gilt enrichments.

THE CONTRIBUTION CUP

is a handsomely chased silver-gilt vase, also mounted on an ebony stand with silver-gilt ornaments. It is elaborately chased with race-horses, &c., on the one side, and bearing an inscription on the other. Two griffins of frosted silver form the handles, and the cover is surmounted with a flying horse, also in dead silver. The inscription is as follows:—"Tien-Tsin Races, Autumn Meeting, 1862. Compradores Cup, Contribution Cup, and Great Northern Steeplechase. Won by 'Hackney,' the property of James Cock, Esq."

THE GARRISON PLATE

is a silver épergne, consisting of beautifully designed oak-trees, with massive bases of rockwork and fern-leaves, having two figures of mare and foal in dead silver. A shield is placed upon the base containing the following inscription:—"Shanghai Races, Autumn Meeting, 1862. Garrison Cup (steeplechase, three miles). Won by 'Miss Mowbray,' the property of I. Markham, Esq. Ridden by Johnston Smith, Esq."

THE LEGATION CUP

is a richly-chased silver claret-jug, with subjects emblematical of racing chased on each side, and a shield, on which is inscribed:—"Shanghai Races, Autumn Meeting. Legation Cup, presented by the Hon. F. W. Bruce and the members of H.B.M's Legation, China. Won by 'Spider,' the property of James Cock, Esq. Ridden by Herbert Smith, Esq."

*** The charge for the insertion of Births, Marriages, and Deaths is Five Shillings for each announcement.*

BIRTHS.

On May 30, at Akyab, Arracan, British Burmah, Mrs. James Bulloch, of a son.

On the 31st of May, on board ship Her Majesty, the wife of Captain M'Leod, 42nd Regiment, of a son.

July 14, at 4, Hyde Park-gate, the wife of Francis Baron, Esq., of a son.

On the 13th inst., at 40, Lowndes-street, Lady Poltimore, of a daughter.

MARRIAGE.

On the 9th inst., at the parish church, Erith, by the Rev. Archdeacon Smith, M. A., Vicar, assisted by the Rev. W. M. Fairley, Samuel Henry Perrin, Esq., of Lincoln's-inn-fields, solicitor, to Annie Palmer, youngest daughter of the late Moses Gilbert, Esq. No cards.

DEATHS.

On June 28, at London, Canada West, Frances, wife of Harry George Acklom Allen, Esq., of Bellevue, near London, C. W., and third daughter of the late Lieut.-Col. Thomas Hewetson Ball, formerly of H. M.'s 81st Regiment.

On the 12th inst., at Thornage Rectory, the Rev. Augustus Dashwood, Rector of Thornage and Bintry, Norfolk, and youngest son of the late Sir Henry Watkin Dashwood, Bart., of Kirtlington Park, Oxon, aged 68.

On the 9th inst., at Rossana, in the county of Wicklow, after a short illness, Lady Kathleen Tighe, aged 36.

On the 14th of May, Ernest Henry, third son of the Right Rev. the Lord Bishop of Honolulu, aged four years and eight months.

MR. GLAISHER'S TWELFTH BALLOON ASCENT.

ON Saturday last Mr. Glaisher made another ascent in Mr. Coxwell's balloon from the grounds of the Crystal Palace, of which he has supplied the following account:—

"This ascent was intended to have combined extreme height and distance, and almost until the time of leaving the earth there seemed to be a promise that both purposes, in these respects, would be realised. As the direction of the wind was due east, the paths of the pilot balloons were such as to indicate that our course would have been towards Devonshire.

"The sky was nearly covered with cirrus and cirro-stratus clouds, and the air was in very gentle motion. The earth was left at 4h. 55m., the balloon moving towards the west till 4h. 59½m., when in a moment we came under the influence of a north wind, and moved almost due south; at this time the balloon was 2400 ft. high. At 5h. 19m. we were nearly over Caterham, where a large number of persons was collected celebrating some festival; at 5h. 36m. we were near Epsom Downs, at 5h. 49m. near Reigate, at 6h. 37m. over Horsham, and at 7h. 14m. within five or six miles of Brighton. Up to this time we had frequently consulted together, with the view of ascending higher; but it did not seem prudent to attempt extreme elevation, as we were running so directly towards the sea, and therefore we kept low, with the prospect of crossing the Channel to France, and then ascending to four or five miles; but on approaching the Channel the circumstances did not promise success. We therefore abandoned the attempt. On descending, when at the height of about 2400 ft., we again fell in with an east wind, being at the same elevation as we lost it at five o'clock. After this time we were compelled to keep at a low elevation, and moved very nearly parallel to the coast, at the rate of about fifteen miles per hour, at elevations varying from 1000 ft. to 2000 ft., till, at 8h. 35m., we were over Goodwood Park, the seat of the Duke of Richmond, where Mr. Coxwell determined to descend, and managed the balloon so that finally it had to be pulled down, and we were not aware when the car touched the earth.

"The temperature at the time of leaving, at the Royal Observatory, Greenwich, was 75½ deg.; at the Crystal Palace it was 74 deg.; in the balloon it declined to 59 deg. by 5h. 4m. at the height of 3000 ft. We then entered a warm current, temperature increasing to 61·5 deg.; then decreased to 60 deg. at the height of 4300 ft. We determined to descend to repeat the observations, and found all temperature down to 3000 ft., nearly 5 deg. higher than at the same heights on ascending. We then turned to ascend, at 5h. 35m., and the temperature decreased gradually, agreeing with that at the same elevation as last taken, and continued to a height of 6200 ft., at 6h. 28m., where the temperature was 52½ deg. We continued at this elevation, with very slight variations, for half an hour, during which time the temperature fell from 1 deg. to 2 deg.

"At 7h. we were nearing the coast, and we descended to 900 ft. by 7h. 20m., the temperature gradually and constantly increasing to 65½ deg. From this time we were moving westward almost parallel to the coast, and were compelled to keep below 2000 ft. to avoid approaching the sea. The temperatures at these elevations varied from 63 deg. to 65 deg., and was 65½ deg. at Goodwood at 8h. 50m., about ten minutes after we had touched the ground. At this time at Greenwich the temperature was 61 deg.; at Brighton, as communicated to me by J. O. N. Rutter, Esq., it was 68 deg.

"On comparing the successive temperatures at the same elevations taken after 5h. 8m. with those at Greenwich a corresponding decrease was shown, but somewhat less in amount.

"At 5h. 27m., when at the height of about 3000 ft., the *Times* newspaper, folded four times, fell over the car. Its descent was watched. After a time it looked like a gull. It reached the ground at 5h. 35m., passing over seven or eight fields in its descent.

"Whilst passing from Brighton to Chichester, without any sense of motion ourselves, at an elevation of less than 2000 ft., over a beautiful country in all respects like Devonshire, with its fine parks of forest-trees, noblemen's mansions, and all the features of rural landscape—a moving panorama, in fact, of great extent appearing in quick succession—like a fairy scene, the voyage was most enjoyable; and I must confess it was with some regret that we were compelled to conclude the aerial journey.

"The currents of air on this occasion were remarkable; there was no transition state from one to the other; the stratum of air moving from the north must have been in contact with that from the east. After reaching Horsham, the north wind must have been confounded with some west—that is at heights exceeding 5000 ft.—which was lost on falling below this height, for then for a time we were moving towards Worthing. When near the south coast the smoke was frequently moving in a different direction to that of the balloon. At Arundel it was moving in the opposite direction. It was this uncertain state of things which prevented us passing to the Isle of Wight, as I very much wished to have some observation over the sea.

"At the Royal Observatory, Greenwich, the horizontal movement of the air between the hours of five and nine was at a rate of less than two miles an hour, whilst during three hours and three quarters the balloon had passed between sixty and seventy miles. It is very evident that our instruments on the earth do not give any indication of the real velocity of the air. A similar result was shown last year in Mr. Coxwell's rapid journey from Winchester (seventy miles in sixty-five minutes); whilst the anemometer registered at Greenwich fourteen miles only; and on every occasion on which the actual motion of the air has been measured by the balloon it has been a multiple of that determined by instruments. The difference between the two is so large that it seems scarcely to be accounted for by the undulatory motion of the earth's surface, and implies that our hitherto estimated velocities of the air are erroneous.

"Shortly after we left, the sky was overcast, mostly with cirro-stratus clouds of such density that at times there were faint gleams of light from the sun; but, for the most part, the sun's place was only just discernible, and for some time before sunset there was no trace whatever of the sun.

"These clouds, when viewed from a height exceeding 6000 feet, seemed then to be as far above as they did when viewed from the earth; they must have been four miles high at least. The atmosphere was thick and misty, very distant objects were invisible, and the earth, not being lighted up by the sun well, was dull.

"The fact of clouds reaching to four miles high, where the temperature of the dew point must be some degrees below zero, at on the preceding ascent, implying the presence of very little water; yet, there was enough in both cases not only to be just visible, but to exclude every thing beyond them. This fact is important, and indicates that our theory of vapour will have to be reconsidered.

"In this ascent we were favoured with the company of Frederick Norris, Esq., of the Conservative Club, and Lieutenant H. Turner, of the Rifle Brigade.

"The place of descent was Goodwood Park, the seat of the Duke of Richmond; and our best thanks are due to Captain Valentine for the assistance he kindly gave us in everything, not only in having my instruments properly taken care of, packing up the balloon, &c., but also for his kind hospitality."

Baron Stockmar died at Coburg on the 8th inst., in his seventy-seventh year. He was an intimate friend of the King of the Belgians. Before the marriage of Prince Albert with the Queen his Royal Highness employed the autumn of 1838-9 in a tour in Italy, and Baron Stockmar was requested by the King of the Belgians to accompany his Royal Highness upon this journey, and for no one did the lamented Prince entertain greater regard and esteem throughout his life. For many years he passed a very large portion of his time in England, living in the Palace, as the dearly-valued friend of the Queen and Prince, and even when last at Coburg he paid daily visits to the Queen.

The Congress of the Archæological Institute will be held at Rochester, on the 28th inst. Besides the cathedral and castle in the ancient city, there are to be seen in the neighbourhood the remains of the Templars' House at Strood, Gundolph's Hospital, Chatham, Cowling Castle, Cobham Church, with its unrivalled series of monumental brasses; Cobham House and pictures, the churches of Cliffe, Dartford, Darenth, Stone (recently admirably restored by Mr. Street, and containing interesting memorials, especially the brass of Nicholas Aumberdene), and Farningham, Boxley Abbey, Maidling Abbey, Maidstone; Ightham Mote, Knole; the castles of Leeds and Allington, Kit's Koty House, the cromlech at Addington, and the stones and chamber at Coldrum. Professor Willis has undertaken the subject of the architectural history of the cathedral and conventual buildings at Rochester; the Rev. C. H. Hartshorne that of the castle in the same place; the Rev. J. Earle will read a paper "On the Archæology of Kentish Local Names;" Mr. Winston "On Certain Examples of Painted Glass in Kent;" and Mr. Waller will treat of the sepulchral brasses of the county.

The annual report of the Fishery Commissioners shows that the herring fishing off the coasts of Scotland and the Isle of Man was very productive in 1862; 830,934 barrels were cured, an increase of above 162,000 barrels over the previous year; and 494,910 barrels were exported, an increase of 104,596 barrels. The quantity branded increased by 81,365 barrels, showing the increasing reliance of the Continent upon the brand. The Continent is the only important foreign market; the large trade to the West Indies before emancipation has shrunk into nothing. Last year, for the first time, several boats fished off Wick for herrings, in the winter. They were found with milt and roe, with the appearance of becoming full fish in three or four weeks. The experiment will probably be repeated and extended. The opinion is now very generally entertained that the herring spawns twice in the year. The cod and ling fishery of 1862 was about an average fishing. Several vessels went to Rockall; but the adventure does not appear to have been very successful. Severe weather was experienced there, and it was thought that too many attempted the enterprise at once, and that this caused several to come away disappointed; 13,144 boats, manned by 43,508 fishermen and boys, were employed in the herring and cod and ling fisheries in 1862, an increase of 183 boats and 757 men; and the estimated value of the boats, nets, and lines was £811,355. It is estimated that these fisheries also gave employment to above 53,000 other persons.

A religious commemoration service and a fête, embracing the presence of subscribers, friends, and present and former inmates of the London Orphan Asylum, Clapton, was held on Thursday week, in celebration of the jubilee year of its establishment. This institution is one of the earliest of our metropolitan charities for parentless and friendless children. Its object is to afford maintenance, instruction, and clothing to destitute orphans of both sexes, and to see them placed out in situations where they may have the prospect of an honest livelihood. Children whose parents have been in respectable circumstances, and children whose parents have lost their lives in the Army, Navy, or marine, and manufacturing services in general, are therefore esteemed the first claimants on this charity. During the fifty years of its existence it has always commanded the confidence and patronage of the principal commercial firms of London, and its practical usefulness is demonstrated by the numerous recipients of the charity who have achieved in later life high positions in mercantile and other spheres. The first step in the present jubilee celebration was the admission of 100 orphans, increasing the number provided for in the asylum to about 430. On Thursday a sort of reunion was established, in which the 430 orphans now in the asylum, with some 600 of those who, as orphan children, have at one time or another during the half century just closed stood in the same position, met together and exchanged greetings. The scene of the celebration was the grounds of the asylum, added to by the adjacent grounds of Clapton Hall, which Dr. Gardiner, the proprietor, liberally placed at the disposal of the managers. The proceedings commenced with an examination of the children and a distribution of prizes to the most successful in the several branches of education. Afterwards the present and past scholars, with the visitors and clergy, proceeded in procession to the neighbouring church of St. James's, Upper Clapton, where service was performed, and an appropriate sermon from the text in Mark, "Suffer little children to come unto me and forbid them not, for of such is the kingdom of heaven," was preached by the Bishop of London. After the company had returned to the grounds, a cold collation was served to the ex-scholars, amongst whom were several evidently well-to-do middle-aged ladies and gentlemen. A vocal concert in the girls' room followed, and cricket and other out-door games filled up the time with those who preferred athletic sports to music. The gentlemen comprising the "Pembroke House Band" enlivened the open-air proceedings by several popular pieces during the afternoon.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

THE unusually favourable accounts at hand from most quarters in reference to the crops, and the great abundance of money in the general discount market, have produced considerable firmness in the value of Home Securities. The purchases of stock, both for money and the account, have increased, and Consols have touched 93¾. The Unfunded Debt has ruled steady, and some of the bills have been done at 3s premium.

There is a very large supply of money on offer for discount purposes. The demand, though steady, is less active than in the previous week, at the rates annexed for the best counter-class paper:—

	Per cent.		Per cent.
Thirty days' bills ..	.. 3½	Four months' bills ..	.. 4
Sixty days' ditto ..	.. 3¾	Six months' ditto ..	.. 4¼
Three months' ditto ..	.. 4		

In the Stock Exchange loans may be had as low as 2 per cent.

Throughout the Continent money is firm in price. We annex the quotations in the leading cities:—

	Bank rate, per cent.	Open market, per cent.
Paris	4	3½
Vienna	5	5
Berlin	4	3½
Frankfort	3	2½
Amsterdam	3½	3½
Turin	5	5½
Brussels	3	2½
Hamburg	—	3
St. Petersburg	5½	7½

The Council for India have disposed of £300,000 in Bills.

At the half-yearly meeting of the London and Westminster Bank a dividend at the rate of 6 per cent and a bonus of 7 per cent were declared. The available balance is £134,325.

The dividend of the Metropolitan and Provincial Bank is at the rate of 5 per cent. The capital of the Standard Bank of British South Africa is about to be increased to £2,000,000.

The report of the English, Scottish and Australian Bank recommends a dividend at the rate of 6 per cent per annum.

About £250,000 in bullion has arrived from various quarters, and £16,000 in gold has been withdrawn for the Bank of England.

Most of the Continental exchanges are in favour of the country. The exchange at New York comes at 158, and the premium on gold, 44 per cent. These quotations show a full average profit on the import of bullion from America.

On Monday the business done in English and Indian Stocks, &c., was rather limited. Prices, however, were firmly supported. Consols, for Transfer, were 92¾; Ditto, for Time, 93; 3 per Cent. Reduced and New Three per Cents, 92¾; India Five per Cents, 108 to ¼; India Bonds, 15s to 19s premium; Exchequer Bills, 15s to 3s premium. Bank Stock was 235 to 237; India Stock, 225 to 227; and Bank Post Bills, 109 to ¼ and 110 to ½. Price a trifle higher on the following day. Consols, for Money, closed at 92⅞; Bank Stock, 236 to 237; Reduced and New Three per Cents 92⅞; India Stock, 223 to 225; Ditto, New, 108 to ½; Exchequer Bills, 15s to 19s prem.; India Bonds, 15s to 19s prem.; Bank Post Bills, 109 to ¼ and 110 to ½; India Bonds, 15s to 19s prem.; Exchequer Bills, par to 3s prem.; Bank Stock, 236 to 238; Reduced and New Three per Cents 92⅞; India Stock, 226 to 228; Ditto, New, 108½; Bank Post Bills, 109 to ¼ and 110 to ½; India Bonds, 15s to 19s prem.; Exchequer Bills, par to 3s prem. On Thursday prices declined:—Consols marked 93 to 93⅛ for Money, and 93¼ to ⅜ for Account; the Reduced and New Three per Cents were 93⅛ to ¼; and Exchequer Bills, 3s prem. India Five per Cent Stock realised 108⅝.

Rather more firmness has been observed in the market for Foreign Securities; and, in some instances, prices have shown a tendency to improve. The capture of Mexico by the French force has had very little effect on the market for Mexican Stock. Brazilian Five per Cents have marked 101¾; Ditto Four-and-a-Half per Cents, 91½; Buenos Ayres Six per Cents, Small, 95½, Caution Four-and-a-Half per Cents 80¾; Egyptian, 101¾; Ditto, Second Issue, 96½; Greek, 55½; Ditto Coupon, 16½; Italian Railway, 75¾ ex div.; Mexican Three per Cents, 37½; New Granada, 15¾; Peruvian Four-and-a-Half per Cents, 1852, 87¼ ex div.; Portuguese Three per Cents, 1852, 44¾ ex div.; Russian Old Five per Cents, 94½; Ditto Three per Cents, 79¾; Ditto Five per Cents, 1862, 95¾; Spanish Three per Cents, 34½; Ditto, Deferred, 16¾ ex div.; Ditto Passive, 3½; Ditto Certificates, 12½; Turkish Old Six per Cents, 93½; Ditto, 1858, 70½; Ditto, 1862, 67¼ ex div.; Ditto Four per Cents, 56¾; Venezuela Six per Cents, 55½; and Italian Five per Cents 71¼ ex div.

The dealings in Joint-stock Bank Shares have not been numerous; nevertheless, prices, almost generally, have ruled firm:—Agra and United Service have marked 110; Alliance, 35; Australasia, 76½; Ditto, New, 31½; Bank of Queensland, 8½; British and American Exchange, 15½; Chartered of British Columbia, 11½; Chartered Mercantile of India, London, and China, 51; English, Scottish, and Australian Chartered, 23½; Imperial Ottoman, 19½; London and Colonial, 3½; London and County, 45; London and South African, 2½; London and Westminster, 8½; National Provincial of England, New, 15½; Scinde, Punjaub, and Delhi, 2½; South Australia, 4½; Union of Australia, 56½; Union of England and France, 8½; and Union of London, 8½.

A fair average business has been transacted in Colonial Government Securities:—Canada Six per Cents have sold at 105½; Ditto Five per Cents, 96¾; Mauritius six per Cents, 106; Ditto, 1878, 104; New Brunswick six per Cents, 106½; and Victoria Six per Cents, 113½.

The Miscellaneous Market has been generally firm. Crystal Palaces have sold at 8¾; Ditto, Preference, 11½; General Credit and Finance of London, 3½; General Steam, 2½; International Financial Society, 10; Italian Irrigation—Canal Cavour, 5½; Ditto, Six per Cent Bonds, 57½; Joint-Stock Discount, 5½; London Financial Association, 3½; Peninsular and Oriental Steam, 79½; Ditto, New, 47; Chelsea Waterworks, 25; East London, 128½ ex div.; West Middlesex, 111½ ex div.; Commercial Gas, 47½; Imperial, 87½ ex div.; London, 87½; Globe Insurance, 115½; Guardian, 5½; Indemnity Marine, 15½; Ocean Marine, 15½; Thames, 15½; and Universal Marine, 4½.

Very little has been passing in American securities, yet prices may be considered steady. New York Central 100 dollar Shares have sold at 73.

The Railway Share Market has been inactive; nevertheless, prices, almost generally, have been tolerably firm. The following are Thursday's official quotations:—

Ordinary Shares and Stocks.—Caledonian, 119½; Great Eastern, 54; Great Northern, A Stock, 130; Great Western, 66½; Lancashire and Yorkshire, 114½; London and Blackwall, 7¾; London, Chatham, and Dover, 45½; London and North-Western, 101; London and South-Western, 103½; Metropolitan, 123½; Ditto, New, 5½; Midland, 124½; North British, 85½; North Eastern, Berwick, 109½; Ditto, York, 94½; North Staffordshire, 10½; North and South-Western Junction, 12; South Devon, 12; South-Eastern, 9½.

Preference Shares.—Great Eastern, Six per Cent Preference, 133½; Ditto, East Anglian, A Stock, 10½; Lancashire and Yorkshire, 155 ex div.; North-Eastern—G.N.E. Purchase, 102½; South-Eastern—Reading Annuities, 23½.

Lines Leased at Fixed Rentals.—Buckinghamshire, 98½; Colchester, Stour Valley, 68; London, Tilbury, and Southend, 96; Midland, Bradford, 97.

British Possessions.—Atlantic and St. Lawrence, 63; Buffalo and Lake Huron, 5½; Ditto, Preference, 7½; Eastern Bengal, 100; East Indian, 102½; Great Indian Peninsula, 108½; Great Western of Canada, 11½; Ditto, New, 5½; Madras Five per Cents, 107½; Ditto, Four-and-Three-Quarter per Cents, 101½; Ditto, Steam Flotilla, 102½.

Foreign.—Antwerp and San Francisco, 20½; Dutch Rhenish, 17½ ex div.; Great Luxembourg, 10½; Ottoman, 11½; Recife and San Francisco, 16½; San Paulo, 21; West Flanders, 7½; Western and North-Western of France, 21½.

The return of the Bank of England for the week ending July 15 shows the following results, when compared with the preceding statement:—

An increase of circulation of	£158,518
A decrease of public deposits of	69,506
A decrease of other deposits of	2,212,804
A decrease of securities of	2,250,435
A decrease of bullion of	75,093
An increase of rest of	32,751
A decrease of reserve of	233,658

The total circulation is £22,130,996. Public deposits amount to £4,948,154; and private deposits to £10,281,013. Securities are £32,052,521; and the stock of bullion is £11,778,876.

THE MARKETS.

CORN EXCHANGE, July 13.—There was only a limited supply of English wheat on offer in to-day's market, nevertheless, the demand for all kinds was in a sluggish state, and in some instances, the quotations declined 1s. per quarter. Fine foreign wheat supported previous currencies, but other descriptions were a shade lower. Fine barley trade was inactive. Prices, however, were tolerably firm. Malt realised last week's prices, with a moderate inquiry. Selected oats were rather dearer. Other kinds ruled heavy. Beans and peas maintained their previous value. Beans and peas changed hands slowly, at late rates.

July 15.—All kinds of produce met a heavy inquiry, to-day, at prices about equal to Monday.

English.—Wheat, Essex and Kent, red, 40s. to 50s.; ditto, white, 40s. to 52s.; Norfolk and Suffolk, red, 40s. to 48s.; rye, 34s. to 36s.; grinding barley, 26s. to 27s.; distilling ditto, 29s. to 31s.; malting ditto, 32s. to 38s.; Lincoln and Norfolk malt, 68s. to 69s.; brown ditto, 56s. to 57s.; Kingston and Ware, 68s. to 69s.; Chevalier, 69s. to 70s.; Yorkshire and Lincolnshire feed oats, 18s. to 24s.; potato ditto, 23s. to 27s.; Youghal and Cork, black, 16s. to 25s.; ditto, white, 19s. to 23s.; tick beans, 30s. to 32s.; grey peas, 33s. to 35s.; maple, 34s. to 40s.; white, 37s. to 39s.; boilers, 37s. to 38s. per quarter. Town-made flour, 40s. to 47s.; town households, 34s. to 36s.; country marks, 29s. to 37s. per 280 lb. *American*, 20s. to 25s. per barrel. *French*, 38s. to 41s. per sack.

Arrivals this Week.—Scotch: wheat, 110; malt, 1180; oats, 50; flour, 280. Irish: oats, 120. Foreign: barley, 2525; oats, 11,190; flour, 50 sacks.

Seeds.—The demand generally is very inactive, and the quotations are almost nominal.

Linseed, English crushing, 62s. to 63s.; Calcutta, 66s. to 67s.; hempseed, 44s. to 45s. per quarter; coriander, 19s. to 19s. per cwt.; brown mustard seed, 8s. to 10s.; white ditto, 7s. to 9s.; tares, 7s. to 8s. per bushel; English rapeseed, 38s. to 38s. per quarter. Linseed cakes, English, £9 10s. to £10 10s.; ditto, foreign, £9 10s. to £11; rape cakes, £5 10s. to £6 per ton; canary, 40s. to 42s. per quarter; red clover seed, 38s. to 60s.; white ditto, 58s. to 57s. per cwt.

Bread.—The prices of wheaten bread in the metropolis are from 7½d. to 8d. for household ditto, 5½d. to 7d. per 4 lb. loaf.

Imperial Weekly Averages.—Wheat, 46s. 10d.; barley, 33s. 10d.; oats, 27s. 6d.; rye, 34s. 5d.; beans, 40s. 2d.; peas, 37s. 5d.

The Six Weeks' Averages.—Wheat, 46s. 9d.; barley, 31s. 3d.; oats, 23s. 2d.; rye, 33s. 9d.; beans, 39s. 10d.; peas, 37s. 5d.

English Grain Sold last Week.—Wheat, 5,237; barley, 813; oats, 2,01; rye, 11; beans, 1371; peas, 67 quarters.

Tea.—The demand is moderately firm, at about last week's prices.

Sugar.—Good and fine qualities are in fair request, at full quotations, but inferior parcels rule heavy. Barbadoes has sold at from 32s. 6d. to 34s.; Jamaica, 31s. 6d. to 33s.; Demerara, 34s. to 34s.; and St. Vincent's, 30s. 6d. to 31s. 6d. per cwt. Refined goods are steady, at 47s. per cwt. for common brown lumps. The stock of sugar is 160,000 tons, against 150,000 last year.

Coffee.—The trade is heavy, and prices have given way 6d. to 1s. per cwt. Stock, 10,257 tons, against 7542 tons in 1862.

Rice.—Only a limited business is passing; nevertheless, the quotations are supported. Stock, 47,000 tons, against 64,000 tons.

Provisions.—The demand for Irish butter is very inactive, at barely stationary prices. Foreign qualities support previous rates. Bacon is steady, at 62s. per cwt. for Waterford on board. All other provisions are a slow inquiry.

Tallow.—The demand is heavy, and P.Y.C. on the spot, is freely offered at 42s. per cwt. Stock, 30,437 casks, against 33,901 ditto, in 1862.

Oils.—Linseed oil is selling at £31 15s. per ton. Rape, dull, at £47 to £46; olive, £51 to £50; cocoa-nut, £41 10s. to £37 10s.; and fish palm, £36. American turpentine, 40s.; and French, 45s. per cwt.

Hay and Straw.—Old meadow hay, £4 10s. to £4 15s.; new ditto, £3 5s. to £4; old clover, £4 10s. to £5 5s.; new ditto, £4 10s. to £4 15s.; and straw, £1 8s. to £1 16s. per load.

Coals.—Best Wallsends, 16s. 6d. to 17s. 3d.; seconds, 14s. 3d. to 15s.; Hartley's, 13s. 3d. to 14s. 6d.; and manufacturers' 13s. to 15s. per ton.

Spirits.—Rum moves off slowly, at last week's prices. Brandy and grain spirits are unaltered in value, with a moderate inquiry.

Hops.—The plantations generally being somewhat favourable, the hop trade is heavy at previous currencies.

Wool.—The public sales have commenced slowly. Privately, the market is heavy.

Potatoes.—The supplies are large, and the trade is steady, at from 70s. to 100s. per ton.

Metropolitan Cattle Market.—(Thursday, July 16).—Our market to-day was reasonably well supplied with beasts, both as to number and quality. All breeds met a dull inquiry, at Monday's decline in the quotations, the top figure for the best Scots being 5s. per 8lb. Although the supply of sheep was rather extensive the primest trade was firm, at full prices. The best Downs realised 5s. per 8lb. Good and prime lambs moved off steadily, at full currencies; otherwise, the lamb trade was in a sluggish state, on former terms. Calves, the show of which was extensive, sold slowly, at barely previous rates. Pigs and milch cows were very dull. Per 8lb. to sink the offal:—Coarse and inferior beasts, 3s. 8d. to 3s. 8d.; second quality ditto, 3s. 10d. to 4s. 4d.; prime large oxen, 4s. 6d. to 4s. 8d.; prime Scots, &c., 4s. 10d. to 5s.; cows and inferior sheep, 3s. 6d. to 4s.; second quality ditto, 4s. 2d. to 4s. 6d.; prime coarse-woolled sheep, 4s. 8d. to 4s. 10d.; prime Southdown ditto, 4s. 10d. to 5s.; large coarse calves, 3s. 8d. to 4s. 2d.; prime small ditto, 4s. 4d. to 4s. 8d.; large hogs, 3s. 6d. to 4s.; neat small porkers, 4s. 2d. to 4s. 6d.; lambs, 5s. 4d. to 6s. 4d.; suckling calves, 12s. to 20s.; and quarter-old store pigs, 18s. to 28s. each. Total supply: Beasts, 1,530; cows, 145; sheep and lambs, 13,800; calves, 770; pigs, 330. Foreign: Beasts, 350; sheep and lambs, 3460; calves, 660.

Newgate and Leadenhall.—The supplies of meat are moderate, and the demand is inactive, as follows:—Beef, from 3s. to 4s. 2d.; mutton, 3s. 4d. to 4s. 8d.; lamb, 4s. 8d. to 5s. 10d.; veal, 3s. 4d. to 4s. 8d.; and pork, 3s. 6d. to 4s. 8d. per 8lb. by the carcase.

ROBERT HERBERT.

THE LONDON GAZETTE.

FRIDAY, JULY 10.

BANKRUPTCIES ANNULLED.

G. TINDALL, Dalston, ship, ing agent.—J. BRIEN, Sunderland, merchant tailor.

BANKRUPTS.

W. M. WOOD, Denmark-street, Gold Harbour-street, Camberwell, cowkeeper and dairyman.—E. C. L. GODOY, Suffolk-street, Pall-mall.—A. W. CAMERON, Shaftesbury-street, New North road, Hoxton, cabinet manufacturer.—W. ROGERS, Stebbing Hall-street, Oakley-square, general dealer.—W. FARNHAM, Bow-common, Stratford, milliner.—W. S. C. LAWRENCE, Chapel-street, Somers Town, commercial traveller.—GERTRUDE ANN MACARTHY, spinster, artist.—E. C. SEAMAN, Kingston Russell-place, Oakley-square, attorney and solicitor.—J. STONE, Canterbury, butcher.—G. HOLLINGS, East-street, Bethnal-green, stonemason.—T. W. GREEN, Cradle terrace, Pownall road, Dalston, shoe and slipper manufacturer.—C. SLINN, Northampton, builder.—J. BAKER, Peterborough, St. Martin's-lane, haberdasher and hosier.—M. WEIN, Frecheville-court, Hoxton, baker.—W. A. BRANT, Ratcliff-cross, Middlesex, licensed victualler.—N. DEAN, Caroline-place, Hampstead-road, timber merchant.—R. BEASLEY, Torrington-square, Bloomsbury, boarding-house keeper.—W. HANCE, Wargrave, Berkshire, grocer.—J. CHAPPELL and CO., 50, New Bond-street.

CHAPPELL'S FOREIGN PIANINO
(the only Pianino to which the Prize Medal was awarded).—A very elegant Pianoforte, of small size, the full compass, check action, and most perfect touch, admirably adapted to small rooms, yachts, boudoirs, &c. Warranted to keep in tune, and to be the best and cheapest Pianoforte, with check action and all the latest improvements.
Price, in mahogany, rosewood, or walnut, 25 and 26 guineas. A great variety may be seen at
Chappell and Co.'s, 50, New Bond-street.

CHAPPELL and CO.'S ENGLISH MODEL
COTTAGE PIANOFORTE.—To amateurs preferring the pure English tone of the Broadwood or Collard quality, the English Model will be found the most perfectly satisfactory instrument, at moderate price. The action is of the same simple description as the above makers', and therefore especially adapted to the country, where the more complicated actions are objectionable to many of the tuners. In elegant rosewood case, with full free, similar in every respect to other instruments at 50 guineas, price 35 guineas; in walnut, 40 guineas.
Chappell and Co., 50, New Bond-street.

CHAPPELL'S FOREIGN MODEL
PIANOFORTE, price 50 guineas in rosewood; or in walnut, 60 guineas. This Instrument has Three Strings and the fullest grand compass of Seven Octaves. It is strengthened by every possible means to endure the greatest amount of wear, and to stand perfectly in any climate. The workmanship is of the best description; the tone is round, full, and rich; and the power equal to that of a Bichord Grand. The touch is elastic, and the repetition very rapid. No pianoforte, in all respects comparable, has hitherto been made in England at the same price. Every instrument will be warranted, and (if desired) exchanged within six months of the purchase.
Chappell and Co., 50, New Bond-street.

BROADWOOD, COLLARD, and ERARD.
The best Pianofortes of every description, including all the newest kinds by those celebrated makers, may be tried side by side (and hired with option of purchase) at the new Showrooms of CHAPPELL and CO., 50, New Bond-street.

EBARD'S NEW BOUDOIR GRAND
PIANOFORTES, at 120 guineas, having been now brought to perfection, can be hired, with the option of purchase, at
CHAPPELL and CO.'S, 50, New Bond-street.

SECONDHAND PIANOFORTES.
CHAPPELL and CO. have a large Stock of SECONDHAND PIANOFORTES for Sale, by BROADWOOD, COLLARD, ERARD, &c., &c., at very reduced prices. Also, new Instruments of every description.—Chappell and Co., 50, New Bond-street.

PIANOFORTES at CHAPPELL'S.—The largest Stock in London, by Broadwood, Collard, Erard, &c., for Sale or Hire.—50, New Bond-street.

ALEXANDRE'S DRAWING-ROOM
MODEL HARMONIUM, the best that can be made, price 60 guineas; other varieties at 25 and 35 guineas. Illustrated Catalogues of Pianofortes and Harmoniums upon application to
CHAPPELL and CO., 50, New Bond-street.

SIX-GUINEA HARMONIUM by
ALEXANDRE, with five octaves, two footboards, and in oak case. These instruments are lower in price and superior to all other cheap harmoniums. Descriptive lists on application to
CHAPPELL and CO., 50, New Bond-street.

SECONDHAND HARMONIUMS,
by ALEXANDRE, nearly (if not quite) as good as new, at greatly-reduced prices, at CHAPPELL'S, 50, New Bond-street.

ALEXANDRE'S PRIZE EXHIBITION
MODEL HARMONIUM, for the CHURCH, 13 stops, 4 rows of vibrators, and Venetian swell, worked by the heel of the right foot, in oak case, 32 guineas. A large assortment may be always seen at CHAPPELL and CO.'S, 50, New Bond-street.

HALF PRICE.—All Music sent post-free at half the published price.
FOSTER and KING, 16, Hanover-street, Regent-street, W.

NEW VALSE.—THE ANGLO-DANISH
VALSE. By B. L. HIME. Solo or Duet. Price 4s. (Sent at half-price.) This Valse, so universally admired, may now be had as a Solo or Duet for Pianoforte, and in Parts for Septet or full Orchestra.—DUFF and HODGSON, 20, Oxford-street.

NEW SONG—BIRD OF THE
WILDERNESS. Composed by EDWARD LAND; Sung by Mr. KENNEDY. Price 2s. 6d. (Sent at half-price.) This graceful Song is the conspicuous favourite in the Entertainment on the Songs of Scotland.—DUFF and HODGSON 20, Oxford-street.

NEW SONG—THE WELCOME AT THE
DOOR. Composed by STEPHEN GLOVER. Price 2s. 6d. (Sent at Half-price.) Sequel to the celebrated Song, "The Good-by at the Door." Popular as the latter has been, "The Welcome" will be equally successful.—DUFF and HODGSON, 20, Oxford-street.

NEW MUSIC.

HERR SCHACHNER'S ORATORIO,

ISRAEL'S RETURN FROM BABYLON.
BOOSEY and SONS have much pleasure in announcing that they have purchased the copyright of Herr Schachner's Grand Oratorio, "Israel's Return from Babylon," which was performed with such eminent success a short time since at Exeter Hall, with the aid of Mdlle. Titiens and Mr. Sims Reeves. It is about to be reproduced at the Worcester Festival on a scale of very great magnificence, and the publishers are glad to announce that the complete work will be ready for sale in time for this important performance. The Pianoforte Score will be published in a handsome volume, complete, price One Guinea, several hundred copies having already been subscribed for. The separate Vocal Pieces will also be published at the usual prices. With the view of assisting the numerous choral societies in the production of a work that cannot fail to attain a high and permanent position in the grandest school of sacred music, the publishers have determined to publish the Orchestral Score, and the separate Orchestral and Vocal Parts, at the lowest possible price. These will shortly be ready for delivery, and orders may at once be forwarded to the publishers for copies.
The "Book of Words" (also the property of Boosey and Sons) may be had on moderate terms for public performances.

THE SEASIDE MUSIC BOOK.
A Collection of new Pianoforte, Dance, and Vocal Music, especially recommended to Tourists and Travellers, as containing in a small compass and at a low price sufficient music for an evening's amusement. In an elegant volume, large size, beautifully illustrated, price 2s. 6d.
BOOSEY and SONS, Holles-street.

BOOSEYS' MUSICAL LIBRARY.—Every SUBSCRIBER at Two Guineas receives a splendid Guinea Volume of Illustrated Music, and has the use of Twelve Pieces of Music in Town and Twenty Pieces in the Country. Subscribers at One Guinea have the use of Four Pieces. Full particulars from 28, Holles-street.

SIGNS OF AUTUMN and MERRY SLEIGH
BELLS. Sung with immense applause by Mr. Lord in his popular Entertainment, "The Canoe, the Rifle, and the Axe." Just published by ROBERT W. OLLIVIER, 19, Old Bond-street, W.

"THE BROKEN FLOWER." Song for
Mezzo-Soprano Voice. Composed by the Hon. ALFRED STOURTON. Price 2s. 6d.
LAMBORN, COCKS, HUTCHINGS, and CO., 63, New Bond-street.

THE MAIDEN AND HER LINNET. Song.
Nightly singing by Miss Louise Kealey at the Theatre-Royal, Haymarket. Words by F. C. BURNAND; Music by W. H. MONTGOMERY. Price 2s.
London: JOSEPH WILLIAMS, 11, Holborn-bars, and 123, Cheapside.

ROBERT COCKS and CO.'S LIST OF NEW
MUSICAL PUBLICATIONS:—
BRINLEY RICHARDS'S THREE NEW NATIONAL SONGS, "God bless the Prince of Wales," "Daughter of Denmark," and "The White Cross of Denmark." Each 2s.
"The success of the two new songs was so eminent that "God bless the Prince of Wales" will have to look to its laurels."—Musical World.
THERE ARE THOUGHTS WE CANNOT TELL. Song. 2s. 6d.
LE BAL. Valse, for Piano. By R. Reichardt. 3s.
BARCAROLLE. Voice and Piano. By A. Reichardt. 3s.
MAY-DREAMS. New Four-part Song. By Abt. 3s. Separate parts, each 3d.
G. F. WEST'S NEW PIANO DUETS. Overture to "Der Freischütz," 6s.; Overture to "La Gazza Ladra," 6s.
HAMILTON'S MODERN INSTRUCTIONS for PIANO (361st Edition), 4s.; for Singing (94th Edition), 3s.
THEMATIC CATALOGUE OF NEW VOCAL MUSIC. Gratis and postage-free.
ROBERT COCKS and CO.'S PIANOFORTES, in Walnut and Rosewood, 6½ Octaves, £35, £38, and £42. N.B. A large and convenient Showroom, adjoining the premises, has just been opened.
London: ROBERT COCKS and Co., New Burlington-street, W., Publishers to the Queen, H.R.H. the Prince of Wales, and the Emperor Napoleon III. Agents for India: Messrs. BURKINYOUNG and Co., Calcutta.

BOOSEYS' MINIATURE PIANOFORTE,
price 17 guineas, in walnut or mahogany.—"We have had occasion to examine a new description of Pianoforte manufactured by Boosey and Sons, which combines quality and cheapness in a degree which has not previously been ever attempted. When heard it creates such surprise as would be caused by a child 'discovering most eloquent' music with the voice of a full-grown man. It has a rich, brilliant tone, quite strong enough to fill the largest drawing-room; and the whole mechanism of the instrument seems to be firm and durable. No piano at so small a price has ever before been presented to the public."—Vide ILLUSTRATED LONDON NEWS, Feb. 28, 1863. This Piano is well adapted for the cabin of a ship, or an extreme climate.—Boosey and Sons, 24, Holles-street, London.

BUTLER'S BRASS BAND INSTRUMENTS,
Cornets, Saxhorns, Circular Vibrating Horns, Drums, Fifes, &c., are all manufactured on the premises and sold at prices much below any other English house. A written guarantee given with every instrument. Cornets warranted, from £3 to £5. Manufactory, 29, Haymarket, London. Prices and drawings post-free.

MUSICAL BOX DEPOT for the Sale of
NICOLE'S celebrated Musical Instruments is removed from No. 54 to 11 and 12, Cornhill, London. Lists of tunes and prices gratis and post-free.

"RECONNOITERER" GLASS, 9s. 6d.!
Weighs 8 oz., is achromatic, and so strong that ships, houses, trees, &c., ten miles off; Jupiter's Moons, &c., are distinctly seen by it; and when used as a landscape glass is valuable on a twenty-five mile radius. "I think the Reconnoiterer very good."—The Marquis of Carmarthen. "I never before met an article that so completely answered its maker's recommendations."—F. H. Rawdon, Esq., Parsley, Otley. "Regarding the glasses supplied by Messrs. Smith, I am well pleased with them."—From a report by the Head Gamekeeper of the Marquis of Breadalbane. "The economy of price is not secured at the cost of efficiency. We have carefully tried it at an 800-yard rifle-range against all the glasses possessed by the members of the corps, and found it fully equal to any, although they had cost more than four times its price."—The Field. Post-free, 10s. 10d. The Hythe Glass, showing bullet marks at 1200 yards, 21s. 6d. These Glasses are only to be had direct from SALOM and CO., 98, Princes-street, Edinburgh, who have no agents.

RIFLE TELESCOPES, from 30s.—W. and
J. BURROW, Malvern. London: Arnold, 72, Baker-street; and Wales and Co., 56, Cheapside.

WATCHES.—A. B. SAVORY and SONS,

THE NEW OPERA-HOUSE AT MALTA.

THE NEW OPERA-HOUSE, MALTA.

WE this week give an Illustration of the new opera-house at Malta. It is in the Italian style of architecture, having a handsome portico supported by four columns of the Corinthian order, approached from a bold terrace by a flight of steps, the terrace itself having two approaches by steps at each end. The base of the building is rusticated, and ornamented with four lions couchant. The figures which are to adorn the front as well as the top of the building are not yet sculptured. The sides of the edifice have three-quarter columns rendered upon them, and panelled between. The roof is two-storied, and well ventilated to suit the warmth of the climate; here, also, are the departments for the scene-painters, and workshops for the carpenters and other individuals connected with the works. We believe rooms are allotted for the residence of some of the principal artists, and the ground floor will have shops somewhat like our Italian Opera-house in the Haymarket. The stone used in the construction is Maltese. Mr. E. M. Barry, A.R.A., is the architect. The building is calculated to hold nearly 1300 persons.

MR. PEABODY'S DWELLINGS FOR THE POOR,

IN COMMERCIAL-STREET, SPITALFIELDS.

THE building is situated at the corner of Commercial-street and White Lion-street, Spitalfields, near to the Eastern Counties Railway station. It is built entirely of brick, and has a frontage of 215 ft. 6 in. towards Commercial-street and of 140 ft. towards White Lion-street.

The Commercial-street wing contains nine shops, with dwellings and stores attached, occupying the basement, ground, and first floors. Above these, on the second and third floors, are twenty-seven dwellings for the poor, with entrances entirely distinct from those of the shops. The fourth or topmost floor is occupied with laundries, baths, and areas for drying clothes and the use of children in wet weather.

The White Lion-street wing contains thirty dwellings for the poor, which occupy the ground, first, second, and third floors, the fourth or topmost floor being arranged, as that in Commercial-street, for the purposes of washing clothes, &c.

The dwellings consist of one, two, and three rooms, situated on each side of a wide and well-ventilated corridor. They are supplied with large, well-lighted cupboards, cooking-range, oven, boiler, hot-plate, &c. Lavatories, &c., are provided on each floor. Dust-shafts

THE "PEABODY" DWELLINGS FOR THE INDUSTRIOUS POOR IN COMMERCIAL-STREET, SPITALFIELDS.

Digitized by Google

extend from the roof to the basement, where large dustbins are provided with separate access from the yard. The living-rooms average 13 ft. by 10 ft., and the bedrooms 13 ft. by 8 ft. Their height is 8 ft. from floor to ceiling.

There are seven dwellings of three rooms, forty-seven dwellings of two rooms, and three dwellings of one room; besides a porter's tenement and office and a co-operative store. The building is being erected by Messrs. W. Cubitt and Co. from the designs of H. A. Darbishire, Esq.

The occupants will pay rents according to the size and accommodation of their dwellings, but these will be fixed at a rate so low that the poorest of the industrious class—i.e., those whose wages range from 12s. to 22s. per week—may be able to pay them without being compelled to sacrifice their comfort and privacy by taking lodgers. No tenant will be allowed to sublet his rooms under any pretext whatever.

This point has been insisted on as one of primary importance by those who have so largely benefited the poor of Bethnal-green and Westminster, and the benevolent founder of the present building regards it in the same light. A system prevails, and is sanctioned even in so-called "model" lodging-houses, which effectually prevents the domestic condition of the poor from being materially and permanently improved. Dwellings being scarce, the poor workman must take what he can get and pay the exorbitant demands of the principal landlord at the price of any sacrifice to himself: Though he would enjoy privacy at home if he could secure it at moderate cost, it is not essential to his existence, and he regards it as a luxury which is beyond his means; he therefore takes as many lodgers as his dwelling will hold, and, by the help which they afford, he is able to pay his rent at the end of the week. If the working man is to be comfortable, he must have his home, large or small, all to himself; if he is to know the meaning of the word decency, he must learn it in his own family; and if he is to enjoy this comfort and acquire this decency, he must be assisted, as far as possible, by those who provide his dwelling place. All who improve the habitations of the poor by any means whatever are benefactors, but those who can improve them upon such terms as shall secure improvement in the habits and feelings of their occupants achieve the greatest good and produce the most lasting benefit.

In order that the tenants may be benefited in the present instance, and that the revenues of the building may yield a fair return upon its cost, advantage has been taken of its favourable situation, and shops have been introduced to increase the income, and to share a portion of the working expenses.

After all charges upon the revenue have been paid, the surplus will be set aside to accumulate, and when a sufficiently large sum has been provided by this means, the trustees will extend their work and erect other buildings in other districts requiring their assistance. Thus the original fund will be ever increasing and ever extending its usefulness, and the poor by deriving benefit themselves will confer benefit upon their class.

NATIVE CHIEFS FROM NEW ZEALAND.

NEW Zealand is "destined to become the Great Britain of the southern hemisphere;" so says an eminent author and statesman. With a fine, if not the finest, climate in the world, and with corresponding advantages in the riches of her soil, there is probably everything to warrant such an opinion and to justify such a belief. But our modern prophet has not told us what part the native (Maori) race will play in the future of the antipodal empire. That the native New Zealanders have played an important part in the past, and are playing an important part in the present, history of the colony few persons will be disposed to question, least of all those who have recently received signal proofs not only of the general intelligence of the Maori race, but likewise of their valour. But whether descendants from the original stock or the "half-caste," the number of which is daily on the increase, will multiply as the country shall advance in power and prosperity, is a question to be solved by time.

The idea of bringing the New Zealand chieftains (represented in the present group) to England originated in the following manner:—During his residence among them Mr. Jenkins, interpreter to the Government, frequently spoke of the power and greatness of England and her vast resources. To this the chiefs invariably replied. "You may tell us these things to make us think little of ourselves, but we don't believe all you say, for if England be such a great and wealthy nation, how is it that so many of you come here and try to get our settlements out of our hands?" Having promised many of the chiefs that he would take them to England, and thus enable them, by actual observation, to form a correct estimate of the true character of the English people, Mr. Jenkins placed the matter before the Governor, Sir George Grey, and obtained his Excellency's approval of the project.

Since their arrival in the mother country the chiefs have declared themselves to be favourably impressed both with England and the English people. They could scarcely be otherwise, as they have already received a most hospitable reception from some of the leading personages in the kingdom. But it is our public establishments and noble institutions which appear most of all to impress the Maories with the greatness of this country, and these impressions will no doubt, on the return of the visitors to their native land, tend to the peaceful disposition of their respective tribes. The following address (translated) was presented to the Duke of Newcastle at the first interview of the chiefs with his Grace:—

Give attention, O people of this land, and hear the reason why this (Maori) people are seen here in this land. Mr. Jenkins asked us, "Would not some of you Maori chiefs like to go to England?" We answered, "What to do there?" He replied, "To see the superiority of England, and to exhibit the customs of New Zealand to the people of England." Then we said, "Yes, let us go and see the evil of that land and the good of that land; and also let us see the Queen, the mother of all the nations under the heaven." God is in heaven who made the earth and the people: the Queen is in England who made the laws by which men are benefited. Give attention, therefore, O people of profound thought, to the workings of my mind. My eyes have seen the good of this land. My heart is rejoicing continually at the multitude of things which my eyes now see, but my heart is dark and filled with chagrin towards my fathers and my forefathers for their stupidity in not seeking out knowledge for my country. The consequence of their ignorance is, that you and I have continued estranged from one another (meaning the Maori people and the English). Perhaps, had they been wise to seek out the things (or knowledge) by which the body and the soul may live, you and I would, long ere this, have been one. You would be as an elder brother to me and I as a younger brother to you. Another obstacle in my way is, that I do not understand your language, which is the cause that we cannot speak to each other, mouth to mouth. Were it not so, I might be able to accomplish something, let it be ever so little; for all the good that is in New Zealand is the fruit of the religion which was brought to us from you. Had it not been for the law (of God), that land would still be wrapped in death—understanding nothing of death or life, evil or good.

The following is a list of the names and tribes of the chiefs:—

Kameriara te Hautakiri Wharepapa, son of the celebrated warrior chieftain, Wharepapa, one of the great Hongi's generals.

Horomana te Atua, son of Te Anga, another of Hongi's generals.

Wiremu te Wana, son of Pou, another of Hongi's generals.

Reihana Taukawan, son of Tukarewa, one of the bravest and most renowned of the old Ngapuhi chieftains of the last generation.

Hare Pomare, son of the well-known warrior Pomare, who was taken prisoner by the British troops, under a flag of truce, during Heke's war, but was, on arrival in Auckland, immediately released.

Hariata Tutapuiti (wife of Hare Pomare), daughter of Pikimaui, one of Hongi's fighting chiefs, and a confidential companion of the great and good Tamati Waka Nene, our noble ally in the northern war.

Hirini Pakia, son of Tipene Hari, who is first cousin to the great Hongi, grandson of Te Waharaupo, and general of Hongi and Kawiti.

Hariata te Iringa (wife of Hirini), daughter of Japo, Kawiti's son. Both Hirini and his wife are closely allied to the faithful Waka Nene.

Paratene te Manu, son of Kau te Awha, and descendent of the powerful chieftain Rangitukiwaha, of the Ngapuhi tribe.

Kihirini te Tuahu, son of Whareri, grandson of Te Whiu, and descendant of the fierce and much dreaded cannibal chieftain, Rangitihi, of Tuhourangi, Tarawera Lake, Taupo, interior of Northern Island.

Takerei Ngawaka, grandson of the great Heuheu, of Taupo, who, with his family and part of his tribe, was buried under a landslip a few years ago.

Ngahuia, granddaughter of the celebrated chief Hereta Taniwha (commonly called "Hook-Nose"), of the Coromandel district, Houraki Gulf, and contemporary with Captain Cook.

Hapimana Ngapiko, son of Mokoera, grandson of Rangitawhanga, and great-grandson of Te Ra Taunga, all noted warrior chieftains of the Ngatiawa tribe, Taranaki.

Hariata Haumu, daughter of Paratene te Ru, near relative of Arama Karaka Pi and Tamati Waka Nene.

The four first-named chiefs belong to the Hapu of Ngalirangi, tribe of Ngapuhi, and are descendants of the far-famed Pene Taui, who took such a prominent part in the wars of the rebel chiefs Heke and Kawiti. The chieftain Hongi visited England, in company with Waikato, in the reign of George IV., and was called Shunghee. He was the first to introduce firearms among his countrymen, and was the fiercest warrior and most cruel cannibal on Maori record.

OBITUARY OF EMINENT PERSONS.

SIR WILLIAM MASSEY STANLEY, BART.

Sir William Thomas Stanley Massey Stanley, tenth Baronet, of Hooton, in the county of Chester, was the eldest son of Sir Thomas Stanley, the ninth Baronet, by his wife, Mary, only child and heiress of Sir Carnaby Haggerston, fifth Baronet, of Haggerston, Northumberland. He was born in 1807, and succeeded to the baronetcy and large patrimonial estates in Cheshire on the death of his father, in August, 1841. From 1837 to 1841 he represented Pontefract in the House of Commons on Conservative principles. Not long after his accession to the title, he had from ill health to seek the more genial climate of the south of Europe; and motives of economy, in consequence of heavy incumbrances, induced him to continue abroad. He had latterly been resident in Paris and its vicinity. Sir William died at Paris on the 29th ult., and, as he never married, he is succeeded by his next brother, now Sir Rowland Errington, the eleventh Baronet, who was born in 1809, and who assumed, in 1820, the surname of "Errington" only, in lieu of his patronymic, in compliance with the will of Henry Errington, Esq., of Red Rice, Hants. He married, the 7th of January, 1839, Julia, eldest daughter of Lieutenant-General Sir John Macdonald, K.C.B., Adjutant General of the Forces. Through his mother, who was the heiress of Sir Carnaby Haggerston, Sir Rowland Errington has a good claim to the ancient barony of Umfravill; but the question, we believe, has not yet been adjudicated on by the House of Lords. The Stanleys of Hooton are the senior branch of that illustrious house to which belong the Earl of Derby and Lord Stanley of Alderley, and of which the Saxon origin is so old and the historic fame so great that it undoubtedly ranks among the very highest families of the realm. The first of the Stanleys of Hooton who was made a Baronet was Sir William Stanley, a Cavalier, who obtained the honour from Charles II. by patent, dated the 17th of June, 1662. From him the title has descended through a long series of Baronets to Sir Rowland Errington, the present Baronet, who, without the name, now represents the oldest line of Stanley.

GENERAL SIR THOMAS ERSKINE NAPIER, K.C.B.

Sir Thomas Erskine Napier, K.C.B., a General in the Army and Colonel of the 71st Foot, was the younger son of the Hon. Charles Napier, of Merchistoun Hall, in the county of Stirling, by his second wife, Christian, daughter of Gabriel Hamilton, Esq., of Westburn, in the county of Lanark, and was the grandson of Francis, sixth Lord Napier, of Merchistoun, and the only brother of the late Admiral Sir Charles Napier, K.C.B. He was born May 10, 1790, and, true to the warlike spirit of his race, he, when only fifteen years of age, entered the British Army. He then joined as Ensign the 52nd Regiment, and served at the siege of Copenhagen and battle of Kiozo, and as Aide-de-camp to General Sir John Hope, in the expedition to Sweden. He was subsequently with Sir John Moore in Spain, and in the glorious retreat that ended with the battle of Corunna. He was then in Sicily, and again in the Peninsula, and shared in the fame achieved at Cadiz, Fuentes d'Onor, Badajoz, Salamanca, Vittoria, Nivelle, and the Nive. During this victorious course he was twice wounded, losing on the second occasion his left arm. He was, in 1838, made a C.B., and in 1860 a K.C.B. He became a Major-General in 1846, a Lieutenant-General in 1854, and a General in 1861. He was, in 1854, appointed Colonel of the 15th Regiment of Foot, and in 1859 was transferred to the 71st Regiment. He was for some years Assistant Adjutant-General of the Northern District of Ireland, and has held several other staff appointments. He had the silver war medal, with seven clasps. The General married Margaret, daughter and coheir of — Falconer, Esq., of Woodcot, by whom he had an only child, Margaret, who died in 1849. The demise of Sir Thomas Napier occurred on the 5th inst., at his seat, Polton House, Lasswade, near Edinburgh.

THE COUNTESS DOWAGER OF CALEDON.

The Right Hon. Catherine Freman, Countess Dowager of Caledon, who died on the 8th inst., at her seat, Tittenhanger, Herts, after a short illness, was the great great-granddaughter of Lord Chancellor the Earl of Hardwicke; the great-granddaughter of Lord Chancellor the Hon. Charles Yorke; and the daughter of Philip, third Earl of Hardwicke, by his wife, Lady Elizabeth Lindsay, eldest daughter of James, fifth Earl of Balcarres. The Countess of Caledon was born April 18, 1786, and was married, Oct. 16, 1811, to Du Pré, second Earl of Caledon, by whom (who died April 8, 1839) her Ladyship had an only son, James Du Pré, third and late Earl of Caledon, and father of John, the present Earl, a minor. The Countess Dowager of Mexborough, the Dowager Lady Stuart de Rothesay, and the Dowager Countess Somers are the surviving sisters of the Countess Dowager of Caledon.

THE DOWAGER LADY KILMAINE.

The Right Hon. Anne Baroness Kilmaine, of The Neale, who died on the 6th inst., in her ninetieth year, at her town house, 26, Chester-square, was a scion of the noble house of Cavendish, Dukes of Devonshire. She was the fourth daughter (by his wife, Sarah, in her own right Baroness Waterpark) of the Right Hon. Sir Henry Cavendish, Bart., P.C., Receiver-General of Ireland, and was the great-grandmother of Sir Henry Anson Cavendish, present and fourth Baron Waterpark. Her Ladyship was married about seventy years ago to James Caulfield, second Baron Kilmaine, by whom (who died the 23rd of May, 1825) she had John Cavendish, present Baron Kilmaine, and seven other sons and two daughters, of whom four sons and one daughter, Sarah Louisa, wife of Colonel George Disbrowe, survive her. Lady Kilmaine's second son is the Hon. and Very Rev. Henry Montagne Browne, Dean of Lismore, and Rector of Burn Church, in the county of Kilkenny.

LADY KATHLEEN TIGHE.

Lady Kathleen Louisa Georgiana Tighe, whose death occurred on the 9th inst., was the sixth daughter of John William, fourth Earl of Bessborough, by his wife, Lady Maria Fane, third daughter of John, tenth Earl of Westmorland. Lady Kathleen was born on the 30th of August, 1826, and was married on the 9th of August, 1858, to Lieutenant-Colonel Frederick Edward Tighe, eldest son of Daniel Tighe, Esq., of Rosanna, in the county of Wicklow, by whom she leaves an infant family. Lady Kathleen Tighe was sister to John George Brabazon, fifth and present Earl of Bessborough; to the Hon. Spencer Ponsonby, Comptroller of the Lord Chamberlain's Department; to the Hon. Gerald Ponsonby; and to Lady De Manley. Of the family of Lady Kathleen's husband, the Tighes of Rosanna, was Henry Tighe, Esq., M.P., whose wife was Mrs. Tighe, the poetess, the author of "Psyche."

WILLS AND BEQUESTS.

The will of the Right Hon. Henry Montagu Upton, Viscount Templetown, of Castle Upton, near Belfast, and The Albany, was proved in London by the joint executors, Major-General the Right Hon. George Frederick Viscount Templeton, C.B., and Lieutenant-General the Hon. Arthur Upton (the brothers of the testator). The personalty was sworn under £45,000. The will was executed in 1848, to which are appended four codicils made this year. His Lordship has devised his castle and demesnes, and all other real estate, to his brother and heir, the present Viscount, to whom he leaves the pictures, statuary, &c., to be held as heirlooms. To his sister, Mrs. Spalding, his Lordship has left a liberal legacy, as well as to other of his relatives and personal friends, appointing his brother, Lieutenant-General the Hon. Arthur Upton, residuary legatee of the personalty. Annuities and legacies are bequeathed to his yachtsmen.

The will of Joshua Field, Esq., of Park-crescent, Portland-place, was proved in London under £250,000, the executors being Joshua Francis Whittell, Esq., of Helmsley Lodge, Flaxton, Yorkshire; Eugene T. C. Whittell, Esq. (son of the latter); and Charles Evans, Esq., solicitor, Gray's-inn-square. The will bears date 1858, and two codicils 1861. To his nephew, Joshua F. Whittell, he has devised his estates in Yorkshire (Leeds excepted), and on his decease they will descend to his great nephew, Eugene, whom he has appointed residuary legatee of both real and personal estate. To his nieces, the Countess of Rosse, and Delia, wife of the Hon. Arthur Duncombe, legacies of £20,000 are bequeathed. Numerous legacies are left to other of his relatives and friends; very liberal legacies and annuities to his servants; and a legacy of £2000 to each of the following institutions—namely, the Middlesex Hospital, Royal Free Hospital, King's College Hospital, Metropolitan Convalescent Hospital (Walton), Brompton Hospital, Leeds Infirmary, Putney Royal Hospital, Samaritan Institution, Governesses' Institution, Soldiers' Infant Home, and the Benevolent or Strangers' Friend Society.

The will of George Salter, Esq., of Weir Lodge, Taunton, Somersetshire, was proved in London under £60,000 personalty. The executors are his sons, William C. Salter and George Salter, Esqrs. To his wife, besides other bequests, he leaves an annuity of £300, and the residence of Weir Lodge, for her life, and which, upon her decease, devolves to his two sons (his executors), whom he appoints residuary legatees. There are other legacies to his family, and bequests to his servants.

The Pugin Memorial Committee, having collected the sum of £1000, has placed the same at the disposal of the Institute of Architects, in trust, for the formation of a student travelling-fund.

From Central America it is stated that General Carrera had again left Guatemala for the purpose of invading San Salvador and Honduras. General Barrios is said to have 5000 men ready to oppose him, and has received a loan of 350,000 dols. from the people of San Salvador to enable him to carry on the war. General Jerez was at La Union, San Salvador, with 800 men, about to make another attack on Nicaragua. General Martinez was to oppose his progress with between 200 and 300 troops, and Jerez, it was expected, would again be routed.

CURRENT LITERATURE.

Romola. By George Eliot. (3 vols. Smith, Elder, and Co.) The sun has not yet mounted so high as to peep through those narrow windows which look from the second story of a sombre mass of stone upon the Via de' Bardi in Florence; yet, if we follow yon grey-haired serving-man through the grim portal, and up the grim staircase till we arrive at the room to which those windows belong, we may see through the gloom a striking picture. The room is long and spacious, but the carpet, which was once a splendour, has long been worn to dimness; around are many shelves, on which stand books in scrupulous order; and here and there, on stands and tables, are marble busts, and lamps of bronze, and elegant vases of Magna Græcia. Yonder is seated a blind old man, delicately pale, with refinement written on brow and nostril; his drooping white locks are surmounted by a black velvet cap, which tends to enhance the delicacy of his complexion; but a firm mouth and powerful chin lend to his face an expression of proud tenacity and latent impetuosity. With one white hand upon the old man's chair and the other resting on a reading-desk, with golden hair that ripples over her neck, with hazel eyes bent on the learned page, and with silver voice—sweet substitute for sight—stands a young and feminine but yet truthful likeness of the greybeard, who sits and listens. You might fancy her the Madonna before her espousal; but the virgin is Romola, and the sightless student is her father. Now, let it not be supposed that Romola's occupation is agreeable to her—she is only performing, with gentle patience and secret weariness, a part of that duty which is the guiding star of her life. For he who should be the eyes of Bardo de' Bardi, the son, upon whom the old man lavished instruction and whom he stored with learning, has proclaimed the worship of ancient literature—which threatened, in 1492, to supplant the worship of the Saviour—both foolishness and blasphemy, and, with his father's curse upon him, has joined the Dominican brotherhood. So Romola attempts to supply her brother's place, and has to bear, besides her self-imposed burden, the garrulous complaints of a pedantic father, who takes every opportunity of sighing over the mental imperfections of women and comparing them unfavourably with those of men. But soon relief seems to have come to Romola. Enter a Greek, handsome as his possible ancestor,

Νιρεύς, ὃς κάλλιστος ἀνὴρ ὑπὸ Ἴλιον ἦλθεν,

learned as Longinus, and not much older than Romola. For old Bardo, though he is poor, is a man of some influence, and the Greek is glad to repay his recommendation by becoming occasionally his reader and amanuensis. How much the sight of Romola had to do with the wily Greek's offer of assistance is only a matter of guess; however, after he had obtained Romola's hand in marriage it was very little help he vouchsafed to his father-in-law, who pined and soon passed away to the land where all things, even books, are forgotten. Romola's husband, thanks to his personal graces and to a straightforward course of ingratitude and villany (successfully hidden from Romola at first), reaches high dignity and great wealth.

Such cunning they who live on high
Have given unto the Greek.

But his end is miserable. He is pursued by a mob; forced to jump from a bridge and swim for his life; then, just as he has reached the land in a state of exhaustion, he is clutched by the man who had picked him an infant from the kennel, had laid him in his bosom and been a father to him, who had been taken captive by the Turks, had sent to him to beg for ransom, had been deserted by him at the time of need, and ultimately disclaimed by him in the streets of Florence; and who, now that the hour of vengeance has arrived, strangles the man who had been to him a son. The author goes on to say, "Then he *sat on the body*, still clutching the tunic." The idea conveyed to our mind by this picture is ludicrous, and we think the author would have done better to omit it and to proceed immediately to the description of the avenger falling dead upon his victim. Romola's heart has long been estranged from her husband, and therefore his death causes her little pain; she thenceforth devotes her life to the children of Tessa, who being a pretty, blue-eyed fool, with too much love to leave room for sense, has been seduced under a form of marriage by the inimitable Greek; and the parts of the story which treat of Tessa and her children are, if not the best, certainly the most interesting. George Eliot then seems at home again. That pen, from the tip of which flowed Nature's self upon the speaking pages in "Adam Bede" and the "Mill on the Floss," moves but stiffly in the delineation of what is forced and artificial. Whisper it not above the breath; but in "Romola" George Eliot is wordy: we miss the pregnant terseness, the pungent humour, the irresistible pathos. We are no longer introduced to a circle of whom we at once become a part; we are conducted round a waxwork show and have the histories of the figures related to us. It is easy to account for the unpopularity (compared with previous works by the same author) of "Romola" during its periodical phase: it cannot "be understanded of the people." Sismondi's "Italian Republics" is not so much read as perhaps it ought to be; few Englishmen care for Florentine events in those days, when Lorenzo de' Medici, the father of Leo X., the friend and adviser of Pope Innocent VIII., the patron of literature and the arts, the fine gentleman and the bad citizen, had departed this life, leaving Florence to a future of discord and misgovernment. Even Savonarola, the Dominican monk of Ferrara, the eloquent preacher of San Marco, the bold antagonist of Alexander VI. (*monstrum nulla virtute redemptum A vitiis*) with his trial by fire, and his rack-extorted confessions and his semi-martyrdom, is little known and less sympathised with among us. Who, again, takes any interest in the *Piagnoni, Arrabbiati*, and *Bigi*? Add to this the unpleasant sensation of reading a mediæval story written in modern English, so that you have constantly to project yourself out of your age with nothing but memory to keep you fixed in the fifteenth century (for the domestic scenes might do for the nineteenth), and it is tolerably evident for what reasons so clever a book should—in its periodical form at least—have met with fewer eulogists than from the author's fame was probable: firstly, the historical epoch and scene are not such as to engage the attention of the ordinary English reader; secondly, the main story is not only interwoven with, but overpowered by, the historical events; thirdly, in the proem—which is quite unnecessary—and elsewhere fine writing has been made to do duty for natural outflow; and, lastly, a sense of confusion is created by reason of there being no linguistic mark to impress upon the mind, by quaintness or some other striking characteristic, the idea of mediæval times.

Adrian L'Estrange. (1 vol. Smith, Elder, and Co.) Love and lust contend, and the latter is victorious; treachery triumphs over straightforwardness; Lilian is trepanned into a half-marriage, and Darcy Pierrepont has his desire. But Lily's heart is with Adrian, and Adrian's heart is with Lily: each wonders at the others silence, and at last Lily goes mad and Adrian is engaged to another, for he has learnt to mourn for Lilian as lost, and he is of that type of men to whom is very applicable the saying, "Quand on n'a pas ce qu'on aime il faut aimer ce qu'on a." He is not inconstant, he is only not inconsolable; and Catherine Vernon has vast powers of consolation, which, after Lilian's death and many adventures on the part of Adrian, she is enabled to exercise. It is a touching story, excellently written: the female characters are charmingly drawn, and if Catherine is satisfied with Adrian's behaviour it is not for others to express dissatisfaction. His conduct was extraordinary, but the circumstances which influenced it were also extraordinary.

Fish-hatching. By Frank T. Buckland. (1 vol. Tinsley Brothers.) One of the energetic secretaries of the Acclimatisation Society here presents the public with some observations, the substance of which was contained in a lecture delivered by him at the Royal Institution, Albemarle-street, upon an interesting subject, attracting every day more and more attention. Pisciculturists (to adopt a hard word) are invited to examine Mr. Buckland's account.

A Tour in Tartanland. By Cuthbert Bede. (1 vol. Bentley.) Scotland is the more common name for the country of this tour; but then the alliteration and the picturesqueness of the title would be lost. All who feel a desire to read of Scottish scenes viewed "through roseate glasses," and described in pleasant, gossiping, demisemi-humorous style, accompanied by numerous anecdotes and extracts from popular poetical and prose writers, will receive great pleasure from a "Tour in Tartanland."

The Pacific Railroad Company have advertised for 4000 tons of American railroad iron to be supplied to the company.

ECHOES OF THE WEEK.

AND are the domes of South Kensington to be saved from their threatened doom, after all? "And shall Trelawney die?" or, rather, is Trelawney *not* to die this time? We are told that the domes are to be spared from utter demolition, and are only to undergo the milder ordeal of transplantation. In the nick of time, and while the pickaxe was poised in mid-air preparatory to the first breach being hewn in the brick walls of the Exhibition building, the Alexandra Park Company stepped forward—so runs the echo—to make a bid for the whole affair *en bloc*—stock, lock, and barrel. It is said that the domes, and the walls, and the girders, are all to be removed to Muswell-hill, where, under the auspices of the Alexandra Park Company, the famous scheme of a "Palace for the People" which was to educate all the world and his wife to pursuits of art and industry and force the Crystal Palace to hide its diminished head, is at length to be carried out.

Ever so many months ago, we commented on this projected "Palace for the People," and asked what had become of it, for we remembered how a great *fête champêtre* was once held in honour of this "house of fame" *in nubibus*; how Lord Brougham was eloquent, and Sir Charles Fox sagacious, and Lord Talbot de Malahide facetious, and Mr. George Godwin enthusiastic about it; and how it was to be erected from the designs of Mr. Owen Jones. Will the modified scheme come to anything, we wonder? and will the "people" show much alacrity in frequenting the "palace" designed for their recreation and improvement? Great alterations would, of course, be made in the appearance of the old Exhibition building in its new abode; and there might be a chance of carrying out on the exterior façade Captain Fowke's florid plan of ornamentation, which now wastes its sweetness on the desert air (and on Bristol board) in the architectural room of the Royal Academy. The domes, we learn from Echo, are, when re-erected, to be "slated." Surely those unlucky cupolas have received "slating" enough—in a metaphorical sense—during the past eighteen months to last them for ever and a day!

That dismal discovery in the Islington nursery-grounds of the remains of the poor murdered child Elizabeth Hunter—for there seems no doubt of the skeleton found being that of the long-missing girl—vividly recalls one of the ghastliest stanzas in Thomas Hood's "Dream of Eugene Aram"—

> So wills the fierce, avenging Sprite,
> Till blood for blood atones!
> Aye, though he's buried in a cave,
> And trodden down with stones,
> *And years have rotted off his flesh*
> *The world shall see his bones.*

Even quicklime is not always to be depended upon, but will play the assassin false, as in the well-remembered case of Patrick O'Connor, murdered in Bermondsey by the Mannings. The corpse had been well covered up with quicklime, but the destructive agent failed to decompose the set of false teeth mounted in gold which the dead man wore. So, too, in the instance of Elizabeth Hunter, a few fragments of clothing and an iron tip to a boot, sufficient for the purpose of identification, escaped the action of the quicklime.

Mr. Cowper is not ordinarily a funny Minister, but he is a very "plucky" one—witness his remarkable "stump" oration to the Sunday mob in Hyde Park. He had his joke, however, on Monday, in the Commons, when, an honourable member asking for explanations as to the crippled and mutilated condition of the statue of George II. in Leicester-square, the Chief Commissioner of Works suggested that his late Majesty might have given way under the superincumbent weight of Mr. Wyld's Great Globe. The Government, it appears, have no power over the old statues; but they can impose a veto on the erection of new ones.

As for Leicester-square itself, it is rapidly going to rack and ruin again. While the ornamental market scheme was before Parliament some interested parties among the inhabitants, anxious, we presume, to show how pretty a place the square might be made without a market, bestirred themselves to lay out the area in serpentine walks and grass-plots. The few barrows-full of gravel and turf-sods have soon been expended, and Leicester-square has reverted to its original desolation. The serpentine paths have disappeared in the midst of a mangy desert of rubbish and rank herbage. The maimed and deformed statue is simply an insult to the memory—not of George II., whom the hideous effigy does not in the least resemble—but of Guy Fawkes. Some of the missing iron railings to the square have been replaced by wooden ones; and, three days ago, we saw a party of ragged urchins coolly root up two of these sham railings and march into the centre of the square, where they proceeded to turn head over heels, and play at pitch and toss against the pedestal of Guy-George's fetish. This is carrying out the "playgrounds for the people" movement with a vengeance. All this appears to us to be very disgraceful to some person or persons unknown; yet for five thousand pounds we would undertake to make Leicester-square one of the prettiest and most agreeable promenades in London.

The Working Men's Club and Institute Union met on Saturday last in the Royal Society's Room in Burlington House, under the presidency of the venerable Lord Brougham, and in the evening the council of the association had a pleasant little dinner at the Whittington Club, Lord Lyttelton in the chair. Mr. Cowper, Sir William à'Beckett (the retired Chief Justice of New South Wales, and brother of the lamented Gilbert Abbott à'Beckett, of *Punch* and the Southwark Police Court), with Mr. Heywood, the Rev. Newman Hall, and other philanthropic gentlemen, spoke at the afternoon gathering. Properly carried out and sensibly conducted, and with the reins of internal government left in the hands of the working men themselves, these clubs and institutes are calculated to effect a vast amount of good among the industrial classes. But it will, nevertheless, take a long time to wean the working man from his favourite "public."

A very excellent charitable association, the Newsvenders' Benevolent and Provident Institution, of which Mr. Charles Dickens—mindful of that wonderful newsboy in the "Haunted Man" who calls out "Mornin' paper, pepper, pupper, popper, or pipper" according to time and temperature—is president, holds its annual festival at the Freemasons' Tavern on Tuesday, the 21st of July. Mr. Benjamin Webster is to take the chair, and the ladies are to dine with the gentlemen. The newsvenders are no misogynists.

We willingly give ear to a very pleasant echo—namely, that it is in contemplation in some influential aristocratic and artistic circles to present a testimonial to Miss Louisa Pyne. The most charming of English songstresses is about, it is understood, to retire from the management of the Royal English Opera; and the present moment is felt to be eminently fitting for a public recognition, not alone of her great talents and blameless character, but also of the eminent services she has rendered to the lyric stage in England. Vocalists, composers, dramatists, and the public at large have alike cause to be grateful to Miss Louisa Pyne for her energetic and unremitting exertions in a national cause; and the appreciation of her merits should be enhanced by the knowledge that the great artist is likewise the accomplished and highminded lady.

Everybody knows that there was a disgraceful riot at Cremorne Gardens on the night of the Oaks; but as much fuss has been made over the trial of the alleged rioters as though the battle of the Oaks had been one of the battles of the Roses. The case seemed one which a magistrate might well have settled summarily by fine or imprisonment; but, in lieu of so swift an adjudication, we have had a long-protracted trial at the Middlesex Sessions. An enormous mass of conflicting testimony was adduced; and, after the most voluble advocates at the Bar had exhausted themselves in orations pro and con., the jury found six young gentlemen guilty of riotous behaviour, and they were respectively sentenced to pay fines of fifty, twenty, and ten pounds. We should be glad to hear the last of the Cremorne affair; but the public are now threatened with a counter-prosecution, brought by one of the young gentlemen convicted, against the police, for savagely beating him.

It is of course dreadfully unconstitutional, and highly "un-English," to hint at the possibility of such a thing; but we do think that order might be much better preserved in our theatres and public gardens if the police were clad in military uniform, and if they carried arms. We will (with all due deference) give our reasons for this opinion. A policeman in a crowd not only looks like a civilian, but he too frequently acts like a civilian, and a very disorderly one too. Knowing that his truncheon is not a lethal weapon, he "pitches in" to his nearest neighbour without the slightest regard for consequences, and distributes broken heads, squashed noses, and black eyes in the most indiscriminate manner. If he wore a sword or carried a bayonet he would not dare to use it recklessly, nor, as a rule, would the crowd dare to assault him. The moral effect of a squad of municipal guards is astonishing; and for throwing oil on the troubled waters of a mob there is nothing like the gleam of a few bayonets, or even the sparkle of half a dozen shakoes. It is the easiest thing in the world to knock off a policeman's hat—the weight being all in the crown—and, bareheaded, he loses, in a crowd, his sole distinguishing feature; but you can't knock off a military shako. As to the "un-English" part of the question, it will be scarcely a bull, we hope, if we point to the martially-equipped Irish constabulary; and, reminding our antiquarian readers that the "mug-house riots" of the last century were frequently quelled by a file of the Guards, we may direct, in conclusion, their attention to the scarlet-clad grenadiers who pace up and down in front of the two Opera Houses. The present functions of those warriors appear to consist in acting as targets for the "chaff" of the little boys; but in old days they mounted guard at the doors of our theatres, and on the very stage itself; ay, and at Vauxhall, and Ranelagh, and Marylebone Gardens, *for the purpose of preserving order among the crowd.* You can't play tomfool's tricks with a grenadier; and yet England was "merrie England" then.

CHESS.

TO CORRESPONDENTS.

I. R. D., Edinburgh.—We have no recollection of the former objection to Problem No. 966, and we do not quite understand the present one. If you will be good enough to say what there is, either in the problem or in the solution, to which you make exception, it shall be laid before the composer.

M. R. T.—The key moves of enigma 1312 are 1. K to K Kt 7th; 2. Q to Q 8th, or 2. P to K Kt 5th (according as Black plays), and mate next move. Those of No. 1317 shall be given shortly.

SPHYNX, Alexandria.—You will find the fact noted more than once in subsequent numbers.

H. R., Vienna.—It shall be examined and reported on in a few days.

G. M., Sharesbrook.—The "Chessplayers' Handbook," published by Bohn, of Covent-garden.

FAUST.—The note appended to move 17 in the game between Messrs. Paulsen and Dubois in our last properly belongs to *Black's 16th move.* If, then, after Black plays 16. Q R to K B sq, you read that note, you will see its applicability.

C. P. de J., Petersburgh.—Received safely and acknowledged by letter.

JOHNSTONE MILLS.—How can the Black King move to his K B 4th while that square is occupied by the guarded Bishop of his adversary?

F. R. S.—The series of works on chess commenced in 1856 by M. Preti has just been completed. This very useful collection comprises—1. "Stratégie raisonnée des Ouvertures du Jeu des Echecs, par l'Abbé Durand, Louis Metton, et Jean Preti." A treatise on chess openings, which places before the student the exact state of the science at the present time, and contains a large collection of beautifully-played games, chiefly by living masters. 2. "Stratégie raisonnée des Ouvertures pour les Parties à avantage, par l'Abbé Durand et Jean Preti." 3. "Choix des Parties les plus remarquables de Paul Morphy, recueillies par Jean Preti." This is an excellent selection of Morphy's games, enriched by copious notes, both critical and explanatory. 4. "Traité complet, théorique et pratique sur les Fins de Parties, par Jean Preti." 5. "Recueil d'Etudes progressives sur les Fins de Parties composées ou jouées des Rois et des Pions, par Jean Preti." Each or all of these books may be obtained of M. Preti, on application to that gentleman, "Rue Saint-Sauveur 72, à Paris.

G. W. D.—M. C. F. de Jaenisch's great work, "Traité des Applications de Mathématique au Jeu des Echecs," of which the third volume is just published, may be obtained of Messrs. Williams and Norgate, the foreign booksellers. This important production has been presented, in its complete form, to the Academies of Science in Paris and St. Petersburg, and is said to have inspired a high degree of interest among the many eminent mathematicians connected with those institutions. We can hardly doubt that it will meet with an equally gratifying reception from the most distinguished mathematicians and chess amateurs of this country.

A SUBSCRIBER.—A pamphlet, descriptive of the meeting of the British Chess Association in Bristol, two years ago, was promised, we believe, at the time, but it never appeared.

COLLECTOR.—You should apply to Mr. B. Simpson, of King William-street, Charing-cross, for his interesting catalogue of books on the origin, history, and practice of the game of chess.

SOLUTIONS OF PROBLEM, NO. 1010, by Felix, T. V., H. S., Medicus, T. R. M., Q. E. D., I. Parry, F.R.S., L. S. D., Quidnunc, D. B., Ernest, Box and Cox, M. C. C., F. A. S., Subscriber, Try-again, R. H., R. G., Sempronius, M. P., Larry, N. C., Boston Stamp, T. P. C., H. C. S., Tavola, Philip, G. M., W. P. S., Faust, Oxoniensis, Kilkenny, D. V. K., Victoria, Peregrin, Travellers' Club, P. P., J. Gurney, D. F., Gamma, I. Smith, Charley, A Lady, Cadmus, Vernon, W. G. R., S., 1863, Dundreary, Beagle, Etonienais, J. M. L., Henry, G. L. N., R. B. W., George Sidney, Argus, D. D., Victor, Delta, C. R. M., Miles; I. L. M. D., Sheffield; Stonehenge, W. H. G., Anna, A German, F. W. C., Percy, W. O., Stanley, Wee Pawn, Nereus, R. C., W. F. Peters, Mignon, X. Y. Z., Omicron, Civis, S. H. N., A Rifleman, F. C. B., An Invalid., Rosalind, F. F. N., I. Vincent, Peon, C. H. Beaumont, Pip., M. R. T.; R. S., of Malines; Johnstone Mills, Violet, Brissac, Doxy, are correct. All others are wrong.

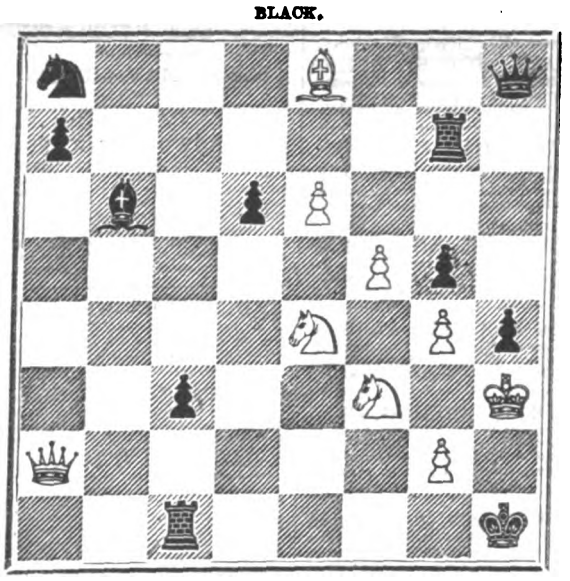
SOLUTION OF PROBLEM NO. 1011.

At the request of many correspondents the solution of Signor Fiachutta's beautiful stratagem is withheld for another week.

PROBLEM NO. 1112.

By Mr. I. A. MILES.

BLACK.



WHITE.

White to play, and mate in five moves.

CHESS IN HOLLAND.

A well-played Game by Signor DUBOIS and Mr. P. DUFRESNE.

(*Vienna Opening.*)

(From this point the game becomes extremely interesting.)		45. K to K 3rd	Kt to Q B 5th (ch)
		46. K to Q 4th, and Black wins.	

Belgium possesses an order of merit for industrial and agricultural labourers. The decoration worn by the members has just been modified by Royal decree, and now consists of a medal bearing an emblematical figure representing manufactures or agriculture, as the case may be, upon a black enamel ground, surrounded with a red border. The design is inclosed within a fillet, on which are inscribed the words "Skill; morality." Around the whole is a wreath of laurel, in blue enamel for artisans and green for agriculturists, surmounted by the arms of the country suspended to a Royal crown. The decoration is suspended to a ribbon of the national colours, which, however, cannot be worn without the medal.

MUSIC.

The opera season, it appears, will terminate with the present month. At HER MAJESTY'S THEATRE the season nominally ended on Saturday last, but Mr. Mapleson has announced a series of nine "cheap nights," which began on Tuesday last, when Weber's "Oberon" was revived. This opera, it will be remembered, was produced at Her Majesty's Theatre at the same period of the season three years ago, in a new Italian version considerably altered from Mr. Planché's original English libretto, and also with considerable changes in the music, the spoken dialogue having been converted into recitative by Mr. Benedict, and several pieces taken from "Euryanthe" (another opera of Weber's) having been interpolated. On Tuesday last the opera was performed in the same manner, the only difference being that the characters were more strongly cast. The part of Reiza was sustained by Tiedens, Sir Huon by Sims Reeves, Fatima by Alboni, Scherasmin by Santley, Oberon by Bettini, and Puck by Trebelli. The performance was splendid throughout, and received with great applause by a crowded audience.

It is announced that the ROYAL ITALIAN OPERA will positively close on Saturday, the 1st of August. The only novelties still forthcoming at this theatre are the "Huguenots," with Mdlle. Lucca (her first appearance in England) in the character of Valentina, this evening; and "L'Elisir d'Amore" on Tuesday next, with Mdlle. Adelina Patti, for the first time, in the character of Adina.

On Saturday last M. Thalberg gave a farewell performance at the Crystal Palace. To accommodate the great number of visitors attracted by the announcement, the performance took place not in the inclosure appropriated to concerts, but in the central transept, the pianoforte being placed in the great Handel orchestra. As might be expected from such an arrangement, the great pianist was very imperfectly heard, for the hands of a Briarens could not make the tones of a pianoforte audible throughout so vast an expanse. But it did not much matter. Thalberg only played such of his compositions as are generally known to the public. The few who were near the orchestra applauded vehemently; the many who were further off applauded because the others did; and so the performance went off with satisfaction to all parties. It is said that this incomparable performer, being possessed of a great fortune, intends to retire altogether from public life.

THE THEATRES.

At this period of the year novelty is not to be expected in theatrical arrangements. Such houses as remain open still retain the same bills. Mdlle. Stella Colas, "The Duke's Motto," and "The Ticket-of-Leave Man" continue to be the only attractions offered. The HAYMARKET, indeed, closed on Wednesday, with Mr. Buckstone's benefit, and his usual address to the audience. We perceive that DRURY LANE is announced to open in September, under the management of Messrs. Falconer and Chatterton. The scientific ghost production is still proceeding, we find, at the East-end as well as in the West, and attracting distinguished visitors from the latter. Miss Burdett Coutts has, for instance, visited the BRITANNIA, at Hoxton, and witnessed the remarkable optical illusions recently introduced there. A new drama has been written for the purpose. It is called "The Wishing Glen; or, Spirits of the Departed," founded on an old Gloucestershire superstition, and is very effective. The SURREY, under the management of Mr. Loraine, closes this evening.

THE WEST INDIA ISLANDS.

THERE had been a long continuance of drought throughout the islands from Barbadoes to St. Croix, and the planters were apprehensive for the next year's crops.

The new Governor of Antigua, Colonel Hill, was becoming very popular amongst the colonists.

St. Croix received, on the 11th of June, its first batch of coolies, who were much needed, and gave entire satisfaction.

The Antigua proprietors considered it fortunate that their island had been rejected as the windward station of the Royal Mail Company, which would have drawn away some 500 or 600 of its best labourers from agriculture.

The intelligence from Hayti refers chiefly to a Ministerial crisis on a question of finance; the Ministers were outvoted, and the alternative was left them either to retire from office or advise an appeal to the nation. The latter course was adopted by the President, and, accordingly, on the 3rd inst. the Chamber was dissolved. It was generally believed that the elections would result in a large majority in favour of the Government.

It is said that upwards of 25,000 slaves from Africa had been imported into Cuba during the last year. When a cargo arrives the slaves are distributed over the plantations, and the vessel is burnt. There are only three small vessels to guard a line of coast of 1500 to 2000 miles. Great fears are entertained in Havannah that the sugar crop would prove a failure, and that not more than half the estimated yield would be produced.

At Jamaica the 10th of June was a general holiday, in celebration of the birthday of her Majesty. In all parts of the island there were demonstrations in honour of the occasion. Considerable anxiety was felt as to who would be the next governor of the colony.

The Barbadoes House of Assembly met on the 23rd of June: the business which transpired was unimportant. The crops were nearly closed throughout the island; the falling off will not be so great as was expected. The total for the island was supposed to reach 40,000 hogsheads.

The railway between Mooltan and Sher Shah Ghat was opened on the 4th of May last, and 5000 natives travelled by it on that day to bathe in the Indus.

General Oudinot, Duke de Reggio, eldest son of the Marshal of that name, died last week in Paris of apoplexy, at his residence in the Rue de Bourgogne. He was born in 1791.

Lieutenant-Colonel Robert Lyon Playfair, of the Royal Madras Artillery, has been appointed her Majesty's Consul at Zanzibar; and Lieutenant-Colonel Herbert Frederick Disbrowe, of the Bombay Staff Corps, her Majesty's Consul at Muscat.

The Italian Government has just adopted a measure in the Neapolitan provinces which is a homage to the principles of liberty of conscience. According to the Neapolitan code, only Roman Catholics can contract marriage in the Two Sicilies. A recent Ministerial circular orders the civil functionaries to accept matrimonial notices from all persons, to whatever religion they may belong.

The *Carlsruhe Gazette* announces that a congress of astronomers will assemble towards the end of August at Heidelberg. The directors of the observatories of Berlin, Leipsic, and Mannheim are already inviting their colleagues to this conference, at which all persons who interest themselves in the science may be present. The object of the meeting is the organisation of some great works, which a single establishment could not execute.

The second match of the season of the Ranelagh Yacht Club took place yesterday week for two silver cups, presented by Colonel Evelyn, the Commodore, and Mr. Pick, the Vice-Commodore. The following contended:—Vision, 81 tons, Mr. G. Harrison; Nicomi, 6 tons, Mr. T. Fuller; Aerolite, 8 tons, Mr. T. P. Dormey; Novice, 6 tons, Mr. J. Gardner. The course was from North Woolwich to Northfleet, and back to Erith; and there was a time allowance of a quarter of a minute for every half ton. The yachts were all under way at sixteen minutes past twelve, wind easterly, so that the yachts had to beat all the way down. Within five minutes of the start the Vision took the lead and kept it throughout the race, and, with a very trifling exception, the Aerolite had the second place from the beginning to the end. Mr. Harrison was presented with the first prize, and Mr. Dormey with the second. The Nicomi was three minutes after the Aerolite.

THE DISTRESS IN THE NORTH.—The weekly meeting of the Central Executive Committee was held at Manchester, on Monday—Sir J. Kay Shuttleworth in the chair. Mr. Maclure, honorary secretary, stated that the receipts of the week had been £985; balance in the bank, £346,842. Mr. Commissioner Farnall's weekly report stated that, on the 4th inst., there was, in twenty-seven unions, a further decrease in the recipients of parochial relief of 5885. Grants were made from the employment and school fund of £429, of £32 for superintendence of labour, and of £10,900 from the general fund. The latter grant included £2000 to Preston, £2000 to Staleybridge, £2000 to Ashton, £1250 to Glossop, £1000 to Wigan, and £1000 to Dunkinfield.——At the fortnightly meeting of the Mansion House Committee, held yesterday week, grants were made to the amount of £4460. The amount of subscriptions received during the fortnight was £2783, of which £2388 was from colonial resources.——At a Cabinet Council held on Saturday it was determined that the Government would yield to the application of the guardians of the poor in the distressed cotton districts, and apply to Parliament for power to grant them loans through the Exchequer Loan Commissioners, in a similar manner and on similar terms to the loans for public works.——The subscribers to the Glasgow Relief Fund have sanctioned a recommendation of the Local Executive Committee that £2000 should be set apart from the fund to assist in sending out to Canada a number of destitute hand-loom weavers.

CRAMER, BEALE, and WOOD, 201, Regent-street.

CRAMER'S PIANOFORTE GALLERY offers peculiar advantages for the choice of a first-rate Pianoforte. There is a profusion of every description, from the smallest Pianette to the largest and finest Grand, and by all the eminent makers of England and the Continent. Nothing but the very best instruments are selected from the factories, all that are deficient in tone being carefully avoided. Purchasers from CRAMER and CO. may therefore rely on having placed in their hands whatever may be reasonably expected from a selection made with competent practical skill.

Cash purchasers will receive the usual discount.

Every Instrument fully guaranteed.

Cramer and Co. deliver their Pianofortes at any railway station in the kingdom without risk to the purchaser, and at a very trifling cost.

Cramer and Co.'s Pianoforte Gallery (the largest in Europe), 207 and 209, Regent-street.

CRAMER'S ENGLISH PIANETTE, 25 guineas. Cramer and Co. manufacture this capital small instrument. It has all the requisites of the best Pianofortes—check action, solid touch, agreeable tone. The case is of polished ash or pine. In practising on this Pianoforte the fingers of the player will be strengthened much more rapidly than on an old instrument, loose in the key and worn in the hammer. In rosewood, 25 guineas; in walnut, 26 guineas.

Purchasers are particularly requested to observe that this instrument has not the common or single action, but the double or check action; and that Cramer and Co. are the only manufacturers of it in England.—207 and 209, Regent-street.

CRAMER'S INDIAN PIANETTE, in solid Mahogany, for warm climates. The most portable Pianoforte yet made. Price 35 guineas.
207 and 209, Regent-street.

THALBERG'S GRAND PIANOFORTES. These magnificent instruments, manufactured by Messrs. J. and P. Erard, and selected by M. Thalberg for his London concerts, have been purchased by CRAMER and CO., and are universally admitted to be the most exquisite Pianofortes ever finished by these distinguished manufacturers, combining in an extraordinary degree all their peculiar excellences; the tone has great volume, together with a charmingly vocal quality. The cases are in walnut and rosewood. Prices, 220 and 240 guineas.—207 and 209, Regent-street.

PIANOFORTE RENEWAL.—CRAMER and CO. have organised a separate staff of the most skilful workmen for the repairing and renewing of the mechanism of pianofortes worn out by years of constant practice. Cramer and Co. do not pretend (as is very commonly done) to make the instrument "equal to new," but they guarantee that, if originally good, it will be restored to great freshness of tone, and in other respects made to be perfectly satisfactory. Cramer and Co. give estimates of cost, and say whether the instrument be worth the outlay.—Pianoforte Gallery (the largest in Europe), 207 and 209, Regent-street.

CRAMER'S CONCERTINAS—PRIZE MEDAL. Prices, 2, 3, 4, 5, 6, 8, 10, 12, 16, and 18 guineas.
201, Regent-street.

GUNS.—E. M. REILLY and CO. invite attention to their extensive stock of double guns and double rifles, breech and muzzle loading. Secondhand guns at reduced prices, &c.—315 and 502, Oxford-street, London.

KEYZOR and BENDON'S TWO-GUINEA BINOCULAR FIELD, RIFLE, or OPERA GLASS.—The extraordinary power of this instrument renders it adapted to define objects distinctly at ten miles' distance—suitable for the theatre, racecourse, target practice, sportsmen, tourists, and general outdoor observation. Illustrated Price Lists of Optical Instruments for 2 stamps.—50, High Holborn, London.

THE PLANETS and DOUBLE STARS seen distinctly by a New Telescope for £5, which will also distinguish the face of a sheep and features of a man four miles, the sign of a public-house five miles, shot marks upon a target two miles, and time by a church clock ten miles. This instrument is guaranteed in writing to perform the whole of the above, and to be equal in the most important respects to telescopes costing £70. It has a 3in. superior achromatic object-glass, two eyepieces, &c., with portable metal tripod stand with jointed claw feet.—S. and B. SOLOMONS, 39, Albemarle-street, Piccadilly. N.B. Persons are invited to apply for a diagram with full particulars, sent free. Powerful small pocket telescopes, opera, field, and general outdoor glasses.

SPECTACLES.—The PATENT TINTED SPECTACLES are patronised by the majority of the nobility, including Viscount Palmerston. They give extraordinary relief by day and night to weak, dim, and defective vision. The adaptation of spectacles to imperfect vision by experienced persons is, indeed, of vital importance. One of the Firm who has had great experience and practice attends to this branch only.—S. and B. SOLOMONS, 39, Albemarle-street, Piccadilly. Opposite the York Hotel.

DEAFNESS.—The SOUND MAGNIFIER and INVISIBLE VOICE CONDUCTOR, for Deafness. It fits into the ear not perceptible, removes singing noises in the head, and enables deaf persons to hear distinctly at church and at public assemblies.—S. and B. SOLOMONS, 39, Albemarle-street, Piccadilly.

NEW BOOKS.

Programmes and full particulars may be obtained at all the Company's Stations and Receiving Offices.
Inquire at King's-cross for Tickets via Midland Railway.
Derby, 1863. JAMES ALLPORT, General Manager.

NORWAY.

T. B. MORLEY and CO., of Hull, have instructions to SELL a Valuable FREEHOLD LANDED ESTATE in Norway, situate about four hours' drive from Christiania, and distant only four miles from an important railway station on the main line of the Norwegian Railway.
The Estate comprises Two Farms of about 1000 English acres each, with large and convenient Dwelling-houses, extensive Outbuildings, and large Stables; also a number of Cottages and a Steam Sawmill.
Only a portion of each farm is at present under cultivation, the remainder being forest land, partially cleared, and which may be converted to agricultural purposes at a cost of about 30s. an acre. Above 200 horses have been employed on the estate in the transport of timber by the present owner, and the land is therefore abundantly manured. The sheep walks are extensive, and the pasturage good. There are two large sheets of fresh water on the chief farm in view from the house. Plenty of birds and hares on the estate, and good fishing in the vicinity.
The Norwegian Government are most favourably disposed towards English settlers, and several Englishmen are farming in the neighbourhood of this estate on property owned by English gentlemen.
A steamer leaves Hull for Christiania every Friday evening, and vice versâ; thus, any one so disposed might go and inspect the estate, having four days in Christiania, and be back in England within ten days.
The property is to be disposed of at a low price, and the seller would deal with intending purchasers in a liberal way.
For further particulars, and to inspect plans, apply to
THOS. B. MORLEY and CO., Hull,
General Shipping and Commission Agents, and Agents to the Norwegian Steamer plying betwixt Hull and Christiania.

INFANT ORPHAN ASYLUM, WANSTEAD. NOTICE OF REMOVAL.—In consequence of the immediate extension of the London, Chatham, and Dover Railway across Ludgate-hill, the Committee have been compelled to remove their Offices to 100, Fleet-street, where, from this date, all communications are to be addressed.—By order of the Committee,
May 5, 1863. HENRY W. GREEN, Secretary.

TWO VACANCIES occur in a quiet, well-regulated SCHOOL in the country for LITTLE GIRLS. Terms moderate. Resident Foreign Governess. Pupils enjoy a happy home, and are carefully trained and educated on Christian principles. Good references. A Governess Pupil required. Terms, 35 guineas.—Address A. B., Messrs. Dawson and Sons, 74, Cannon-street, City, E.C.

ISLE OF MAN.—HILL'S ROYAL HOTEL, DOUGLAS. Board, Lodging, and Attendance, 5s. 6d. per day. Inclose a stamp for an interesting Guide and Map of the Island.

QUEENWOOD COLLEGE, four miles from Dunbridge Station, South-Western Railway, Hampshire.
The Course of Instruction embraces Mathematics, Natural Philosophy, Theoretic and Practical Chemistry, English, Classics, Foreign Languages, Practical Surveying, Levelling, &c., Mechanical and Free-hand Drawing, and Music. The Principal is assisted by Ten Resident Masters. The position of the Establishment is healthful, and the advantages various and unusual. Attention is invited to the Prospectus, which may be had on application.
The ensuing Quarter will commence on July 30.

EDUCATION—West—Terms, 50 Guineas. For the Daughters of Gentlemen. Locality unexceptionable, and the house most desirably and healthily situated. Address—THETA, Mr. Lockwood, Stationer, 75, New Bond-street.

EDUCATION.—RICHMOND-HILL.—In a French and German Protestant Establishment, permanently engaging five resident governesses and twelve visiting masters for English, French, German, Drawing, Painting (all daily), Italian, Latin, Music, Singing, Dancing, Drilling, Scientific Lectures. Religious Instruction by a Clergyman. Gentlemen's daughters receive tuition from any of the masters, with liberal board, from 40 to 50 guineas per annum, inclusive. The Principals devote their undivided attention to the comforts of the pupils. Parents can best appreciate the domestic arrangements, which include single beds and bathrooms, by inspection and references. The house is on a healthy eminence on the best part of Richmond, near the Park.—THETA, Post-office, Richmond, Surrey.

MONEY ADVANCED by Mr. LUXMOORE, Silversmith, &c., of 92, St. Martin's-lane, W.C. (opposite New-st., Covent-garden), on plate and jewellery, at much less interest than is usually charged.—N.B. Jewels and plate bought.

TO CONNOISSEURS and COLLECTORS of FINE ARTS.—"THE FOUR SEASONS," by BOUCHER, FOR SALE.—Four exquisitely-finished specimens of this rare and valuable master. Size of each, including frame, 55 by 55 in. May be seen at Mr. Nurse's, Glider, Old Cavendish-st., Oxford-st., W.

GOLD CHAINS and FINE GOLD JEWELLERY.—A very elegant STOCK of GOLD CHAINS, 15s. to 30 gs.; Gentlemen's Albert Chains, 21s. to 18 gs.; Gold Brooches, 30s. to 15 gs.; Gold Bracelets, 55s. to £30; Wedding and Keeper Rings, 10s., 15s., and 20s.; Gem ditto, 12s. 6d. to 20 gs.; Gold Earrings, 12s. 6d. to 5 gs. per pair. Gold Lockets, 10s. to 16 guineas. Gold Scarf Pins, 5s. to 10 gs.—FREDC. HAWLEY, Goldsmith, 148, Regent-street, W. Jewellery repaired and Diamonds reset.

WATCHES, TIMEPIECES, and CLOCKS. Elegant GOLD WATCHES, jewelled in four holes, £2 15s. to £38; Silver Watches, £1 5s. to 12 guineas; eight-day Timepieces, 12s. 6d. each; Clocks going 14 days, three guineas and upwards.—FREDERIC HAWLEY, Watchmaker, 148, Regent-street, W. (from 75, Strand, and Coventry-street). Established nearly a Century. List of prices free. Old Watches, Gold, Silver, Diamonds, &c., purchased or taken in exchange. Merchants and Captains supplied on liberal terms. Watches and Clocks repaired.

DYSPEPSIA.—MORSON'S PEPSINE WINE, containing the digestive principle prepared from fresh calves' stomachs, combined with a rich stomachic wine, is a perfectly palatable form for administering this popular remedy for weak digestion.
Manufactured by T. Morson and Son, 19 and 46, Southampton-row, Russell-square, W.C., in bottles at 3s., 5s., and 10s. each.

SAUCE.
LEA and PERRINS'
WORCESTERSHIRE SAUCE,
Pronounced by Connoisseurs
"THE ONLY GOOD SAUCE."
None genuine without name on wrapper, label, bottle, and stopper.
Sold by CROSSE and BLACKWELL; Barclay and Sons; and by Grocers and Oilmen universally.

A Delicious Sweetmeat. Sold by Grocers and Confectioners.
FRYS' CHOCOLATE CREAMS.
Medal awarded to Fry and Sons, 1862.

HORNIMAN'S PURE TEA CHEAPER. Full benefit of reduced duty obtained by purchasing Horniman's Tea in packets; very choice at 3s. 4d. and 4s. "High Standard" at 4s. 4d. (formerly 4s. 8d.) is the best imported.

LETTERS PATENT 1838. PRIZE MEDAL 1862.
ROBINSON'S PATENT GROATS is the most valuable preparation for making pure and delicate Gruel. Modern chemistry has shown that this food is easy of digestion and rich in nutriment.
ROBINSON'S PATENT BARLEY makes a delicious custard pudding, directions for which have been given by Mdme. C. R. Francatelli. It is appreciated as a non-inflammatory drink, is excellent for mothers nursing, and has been used with great success for rearing children by hand.
KEEN, ROBINSON, BELLVILLE and CO.
Garlick-hill, London.

KEEN'S GENUINE MUSTARD. There are many qualities of Mustard sold.
Obtain Keen's Genuine Mustard and full approval is guaranteed.
FIRST MANUFACTURED, 1742.
Sold by the Trade from the Cask, and in 1lb. and ½lb. canisters.
KEEN, ROBINSON, BELLVILLE, and CO.,
Garlick-hill, Cannon-street, London.

OSWEGO
PREPARED CORN, for Puddings, Custards, Blanc-Mange, &c.
Manufactured and Perfected by
T. KINGSFORD and SON,
of Oswego, State of New York.
It is the original preparation from the farina of maize, established 1848, commands the highest price from the trade, and offers the best value to the consumer.
It is a quarter stronger than any of the imitations, has a finer grain, and is more delicate.
The Oswego has the natural golden tinge, and not the chalk white produced by artificial process.
KEEN, ROBINSON, BELLVILLE, and CO.,
Garlick Hill, London.

INDIGESTION may be in a great measure avoided if Parties would use Bread, Pastry, and Puddings made with BORWICK'S BAKING POWDER, as recommended by the most eminent Medical Men.

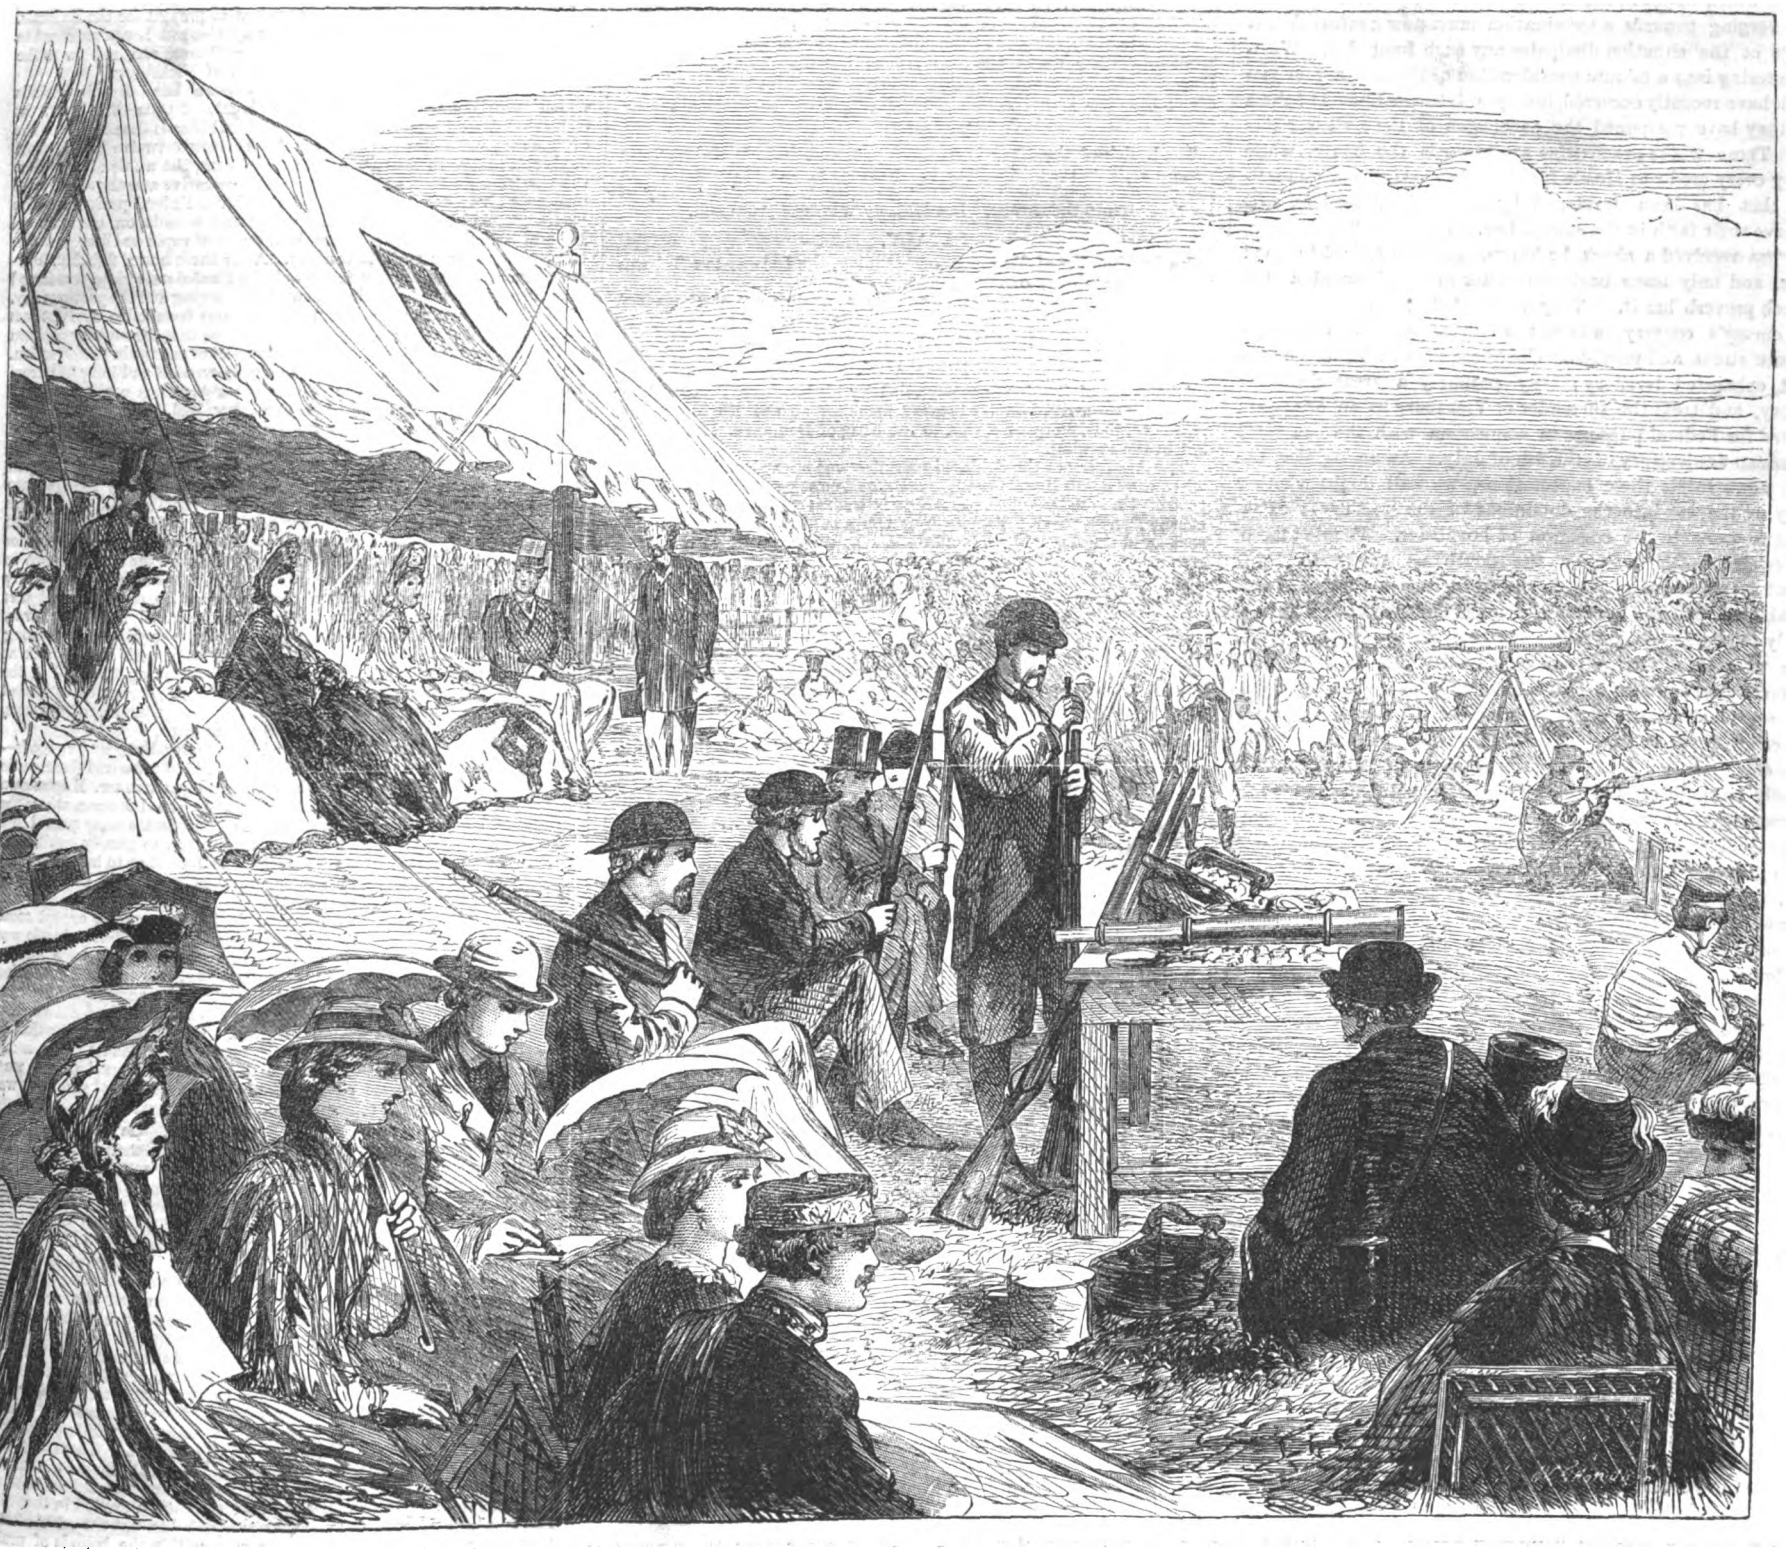
THE ILLUSTRATED LONDON NEWS.

No. 1214.—VOL. XLIII. SATURDAY, JULY 25, 1863. WITH A SUPPLEMENT, FIVEPENCE

A GLANCE ABROAD.

It is a proof of the interest attaching to what, in curt phrase, we call foreign affairs, that the most marked, if not the most important, discussions in Parliament of late have turned on other than domestic topics. We talk with unpleasant familiarity of Poland in revolt, of proximate war with Russia, of new situations in the civil war in North America, and of French progress in the southern part of that continent.

As regards that Polish question which everybody discusses, and which, as we believe, few, if any, really understand, matters have passed into a new phase. The arrival of the reply of Russia to the diplomatic notes of the three Powers has brought matters to a point which was foreseen by some plain persons who do not look at things with the vision of heaven-born statesmen—namely, to what is commonly called a dead lock. The astuteness of Russian diplomacy has not been wanting, though, to say the truth, it did not need any very great exercise of its known quality to render it equal to the existing situation. If the propositions of her Majesty's Government meant anything they meant a virtual separation of the kingdom of Poland from the empire of the Czar, leaving the Emperor the nominal head of the new kingdom, which would consist only of a small portion of the ancient realm of the Polish Monarchs. There was a demand for an armistice, one of the parties to which was to be the armed bands of Poles spread over the Duchy of Warsaw, who are in connection with, but cannot be said to be controlled by, an anonymous and irresponsible Government. Then there was a proposition for a Conference of the Powers, parties to the Treaty of Vienna, to the consideration of which the Polish question was to be submitted. Coeval with the presentation of these propositions care was taken that it should be well known that England was not prepared to push her demands to the sword's point, and that it was on her moral influence that she intended to rely for solving the difficulty with which she had to deal. The result, however it might have been expected, is, we think, mortifying enough. As plainly as it could be said in courteous language, England is told to mind



THE NATIONAL RIFLE ASSOCIATION PRIZE MEETING: THE PRINCE AND PRINCESS OF WALES WITNESSING THE MATCH BETWEEN THE LORDS AND THE COMMONS.—SEE PAGE 88.

Digitized by Google

her own business. Russia does not refuse to consider the "six points" which have been submitted to her, but she gives reasons for not conceding them at present, which are conveyed in language which is nothing if it is not ironical. She does not refuse her consent to a conference, but she intimates that it is more the business of the three Powers which now divide Poland between them to arrange the Polish question, than that of the other five parties to the Treaty of Vienna; and, while pointing out the difficulty in reference to an armistice, to which we have already alluded, she more than hints that the concessions demanded could not satisfy the Poles themselves, who have been taught by their friends and sympathisers to expect nothing less than complete independence, a claim which those who make the Treaty of Vienna their basis of negotiations cannot in consistency support. On the whole, we are reluctantly compelled to admit that her Majesty's Government has received checkmate in the diplomatic game which they are playing. There are not wanting those who would have us believe that Ministers are not so simple as they seem, and not so credulous as to suppose that the whole system of Russian policy could collapse before a letter, even though written by so practised a hand as that of Lord Russell. Such persons would have us think that, notwithstanding recent emphatic declarations, there was a foregone conclusion, in the mind at least of Lord Palmerston, that at the proper time the demands of England on behalf of Poland would be enforced by a threat of war, and even by actual war with Russia, and that the more temporising course which has been pursued was adopted under the influence of Lord Russell and Mr. Gladstone. In this opinion we are not disposed to concur. Looking to Lord Palmerston's policy in regard to Poland in 1831, we are fain to believe that he is content to reproduce that policy now; and that, having a secret conviction of the hopelessness of the re-establishment of an independent kingdom of Poland, he endeavours at once to march abreast of the sympathies of the people of this country in reference to the Poles and to avoid any actual collision with Russia. That, up to the present time, he has been unable to effect this object is clear. His speech and that of Mr. Gladstone, on Monday night, on Mr. Horsman's motion, were those of men baffled and perplexed in the extreme; and at that moment, at any rate, they were as little prepared to say what was to be their next move in Polish affairs as the latest admitted clerk in the Foreign Office.

Any one who was so sanguine as to hope that the fratricidal contest which wages in the once United States of America was even verging towards a termination must now confess that a glance at the situation dissipates any such fond idea. Without entering into a minute consideration of the military events which have recently occurred, it may well be predicated of them that they have postponed the conclusion of the civil war *sine die*. Those whose proclivities are towards the South, while giving every credit to Meade for the only piece of real generalship that has been developed by the Federal leaders, still preserve their faith in the star of Lee. They still believe that, if he has received a check, he has nevertheless retired in good order, and only leans back the better to leap forward, as the French proverb has it. They assert that his movement into the enemy's country was not an invasion, but a raid to procure stores and provisions elsewhere than in his own somewhat exhausted territory; they prophesy a great Southern victory, and treat the surrender of Vicksburg as an organised *canard* for Federal purposes in connection with the chartered American anniversary of the 4th of July. Assuming that the next news fulfils these expectations, we still doubt whether carrying the war into the dominions of the North was calculated to promote the cessation of hostilities. People talk of a decisive battle won by the South as likely to bring about a settlement of the dispute. In such a contest as that in which North and South are engaged decisive battles are not likely to occur. As yet, there has been no approach on either side to such a victory as would be entitled to rank, even theoretically, amongst decisive battles; and we confess we do not see much chance of the attainment of any such success either by Meade or Lee. This civil war has within it peculiar elements. It is not the sanguinary sport of Kings, but the deadly struggle of a divided people for political and social supremacy. It partakes of the fierce contention between individual men; it has the unnatural ferocity which characterises the hatred of brothers which has risen to the height of a thirst for each other's blood. It is not tempered by the chivalry which belongs to war carried on between two different nations, and it has long passed beyond the reach of that diplomacy which is always watching a favourable moment to intervene in a quarrel between rival Monarchs. He is hardy who ventures to predict anything which relates to this American difficulty; but we will venture to say that the only circumstance which seems to us likely to have an influence on the contest will be the next Presidential election. Many reasons, which it is not convenient for us to enter upon now, might be stated to show why this event may become the turning-point of the quarrel. It was the election of one President which was the immediate cause of the war; the election of another may be the means of bringing it to an end.

While all the world is looking with anxiety or interest, as the case may be, to Poland and America, comparatively little attention is paid to a very important movement which is going on in Mexico. It is not too much to say that the Emperor of the French has achieved the conquest of Mexico; and this question must ere long arise (although nobody seems in a hurry to raise it), what will he do with it? Will he set up a Mexican kingdom under the protectorate of France? or will he, following the example of England with regard to India, annex Mexico to his empire, and govern it after our Indian fashion, by a Viceroyalty? In either event—and, in truth, there is in the matter a distinction without a difference—the fact will be that French influence and French policy will have been established on a large scale in the Transatlantic world, and the projects of France, which were foiled by the conquest of Canada by England, will be revived, although the *locus in quo* will be changed. It is, we repeat, a little surprising that these Franco-Mexican matters attract so little notice in Europe, and in this country in particular. There are those who have argued, from certain indications which they profess to have observed, that it is the ambition of Napoleon III. to put a French girdle round the earth. Is the occupation of Mexico one of its links?

FOREIGN AND COLONIAL NEWS.

FRANCE.

The *Patrie* states that the Corps Législatif will not reassemble before November.

Despatches from Mexico announce that on the 31st of May Juarez retired—or, as the official journal says, "fled"—from the capital with a few troops in the direction of San Luis de Potosi. General Bazaine then occupied the city, into which the General-in-Chief made his entry, on the 10th of June, at the head of the army, accompanied by the French Minister and General Almonte. This entry is described as a "triumphal march, in the midst of 200,000 inhabitants uttering cheers for the Emperor, the Empress, and French intervention." The municipality of Mexico handed over to General Forey, it is stated, the keys of the city in silver. The flags taken were presented to the Emperor on Sunday at Vichy. His Majesty summoned the sub-officers of the Guard, and delivered the trophies into their charge, with the words—"If you had been there you would also have taken your share of flags." The battalion defiled before the Emperor amid the acclamations of the crowd.

The reply of Prince Gortschakoff to the French note on Poland was published in the *Moniteur* on Wednesday. A summary of it is given in another column. The despatch is cold, ironical, and discouraging, holding out no hope of any satisfactory arrangement or compromise. The publication of the note caused much excitement on the Bourse, and a considerable fall. All the French papers, except the *Presse*, consider the reply of Russia insufficient and unacceptable.

The *Moniteur* publishes the text of the treaty of peace and friendship concluded between France and Spain, on the one part, and the kingdom of Annam on the other. Three provinces are ceded to France, and the French further acquire the right of free navigation in the River Cambodia and all its branches.

The negotiations for the conclusion of a treaty of commerce between France and Switzerland have been postponed until October next.

AUSTRIA.

In the sitting of the Lower House of the Council of the Empire, yesterday week, the Finance Minister made his statement for 1864. The savings in the War Department are calculated at about 700,000 florins. The Minister promises shortly to introduce a bill for the regulation of the direct rates and taxes. The balance of ordinary revenue over ordinary expenditure is stated at upwards of 9,000,000 florins. The deficit occasioned by the extraordinary outlay of 50,000,000 florins is proposed to be met by payments falling due, by a new tax, and by the public credit. The deficit is of an extraordinary character because the Budget now brought forward is for fourteen months, occasioned by the transition from the financial to the solar year; also in consequence of the repayment of the instalments due by the State to the Bank and of the interest of the loan falling due. The Minister further states that, to relieve the distress prevailing in Hungary, the Emperor has consented to grant an advance of 2,000,000 florins from the Treasury, and promises further assistance if required.

BELGIUM.

The health of the King is so much restored that his Majesty was present on Tuesday at a solemn performance of the "Te Deum" in the church of St. Gudule, Brussels, to celebrate the anniversary of his accession to the throne. His Majesty was loudly cheered.

ITALY.

In the Chamber of Deputies, on Tuesday, the Income-tax Bill was passed by a majority of 130 against 70 votes.

The difference between France and Italy, arising out of the arrest of the brigand chiefs on board the Aunis, has been settled by the surrender of the five prisoners by the Italian Government.

DENMARK.

The King of Sweden, accompanied by his brothers, Princes Oscar and August, arrived on Wednesday morning at the Royal summer residence, Skodsborg, on a visit to the King of Denmark. His Majesty left in the evening.

The Assembly of the Schleswig Estates was opened yesterday week, when the Danish Royal Commissioner, as temporary president, refused to accept a vote by which the majority wished to exclude a member of the Danish party. Twenty-four German deputies resigned their seats, and the Assembly was adjourned as incompetent to come to a resolution. The Government has issued orders for the election of Deputies to supply their places. The new members are to appear at the Diet by the 30th inst.

THE INSURRECTION IN POLAND.

Prince Gortschakoff's reply to Earl Russell's note respecting Polish affairs has been laid before Parliament. The Russian Foreign Minister declares, with reference to the six points, that the greater part of the measures which Earl Russell points to have already been either decreed or prepared on the initiative of our august Master; but he cannot, without certain reserves, share the hope that the adoption of those measures would lead to a complete and permanent pacification of Poland. Order must be restored before the measures could produce their effects; for the Polish insurgents desire neither an amnesty, nor an autonomy, nor a representation, and would not even be satisfied with the absolute independence of the kingdom of Poland, but would aim at dominion over provinces where the immense majority are Russian by race or by religion, and would certainly claim the Polish provinces belonging to other States. As to an armistice, Earl Russell, says Prince Gortschakoff, will dispense us from giving an answer to the proposed arrangement for a suspension of hostilities. It would not resist a serious examination of the conditions necessary for carrying it into effect. If it were to be defined between whom it was to be negotiated, of what nature the *status quo* was to be which it would guarantee, and who was to watch over its execution, it would readily be perceived that the provisions of public law could not be applied to a situation which would be a flagrant violation of such law. His Majesty the Emperor owes to his faithful army, which struggles for the maintenance of order, to the peaceable majority of Poles who suffer from these deplorable agitations, and to Russia, on whom they impose painful sacrifices, to take energetic measures to terminate them. Desirable as it may be speedily to place a term to the effusion of blood, this object can only be attained by the insurgents throwing down their arms and surrendering themselves to the clemency of the Emperor. Every other arrangement would be incompatible with the dignity of our august Master and with the sentiments of the Russian nation. A conference of the eight Powers which signed the Treaty of Vienna, for the purpose of discussing the six points, would be attended with serious inconveniences, without any advantages. The Russian Cabinet would be ready to enter into negotiations with the Austrian and Prussian Governments respecting Polish affairs. But, in any case, the re-establishment of order is an indispensable condition which must precede any serious application of the measures destined for the pacification of the kingdom. This condition depends greatly upon the resolution of the great Powers not to lend themselves to calculations which the instigators of the Polish insurrection found on, or expect from, an active intervention in favour of their exaggerated aspirations.

In the Russian reply to the French note the six points are dealt with in the same manner as in the reply to England—the armistice is rejected, and the conference only accepted in part. But the note, moreover, contains a charge against the French Government of encouraging the revolutionary spirit, which can scarcely fail to give great offence to the Emperor. It insists on the moral solidarity of the great Powers in presence of the evident action of the revolutionary element of all countries, concentrated at present in Poland, stating that this gives the question a European character, and continues:—"We are so much the more compelled to call the attention of the French Government to this fact, since one of the principal foci of the agitation which exists is Paris itself. The Polish emigrants, profiting by their social relations, have organised a vast conspiracy, destined to mislead public opinion in France by a system of misrepresentation and calumny, and to keep alive disorder in the kingdom of Poland by assisting it with material, by the terror of a secret committee, and, above all, by propagating the conviction that active foreign intervention will take place in favour of the most senseless aspirations of the insurrection." "This influence," it adds, "is at present the principal source of the agitation, which without it would be overtaken by the action of the law in presence of the indifference or opposition of the masses. Herein lies the moral cause which tends to prolong the present painful state of things, for the prompt cessation of which the French Government, like ourselves, appeals in the name of peace and humanity. We have pleasure in believing that the French Government will not permit its name to be abused for the advantage of the revolution in Poland and in Europe."

Austria has dispatched a preliminary note to Russia in reply to the despatch of Prince Gortschakoff, in which Russia is informed that Austria cannot abandon the line of conduct she has pursued up to the present. She rejects the proposal of a conference of Russia, Prussia, and Austria, and maintains the six points. Austria has also sent notes to France and England, declaring that she will continue to act in concert with them.

Whilst notes are thus being exchanged the Polish insurgents, with the conviction that "in native swords and native ranks the only hope of courage dwells," are making desperate efforts to maintain the struggle against Russia. The telegrams report engagements under the chiefs Wierzbicki, Jasenski, and Wawer, in which the Russians were defeated. Count Paslowski has been shot by order of General Mouravieff, and the same General had confiscated the estates of upwards of five hundred Polish landowners. It is reported that there has been a collision between a detachment of Prussian troops and a band of Polish insurgents near Miloslaw, and that several men were killed and wounded on both sides.

The following is the most recent instance recorded of the mysteriousness and power of the Polish National Government:—"If any one (says the *Presse* of Vienna) has need of a passport to some foreign country to serve him as a safeguard against the insurgents whom he might meet on his journey, all he need do is to write his name, his place of residence, and the reason of his absence on a piece of folded paper and let it drop in some public place. He may be certain that the paper will, by some inexplicable means, reach the hands of the competent authority, and that within twenty-four hours, or at most forty-eight, he will receive the required paper."

From St. Petersburg we learn that an Imperial decree has been published which, in view of the present state of affairs, orders a fresh levy of troops in November next, at the rate of ten men for every thousand of the population. The Russian conscription in the governments of Wilna, Grodno, Kowno, Volhynia, Kiew, and Podolia has been postponed till 1864. According to letters received from St. Petersburg the Emperor has again inspected the batteries, fortifications, and vessels of war, as well as the camp of the troops at Cronstadt.

AMERICA.

WAR NEWS.

The tide of success seems to have set in at present for the Federals. To the repulse met with at Gettysburg by General Lee, announced in our last Number, we have now to add a still more serious blow to the pride and interests of the South in the fall of Vicksburg.

First, let us follow the fortunes of General Lee. By the details which have come to hand of the battle of the 3rd inst., at Gettysburg, we find that it was, as General Meade described it, "one of the severest actions of the war." It lasted twelve hours, from daybreak to five in the afternoon; and during the whole of that time the Confederate forces were engaged in successive assaults of the most obstinate character on different points of the Federal position. The battle opened by a vigorous cannonade and assault on the extreme Federal left, the enemy striving, by a series of rapid and fierce attacks, to pierce or turn it early in the day. After three hours' fighting, however, the attempt not only failed, but the Confederate right was forced back across the whole battle-field of that morning and the previous day. During this attack on the left a resolute and formidable attempt was made to flank the Federal right, and it is clear that the superior position of the Confederates gave them every prospect of success in this direction. Behind the Confederate left rose a densely-wooded and lofty hill, from the summit of which the Confederate batteries could command the Federal right and centre on Cemetery Hill. The great effort of the day was to turn this position, and at one time it seemed doubtful whether the effort would not be successful. In the assault upon it General Hill's corps was brought from the other wing to reinforce General Ewell. The reserve Federal artillery brought into play from elevated points behind the Cemetery Hill, and the vigorous resistance of the eleventh corps on the Federal right, partially checked the Confederate advance; but the opportune arrival of two brigades of militia to reinforce the Federal right obliged the Confederates to retire. They retired, however, slowly, fighting desperately at every step until the afternoon, when their attempt to turn the right was finally abandoned. Within an hour another and final effort was, however, made. The Confederate troops were again massed along the whole Federal line, but by five o'clock they were driven back at all points, and the engagement terminated, leaving the field in the hands of the Federals. The loss on both sides is roughly estimated at 30,000. The Federals have also captured a large number of prisoners, with numerous waggon-trains, colours, and arms.

On the 4th, General Lee retreated from Gettysburg by two roads—through Fairfield on one side, and through Cashtown and Greencastle on the other—to Hagerstown, where his head-quarters are. Hagerstown is only a few miles from Williamsport, on the Potomac, where the bridge of boats, by which part of the Confederate army passed into Maryland, remains. The Potomac is, however, so greatly swollen by recent rains that it is impossible either to ford it or to build pontoon bridges across it. General Meade marched in pursuit as rapidly as the state of the roads would permit.

To the 13th there had been no fresh engagement, except some skirmishes between the hostile armies in Maryland; but a battle was believed to be imminent. General Lee, whose forces were said to occupy a strong position around Hagerstown, was engaged in sending his wounded men and his commissariat stores across the Potomac; but none of his troops had quitted Maryland, and he had drawn fresh supplies of ammunition from Virginia. There was a rumour that he had been joined by 40,000 men from General Beauregard's army. The Federal forces under General Meade and General Couch were concentrating in front of the Confederate army, and would, it was supposed, assume the offensive, and assail General Lee's position.

Vicksburg has surrendered unconditionally. On the 3rd General Pemberton sent two officers to the camp of General Grant, to ask that commissioners should be appointed to settle the terms of surrender. This request was refused. General Pemberton himself then had an interview with General Grant, and the surrender was agreed upon. The garrison, variously stated at 10,000, 12,000, and 27,000 fighting men, were paroled, and rations given them to enable them to reach their lines. The guns and arms captured are very numerous. The immediate causes of surrender were the exhaustion of supplies and ammunition and the failure of General Johnstone to come to the assistance of the garrison. The fleet of Admiral Porter is now ready to co-operate in the attack on Port Hudson, whilst it is reckoned that no fewer than 100,000 veteran troops are placed at the disposal of the Federal Government. Of the whereabouts of Johnstone, who was to have relieved Vicksburg, no mention is made. Southern papers speak of an advance of their troops upon New Orleans, and the capture of some thousands of Federal soldiers. General Neal Dow has been captured. These accounts are probably exaggerated. It appears, however, to be certain that a considerable body of Confederates had shown themselves between General Banks and New Orleans, and that alarm existed in that city. The recovery of New Orleans was not probable, but the relief of Port Hudson and the capture of Banks were within the bounds of proba-

Digitized by Google

bility. Thus success and defeat swing from side to side, and the bloody contest continues without results.

General Dix is reported to have abandoned White House, and returned to Fortress Monroe, after destroying the railway communication between Richmond and Lee's army.

The Confederate General Bragg has crossed the Tennessee River and destroyed the bridge at Bridgeport. It is stated that General Bragg will make the Tennessee River his future line of defence.

General Morgan, the active Confederate leader, with 8000 men, has captured Corydon, Indiana, and is advancing to Jeffersonville, where there are large Federal supplies. Business is suspended at Indianopolis, and the Governor of Indiana has called out 50,000 men.

Between 8000 and 9000 Confederates, under Generals Holmes, Price, and Marmaduke, made an attack on Helena, Arkansas, on the morning of the 4th. They advanced in three columns, but the roughness of the ground prevented them bringing up their artillery, and they attempted to carry their works by assault. The centre column charged in the direction of Fort Curtis, and took three lines of rifle-pits. The flank attack was not so successful, which subjected the centre to an enfilading fire, which swept them down in great numbers. They were soon surrounded, and one whole brigade, numbering 840, was captured.

Among the vessels recently overhauled by the Confederate cruisers was the George Griswold, which some time ago brought to Liverpool a cargo of provisions for the operatives of the cotton-manufacturing districts. The ship was on her way from Cardiff to Rio with a cargo of coals, belonging, it would seem, to British subjects; and she was, therefore, released on the captain giving the bond usually demanded in such cases. The following vessels have been captured and burnt by the Alabama:—The ship Amazonian, bound from New York to Monte Video, was burnt on the 2nd of June; and the Jabez Snow, bound from Liverpool for Monte Video, was burnt on the 29th of May. The crews of these vessels were landed at Monte Video. The Georgia captured the ship Hope, bound from Boston to the Cape of Good Hope, together with the G. W. Seaver, bound from Boston for Rio. The latter vessel was released upon giving bonds for 15,000 dols. The Pernambuco papers state that the Florida, Confederate cruiser, has taken possession of the Rocas Islands—a small group of desert rocks near the Island of Fernando Noronha—as her base of operations.

MISCELLANEOUS.

At Washington, on the evening of the 7th, President Lincoln, General Halleck, and Secretaries Seward were serenaded on the receipt of the news of the surrender of Vicksburg. In returning thanks the President made an unimportant speech. General Halleck claimed the merit of retaining General Grant in command, and consequently of the victory he achieved. Secretary Stanton declared that the real victory had been won over Copperheads as well as rebels. Mr. Seward admitted that he was originally opposed to the war, and desired to put it off, if possible. If that were a weakness there was a warrant for it in the character of Him who died to save the world, who desired the cup to pass from Him if his Heavenly Father pleased, but, if not, He would accept it. Another report states that Mr. Seward said:—"He had been censured for his predictions that the rebellion would be ended in ninety days, and it would have been ended before it was begun if councils of patriots had been held. It had been protracted by the hopes held out of foreign interference. If foreign nations would keep their hands off the Americans would settle all their own quarrels."

The *New York Herald* says that there has been a crisis in the Cabinet in reference to the peace question. Mr. Seward wished to issue a Presidential proclamation offering an amnesty to all but the leaders of the rebellion, withdrawing the emancipation proclamation, suspending the Confiscation Act, and offering protection to the personal property and rights of the Southern people. According to the *Herald*, he was opposed by a majority of the Cabinet. The Republican party are said to be preparing a petition to the President, in reference to the restoration of peace and the Union, on the basis of the extinction of slavery in 1876.

The Washington Government had refused to allow Mr. Stephens, the Confederate Vice-President, to present in person to President Lincoln important communications from President Jefferson Davis. The Southern papers state that Vice-President Stephens's visit to Washington was either to arrange for the exchange of prisoners or to inform the Federal Government that if private property was not respected the Confederates would retaliate. The *New York Herald* asserts that Vice-President Stephens's message was a proposition from President Davis for a separate Government for the North and South, but only one President. The *Tribune* says that the Secretary of War has given orders for mounting guns and garrisoning the forts in Portland Harbour, and has authorised the Governor of Maine to raise artillery companies for the defence of the coast towns.

It is stated that the Federal Government has ordered a levy of 300,000 conscripts. A serious riot has occurred at New York, caused by the enforcement of the draught.

Martial law has been declared in Louisville. All citizens have been ordered to enrol themselves, or to go North.

INDIA.

The Bombay mail brings intelligence from that presidency to the 24th of June. Since the previous mail no event of any striking interest had happened in India. During the fortnight incessant rain had prevailed in Bombay, which had been general throughout the presidency. The Viceroy and Governor-General had held a durbar for the hill chiefs at Simla. There were some indications of disturbances in the north-west. The Bhootias had again come down upon Assam, and it was generally believed that it was Nana Sahib who was instigating them.

A large section of the rock on the Canada side of the Falls of Niagara has disappeared, increasing the horse-shoe appearance of the falls.

Several shocks of earthquake have again been felt in the province of Almeria, Spain.

In the Swedish State Council, held yesterday week, the question of placing the army and navy on a war footing was discussed.

Mr. Elias Perkins has been approved as Consul at Kingston, Jamaica, for the United States of America; and Mr. A. J. Levy as Consul at Belize for the King of Sweden and Norway.

A Florentine patrician, Count Angioli Galli, has recently died, and left all his property, amounting to about four millions of francs, to the hospitals of Tuscany.

Accounts from Zante and Cephalonia state the prospects of the currant crops to be most promising. Last year those two islands exported more than 50,000 tons, and this year the export will be 30 per cent greater.

The Council of the Russian Empire is to be reinforced by the addition of the Marshals of the nobility and the Burgomasters of St. Petersburg and Moscow.

A letter from Cairo states that the Viceroy is preparing an expedition against the Abyssinians, to avenge an invasion of Egyptian territory by a chief calling himself the Emperor Theodorus, and who has carried into captivity several Egyptian subjects and an agent of the Porte.

CAPE OF GOOD HOPE.—The Cape Parliament, although it had been sixty-four days in Session, had done little beyond voting estimates. The votes for the police and gaols were reduced by about £16,000. A motion, declaring that the time had arrived when the establishment of a responsible or party Government was expedient and necessary, had been discussed for three days. Most of the members of the greatest Parliamentary experience and influence were for the change, but it was known that a numerical majority of members would record their votes against it. The Government had maintained perfect neutrality in the matter. A vote of censure had been passed on the colonial engineer and the Chief Commissioner of the Works Department for extravagance and inefficiency in constructing public works. The Governor had offered to remove Mr. Scott Tucker (who is now in England on leave) on a handsome retiring allowance, and to alter the management of the Public Works Department. The Government proposal for purchasing the Cape Town and Wellington Railway had been referred to a Select Committee. The proposed new railway schemes had gone no further than the Government being empowered to prepare careful surveys and estimates for the guidance of the Legislature next year. The Assembly had refused to authorise the expenditure of £4000 per annum for a trigonometrical survey of the colony. All was quiet on the frontier. In the free State the movement in favour of reannexation was extending. Negotiations were pending with the object of bringing Basutos also under British rule. The Gorgon had arrived with news from Zambesi. Dr. Livingstone was about to proceed to Great Lake Nyassa. At the University Mission, River Shire, the Rev. Mr. Scudamore was dead. Animal food was so scarce that it was feared the missionaries would not be able to remain.

CHURCH AND UNIVERSITIES.

The cost of restoring the Church of St. Bartholomew the Great, which in our last Number was estimated at £1400, will, we are informed, be £4000.

A mural monument, by the sculptor Theed, to the memory of the late Dr. Williams, has just been placed in Winchester Cathedral, where he was for twenty-seven years Canon.

The subscriptions to the fund set on foot for the purpose of extending the parochial system throughout the diocese of London has reached nearly £70,000.

On Thursday week the Bishop of Oxford consecrated the chapel of Wellington College, the foundation-stone of which was laid by the late Prince Consort on July 12, 1861.

The Incorporated Church Building Society held its last meeting for the present session on Monday last, at the society's house, Whitehall, when grants of money, amounting to £4875, were made.

On Sunday the Bishop of London confirmed 179 persons at the Church of St. Paul, Lorrimore-square, Walworth, 141 of that number being members of the congregation of St. Paul's. The chancel and sanctuary were adorned for the occasion, four vases of flowers being ranged on the superaltar, and the altar itself vested in a white silken frontal.

The Archbishop of York consecrated St. Martin's Church, Scarborough, on the 11th inst. The church is built (after the designs of Mr. Bodley, architect) of a light-coloured stone, and consists of nave, aisles, chancel, and tower above the western bay of the north aisle. The seats, of oak, are free and unappropriated.

The Lord Mayor, co-operating with the Dean and Chapter and a committee of gentlemen formed for the special purpose, on Monday opened at the Mansion House what is intended to be a national subscription towards the completion of the embellishment of St. Paul's Cathedral, as originally designed by Sir Christopher Wren; and headed the list himself with a donation.

The annual assemblage of the students at Epsom College for the distribution of prizes previous to the summer vacation took place in the schoolroom of the college on Wednesday. The chair was occupied by the president of the institution, Lord Chelmsford, among the visitors being Lady Chelmsford, Sir George Pollock, Mr. Cubitt, M.P., and a considerable number of the friends of the pupils.

The ninth annual meeting of the friends and supporters of the London Diocesan Church Building Society was held at Willis's Rooms yesterday week. The Right Rev. the Bishop of London presided. The accounts showed that the balance in hand at the last audit had been £13,568, and, after the receipts of the year were added, the gross income was raised to £18,935. After meeting the expenditure a balance of £9558 remained.

The fourth annual festival of the Norfolk and Suffolk Church Choral Association, held on Tuesday week in Norwich Cathedral, was highly successful. A congregation of about 1500, exclusive of the choirs, filled all the available space of the noble edifice. The total number of choristers present was 584—viz., 314 soprani, 68 alti, 100 tenors, and 102 basses. Mr. Harcourt officiated as choirmaster, and Mr. Bunnett presided at the organ.

The annual commemoration of Trinity College, Glenalmond, took place on Wednesday week. It was specially marked by the opening of the new hall, a noble building, planned by the late Mr. Henderson, and filling up one of the uncompleted features of the original design. The library and the spire of the chapel are all that now remain to be done; and the steady growth of the college for some years past under the active management of the present Warden, Dr. Hannah, warrants the expectation that no long time will elapse before these two are also added, and the large outline, so boldly traced in faith by the founders twenty years ago, completely filled in. An unusually large company assembled, including six out of the seven Bishops of the Scottish Episcopal Church, and a large number of the Scotch landowners and aristocracy, who are fully aware of the great value of an institution which secures to them all the advantages of a great public school without the necessity of a distant journey to England. The proceedings consisted of a full choral service in the chapel, a distribution of prizes and recitation of speeches in the school, and a luncheon, to which more than 300 persons sat down, in the new hall.

Monday was a day long to be remembered at Winchester College, as the interesting annual ceremony of "Domum" was combined with the opening of the new tower of the college chapel, called "The Tower of the Two Wardens," which has been erected, at a cost of nearly £4000, in memory of the late Rev. Daniel Williams, D.C.L., Warden of New College and Canon of Winchester, who died on the 22nd of March, 1860, aged seventy-three; and the Rev. Robert Speckott Barter, B.C.L., Warden of Winchester College, who died on the 8th of February, 1861, aged seventy. On Monday, at two o'clock, the prize recitations were delivered in the schoolroom. The following roll of Wykehamists, for scholarships at New College, Oxford, was sent out in the afternoon:—Theodore Kensington, John Barrow Alen, Robert Campbell Moberly, Edgar Jacob, Frederic Dobree Teesdale. At four o'clock a dinner was given in the college hall, under the presidency of the warden. About one hundred sat down. At seven o'clock the meads and the adjoining quadrangle were filled with visitors of all classes, to mix with the scholars and "dons" in singing "Domum." The "Domum ball" was given on Tuesday evening, under the patronage of the Hon. Lady Mildmay, Lady East, Mrs. T. W. Fleming, &c. The summer holidays began on Tuesday.

PREFERMENTS AND APPOINTMENTS.—The Rev. W. Cookin, Rector of St. George's, Birmingham, to be Examining Chaplain to the Bishop of Durham; Rev. M. E. C. Walcott, M.A., Exeter College, Oxford, to be Precentor of Chichester Cathedral. *Rectories:* The Rev. A. Clarke to Longton, Staffordshire; Rev. W. Hildebrand to Millbrook, Bedfordshire; Rev. R. Parker to Wickham, Hampshire; Rev. G. F. Price to St. John, Maddermarket, Norwich; Rev. M. A. Smelt to Medstead, Hampshire; Rev. H. Thomas to High Halstow; Rev. R. Trimmer to Holy Trinity with St. Mary, Guildford. *Vicarage:* The Rev. A. Robinson to Humbleton, Yorkshire. *Perpetual Curacies:* The Rev. W. L. Cox to Ashfield-cum-Thorpe, Suffolk; Rev. G. W. Dalton to St. Paul, Wolverhampton; Rev. J. Rodgers to St. Thomas, Charterhouse. *Curacy:* The Rev. E. G. Hunt to Plympton St. Mary, Devonshire.—*Guardian.*

METROPOLITAN NEWS.

The Earl of Shrewsbury laid the foundation-stone of the Langham Hotel, Portland-place, yesterday week.

A large and enthusiastic meeting in aid of Poland was held in St. James's Hall on Wednesday evening. Sir J. Shelley presided. Mr. Edmond Beales, Sir H. Hoare, General Count Zamoyski, and other gentlemen were among the speakers. It was determined that a deputation from the meeting should wait upon Earl Russell to lay before him the resolutions which had been adopted.

An interesting ceremony took place at the Butchers' Almshouses, Walham-green, on Tuesday, on the occasion of the inauguration of a spacious additional wing, which had been built as a memorial of grateful respect for the Prince Consort, late patron of the charity. The new building is an elegant and commodious structure, and has been erected wholly by voluntary contributions.

There was an interesting scene at the Crystal Palace on Tuesday. Some thousands of the charity-school children of London were gathered in the great orchestra and sang a number of pieces very creditably. Unfortunately the afternoon was wet; but this did not prevent the youngsters from enjoying themselves after the concert right heartily in the building. The total visitors during the day reached 22,109.

As Lord Aveland's carriage was going through St. James's Park, yesterday week, the axle broke, and the horses, becoming unmanageable, came in contact with Sir C. Cresswell, who was returning from court on horseback, and whose knee-pan was broken in the concussion. The coachman and footman were also severely shaken. The accident to the learned Judge has necessitated the closing of the Divorce Court thus early in the term.

The twenty-fourth annual festival of the Newsvenders' Benevolent and Provident Institution was celebrated on Tuesday, at the Freemasons' Tavern, under the presidency of Mr. B. Webster. About a hundred friends of the institution sat down to an excellent dinner, and several ladies were among the guests at the table. In the course of the evening subscriptions to the amount of £100 were acknowledged.

A swimming-race took place in the Thames, between Hammersmith and Putney, on Wednesday evening, for a gold medal, the first of a series to be offered annually by Sir William Fraser; and a silver one, presented by the London Swimming Club. There were twenty-two competitors. A lad named Garr, aged sixteen, came in first by several yards, thus winning the gold medal; and Mr. Coulter took the second prize.

At the meeting of the City Commissioners of Sewers, on Tuesday, a communication was made that the London, Chatham, and Dover Railway Company had entered into an arrangement, on their bill passing, to execute the work in the manner originally arranged with the commission—namely, to widen Ludgate-hill 70 ft. at the bottom, to make other improvements in the roadway, and to construct the viaduct to their satisfaction with regard to ornamentation.

The American steam fire-engine "Manhattan," which was so seriously injured by an accident at the Crystal Palace as to be unable to compete in the recent trial, has now been repaired, and is to be publicly displayed at work to-day (Saturday) in the grounds of the New River Company, at the New River Head, Clerkenwell, at noon. Very great interest is felt in scientific circles as to the capabilities of this celebrated machine, which is reputed to be the most powerful and efficient of all the American steam fire-engines.

A numerously-attended meeting was held on Monday evening in the lower room of St. Martin's Hall, under the auspices of the Working Men's Club and Institute Union, for the purpose of assisting in the formation of a Working Men's Club and Institute in St. Martin's-in-the-Field. The chair was taken by Admiral Sir Frederick Grey, K.C.B., and among those present were Lady Grey, Lady Comm, Hon. Miss Copley, Mr. and Miss Lefevre, the Misses Wray, &c. The Rev. Henry Solly, Secretary of the union, explained the object of the meeting, and stated that Sir Frederick and Lady Grey, with several of their friends, had undertaken to guarantee the rent of a house for twelve months, and find the funds for the preliminary outlay. The announcement was received with loud cheers, and resolutions were passed, principally by working men, pledging the meeting to carry out the purpose for which it had assembled.

Last week the births of 930 boys and 880 girls—in all 1810 children—were registered in London. In the ten corresponding weeks of the years 1853-62 the average number (corrected) was 1803.——Last week there were 1364 deaths in London. The report for the week that ended on the 11th inst. showed an increase of 100 deaths over those of the previous week; and the return for the week that ended last Saturday exhibits a further increase of nearly 100 on the preceding number. The average number of deaths in ten corresponding weeks—viz., a week in each of the years 1853-62—is found, with a correction for increase of population, to be 1223. The increase in the mortality is caused chiefly by diarrhœa, the deaths from which rose from 47 and 91 in the two previous weeks to 148 last week. Besides the deaths referred to "diarrhœa," there were also 15 from summer cholera. Of the 163 deaths referred to both heads, 142 occurred to infants under two years of age. A woman died at the age of ninety-five years and another at ninety-nine.

Last Saturday a large number of the members of both Houses of Parliament assembled in the tearoom of the House of Commons to meet the chairman of the Metropolitan Board of Works and the engineer, in order to proceed with them on an inspection of the outfalls of sewers provided by the great main-drainage scheme. They embarked at the Speaker's stairs on board a steamer, and proceeded to Crossness Point, in the Erith marshes, when Mr. Bazalgette, the engineer, explained to them the system adopted for disembogueing the southern drainage into the Thames. They then proceeded across the river to Barking, where in like manner he explained the scheme of the northern outfalls. Here the works are so far in operation that the contents of the high-level sewer were for the first time allowed to run through the outfall direct into the river. Mr. Bazalgette assured the company that in the course of the next twelve months the whole sewers of the southern drainage would be in full operation, and that in the course of about two years and a half from this time the Thames embankment on the north would be completed, and the drainage of London perfected.——On Monday [illegible] the outfalls were inspected by the metropolitan vestries. The number of persons invited on those two days was about 2500.

COUNTRY NEWS.

The *Western Express*, a daily paper, recently established in Exeter, is defunct.

The sittings of the Wesleyan Conference were commenced on Tuesday, at Sheffield.

Charles Platt, Esq., of the Home Circuit, barrister-at-law, has been appointed Associate of the Norfolk Circuit, in the room of Harry Edgell, Esq., deceased.

The Halifax Town Council has voted £2000 towards the expenses to be incurred in making preparations for the approaching visit of the Prince and Princess of Wales.

Mr. Leybourne Watson has been approved as Consul at Leith for the Grand Duke of Oldenburg; and Don Mariano de la Roca as Consul at Newcastle for the Queen of Spain.

At the York Assizes the two men, Light and Hides, who were concerned in the recent forgery of Federal "greenbacks" at Sheffield, have been sentenced—Light to four years' penal servitude, and Hides to fifteen months' imprisonment.

At the Foresters' annual fête in Aston Park, Birmingham, Mdme. Geneviève, a "Female Blondin," was performing on the high rope, with a sack over her head, when the rope broke, and she fell 60 ft., and was instantaneously killed.

On Thursday week was turned the first turf of the Hayling Railway, intended to furnish increased facilities of direct communication between London and the Isle of Wight, to aid the development of Hayling Island, a sea-bathing place on the south coast, and to utilise Langton Harbour.

The committee for carrying out the proposal to erect a bronze statue at Bradford to the memory of the late Richard Oastler, well known for his exertions on behalf of factory children, have intrusted the commission to Mr. T. Birnie Philip. The memorial will take the form of a group, a statue of the philanthropist to form the centre figure, and will cost £1000. It will be erected in a conspicuous position at Bradford.

Some time ago a Mr. Powell, a coalowner, and one of the richest men in the midland counties, died, when it was discovered that his will had been stolen. Every effort was made for the recovery, but in vain, till an anonymous letter was sent to his widow offering to restore the document for a settled sum. A trap was laid and a man was apprehended, who turned out to be a young man employed in the neighbourhood. What motive he had for being engaged in this, to him, aimless theft, or whether he was a tool in the hands of other persons, has not yet been ascertained.

A movement is being made by some of the nobility and gentry of Somersetshire, of which the Speke family are natives, to mark their appreciation of the services of Captain Speke, the Nile traveller. It is at present intended that a work of art, dependent in some degree on the amount of subscriptions raised, and commemorative of the story of "The Discovery of the Nile," shall be placed in the County Hall, at Taunton, adjoining the marble memorials of Blake and Locke. Mr. Arthur Kinglake, one of the promoters of the undertaking, has received a memorial design, which has been approved by Mr. Baily.

A testimonial was presented to William Williams, Esq., of Tregullow, Cornwall, on the 14th inst., at Redruth. It consists of a massive silver centrepiece and two candelabra of four lights each, of extremely elegant design, the centrepiece representing an interesting scene from Scott's "Talisman: a Tale of the Crusaders," and was purchased for £637 of Messrs. Garrard and Co., Haymarket, the subscriptions having been offered with great cordiality and readiness by a large number of persons, in proof of their appreciation of the highminded integrity and the enterprising and public-spirited energy of the recipient as a leading director of the mining industry of the county of Cornwall; and, at the same time, in personal esteem for his amiable qualities and honourable bearing as a man.

A murderous assault was made yesterday week in a railway-carriage, on the London and North-Western line, by Mr. Michael Lyons, national-school teacher, of Bampark, Ballymascallan, near Dundalk, upon two fellow-passengers. The assailant had taken a return excursion ticket for a month from Ireland to London. As the 9.15 express-train was about to start from Liverpool to London he, Mr. Peter M'Lean, and Mr. James Worland, of Plaistow, Essex, entered a second-class carriage, in which there was previously an elderly lady. After the train had started the prisoner was heard to say something incoherently, but in a menacing sort of way. He, however, sat down quietly, and continued so until after the train had passed the Bletchley station. Then he suddenly jumped up from his seat, and, with a large, open clasp-knife in his hand, rushed at Mr. Worland and stabbed him in the forehead, causing a most frightful wound. He was in the act of striking another blow, when Mr. M'Lean knocked him back on to the seat. This had the effect of infuriating him the more. He started to his feet, and was about to strike another blow at Mr. Worland, when Mr. M'Lean seized him by the throat and clutched the knife in his right hand. Lyons drew the weapon through his antagonist's hand, cutting some of the fingers to the bone. A fierce struggle ensued, lasting the whole journey from Bletchley to London, a distance of between forty and fifty miles. Messrs. Worland and M'Lean lie dangerously ill from their wounds; and the lady who was in the carriage is laid up from the shock her system sustained. The prisoner has made a statement to the effect that he believed the two gentlemen who were with him to be thieves, who intended to rob him. He is supposed to be insane. It is alleged that about twelve years ago he was confined in an asylum, suffering from a deranged mind brought on by over study.

ASHRIDGE HOUSE, BUCKS.

THERE have recently been great festivities at Ashridge Park, to celebrate the coming of age of Earl Brownlow and his taking possession of the vast Bridgewater property, as well as that attached to the title of Brownlow, in Bucks, Beds, Herts, Yorkshire, Durham, Northamptonshire, Shropshire, and Lincolnshire. His Lordship gave a series of entertainments to a large number of his private friends, to his tenantry, also to the labourers on the estate, the poor of the neighbourhood, and school children. The present Earl Brownlow, who came of age on the 28th of March last, was educated at Eton and Christ Church, Oxford.

Ashridge House (of which we give an Engraving) is situated on the confines of the counties of Bucks and Herts. This noble palatial pile was built, from designs by Mr. James Wyatt, the Surveyor-General, in 1808-14, on the site of an ancient edifice, parts of which have been preserved and incorporated with the modern building. One of the architect's descendants, Mr. Digby Wyatt, has been lately engaged on a magnificent apartment called "the morning room." The mansion has its principal fronts to the north, the south, and east,

HENRY WEEKES, ESQ., R.A.

the north, or carriage front, being above 1000 ft. in length. Nearly in the centre of the range the elegant spire of the chapel rises to the height of 142 ft. The principal apartments, in size and finish, are all in keeping with the splendour and scale of the building. The morning room before alluded to is embellished in the richest Renaissance style, which was selected in order the better to display many beautiful and interesting works of art of the Cinque-cento period, collected in Italy by Lady Alford, the mother of the present Earl. The collection of paintings, family and other portraits, is extensive. The chapel is considered the masterpiece of Wyatt. "From the point at which the chapel is entered," says the venerable historian of Ashridge, Archdeacon Todd, "it is difficult to say what most excites admiration—the perforated oak screen, the highly-wrought Gothic ceiling, the windows filled with beautiful painted glass, and throwing around their various coloured and subdued light, the elaborately carved alabaster altarpiece, and the brass rail which incloses it—all at once demand our particular notice." The noble park, pleasingly varied by hill and dale, extends over about 3000 acres, or seven or eight miles round; and the rich turf is shaded with the finest forest trees of oak, ash, and beech. The beeches are magnificent specimens of their class, and the majestic limes near the mansion were planted, according to tradition, by Queen Elizabeth. Looking from the north front of the house are three fine vistas or openings across the park, cut through large plantations of forest trees. At the extremity of one of these is a majestic Corinthian column erected in honour of the late Duke of Bridgewater, called "the Father of Inland Navigation," from his untiring exertion in the promotion of canal navigation, and whose name will long live in association with that of Brindley.

The historical associations of Ashridge House render it doubly attractive. On going over it, we see here a fine crypt, there an old Gothic doorway; here a cloister, there a monumental brass; here the arches of monkish sepulture, there a green tree planted by Queen Elizabeth; in one room embroidery made by the maiden Queen when she was residing in the old house; in another the portrait of the lady for whom Milton wrote his "Comus." Among the family archives are grants of various parts of the domain of Ashridge by Elizabeth to different persons; but, before the end of her reign, the greater part of it had passed into the possession of her Lord Keeper of the Great Seal, Thomas Egerton, Baron of Ellesmere, who was afterwards Lord High Chancellor to James I. The son of this Chancellor, soon after the death of his father, was created Earl of Bridgewater; and to his appointment as Lord President of Wales we owe Milton's mask of "Comus." Lord Bridgewater had long before this been acquainted with the great poet, and invited him to join the festivities at Ludlow Castle on the occasion of entering upon his new duties. Lady Alice Egerton and two of her brothers, on coming to join their father's guests, after having visited a relation, mistook their road, and Lady Alice was lost for some time in a wood. This accident furnished Milton with a subject for a mask, which was performed as a Michaelmas festivity in 1643.

WET or DRY, the CRYSTAL PALACE equally enjoyable
All approaches under cover.
NOTE.—The Excursion Season now commencing, Societies and Clubs, not having yet fixed their days of meeting, should do so at once.
The Great Excursion of the Odd Fellows is fixed for Tuesday, August 4; that of the Foresters for Tuesday, August 18.

VISIT the CRYSTAL PALACE in JULY. It is now at its best. The removal of the tropical screen opens the view from end to end. The Gardens are radiant with Flowers. The Rosery is covered with bloom. The fine collections of Plants and Trees within and without the Palace are now in full beauty, with the daily Display of Fountains, forming a sight unequalled in the world without the chance of rivalry.
The following are the unusually attractive arrangements for the coming week :—
Monday, July 27—Royal Dramatic College Bazaar, Fancy Fair, and General Fête.
Tuesday, July 28—Great National Brass Band Competition.
Wednesday, July 29.—Extra Grand Concert—Mdlle. Adelina Patti, Mdme. Miolan-Carvalho, Signor Tamberlik, Signor Graziani, Herr Formes, and Signor Mario.
Thursday, July 30—Crystal Palace Art-Union Drawing for Prizes. Subscribers admitted free on showing their receipts for the present season.
Saturday, August 1—Queen's (Westminster) Rifle Corps Fête.
Orchestral Band and Great Organ Performances daily. Open at Ten.
Admission: Wednesday, Five Shillings; Saturday, Half-a-crown; other days, One Shilling. Children under Twelve, Half-price. Guinea Season Tickets free.
Proprietors admitted after 1.30 on Sunday by tickets.

CRYSTAL PALACE.—ROYAL DRAMATIC COLLEGE BAZAAR, FANCY FAIR, and GENERAL FETE, SATURDAY and MONDAY, JULY 25 and 27.
The Stalls will be attended by the principal ladies of the dramatic profession. Besides these, there will be an infinite variety of games, exhibitions, and amusements provided by the Council of the Dramatic College, including RICHARDSON'S SHOW with a thrilling melo-drama; WOMBWELL'S WILD BEAST SHOW with VAN AMBURG and a wonderful collection of performing animals; THE GHOST; ZADKIEL'S CRYSTAL BALL; GIPSY TENTS; AUNT SALLYS; &c, presided over by the leading gentlemen of the profession.
Admission, this day (Saturday), Half-crown; Monday, One Shilling.

CRYSTAL PALACE.—GREAT NATIONAL BRASS BAND CONTEST, TUESDAY NEXT, JULY 28.
The doors of the Palace will open at Nine, and the Contest commence in the grounds at Ten o'Clock precisely.
At Three o'Clock the whole of the Bands will assemble on the Great Orchestra, and perform the following Programme :—
1. National Volunteer Artillery and Rifle Corps March. E. Jackson.
2. General Jackson's Schottische. Tidswell.
3. Wedding March. Mendelssohn.
4. Das Musikfest Waltzer. E. Jackson.
5. Chorus—Hallelujah. Handel.
6. God Save the Queen.
Conductor—E. Jackson.
Admission, One Shilling; Children, Half-price.
NOTE.—Excursion-trains from all parts.

CRYSTAL PALACE.—QUEEN'S (WESTMINSTER) RIFLE CORPS.—The ANNUAL FETE will take place on SATURDAY NEXT, AUG. 1. Special Amusements will be provided, which will be duly announced.
Admission, Half-a-Crown; Children, One Shilling. Guinea Season Tickets as.

CRYSTAL PALACE.—EXTRA GRAND CONCERT, WEDNESDAY, JULY 29, 1863.—The directors have the pleasure to announce that, encouraged by the success of the Eight Grand Concerts already given, they have made arrangements for a final one on Wednesday, July 29.
For this Concert they have the gratification to state that Mr. Gye has consented that the following eminent artistes shall appear :—Mdlle. Adelina Patti (her first and only appearance this season), Mdme. Miolan-Carvalho, Signor Tamberlik, Signor Graziani, Herr Formes, and Signor Mario. Conductor, Mr. Manns.
This Concert will take place in the Centre Transept, on the front of the Great Orchestra.
Reserved Seats (Half-a-Crown each) will be arranged in blocks, as at the Handel Festivals, and, with admission tickets, are now on sale.
Admission.—By Season Ticket; by Ticket purchased before the day of the Concert, Half-a-Crown; by payment on the day, Five Shillings.
NOTE.—The demand for Reserved Seats at the Concerts this season has been so far beyond the possible supply, that the Directors can only reiterate that those who desire to procure Seats for this specially attractive Concert should apply for them without delay at the Crystal Palace; 2, Exeter Hall; and the usual agents.

THE ILLUSTRATED LONDON NEWS.

LONDON: SATURDAY, JULY 25, 1863.

A SERIES of handsome medals lying before us calls back our recollection to a celebration the amplest records of which were gladly given by us, and to which we little thought it would be our duty to make reference in a melancholy spirit. When the Queen of England and her lamented Consort inaugurated a People's Park near Birmingham, and when a noble old English hall was set apart as a place of rational entertainment for the working classes, it was utterly away from the thoughts of those who aided in and commemorated the movement that Aston Park should ever be the scene of such a tragedy as that which has just been performed there. The pains which we took to offer the most complete account, literary and pictorial, of a gratifying ceremonial, seem to give us more than ordinary right to advert to that occasion, and to express our deep regret that the trustees of Aston Park should have so completely forgotten the spirit in which that beautiful locality was handed to their keeping. But we look at what has occurred as only an incident of a system now so widely spread as to demand the strongest reprobation and the immediate interference of the Legislature.

We do not design to dwell upon the hideous accident itself. A number of the persons who call themselves Foresters, and who spoil a useful association by costumes and follies almost beneath contempt, held a festival at Aston Park on Monday. One of the "attractions" was a tight-rope performance of the Blondin character by a married woman, who expected soon to become a mother. The rope broke (it is said to have been unfit for use), and the poor woman was instantly killed. Her body was removed to one of the rooms in the old hall, and the Foresters continued their festivities in other rooms and in the park. That is the tale, in the fewest words.

We do not see what excuse the trustees of the park have to offer for permitting such a performance. They cannot plead ignorance of what was intended, as the programme of such fêtes is placarded for weeks on every wall of the place where they are held. Were it not so, the trustees would have no right to be ignorant upon the subject. It is their business to know to what uses property confided to them as a sacred trust is designed to be put. It is with them, and not with such persons as are likely to direct a Foresters' festival, that the reckoning must be made, and they will not find it easy to persuade the public that they have not neglected their duty. But, though these trustees must not escape uncensured, the question has a larger range. Accidents from performances arranged to gratify the present inhuman love of "sensation" are now of frequent occurrence. The Highbury-barn female victim survives, a cripple. At Cremorne a man was killed the other day. It is not three weeks since another man was killed in the provinces by the breaking of his rope. And at this season the same kind of entertainment is provided in scores of "gardens" and other places where crowds can be collected. When the year's list of casualties is made up, the persons who will be found to have been killed in amusing a vulgar crowd will make a large number.

But when we say a vulgar crowd we do not mean to speak only of the uneducated. It so happens that death has not occurred in the presence of the high-class crowds who attend similar exhibitions; but this is matter of chance. Large assemblies gathered to see Blondin run along a rope, at one time with his wife, at another time with his little child; and that it was the danger of the performance, and not its grace, that attracted the upper classes is proved by the fact that when he executed the same feats at the low level, where he was in no peril of suicide, the aristocratic patrons of the sport staid away, and the affair was a comparative failure. Therefore, although we have a right to condemn the Foresters and people of that class for their coarse taste (and in the Aston Park case it is difficult to speak with reticence of the mob that could see the woman die horribly and could then turn to its drinking, shouting, and kissing-in-the-ring), we have no right to condemn them only. It is true that tight-rope feats were an attraction for the many long before a performer of special daring made them fashionable; but a great popularity was added to them by the Blondin performances, and, let us add, by the success which even more dangerous and repulsive feats have met with in the demoralising music-halls of London and the provinces. Here the less reputable of the lower middle-class, over spirits and water, practically applaud gymnastics of the most perilous kind, and are especially delighted when children are forced into the disgusting service. No class of the ordinary pleasure-hunter is free from guilt in this matter: some assemblies may be dirtier and coarser than others; but all, washed and unwashed, are attracted by a spectacle which is offensive to refinement and humanity.

We are told that the public is the only censor that ought to be tolerated, and that it is quite ready and able to prevent any show that is opposed to good morals. These murderous performances prove that the allegation is false, and that the public will rush to support and patronise any novelty which promises to stir the nerves. We affect a virtuous horror of the bullfight; but it is very much to be doubted whether, if a bull-fight were got up, with a handsome circus, with reserved seats, and with a few hypocritical assurances in the preliminary puffs that there would be nothing cruel in the display, the performances would lack spectators. People who will crowd to see a woman on a tight rope, would scarcely be restrained by humane considerations from seeing a horseman rush at a bull. And, inasmuch as the public has shown that it is not to be trusted, and as there is no saying what next brutality may be invented or imported, we think that it is time for the Legislature to interfere, in the interest of good morals. It has already shown its opinion of the public as a censor by passing laws for preventing the public from getting a sensation out of cockfighting (as a nobleman learned the other day); nor may Foresters bait a bull, nor may slang songs in a music hall be relieved by the scarcely less civilised noises made by dogs in combat. There is, therefore, precedent for prohibiting other inhuman or dangerous sports. The Houses have but a short time to sit, but a bill can be hurried through, by suspending the standing orders, in a few hours; and, inasmuch as it is greatly to be desired that an end be put to such spectacles as those we have mentioned, it could be wished that the Home Secretary, if he has not the power of commanding the cessation of these "sports," should obtain it before the Houses rise. A bill of ten lines will effect the object. The last stage of endurance has surely been passed when a beautiful park, consecrated by Queen Victoria and Prince Albert to the rational recreation of the people of Birmingham, has been stained with the blood of an unhappy young mother, slain for the amusement of a benefit society in fool's caps and green baize. The ludicrous mingles with the horrible in this case, as in life generaly; but the coarser features of the Aston tragedy must not repel us from pointing it out as the fit termination of this kind of sacrifices for "sensation."

THE COURT.

THE Queen continues at Osborne, in good health. On Sunday her Majesty, Princess Helena, and Princess Louisa, attended Divine service at Osborne. The Rev. G. Prothero officiated. On Monday morning the Queen, accompanied by Princess Helena, drove out. In the evening the Prince and Princess of Wales, attended by the Marchioness of Carmarthen, Lieutenant-General Knollys, and Captain Grey, arrived at Osborne on a visit to her Majesty. The Queen and the Royal family have, during the week, taken daily walks and drives in the vicinity of Osborne. Vice-Admiral Sir Michael Seymour and Major-General Lord William Paulett arrived at Osborne at the end of last week, and had the honour of an interview with the Queen. The Judge-Advocate-General arrived on Monday and had an audience of her Majesty. The Dowager Countess of Mount-Edgcumbe has arrived at Osborne to assume her duties as Lady in Waiting. The Hon. Beatrice Byng has left Osborne.

THE PRINCE AND PRINCESS OF WALES.

The Prince and Princess of Wales drove to Cliefden, the seat of the Duchess Dowager of Sutherland, on Saturday afternoon. Their Royal Highnesses were attended by Lieutenant-General Knollys, Captain Grey, and the Marchioness of Carmarthen. On passing through Maidenhead the Prince engaged a cutter, and the Royal party returned thence to Windsor by water, his Royal Highness and Captain Grey rowing and the Princess steering. Their Royal Highnesses landed at Albert Bridge, in the Home Park, where the carriages were in waiting to convey them to Frogmore.

On Sunday the Prince and Princess attended Divine service in the parish church of St. John's, where the Rev. H. J. Ellison and the Rev. T. Rooke officiated. Their Royal Highnesses subsequently paid a visit to the Dean of Windsor and the Hon. Mrs. Wellesley at their residence in the cloisters.

On Monday at ten o'clock the Prince and Princess left Frogmore for Marlborough House. The Prince, upon his arrival in London, presided at a meeting of the council of his Royal Highness, held at the office of the Duchy of Cornwall, at Buckingham-gate. In the afternoon the Prince and Princess, with their suite, left London by the South-Western line, en route for Osborne. Their Royal Highnesses arrived at Southampton at half-past five o'clock, and immediately embarked on board the Royal yacht Fairy, which conveyed them to Osborne. The Dauntless frigate fired a Royal salute as their Royal Highnesses steamed out of dock. Their Royal Highnesses' visit to the Queen will extend about ten days, at the close of which the Prince and Princess will leave for Balmoral, paying visits en route in Yorkshire

FASHIONABLE ENTERTAINMENTS.

The Duke of Cambridge entertained a select party at dinner on Sunday evening, at Gloucester House.

The Duke of Cleveland received a select party at dinner on Tuesday evening, at his mansion in St. James's-square.

The Marquis and Marchioness of Clanricarde gave a dinner party on Tuesday evening, at their residence in Stratton-street.

The Marchioness of Ailesbury had a dancing party on Monday evening, at her residence in Pall-mall.

The Countess of Jersey entertained a select party at dinner on Monday evening, at her mansion in Berkeley-square.

The Countess Dowager of Essex had a dancing party yesterday (Friday), at her residence in Belgrave-square.

Viscount and Viscountess Palmerston held a reception on Saturday evening, at Cambridge House. The réunion was numerously attended. Previously to the assembly the noble Viscount and Viscountess entertained a select party at dinner.

Viscount Chelsea gave his second ball on Tuesday evening, in Cromwell-road.

Lord Kensington entertained a select circle at dinner, on Tuesday evening, at his residence in Grosvenor-crescent.

Lord and Lady Chiveston received a distinguished circle at dinner on Tuesday evening, at their residence in Upper Brook-street.

The Right Hon. the Speaker gave his Sessional Parliamentary dinner to the principal officers and clerks of the House of Commons on Wednesday evening, at his official residence.

Mrs. Archibald Peel gave a grand ball on Tuesday evening, at Sir Roger Palmer's mansion in Portland-place.

Miss Burdett Coutts gave an afternoon party yesterday (Friday), at her residence in Stratton-street. The Bishop of Mauritius attended, and gave a narrative of the late events in Madagascar, which was listened to with profound attention.

Her Royal Highness the Duchess of Cambridge and Princess Mary left St. James's Palace on Monday for Germany. Their Royal Highnesses proceeded direct to Bumpenheim, the Duchess's villa, near Frankfort.

The Prince and Princess Frasso Dentice have left the St. James's Hotel for the Continent.

The Duchess of Buccleuch has left town for Carlsbad for a few weeks.

The Duchess of Norfolk, accompanied by the youthful Duke and Lord Edmund Howard, has arrived at Brighton.

The Duchess of Roxburghe and Miss Dalton have left the Clarendon Hotel for Scotland.

Marquis Conyngham left Hamilton-place on Tuesday for his seat, Slane Castle, in the county of Meath.

The Marquis of Hastings' "majority" has been celebrated with great festivities at Donington Park, Leicestershire, during the past week.

Earl and Countess Delawarr have left town for Kissingen. The noble Earl and Countess are likely to remain in Germany several months.

The Earl and Countess of Camperdown and family have left town for Camperdown Castle, Forfarshire.

Earl and Countess Amherst and family left Grosvenor-square on Wednesday for their seat, Montreal, near Sevenoaks.

The Earl and Countess of Morley and Lady Catherine Parker left town a few days since for Whiteway House, Devon.

The Earl and Countess of Meath and Lord Brabazon have left town for the family seat, Kilruddery House, in the county of Wicklow.

Countess Cowper and the Ladies Cowper have left St. James's-square for Wrest Park.

The Countess of Sefton and Lady Cecilia Molyneux and the Earl of Sefton have left town for Croxteth Hall, near Liverpool.

The Countess of Fife has left Grosvenor-place for Mar Lodge, Aberdeenshire.

Viscount and Viscountess Hardinge have left the Earl of Lucan's residence in South-street, for South Park, Penshurst.

Viscountess Jocelyn and the Hon. Misses Jocelyn left town on Monday on a visit to the Countess Dowager Cowper, at Wrest Park.

Viscount Walden has left town to join her Ladyship, who is on a tour in Germany.

Lord Londesborough will leave town on Tuesday, in order to preside at a grand banquet he intends giving on the following day at Grimston Park to nearly a thousand members of three rifle volunteer corps, the colonelcies of which regiments are held by his Lordship.

Lord and Lady Chesham have left Grosvenor-square for their seat, Latimers, Bucks.

Lord and Lady Harry Vane left Grosvenor-place on Tuesday for Battle Abbey, Sussex.

Lord and Lady Vivian left town a few days since for Glynn Bodman, Cornwall.

Sir Alexander and Lady Arabella Bannerman left Grosvenor-place on Tuesday for their seat in Aberdeenshire.

Sir Thomas and Lady Cochrane left Belgrave-square on Tuesday for their seat, Quarr Abbey, Isle of Wight.

Field Marshal Lord Clyde has been dangerously ill, but is now better.

William Bowyer Smijth, Esq., Attaché to her Majesty's embassy at Paris, has been appointed a Third Secretary in her Majesty's Diplomatic Service.

THE ROYAL AGRICULTURAL SHOW AT WORCESTER.

WORCESTER looked in truth a city of banners when the first stream of visitors set in from the great hop and cider counties by eight on Monday morning. Malvern was the point to which those who had no county friends seemed to make on the Saturday; but the later comers found every bed full, and were fain to fall back on Worcester and war prices in their need. Here the railway arrangements, never great at any time, were sadly faulty. Scores were fighting to get at one little booking window for "second and third," with not even a rail to break the crush; the complaints about cattle delays were endless; the cab arrangements inscrutable; so that the Hereford men, whose convenience was very little consulted, might well inquire after the rail facilities which just turned the scale in council against their city. The glass had been a little threatening for forty-eight hours, but a fine warm morning was too strong a lure, and about 806 visitors paid the ten-shilling entrance fee for the privilege of seeing the public judging. The members of the society mustered another 800; and the shorthorn, Hereford, and horse rings had attentive and full audiences. Mr. Gibbs's selection of ground for them on each side of the main avenue and at the end was very happy; and, except at one sheep ring, where some exhibitors rather forgot themselves, the whole proceedings went off right well. The orange, blue, and yellow cards, which denote first, second, and third honours, were duly handed by the judges to the leaders of the winners as soon as the order of merit was decided; but the shorthorn exhibitors had an anxious time of it, as Messrs. Unthank, Drewry, and Beanford were set to sift no less than 183 entries, and were lucky to get through them in about six hours. Despite the extra attraction of the local prizes, this department of the show was not equal in numbers to last year, when two sets of judges went to work; but perhaps never have such a female quintet as Pride of Southwicke, Rosedale, Flower Girl, Lady Oxford 5th, and Queen of the Ocean, borne off the orange token in one day. The judges were divided in the aged bull class, Mr. Unthank going stoutly for General Murat, while his colleagues held to Mr. Wilson's Duke of Tyne, by Colonel Towneley's Richard Cœur de Lion, whose blood was to be found in three other winners that day. The Duke had a rare breast and fore-quarter, and looked remarkably well out. He has already won three firsts and two seconds, and is not only "a chieftain to the Highlands bound" next month, but pretty certain to meet General Murat again at the Durham County, next week. His attendant sat on a rail hard by, and thus summed him up:—"There never was such a bull; he won't look at oilcake or milk—just you try him. I can walk him seven miles in two hours, and he was shunted up and down the Birmingham station for thirteen hours and a half last Friday." General Murat had a very level and massive top, and rare hind quarters; and, although perhaps not so stylish as his victor, he was full of bloom, and was much admired at The Yorkshire last year, where he was second to his brother Gamester, also by Prince Talleyrand. Viscount Hill's Hemlock, the winner in the next class, was by his Lordship's Chester winner Hetman; his front view was not equal to his side one, but, although this decision was cavilled at, we believe that quite the most experienced gazer round that ring considered that it was right, and "we count him worth a host." Twins have brought singular luck at this show to Messrs. Booth, Gunter, and Howard in succession, and now Mr. Peel has carried on the charm and won second place in this class with his white Hengist, a thick goodhaired bull, full of Booth blood, but prematurely patchy about his quarters. Horse, the second born, got no mention. Royal Butterfly 10th, which met Culshaw at Worcester after a nine months' separation, held the third place for Colonel Towneley; but, like many of Royal Butterfly's stock, he is rather on leg. The next class was reduced to a duel at last between Mr. Eastwood's Hero and Col. Towneley's Royal Butterfly 11th, and Mr. Woodward's bull, which was entirely of Towneley blood, came third. Mr. Eastwood's bull was from Heroine, one of Mr. Henry Smith's Captain Shattoe sort, and it is worthy of note that both Mr. Marjoribanks's first prize Royal winners, Harkaway and Whipper-in, were from cows of similar descent, purchased from the same gentleman. The Hero gave ten months to the second, and the judges were a long time in council, as, although the white is very evenly made and deep fleshed, his handling is not just the thing. Hopewell, the second to First Fruits last year, was not noticed; and Mr. Atherton did not enter his American bull, for which many were on the look-out in fear and trembling. In the bull-calf class, the herd of Sir Anthony de Rothschild reaped its first Royal honours with Captain Cherry, a beautiful handler, and very good in his hind quarters. The second bull seemed to have very small pretensions, and the nice flank and good handling of the third, Pretor, by the second Duke of Thorndale, from the Clifton pastures herd, which generally contrives to score a third place in some class, did not comport with his very shabby forehand.

The cow class was weak in point of numbers. Cuddy was lamenting that Mr. Richard Booth could not send Sincerity, as he had originally intended; Colonel Towneley's Rose of Lancashire was too near carving; Queen of Athelstane is, we believe, reserved for the Highland Society at Kelso; and Duchess 77th, who did not claim her Leeds first prize in consequence of having a dead calf, prefers to spend her prime in the Wetherby meadows instead of knocking about in railway trucks. Hence, Lady Pigot's beautiful Pride of Southwicke, which comes to the hammer in September, had no difficulty in adding another prize to the spoils of her "Grand Tour." She has had two calves (one of which, Queen of the Glen, is in her Ladyship's herd), and she is now supposed to be in calf to Booth's Ravenspur. Maid of Athens, which succeeded to the first in calf heifer prize at Battersea when May Morn failed, was her second in a wretched class, and a long way behind. The heifers in calf showed in great strength, and it was over them that the real "battle of Worcester" was fought for nearly an hour. The judges reduced the seventeen down to eight, any one of which would have made a creditable winner, and then sat down for a space on their chairs and took a little breathing time. The veteran Cuddy and John Ward (who is quite a General Lee in his ring tactics) kept manœuvring their heifers, steadily keeping their best points point blank at the bench, and, as the audience expected, the final struggle was between their charges. Still Mr. Unthank hung to Queen of May 2nd, and would not give her up, but his colleagues were equally firm the other way, and John Ward received a second orange card for Branches, making his fourth victory out of six over Mr. Booth's heifer. Rosedale, which was not even commended when the two met at Battersea, looked well, though decidedly overfed and throwing out strong Islington tokens behind. Still her hocks had rather fined than otherwise under the high pressure, while "The Queen's" seemed to be giving way, and there were other signs of her not being quite up to the mark. Two fine heifers of Colonel Towneley, Roan Knight's Butterfly and Royal Butterfly's Duchess, were third and the reserve number, and the first of them had a calf only a week old at home. Mr. Taylor's Trinket, the champion beast at the recent Oxford Show, and a very nice one, barring the droop behind. Mr. Bowly's Musical, Mr. Butler's anonymous roan, and Mr. Lane's Kiss the 3rd were also H. C.'s, and no C.'s were given. The ring had no more anxious spectators during the yearling heifer contest than the Duke of Montrose and his sister, Lady Emily Foley. His Grace's heifer Flower Girl, by Baron Killerby (bred by Mr. Carr), dam by the Duke's Victor Emmanuel, was the only female shorthorn from Scotland (although Pride of Southwicke was bred there), and a very excellent one. She was so good, in fact, that no one coincided more thoroughly in the decision than Culshaw, who was second with Frederick's Farewell, quite the plum, to our eye, of the Towneley lot, and with all the neatness and beautiful forequarter which distinguish that grand old bull's descendants. Lady Pigot's lengthy and neat Castanira was third, but Lady, the first calf of last year, got no higher than a commendation; and Claret Cup, which has gone off sadly, was not mentioned. If they both go to Kelso, Rosedale and Flower Girl will be in the same class. Mr. Macintosh's pure Bates Lady Oxford 5th, the first calf by that gentleman's celebrated American bull, Third Duke of Thorndale, fairly distanced the calf class. She had been a winner at the Essex Show a short time before, with a half-sister as second to her. Her form and handling created quite a sensation, and if there had been a gold medal this year it is quite on the cards that she would have beaten all the shorthorn females. Mr. Oliver was another winning "colt" at this meeting, with his good red Lalage 2nd, by Colonel Towneley's Romulus Butterfly; and the Colonel was fain to content himself with the third honours of Royal Butterfly's Pageant, thus making three thirds and two seconds. The local prizes brought him a first for a pair of very beautiful yearling heifers, for which Mr. Stratton was his only opponent; and then Mr. Booth showed some of his trump cards. For the pair of heifers in calf he was first with his roans—which made quite a picture in the ring, against two nice pairs of roans—Graceful and Lady Joyful; his gold medal cow, Queen of the Ocean and Soldier's Bride then played a winning duet as cows in milk, with Mr. Langston's deep white Dandelion and Merrytrix as seconds. The Sarsden herd, with Lord of the Harem, Gulnare, and Harem's Select occupied the same place, when the balance was adjusted, to Mr. Stratton's Knight of Lagan, Lady Hinda and calf in the bull, cow, and offspring class—a mode of competition very popular in the district, and for which Royal Butterfly (rising seven, and as fresh as ever), Alice Butterfly, and their bull-calf pledge, had very nearly been brought. That treat was, however, denied us, which we especially regret, as the Hereford men hold curious shorthorn antipathies, and had too good reason to express them over the majority of the bull candidates.

Be this as it may, they did themselves and their county thorough justice with their "rent-payers," whose rich red line was varied by two milk-whites and two thorough Downton greys. Among their special prizes for Herefords (which numbered 96, or 1 less than last year) we had the last Royal winning entry to the credit of the late Mr. Rea of Monaughty's herd, whose favourite Sir Benjamin blood seemed to carry all before it. His son Sir Thomas was the star of Mr. Roberts's first-prize family trio, and Mr. Arkwright's stylish and fine-fleshed bull Sir Oliver the 2nd, and Plato of the wonderful back, the first and second in the aged bull class, and both bred by Mr. Thomas Rea, jun., at Westonbury, were also by this celebrated scion of Sir David. Everything has a set-off; and it was reported in the yard on Wednesday that there were hardly any hopes of his getting over an inflammatory cold. In the next class, which was generally commended, Mr. Taylor's Tambarine, Mr. Morris's Moderator, and Mr. Evans's Rodney were first, second, and third, with Mr. Hollings's Chieftain 2nd as the reserve. In the yearling-bull class Mr. Baldwin's Battersea—who was not so well up as he was last year—had to yield to Mr. Edwards's Adforton, which he has beaten three times. The winning lot in the bull-calf class fell on Mr. Roberts's Sir Thomas calf, which was a trifle slack in its back; Mr. Capper being second with Worcester, which is of Lord Berwick's blood, and a pretty good one. Mr. Perry won the cow prize with Beauty, a thick but not a very level cow, with very neat bone. Mr. Thomas Rea was second with Kate 2nd by Sir Benjamin, a long, good cow, with a very swelled knee; and Mr. Duckham, the editor of the Hereford Herdbook, third with his eight-year-old Delight. General Hood's Adelina, after winning a first Royal prize, both as calf and yearling, was only third to Messrs. Tudge and Pitt; and then came a very dashing contest for the yearling heifers. The judges pondered long over four—Clementine by Chieftain, grand-dam by Madoc, a mellow, well-grown, and growthy heifer; Mr. Roberts's very compact Duchess of Bedford 2nd, Mr. Perry's little but good Lady Duppa, and the Honourable Noel Hill's Petunia, bred by Lord Berwick. It was a wonderfully near point, and rather a puzzler for those who studied "the poetry of (judicial) motion." The winner is the property of Mr. Monkhouse, of The Stowe, the celebrated octogenarian breeder of Herefords; but although "Sam" may go to Hereford in October, with her and Rosette as a pair, he is not likely, win or lose, to have orders to "go on with her" for Newcastle. It is by no means Mr. Monkhouse's first victory in a Royal ring, and many a wish was expressed that it might not be his last when he visited the yard next day, and examined all the animals with that exquisite power of touch which more than thirty years of total blindness has only tended to heighten. Mr. Roberts took his third first that day in the next calf class with Miss Hastings 2nd by Sir Thomas, a "Knight Grey" second. The breeders threw their strength so completely into the general classes that the local ones were very bare.

The Royal Flemish Farm sent three Herefords in all, and received only one high commendation with Adela; but the Royal Norfolk Farm atoned for this ill luck, as two out of its five Devon candidates were first, and the three others highly commended.

The Devons were short in number, and rather smaller in size; and, among the fifty, Quartley's, Davy's, and several of the other good herds had no representative whatever. In fact, the owners did not seem to care about coming at all, and their ring was most scantily attended. In the aged bull class, Mr. Farthing's Viscount, a first-prize winner last year, with the most wonderful carcass on short legs, and girthing 8 ft. 7 in., had to yield to Mr. Newberry's Prince Jerome. Mr. Turner's lack of luck with Leicesters was compensated by the first prizes of Van Tromp and The Drone; and General Hood's yearling, Prince Alfred, added another first to his Battersea one. Mr. A. Smith's Rachel, bred by Lord Portman (who has deserted to the shorthorns) changed her third of last into a first this year in the cow class, which was one of very great merit and generally commended. Two more seconds for his Little-Known blood awaited Mr. Turner in the female classes, where Mr. Harboro's Lina, Mr. Buller's yearling heifer, and General Hood's Rose of Denmark took firsts. The Brothers Heasman had five prizes (the majority of them firsts) for Sussex reds; and, although a longhorn bull of Mr. Burbery's breeding and two bulls and a heifer from the Channel Islands did catch the judge's eye favourably among "the other established breeds," the blood-red dairies of Lord Sondes, Sir Edward Kerrison, and Sir Willoughby Jones, had matters pretty well to themselves.

The horses were much sounder than usual—a fact in favour of the the present system of preliminary examination; and the class of blood sires was highly commended throughout. For the £100 competition, Neville, once well known on the northern turf, was a clever first, and seemed hung on wires as he trotted down the ring centre as a finish to the parade. The handsome Cavendish was a good second; and Mr. Phillips, who won last year with Ellington, came third with the active and rather flashy-looking Cambondo, who had wasted heavily from fretting in his railway-box, and looked more leggy in consequence. Rouble, Plum-Pudding, Merryman, and Stampedo were among the other nine, and the latter took matters most leisurely. The hunter sire class was motley to a degree—blood horses, hunters, coachers, trotters, and some thorough nondescripts, all trying their fortune. The first prize went to Sir Peter Laurie, a rare steeplechaser in his day, and beaten in this ring by Hunting Horn, four years ago, at Warwick; while Elcot, second for the Derby, was second here; and Safeguard, a very good one across country, and as much liked as any of them, third. President Junior was quite a premier in the trotting line, and acted up to his pretensions; but, of course, the judges could not recognise him, and dismissed him and the rest in silence. The hunters made up a very good and generally commended class, which was headed by Mr. John Booth's (of Killerby) Beechwood, who has already won upwards of £160 for his owner in prizes alone, and is entered at Boston, Redcar, and Stockton. He is a fine weight-carrying horse, and would bear drawing finer; but many hung quite as much to the second, a mare, by Teddington, as "elastic as her name," whom Lord Coventry, for Emblem's sake, purchased at once for 200 guineas, and would have gone much higher. The highly commended ones were a very neat brown by Charles XII., who once travelled this country, and a chestnut by old Hereford, that West Midland sire of apocryphal age. A rare son of Highland Laddie's, from Cumberland, redeemed a weak pony sire class; the prize for the best pony mare (also under fourteen hands) was adjudged to the winner at the last Suffolk meeting; and Mr. Branwhite's capital chestnut cob took its third first prize, and deserved it; and so did Mr. Percy's hackney brood mare.

The show of agricultural horses was singularly weak; but Mr. Johnson's grey drayhorse Young John Bull was as grand a one as ever entered a showyard. The local committee did not meet with much response to their £10 and £20 offer for horses to travel the district, as only two very bad ones came. Their conviction that Suffolks will not do in their heavy clays, and the consequent restriction seems to have rather stalled off "The Punches;" and Mr. Crisp's absence with his lot at Hamburg was also a great drawback. The show of these chestnuts was both short and weak; but Sir Edward Kerrison's mare, which was the first two-year-old at Warwick, would have been very bad to beat, come what might; and Mr. Mumford's Young Duke, the two-year-old first prize, was a good one, but not a "Canterbury Pilgrim."

The society never had a finer show of sheep, and, seeing that wool is now becoming the very loadstone of farming prosperity, it only keeps pace with the times. The Leicesters had more substance and better wool. Mr. Sanday and "George" made positively their last appearance, as the rest of the Holmpierrepont flock will be sold on the 19th of next month. Mr. Sanday only took a second and a third this journey in each of the two shearling classes, and he was beaten in each instance by Lieutenant-Colonel Inge, who has used no blood except the Holmpierrepont. Mr. Borton, who began steadily from Burgess's, swept all three prizes in the old ram class with very good sheep, the third of them bred by Mr. Sanday; but Colonel Inge's first pen of theaves were the gem of this part of the show. The Cotswold theaves were hardly big enough, but very neat, and there was not, so to speak, a regular topper among the seventy-one rams and shearlings. Mr. Robert Garne was first, second, and third with his shearling rams; and first again in a highly-commended class of rams (with Mr. Beale Brown and Mr. Handy in the next places); and third for theaves to Messrs. Fletcher and Lane. Mr. Marshall's Lincolns had it all their own way at Hamburg; but here the leading ram prizes in "Lincolns and other longwools" were again won by Mr. Lynn with his Leicester-Lincoln, which had gained size and not sacrificed quality by the fusion. Mr. Aylmer's dangerous West Dereham opponency was got rid of by reason of his forming one of the thirty-six judges of the day. The Oxfordshire Downs were good, but were again a complete byword in the yard for their unfair clipping. Mr. Charles Howard, in disgust at the "Battersea trimming," sent his pen of theaves clean shorn. Messrs. Bryan, Wallis, and Gillett earned the three twenties. Lord Walsingham's Southdowns fairly swept the board; and John Day, the late Mr. Webb's shepherd, must have felt it quite like old times again when he looked round his charges, and more especially at the shearling ram, perhaps one of the most perfect models in the whole sheep classes for character and first-rate getting up. Mr. Rigden was all but bowled out, and only got an H.C., while Messrs. Heasman came up second with their pen of theaves, and Mr. Farquharson, Earl Radnor, and the Duke of Richmond behind them. The Shrops were as grand as ever, and in the shearling classes there was one H.C. (special) and five H.C.s. Mr. Stubbs, of Staffordshire, was first, beating Mr. Horton, the winner last year, and second and third this; Mr. Price Bowen, of Shropshire, won with his old ram, the only one he showed in that class; and Shropshire also claimed the three theave honours, two for Messrs. Crane and the third for Mr. H. Matthews, which is just "as you were" at Battersea. Mr. Humfrey took a first and two seconds in the Hampshire Down classes, and Mr. Rawlence vice versâ. The two pens of theaves belonging to the latter must have been excellent, as his third had a special high commendation. In the mountain sheep classes Mr. Jonathan Peel and his Mountain King lonks quite settled the Exmoors; but the Ryelands, a very favourite cross in Herefordshire, both for Leicesters and mountain sheep, could only muster seven, belonging to three owners. Mr. Bearcroft Downing won both prizes, and the most fastidious flock-owners were very much pleased with the specimens, the ram especially.

The pigs had a good entry, but Professor Symonds was kept very busy, and disqualified a large number for being over age. The great offenders were the owners in the Leeds district, some of whom proceeded to tear down the disqualification-tickets, and nothing but reading the Riot Act and threatening to expel them and their pigs from the yard brought them to their senses. Mr. Wainman took seven firsts and Mr. Crisp four. The Berkshires showed great improvement, but for general excellence the Middle Whites had perhaps the palm.

The implement show has been far beyond any of its predecessors, and not very far short of £1000 was paid for the hire of shedding. The trial of steam cultivators was most successful, and Fowler won easily in both classes, Mr. Savory (a fresh name in the lists) being second in one class, and Messrs. Smith and Howard second and third in another. Barret, Exall, and Clayton were bracketed for the fixed engines, and Hornsby and the Tuxfords were respectively at the head of the 12 and 8 horse power portable engine competitions. Hornsby and Clayton, and Shuttleworth were very close together in a capital thrashing-machine trial, which was commenced with 100 sheaves to each—a number which was increased to any extent, when the great tug of war arrived. Cooch for hand dressing-machines and Barrett and Exall for barley-hummellers were the other first prizemen, and Amies and Barford had a silver medal for their wrought-iron water-ballasting roller; H. Mackinder for his potato-separator, and E. Humphries for his portable clover-machine; while a patent drill steerage, an adjustable scythe, a combined corn-distributor, a cheese press, some "Excelsior steam whipple-trees," and a root-pulper came in for commendations. Washing machines were, as usual, a great attraction, and so was Shanks's steam fire-engine; and, in fact, the implement catalogue enumerated 5893 articles, and occupied 490 pages. The steam cultivators were working during the week, on Mr. Coney's farm, but very few went to see them.

The weather on Tuesday was very bad after eleven o'clock; but the rain was far too much wanted at home to make the visitors grumble, so they ran into horsesheds or sat under canvas with the cows, crowded the refreshment-tents, and made the best of matters. The receipts were increased by that evening to nearly £1450, and on Wednesday they were about doubled; and it is still to be seen whether Birmingham will come down with its thousands and "the splendid shilling," and revive the Battersea-stricken hearts of the finance committee.

THE DISTRESS IN THE NORTH.

A GENERAL meeting of the members of the Central Relief Committee was held on Monday, in the Mayor's Parlour, Manchester. The chair was taken by the Mayor. The hon. secretary read the report of the Central Executive Committee, who stated that, owing to the increase of outdoor work, the revival of the cotton trade for the time being, and other causes, forty-seven local committees have been enabled to suspend their operations; and the whole number of persons dependent on the parochial rates and the relief funds in December, 1862, has been reduced nearly one half. The number relieved in January, 1863, was reported by the hon. secretary to have been 456,786; but the maximum pressure had been attained before Christmas, and was probably not far short of 500,000; so that, as 256,230 were on June 30 still in receipt of relief, nearly half the burden of indigence consequent on the American war has been for the time removed. The balance of the central fund remaining on hand is £350,958. To this must be added the balance of the Cotton Districts Relief Fund, £85,652; of the Liverpool fund, £38,480; and other funds, which amount to about £40,000; and, taking into account a further sum of £24,000 subscribed to the central fund, which is to be paid in instalments, they may thus have at their command an aggregate fund of £539,090. The whole expenditure, through the district relief committees, amounted, from the commencement of the distress in May, 1862, to June 30, 1863, to £1,054,413; of which outlay £806,201 was contributed from central funds. The total expenditure from the parochial rates on outdoor relief only amounted in the same period to about £622,000; so that the expenditure on the relief of indigence from June 30, 1862, to June 30, 1863, from both sources, was about £1,676,413. The report was adopted. Dr. J. Watts said he could not speak too highly of the manner in which the central committee had managed the funds. They had managed a fund of a million of money at a cost of about ¾ per cent.

The weekly meeting of the Central Executive Committee was also held at Manchester on Monday—Sir J. P. Kay Shuttleworth, Bart., in the chair. The honorary secretary stated that the total receipts for the week were £319, and that the balance in the bank was £335,652. Mr. Farnall reported that, on the 11th inst., there was a decrease in the number of persons receiving parochial relief in twenty-seven unions in the cotton manufacturing districts, as compared with the number so relieved in the previous week, of 5464. Several grants were made for general relief and clothing.

The Central Relief Committee have issued a letter to the various local committees calling their attention to the provisions of the Public Works Act, reminding them of the probability of increased pauperism in winter, and urging them to withdraw their "aid from single ablebodied young men as soon as possible and as far as practicable, in order that they may be induced to seek for outdoor work from such sources as are already and soon will be afforded to them."

The Poor-law Board has just issued an order, throwing upon the county a portion of the burdens of the Preston Union. The amount of this rate in aid is £7578.

The traditional whitebait dinner, which precedes by a few days the prorogation of Parliament, will be eaten at Greenwich to-day.

Robert Vaughan Williams, Esq., of the North Wales Circuit, has been appointed Judge of the County Courts of North Wales, rendered vacant by the death of J. Richards, Esq.

The Select Committee of the House of Commons on the Malt Duty have sent in a report, in which they merely state that they have taken measures for collecting information on the subject submitted for their consideration—namely, "whether, compatibly with the interests of the revenue, the laws relating to the excise duty upon malt can be amended so as to operate more advantageously with reference to the cultivation and price of barley, to the manufacture and price of malt and malt liquor, and to the use of malt in the feeding of cattle and sheep." They recommend the appointment of a committee on the same subject next Session.

SKETCHES IN PARLIAMENT.

WHEN the success of a then unknown actor was assured in a London theatre by a very thin audience, some one, speaking of their applause, said "the only wonder was how so few of them could make such a noise." Something like this has happened with regard to the House of Commons of late; and it is really wonderful how so few of them manage to keep up such bustle as they do. They sit long and late; and one morning the opponents of a bill which was intended to prevent the poisoning of birds kept the ball going until four o'clock, the result of which was the practical defeat of a measure which, by establishing tests for anchors and cables, had for its object the saving of the lives of men. A world of indignant eloquence has been expended on street music, on the suggestion of Mr. Bass, who, in introducing the subject, was delivered of a great amount of unconscious drollery; a singular quantity of patriotic talk was expended on a vote which handed over a British packet service to a Belgian contract; Mr. Darby Griffith has been allowed to have the floor to himself for as long as he pleased on some minute question of stamps; and Mr. Henry Berkeley has shone as a narrator of a sensational story of wrong and outrage, on which he really held the House interested for such time as was necessary for his artistic treatment of his subject. In short, there has been a clear stage and every possible favour for the airing of crotchets and the riding of hobbies, and bores having no fear of counts out before their eyes, because every night some Government bill was to be passed a stage, have had everything all their own way.

Speaking of crotchets, it may be observed that most members have one crotchet at a time; but there is one member whose impish activity causes him to buzz about and alight upon every possible subject which comes before the House. It is a peculiarity of the House of Commons that it is composed of men who have some business of their own to attend to, and who combine with it, and on the whole not unsuccessfully, their Parliamentary duties. Even the "swell" members, the representatives of the aristocratic younger sons, have "their business or delight, such as it is;" and fashionable life is rather hard work. There are, consequently, scarcely any members who are in their private life essentially idlers. But there is at least one who fulfils that character. There is one who appears literally to have nothing to do unconnected with Parliament, and lives in the house, being the first to enter and the last to leave it every day; the end and being of his existence are settled there; he is to be seen and heard on every question, and is especially vivacious at those hours of the morning when every one else is exhausted. It is at these times that it generally pleases him to intervene with curious infelicity, and to do his best to keep Government officials and a long-suffering Speaker from the little natural rest which the Session affords them! This hon. gentleman is not eloquent; he is not witty; he is not a man of ability in the broad sense of that term, the cleverness which he undoubtedly possesses being akin to that which Le Sage has insinuated rather than developed in his delineation of "Gil Blas;" but his nervous organization is singularly acute, while his audacity is simply boundless! His personal restlessness is marvellous; he is the very Ariel of the house, "now in the waist, now on the prow, now on the mast," he never makes two of his ever-recurring speeches from one seat. He always has confidential communications to make to members in every section of the house, and flits from bench to bench, dispensing his whispers alike to Ministers, Liberals, and Conservatives. He seems always to be suffering from a Parliamentary St. Vitus's dance; he cannot be still—*stare loco nescit*; he is ubiquitous. Possessed of a kind of mischievous industry, he has a knack of picking small holes in measures and propositions, and is always ready with technical opposition. He fastens on the first men in the House as readily, and indeed more readily, than on the least distinguished member. He cannot be shaken off. A gadfly might have almost maddened the Godolphin Arabian or the Flying Childers, and a mosquito might for a time have prostrated the energies of the victor of Plassy and the founder of our Indian empire; and so does this honourable member teaze and torment First Ministers, Chancellors of the Exchequer, and a most impregnable Solicitor-Generals; while, as to the Speaker, he is an especial object of his buz and sting. Any one who heard, and even some who read, the debate, on Wednesday, on the Statute Law Revision Bill (when, by-the-by, there was nearly a division on the question whether Magna Charta should be repealed in whole or only in part) will recognise this faint sketch; and if imagination can figure the same individual evincing the same pertinacity and restlessness on most nights, if not on every night, of the Session, some idea will be gained of that which it is intended to convey. But the most curious part of the matter is, that this honourable member, in his confident self-reliance, believes that he is not only gaining Parliamentary distinction (and we are not disposed to deny him that in a peculiar or rather a negative sense), but he feels assured that he has established a claim to office when the Conservative party comes into power. Looking to the traditions of that party, and considering the fact of that member of it who must be the leader of the House of Commons in such a case, we will venture to say that this honourable gentleman is exactly the person whom a Conservative Government would take care to separate from them by wide seas and thousands of miles, including, if possible, a long tract of desert. If necessary, a vice-consulship in the most tropical part of the tropical zone—say at the source of the Nile—will be created for his acceptance.

The last great debate of the Session—that upon Poland—was perhaps the greatest failure of the Session. If the sympathies of the people of England for the Polish cause are to be judged by the attendance of their representatives on this occasion, they are small indeed. A large House—all things considered—was kept together until six o'clock by a private bill; but the enthusiasm of memberdom evaporated then, and Mr. Horsman rose at a very awkward hour to the thinnest of houses—although, as is well known, a speech from him is generally an attraction. Truth to say, his oration, though marked by his usual ability, and almost devoid of his customary bitterness, would have been better placed if it had appeared as an article in a quarterly review. It was long, laboured, didactic; and the speaker once more proved himself unskilled in that which is an art in the orator as well as in the letter-writer—the art of knowing when to leave off. Half a dozen perorations, or what ought to have been perorations, only served as new points of departure; and, seeing that Mr. Horsman consumed no less than three glasses of water while he was speaking, one could not but think that such a supply of liquid had a diluting effect upon his speech. Perhaps he lingered in the hope of members coming back to listen to him; but they did not. Nor did Mr. Gladstone's immediate advent into the debate lure them to return. And they were right; for, emulating himself in his extraordinary (in the wrong sense of the word) speech on Turkish affairs, the Chancellor of the Exchequer displayed not one single characteristic of his style of speaking. He was slow in delivery; he exhibited no fire, no energy—even no temper: his language was jejune, and his periods were left unturned; and great was the contrast between Gladstone stumbling about a vexed question of foreign affairs, which he either had not studied or had not made up his mind about, and the Chancellor of the Exchequer thundering about a reduction of a penny-stamp duty in a discussion on one of the details of his Budget. We wonder what the stranger who heard him then for the first time thought of the judgment which has dubbed him the first orator of the day. But, after all, he was speaking on a subject on which Ministers had just received a rebuff from Russia, and to less than forty members, who may be supposed to have represented all of the British House of Commons that cared anything about Poland and the Poles. Mr. Hennessy by his tenacity kept the debate alive for the critical hours between half-past eight and ten; but even he could not get up a smirk or dash his address with any one of his peculiar characteristics. To be sure, Mr. Kinglake, roused out of his silence of this Session by an assertion of the bravery and great qualities of the Emperor of the French by Mr. Horsman, spoke a few really sparkling sentences, in which he mercilessly showed up the sham of the debate which was then proceeding: but after that it fell into the small hands of Mr. Peacocke, Sir Francis Goldsmid, and Mr. Somerset Beaumont; and was on the verge of extinction when Lord Palmerston reluctantly rose and made a speech, which was clearly intended not to be understood, and from which, if anything was to be gathered, it was that he really did not exactly know what his next step was to be into the Polish question, where he had stepped in so far that it was not easy to draw back; while going on was war with Russia. At any rate, he seemed as if he was only too happy that this was to be his last set speech for the Session of 1863.

The House of Lords was astonished one night last week; and their Lordships are not easily astonished. The matter in hand was a Government bill under the charge of a member of the Cabinet, and a clause was under discussion which a Conservative Earl opposed in vain. Either in a moment of desperation, or by preconcerted understanding, he appealed to the Lord Chancellor for his opinion. Upon this, the holder of the Great Seal, the first legal adviser of the Cabinet, himself a Cabinet Minister, in solemn tones and in language of deep adjuration, declared that he should think himself unworthy to sit on the judicial bench if he did not state that the act then proposed to be done by his own colleague in the Government on behalf of the Government was, in his estimation, flagitious, if not wicked. His other colleagues were probably not astonished, knowing the secrets of Ministerial consultations; but any one else will probably ask if this is a specimen of the way in which Cabinet Councils are carried on.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

The Fortifications (Provision for Expenses), the Nuisances Removal Act (1855) Amendment, the Navy Prize Agents Bill, and the Public Works and Fisheries Acts Amendment Bills were read a second time, and several other bills were forwarded a second stage.

Lord Lyveden asked what steps had been taken to raise a militia in Canada since December, 1862. Earl Granville was unable to give a satisfactory answer, as little had been done beyond the raising of 10,000 militia; but a number of volunteers had been enrolled and organised.

On the motion for going into Committee on the Fisheries (Ireland) Bill, several petitions were presented from parties interested, praying to be heard by counsel against the bill; and, these being supported by some noble Lords, a division on a motion to that effect took place, on which it was lost by 66 to 19. The bill was then taken in Committee, and passed through that stage after a lengthy discussion.

HOUSE OF COMMONS.—MONDAY.

A new writ was ordered for the election of a member for the county of Clare, in the room of Mr. Calcutt, deceased.

The Great Eastern Steam-boats Bill and the North British Railway Steam-boats Bill were each advanced a stage.

The report of Supply was brought up and agreed to.

The report of Ways and Means was also brought up and agreed to.

The Lords' amendments to the Telegraphs Bill were considered, and, with a few exceptions, were agreed to.

The following bills were read a third time and passed:—The City Traffic Regulation Bill; the Railway Clauses; Waterworks Clauses; Turnpike Acts Continuance; Expiring Laws Continuance; Petty Sessions (Ireland); and Poisoned Grain, &c., Prohibitions Bills.

The Anchors and Chain Cable Bill was withdrawn.

A bill to provide superannuation allowances for poor-law officers was brought in by Mr. Villiers.

The Appropriation Bill was also brought in.

POLAND.

Mr. HORSMAN moved that, in the opinion of the House, the arrangements made with regard to Poland by the Treaty of Vienna have failed to secure the good government of Poland or the peace of Europe, and any further attempt to replace Poland under the conditions of that treaty must cause calamities to Poland and embarrassment and danger to Europe. He proceeded to severely criticise the propositions made by the three Powers to Russia, which implied the ingrafting of a constitutional government of a province on a despotic Power, and attributed them to the influence of Austria, whose only intention was to cheat the Poles; but he added that England had, by insisting on an armistice and a conference, made her policy safe. Russia, however, had rejected these latter, and had accepted only that which was the proposition of Austria. He argued generally that no protocol or congress-elected kingdom of Poland would now do, and if she was to be freed from the present rule of Russia it could only be done by establishing her independence. The peaceful attainment of that object depended on Austria, and her giving up of Galicia, which must be followed by Prussia yielding Posen, and the rest must follow.

The CHANCELLOR of the EXCHEQUER characterised the scheme of the restoration of Poland by the cession of Galicia, Posen, the Russian provinces, and the whole Polish nationalities, as a gigantic vision. A war for the restoration of Poland was a war of all Europe, and implied territorial considerations which must lead to after complications. The declaration of Earl Russell that England could not go to war for Poland, was quite consistent with the policy of the Government. He objected technically to the motion as inconsistent with the objects laid down in the speech in support of it.

Mr. HENNESSY contended that the feeling of the people of England had been unequivocally expressed in favour of Polish freedom, irrespective of any of the terms of the Treaty of Vienna. He combated Mr. Horsman's notion that Austria was insincere, and even treacherous, in her present conduct towards Poland, and urged that the Austrian Government was really anxious for the Poles, while the Austrian people and the Austrian army gave them their entire sympathy. He asserted that the Treaty of Vienna was not confined to the Duchy of Warsaw, but included the Polish provinces of Russia. He further argued that the Prussian people were in favour of Poland, while France, in her support of the cause of the Poles, contemplated no territorial aggrandisement; and as, in fact, all Europe was with her, it could hardly happen otherwise than that there should be established an independent Poland.

Mr. KINGLAKE admitted that England had a right to call on Russia in reference to the Treaty of Vienna; but, that not being a treaty with guarantees, she was not bound to go to war in support of it. Unless the interest of England were involved it would not be possible to take the country into a war for mere sympathy. He also defended Austria from the charge which had been made against her, showing that there was every reason for her being impelled sincerely to advocate and promote the cause of Poland. As to the cession of Galicia by Austria, he produced statements from Galicians themselves to the effect that they did not desire to throw off the rule of Austria. He pointed out the difficulty of obtaining an armistice, which, in fact, would be disadvantageous to the Poles themselves, and therefore it would be unwise to break off negotiations with Russia because she declined to accept an armistice. He objected to the motion as condemnatory of the Treaty of Vienna, which was the only ground on which her Majesty's Government had to go.

After observations from Mr. Peacocke, Sir F. Goldsmid, Mr. Newdegate, Lord H. Vane, and Mr. S. Beaumont,

Lord PALMERSTON observed that the gist of Mr. Horsman's speech was that her Majesty's Government had not pushed diplomatic action to the point of war; and he seemed to lay no stress on the force of public opinion in a case like this. At least our moral influence had produced a change in the policy of Russia from that pursued by her in 1831, for she had admitted the right of the great Powers, parties to the Treaty of Vienna, to interfere. In 1815 Russia, having a large army in Poland, refused to give it up; but the Emperor (Alexander I.) intended to give a Constitution to Poland, and to annex to her the Russo-Polish provinces. He could not see that there would have been much incompatibility between such a constitutional kingdom and the despotic empire of Russia; and the reason that that constitutional system did not work was that the then Grand Duke Constantine, by his arbitrary government, overthrew it, and finally drove the Poles into insurrection in 1831. It was not possible, except by force, to re-establish the ancient kingdom of Poland; nor could any such demand be made under the Treaty of Vienna. If the motion proposed was carried it would affirm the principle of giving up the only right this country had to interfere in the Polish question; and he did not see how such a course could be of advantage to Poland. He believed the Government was only doing its duty in proposing an armistice; and, as it had been refused, the responsibility rested on Russia.

After some remarks from Mr. HORSMAN in reply, who said he considered it would be unreasonable then, in consequence of her Majesty's Government having just received the answer from Russia, to state their intentions upon it, and that a wrong construction had been put upon the terms of his motion, he asked to be allowed to withdraw it.

The motion was then withdrawn.

HOUSE OF LORDS.—TUESDAY.

The Commons amendments to several bills were considered.

The Charitable Uses, the Union Relief Aid Acts Continuance, the Companies Clauses, the Turnpike Trusts Arrangements, and the Exhibition Medals Bills were read a second time.

The Harwich Harbour, the Pier and Harbour Orders Confirmation, the Misappropriation by Servants, the India Stock, and the Sydney Branch Mint Bills were severally read a third time and passed.

The Royal assent was given by commission to the Volunteer Bill, the Royal Naval Reserve Bill, and several other measures.

HOUSE OF COMMONS.—TUESDAY.

The House had a morning sitting, at which the Appropriation Bill was read a second time, and progress was made in Committee with the Augmentation of Benefices Bill.

At the evening sitting, after some questions had been disposed of, Mr. B. Cochrane called attention to our present relations with Japan. Having traced the various events from the convention made by Admiral Stirling in 1854 to the treaty obtained by Lord Elgin in 1858, he contended that the treaties, owing to the peculiar government and state of the country of Japan, could not be carried out, and the result would be a war, entered upon by this country, entailing an immense expense. Mr. Liddell followed in a similar sense. Mr. Layard regretted the necessity which had arisen of demanding compensation from Japan, and proceeded to show that that necessity was inevitable. He pointed out that Russia and America having obtained treaties with Japan, looking to the commercial spirit of this country, the Government would have been wholly blamed if they had not obtained similar advantages for British merchants. He denied that the treaty was forced on the Japanese, a majority of whom were willing, and even anxious, to accept it. A number of murders and atrocities having been committed on Europeans, not merely Englishmen, by the Japanese, redress for such outrages was indispensable.

Mr. Peel moved that the mail contracts for the Cape of Good Hope by the Steam Union Ship Company to Brazil and the River Plate with the Royal Mail Steam-packet Company, and to America from Galway by the Atlantic Royal Mail Steam Navigation Company, be approved, which was agreed to.

Mr. Peel obtained leave to bring in a bill to reduce the duty on rum in certain cases.

The Petty Sessions Bill and the Railways Bills (No. 2) Bill were withdrawn.

The Indemnity Bill, the Colonial Letters Patent Bill, the Jurisdiction of Justices Bill, and the Pauper Lunatic Asylums Bill were read a third time and passed.

The Clergymen (Colonies) Bill, the Alteration in Judges' Circuits Bill, and the Superannuations (Union Officers) Bill were read a second time.

The Lords' amendment to the Oaths Relief in Criminal Proceedings (Scotland) Bill was considered and agreed to.

HOUSE OF COMMONS.—WEDNESDAY.

The British Columbia Boundaries Bill and the Rum Duty Bill were read a second time.

The Statute Law Revision Bill, the Colonial Acts Confirmation Bill, the Appropriation Bill, the Alteration in Judges Circuits Bills, and the Superannuation (Union Officers) Bill passed through Committee.

The Land Tax Commissioners Names Bill was read a third time and passed.

The Lords' amendments to the Sheep and Cattle (Scotland) Bill, the Removal of Irish poor Bill, the Marriages Registration (Ireland) Bill, and the Port Erin Harbour (Isle of Man) Bill were considered, and agreed to.

HOUSE OF LORDS.—THURSDAY.

DANGEROUS EXHIBITIONS.—The Earl of MALMESBURY drew attention to the late fatal accident to the tight-rope walker at the Foresters' fête at Birmingham, and asked if any steps could be taken to prevent a recurrence of such a lamentable catastrophe?—Earl GRANVILLE replied that Government had written letters of warning to some places where these exhibitions were advertised to take place, and in the metropolis these requests to desist had been attended to. The Government, however, had no power to stay such proceedings. There was no doubt that the great charm of the exhibitions arose from the danger the performer was exposed to, but the same might be said of fox-hunting, and their Lordships would not ask the Government to interfere in that case. The remedy was to be found in purifying the public taste.—The Earl of SHAFTESBURY said he was quite sure that if the rope were placed only a few feet from the ground, with a large quantity of sawdust underneath it, not a fourth of those now attending such exhibitions would be found there. The noble Earl believed that nothing could be done by the Legislature, but hoped the public taste would be improved if the press dealt with all such cases in a becoming spirit, as they had done in this case.

FISHERIES (IRELAND) BILL.—Lord STANLEY of ALDERLY moved the third reading of this bill.—Lord CRANWORTH objected to the measure on the ground that it interfered with rights held under Royal grant or charter, or possessed from time immemorial. The noble and learned Lord moved that the bill be read a third time that day three months.—After some discussion the amendment was negatived by a majority of 40 against 25.—The bill was then read a third time.—Lord CRANWORTH and the Earl of DONOUGHMORE proposed amendments, but they were both defeated on divisions. The bill was then passed.

The following bills were also read a third time and passed—viz.:—Stipendiary Magistrates, Fortifications (provision for expenses), Public Works and Fisheries Acts Amendment, Vaccination (Scotland), and the Exhibition Medals Bills.

HOUSE OF COMMONS.—THURSDAY.

DENMARK AND GERMANY.—Mr. S. FITZGERALD said he was unwilling to allow the Session to come to a close without endeavouring to obtain from her Majesty's Government some explanation with reference to the present condition of matters between the Germanic Confederation and the Kingdom of Denmark. He regretted that while the friendly relations between other Powers appeared to be only strengthened, those between the Germanic Confederation and the Government appeared to be embittered. He considered that the Federal occupation of Holstein would be most menacing to Europe if Denmark resisted it.—Lord PALMERSTON said this was one of the most complicated subjects that ever engaged the attention of statesmen in Europe. He should not enter into details of what was called the Schleswig-Holstein affair, which was involved in the utmost obscurity of former times. The German advocates referred back to 1640 as the ground on which they maintained stricter relations between Schleswig and Holstein than those admitted by Denmark or any other Powers. He entirely agreed with the hon. gentleman (Mr. Fitzgerald) that it was a matter of British policy to maintain the independence and integrity of the Danish monarchy. It was not a large one; but it had its rights as well as larger States, and its geographical position rendered it the more important to this country that these rights should be secured. The position the Government had always held was, that Holstein was a member of the German Confederation, and that that Confederation had a control over the affairs of Holstein, as it had over other members of the Germanic Confederation, and that any arrangement made by the King of Denmark opposed to this fundamental rule was not justifiable. But they held that, with regard to Schleswig, the Germanic Confederation had no control, and the Germanic Confederation had no more right to prescribe rules for it than Spain, Portugal, England, Russia, or any other separate and independent State. They held that Schleswig was a matter of European arrangement. But still there were many Germans there, and the Government held that the German Confederation had a right to represent, if such a case existed, that the German inhabitants were not placed upon an equal footing with the subjects of Denmark. Such matters ought not, however, under any circumstances, to justify an appeal to arms. As to the policy and course of the Government as to these disputes, he might say that the Government were desirous that the rights of Denmark should be maintained, and that if any attempts were made to overthrow these rights they should be resisted. He trusted, however, that these matters would be subjects for negotiation and not for war. Every effort would be made by her Majesty's Government to induce the parties to include all disputes within the limits of diplomatic intercourse. He had no doubt those efforts would be successful, and he had no apprehensions of either immediate or remote danger.

THE CONFEDERATE STATES OF AMERICA.—PRIVATEERING.—Mr. COBDEN called attention to the exploits of the Oreto, alias the Florida; the Alabama, alias the 290; and the Japan, alias the Virginia. The hon. gentleman having dwelt upon the provisions of the Foreign Enlistment Act, and to the attacks which the above-named vessels had made upon the merchandise of a friendly Power, remarked that every vessel which was captured by them was taken note of by the American Government. In all cases the value of the vessels seized were taken by deposition on oath, and in all cases a claim was made for compensation on this country. The Government always resisted these claims; but that was the most serious part of the matter; and he contended that in such cases every man ought to constitute himself a detective policeman, in order that those proceedings might be frowned down. By every feeling of reciprocity towards the American people we ought to strive to put down these illegal practices. He thought there was every claim upon the Government to prevent these armed vessels from leaving these shores. He hoped that by no technical evasion another vessel for Confederate purposes would be allowed to escape from these shores. The terrors of the civil war in America were frightful; but he hoped they would not be extended by any connection with it on our part. All he asked for was neutrality. Whatever might be the issue of this dreadful war, let England keep clear of it. His voice would be mute; and what he asked was that England should be silent and sorrowful until this dreadful civil war was over.—Mr. LAIRD denied that the Alabama went out of Liverpool in an improper way.—Mr. COBDEN said he quoted Earl Russell.—Mr. LAIRD said he was not responsible for what Earl Russell said. She went out of dock in the broad daylight.—Mr. COBDEN: Did she take a clearance?—Mr. LAIRD: She did not require a clearance.—Lord PALMERSTON looked upon the two parties in America as in arms against each other, and, as such, belligerents, and therefore entitled to all the right and privileges of belligerents. That which was running in the head of the hon. gentleman, and which guided his reasoning as well as his feeling, was that the Union was in legal existence, that there were not two belligerents, but a legitimate Government and a rebellion against that Government. Now what was the duty of a neutral with regard to two belligerents? The American Government had laid it down for themselves; for they had laid it down that a neutral might supply a belligerent with ships, arms, ammunition, or anything else, although they might be important ingredients in naval and military operations. The hon. gentleman complained that her Majesty's Government had not taken proper steps in this matter, but had rested upon information derived from the American Minister. He assured the hon. gentleman that that was not the case, and he believed that the hon. gentleman and the Federal Government were not entitled to say that the Government had omitted to do anything that by law they could do in reference to this matter. At the same time, he thought this country ought to enforce its law in these matters as stringently as possible.

IONIAN ISLANDS.—Lord J. MANNERS complained of the conduct of the Foreign Office in excluding Turkey from the proposed conference to whom is to be referred the cession of the Ionian Islands to Greece. He should like to know whether Turkey had made any demand to be admitted to the Conference. He considered that the cession of the Ionian Islands was the most impolitic, uncalled-for, and prejudicial act ever committed.—Mr. C. BENTINCK inquired whether the opinion of the Conference would be taken before the meeting of the Ionian Parliament. With regard to the question of the noble Lord (Lord J. Manners), he said the Sultan was not an acceding party to the Protectorate. A treaty would be signed by the Powers before the meeting of the Ionian Parliament.

THE INSURRECTION IN NEW ZEALAND.—At the evening sitting Mr. C. FORTESCUE, in reply to Mr. W. Forster, said that the Governor of New Zealand had not applied to the Governor-General of India for the assistance of Sikh troops to suppress the disturbances in New Zealand, but he had applied to the Home Government for an additional regiment of European troops.

INDIA.—Sir C. WOOD made the usual annual financial statement regarding India, which was of a most satisfactory character, both as regarded the revenue and the railway and other works being carried on there.—Several members expressed their gratification at the statement of the right hon. gentleman.

The Consolidated Fund (Appropriation) Bill was read a third time and passed.

MUSIC.

Though the ROYAL ITALIAN OPERA is almost on the eve of closing its doors for the season, the interest of its performances does not flag. Within the last eight days there have been two novelties as remarkable as any that have occurred since the season began. The first was the début of Mdlle. Lucca before the English public, the second was the first appearance of Mdlle. Adelina Patti in a new character—one of the most attractive and successful of all her achievements. Had either of these appearances—especially the début of Mdlle. Lucca—taken place at the beginning of the season, instead of being almost at its end, the whole course of the performances would probably have been greatly changed, for this lady would have strengthened the company in its weakest point by adding to it a prima donna able to shine in the highest sphere of the grand serious opera.

Mdlle. Lucca was engaged before the commencement of the season, as her name is included in the list of performers mentioned in the preliminary prospectus of the arrangements. Why she has not appeared till the eleventh hour we know not; but a delay so prejudicial to the interests of Mr. Gye must have arisen from circumstances over which he had no control. She is engaged, however, as we understand, for two or three years, and cannot fail next season to be one of the great stars of the theatre. She is from the Royal Opera of Berlin, and, notwithstanding her youth, has already gained a great name in Germany. She is exceedingly handsome, of low stature—not taller, indeed, than Adelina Patti—and therefore, it might be supposed, better fitted for the sock than the buskin; but it is not so. She is most at home, it appears, in the highest walk of lyrical tragedy. She made her début, on Saturday last, as Valentina, in "The Huguenots," and fully realised the grandeur of Meyerbeer's lofty and impassioned heroine. Her voice has nothing of the smallness of her stature. It is a pure soprano, of great power, volume, and compass, sufficient to give expression to the utmost intensity of passion. She has a speaking countenance, a queenlike air, and dignity and grace in all her movements. Her talents, both as an actress and a singer, are highly cultivated; and, young as she is, it is not too much to say that she is already a finished artist. Her début was attended with the most brilliant success. Her rare beauty made an instant impression, and her whole performance, from the first scene to the last, was hailed with acclamations. The opera was magnificently performed. Mario, when in full possession of his vocal powers, is still incomparable in the character of Raoul, and so he was on this occasion. Formes is the best Marcel on the stage. Mdlle. Marie Battu sang the florid music of the Queen of Navarre very brilliantly, and Mdme. Didiée's rich contralto voice was heard to great advantage in the character of the Page, which, moreover, she acted gracefully and archly.

Mdlle. Adelina Patti's new character was Adina in the "Elisir d'Amore." She appeared in it for the first time on Tuesday last, and it will prove a vast addition to her repertory. Nothing could exceed her success. In her aspect and attire, her playful gaiety chastened by touches of nature and feeling, she was the very beau ideal of the rustic coquette, while she sang the music as if it had been written expressly for her. Her exuberance of florid ornament, which she sometimes carries to excess, was quite appropriate; and she gave her embellishments a charm all her own by the inimitable facility and grace with which she executed them. She was well supported, the whole opera being admirably performed. Naudin was an excellent Nemorino, personating the country lad very pleasantly and singing the pretty music with great sweetness. Tagliafico bustled through the part of Sergeant Belcore with much spirit; and Ronconi's Doctor Dulcamara is one of the finest specimens of the true Italian buffo style now on the stage.

"Le Nozze di Figaro," the most celebrated, and in many respects the finest, comic opera in existence, was produced on Wednesday last at HER MAJESTY'S THEATRE. It is an opera which the public seldom have an opportunity of enjoying, in consequence of the extreme difficulty in finding performers for such a host of first-rate parts. How far this difficulty has now been surmounted at Her Majesty's Theatre is a subject on which we shall have a few remarks to make next week.

The series of Saturday Concerts at the CRYSTAL PALACE was brought to a close on Saturday last. They have terminated just at the time when their pleasantness was at its height—when the public, glad to escape from the heat and suffocation of London theatres and concert-rooms, might enjoy the pleasures of music along with the free air and beautiful scenery of the Palace of Sydenham. They have had much success, we understand, during the season, and certainly they have deserved it. The concluding concert was of the usual character. The vocal performers were Mdlle. Carlotta Patti, Mdme. Didiée, Signor Tamberlik, Signor Graziani, and Signor Ciampi. The young Polish violinist, M. Lotto (a favourite at the Crystal Palace, where he has been chiefly heard), played a movement of one of Paganini's concertos and a pretty waltz composed by himself; and several classical orchestral pieces, including Weber's overture to "Euryanthe," were performed by the admirable Crystal Palace band, under the direction of Herr Manns. These concerts are given, not in the great open space of the central transept, where nothing but the loudest noises can be heard, but in the inclosure, or concert-room, which is well fitted for every description of music.

The concert given by Signor CIABATTA, the eminent singer and vocal instructor, on Wednesday, last week, besides being of distinguished excellence, had one feature of peculiar interest: it was the only occasion on which Grisi has been heard in London this season, and the last time (most probably) she will ever be heard in England. She sang a great deal:—The air "Qui la voce," from the "Puritani;" the duet (with Alboni) "Giorno d'Orror," from "Semiramide;" the duet (with Mr. Santley) "Mira di acerbe lagrime," from the "Trovatore;" Cimarosa's terzetto for female voices from the "Matrimonio Segreto;" and "Qui sola vergin rosa" (The last rose of summer), from "Martha." She sang with undiminished vocal power and still unrivalled beauty, and was greeted by one of the most crowded and brilliant audiences of the season with such transports of enthusiasm that she was evidently deeply moved by her reception.

It requires a very great attraction to fill a concert-room in the dog days; but yet the HANOVER-SQUARE ROOMS, on Wednesday, were as crowded, hot, and suffocating as they have been at any time during the height of the season. The concert was Mdlle. Louise Michal's, and its great attraction was the appearance of Mdme. Lind-Goldschmidt, who generously came forward to assist her young countrywoman. To say that Jenny Lind's voice retains the youthful freshness which charmed every ear when she first appeared on the boards of Her Majesty's Theatre would be to say what she herself would be the last person to believe; but her voice is still a noble organ, and she possesses unimpaired the highest qualities of an artist. Her performance on Wednesday of Handel's magnificent air, "What passion cannot music raise and quell?" of Mendelssohn's part-songs, and of the old national melodies of her country, was as great a treat as vocal music could afford. Mdlle. Michal, herself a charming singer, was assisted also by Mdlle. Artôt, Mdlle. Trebelli, Signor Bettini, M. Otto Goldschmidt, M. Charles Hallé, and other eminent performers; and the concert was altogether one of the best and most successful of the season.

THE THEATRES.

HAYMARKET.—The performances for Mr. Buckstone's benefit on Wednesday week were of a special character, and deserve more than a passing notice. They commenced with "The Star of Andalusia," introductory to the revival of Mr. Planché's drama of "Charles XII," in which Mr. Buckstone himself performed Adam Brock; Mr. Alfred Wigan, the valiant Monarch; and Mr. Compton, the burgomaster, Triptolemus Muddlewerk. We notice these particulars now, because, on the reopening of the theatre, the piece, with its present cast, will probably be revived. Mr. Buckstone was very happy this year in his address, both in its manner and its topics. The former was business-like, and the latter conveyed some pleasant information. Mr. Buckstone is justly proud of the length of his seasons. The one then closing had lasted for five years, including 1473 nights, and the same had been the case with the one immediately preceding. For more than ten years Mr. Buckstone has been manager of this theatre, and he now tells us the sole lessee also, having during that period stood alone, without "a backer." This is the more honourable to him, as at the beginning Mr. Buckstone had to struggle with many difficulties; but the latter portion of his career has been singularly prosperous. The great exhibition year, he states, brought him "an unparalleled tide of prosperity, although it is but right to allow that much of that prosperity was due to my Lord Dundreary (Mr. Sothern), whose extraordinary performance was the talk of all London for more than twelve months." Next season, it appears, the same celebrated actor intends to introduce the Haymarket audience to his "Brother Tham." Mr. and Mrs. Wigan are also to reappear in the comedy of "Finesse," and Mr. and Mrs. Charles Mathews will return to these boards. These announcements are pleasant enough; but the public will be still more glad to learn that at length preparations are to be made for a reform in the auditorium of the house. We record the fact with entire satisfaction. It is intended to widen the seats in the stalls and to improve their construction, with a view to the comfort of the sitter. An additional row will also be made, together with a door on each side, for the accommodation of ladies' crinolines. "In the dress-circle the knife-boards are to be abolished, the box partitions removed, and 250 velvet chairs placed for the convenience of the visitors to that part of the house. In the amphitheatre the benches will be covered, backs will be added to them, so that when the pit is overflowing no one will object to pass up aloft, where they will meet with every comfort and obtain one of the best points of sight in the house." These promises are of the right sort, and relate to points which have been frequently canvassed by the audience. Their realisation will conduce much to the popularity of the management.

STRAND.—This little theatre has achieved another success, in connection with one of Mr. J. H. Byron's burlesques, described in the bills as "a shameful travestie of 'The Duke's Motto.'" This caricature bears the title, "The Motto, 'I am all there.'" In reviewing these productions the critic is reduced to the necessity of repeating many phrases. He has, of course, to state that the dialogue abounds with puns, and the lyric accompaniments with parodies. Of the former Mr. Byron has, on the present occasion, given us more than usual, and scattered them over the text in marvellous profusion. He has probably been induced to manifest his prodigality in this way because in the outline of the plot he has permitted himself little liberty, so that it proceeds with scarely any variation from that of the original drama. It opens in the same manner with the tavern scene and the project of the assassination of the Duke de Nevers, on whose name Henri Lagardère utters a prodigious number of puns, and then proceeds, in the usual way, to deliver the heiress of the story, set off with such humorous additions as the author could invent. The succeeding lapse of twenty years presented a difficulty which the genius of burlesque has, though not for the first time, ingeniously evaded. A duet and a dance between Carrickfergus and the Regent (Miss Jenny White and Mr. E. Clifton) are supposed to fill up the important interval, and the duty thus intended was performed so satisfactorily that the delighted audience insisted on their repetition. Then, of course, follows the Gipsy Encampment, and furnishes ample material, or rather suggestion, for Mr. Byron's invention, exhibiting Henri as an acrobat and Blanche as a fortuneteller, duly armed with Zadkiel's crystal. Mr. George Honey, the representative of Henri, is exceedingly happy in the assumption of the character and gait of Æsop, and may well claim comparison with Mr. Fechter himself. The subsequent scenes are amusingly rendered, Lagardère giving his answers to the widowed Princess from a store-closet, and also conducting the mesmeric processes and other incidents with such a degree of extravagance as makes them tell with ludicrous effect on the laughter-loving audience. Mr. Honey adopts the voice and manner of Mr. Fechter, and provokes much merriment. Mr. Frank Musgrave deserves credit for the instrumental music; and the scenery, by Messrs. Leitch and Turner, is appropriate. Altogether, the piece made a decided impression on the audience, and will probably command a prolonged run.

Mount Etna shows signs of a coming eruption. Columns of black smoke now ascend from the crater.

The Ashburton Challenge Shield for the Public Schools was, we are requested to state, won by Rugby in 1861, the first year of its being shot for, Harrow standing second.

THE MARKETS.

CORN EXCHANGE, July 20.—To-day's market was scantily supplied with home-grown wheat; nevertheless, the demand for both red and white qualities was very inactive, at last week's quotations. Foreign wheat—the show of which was seasonably good—moved off slowly, at late prices. Floating cargoes of grain were a dull inquiry, but not cheaper. Very little barley was brought forward. The inquiry for it, however, was somewhat heavy, on former rates. Malt was in fair supply, and sluggish request, at late currencies. Good, sound oats commanded full prices; but heated samples were very dull. Beans and peas moved off heavily, at about last week's quotations. In flour very little business was transacted.

July 22.—The amount of business doing in all kinds of produce, to-day, was limited; nevertheless, Monday's prices were fairly supported.

English.—Wheat, Essex and Kent, red, 40s. to 50s.; ditto, white, 40s. to 52s.; Norfolk and Suffolk, red, 40s. to 49s.; rye, 34s. to 35s.; grinding barley, 26s. to 27s.; distilling ditto, 29s. to 31s.; malting ditto, 29s. to 33s.; Lincoln and Norfolk malt, 60s. to 66s.; brown ditto, 50s. to 57s.; Kingston and Ware, 60s. to 66s.; Chevalier, 65s. to 68s.; Yorkshire and Lincolnshire feed oats, 18s. to 23s.; potato ditto, 23s. to 27s.; Youghal and Cork, black, 16s. to 23s.; ditto, white, 16s. to 23s.; tick beans, 30s. to 32s.; grey peas, 35s. to 36s.; maple, 38s. to 40s.; white, 37s. to 38s.; boilers, 37s. to 39s. per quarter. Town-made flour, 40s. to 47s.; town households, 34s. to 36s.; country marks, 29s. to 31s. per 280lb.; American, 20s. to 25s. per barrel: French, 38s. to 41s. per sack.

Arrivals this Week.—Scotch: wheat, 190; malt, 310; oats, 10; flour, 220. Irish: oats 850. Foreign: wheat, 10,470; barley, 1040; oats, 6110; flour, 110 sacks, 10,800 barrels.

Seeds.—New rapeseed has sold at from 64s. to 68s. per quarter. Linseed is very firm in price; but all other seeds are inactive. In cakes, very little is doing.

Linseed, English, crushing, 62s. to 68s.; Calcutta, 65s. to 67s.; hempseed, 44s. to 48s. per quarter; coriander, 14s. to 16s. per cwt.; brown mustard seed, 8s. to 10s.; white ditto, 7s. to 9s.; tares, 7s. to 8s. per bushel; English rapeseed, 80s. to 84s. per quarter. Linseed cakes, English, £9 10s. to £10 10s.; ditto, foreign, £9 10s. to £11; rape cakes, £5 10s. to £6 per ton; canary, 46s. to 52s. per quarter; red clover seed, 38s. to 66s.; white ditto, 54s. to 57s. per cwt.

Bread.—The prices of wheaten bread in the metropolis are from 7½d. to 8d.; of household ditto, 5½d. to 7d. per 4lb. loaf.

Imperial Weekly Averages.—Wheat, 46s. 7d.; barley, 28s. 10d.; oats, 22s. 6d.; rye, 32s. 9d.; beans, 40s.; peas, 37s. 1d.

The Six Weeks' Averages.—Wheat, 46s. 9d.; barley, 30s. 9d.; oats, 23s. 1d.; rye, 33s. 10d.; beans, 39s. 11d.; peas, 37s. 6d.

English Grain Sold last Week.—Wheat, 46,737; barley, 712; oats, 2427; rye, 20; beans, 1324; peas, 193 quarters.

Tea.—The public sales have gone off slowly, and, in some instances, prices have declined 1d. per lb. Privately, the demand is inactive.

Sugar.—All raw qualities are very dull, and the currencies have a drooping tendency. Barbadoes has realised 32s. to 39s.; Jamaica, 31s. to 33s. 6d.; St. Vincent's, 30s. 6d. to 34s.; and Demerara, 31s. to 42s. per cwt. Refined goods are heavy, at 45s. 9d. per cwt. for common brown lumps. The stock consists of 106,000 tons, against 83,000 tons last year.

Coffee.—The demand for most kinds has somewhat improved, and the quotations, generally, are well supported. Stock, 10,000 tons, against 9000 ditto in the corresponding period in 1862.

Rice.—The market is inactive, yet the quotations are tolerably firm. Stock, 43,000 tons, against 50,000 ditto.

Provisions.—The demand for butter is steady, and the best Friesland has advanced to 88s. per cwt. Bacon is in request, and rather dearer. Most other provisions rule tolerably firm.

Tallow.—Very little is doing in any kind. P.Y.C., on the spot, is selling at 42s. to 43s. per cwt. Stock, 39,000 casks, against 34,000 ditto.

Oils.—Linseed oil is in fair request, at 45s. per cwt. Rape is selling at from £43 10s. to £46; cocoanut, £45 10s. to £48; and fine palm, £46. French turpentine has declined to 75s. per cwt.

Spirits.—Rum is in moderate request, at 1s. 4d. for proof East India, and 1s. 5d. for proof Leewards. Brandy is steady, at 3s. to 11s. 4d.; Hambro' spirit, 1s. 4d.; English ditto, grain, 1s. 9d. to 1s. 10d.; ditto, rice, 1s. 4d. to 1s. 5d.; and English gin, for export, proof, 2s. 9d. to 3s. per gallon.

Hay and Straw.—Old meadow hay, £3 10s. to £4 10s.; new ditto, £3 to £4; old clover, £5 to £6; new ditto, £3 10s. to £5; and straw, £1 8s. to £1 16s. per load.

Coals.—Best house coals, 17s. to 18s.; seconds, 14s. 6d. to 16s.; Hartleys', 13s. to 14s. 9d.; and manufacturers', 13s. to 15s. per ton.

Hops.—There is a moderate business doing in most kinds, at full prices. The plantation accounts are rather more favourable.

Wool.—The public sales are progressing steadily, at full quotations. By private contract very little is doing.

Potatoes.—The demand is steady, at from 80s. to 120s. per ton.

Metropolitan Cattle Market (Thursday, July 23).—Our market to-day was seasonably well supplied with beasts, both as to number and quality. Nearly all breeds moved off slowly, at about Monday's currency. The extreme value of the best Scots, however, was 5s. per 8 lb. Sheep, the show of which was good, changed hands somewhat freely, at full quotations. The best old Downs realised 5s. per 8 lb. There was a fair sale for lambs, at fully previous rates. The top price was 6s. 4d. per 8 lb. Calves were in fair average supply and sluggish request, at the late decline. Pigs and milch cows were dull but not cheaper. Per 8 lb. to sink the offal:—Coarse and inferior beasts, 3s. 4d. to 3s. 8d.; second quality ditto, 3s. 10d to 4s. 2d.; prime large oxen, 4s. 4d. to 4s. 8d.; prime Scots, &c., 4s. 8d. to 4s. 10d.; coarse and inferior sheep, 3s. 6d. to 4s.; second quality ditto, 4s. 2d. to 4s. 6d.; prime coarse-woolled sheep, 4s. 8d. to 4s. 10d.; prime Southdown ditto, 4s. 10d. to 5s.; large coarse calves, 3s. 8d. to 4s. 2d.; prime small ditto, 4s. 4d. to 4s. 6d.; large hogs, 3s. 6d. to 4s.; neat small porkers, 4s. 2d. to 4s. 6d.; lambs, 5s. 4d. to 6s. 4d.; suckling calves, 12s. to 20s. and quarter-old store pigs, 20s. to 28s. each. Total supply:—Beasts, 1040; cows, 130; sheep and lambs, 12,800; calves, 390; pigs, 312. Foreign: Beasts, 520; sheep and lambs, 4200; calves, 305.

Newgate and Leadenhall.—There is a moderate demand for meat, at the annexed quotations:—Beef, from 3s. to 4s. 2d.; mutton, 3s. 4d to 4s. 6d.; lamb, 5s. 4d. to 5s. 8d.; veal, 4s. to 4s. 4d.; and pork, 3s. 8d. to 4s. 8d. per 8 lb. by the carcass.

ROBERT HERBERT.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

In the early part of the week, owing, chiefly, to the unsettled state of the Polish question Home Securities were heavy, and the quotations had a drooping tendency. Since then however, the market has become firmer, the decline in prices has been recovered and a fair average quantity of stock has been absorbed by the public.

The Discount Market continues to be heavily supplied with capital. The demand for accommodation has not increased; nevertheless, very little change has taken place in the quotations. Those in Lombard-street rule as follows:—

Thirty days' bills	3½ per cent.	Four months' bills.. ..	4 to 4½ per cent.
Sixty days' bills	3½ "	Six months' bills	4½ 5 "
Three months' bills	4 "		

In the Stock Exchange the value of money is 2½ per cent.

On most parts of the Continent money is in fair request. The rates in the leading cities are as under:—

	Bank rate per cent.	Open market per cent.		Bank rate.	Open market.
Paris	4	3½	Amsterdam ..	3½ ..	3½
Vienna	5	5	Turin	5 ..	5½
Berlin	4	3½	Brussels ..	3 ..	2½
Frankfort ..	3	2½	Hamburg ..	— ..	3
			St. Petersburg	5½ ..	7½

The half-yearly report of the Scottish Australian Investment Company recommends a dividend at the rate of 10 per cent per annum.

Most of the foreign exchanges are favourable, and there is still a fair profit on imports of gold from New York, where the premium has fallen to 3½.

At the meeting of the shareholders in the City Bank, a dividend at the rate of 6 per cent was declared, with a bonus of 20s. per share—equal to 10 per cent per annum. The dividend of the St. Katharine's Dock Company is 1½ per cent for the past half-year, and of the National Bank at the rate of 8 per cent, together with an extraordinary dividend of 16s per share.

On Monday Consols, for Money, marked 92⅜; Ditto, for Account, 92⅝; Reduced and New Three per Cents, 92⅜; India Five per Cents, 108; Ditto, Bonds, 15s. to 19s. prem.; Exchequer Bills, par to 3s. discount; India Debentures, 100½. Bank Stock was 235 to 238; India Stock, 227 to 229. There was more doing on the following day. Consols, for Transfer, closed at 92⅝; Ditto, for Time, 92⅝; Bank Stock, 236 to 238; Reduced and New Three per Cents, 92⅜; India Stock, 226 to 228; Ditto, New, 108 to ¼; India Bonds, 15s. to 18s prem. Exchequer Bills, par to 3s. prem.; the Five-and-a-Half per Cent Rupee Paper, 116½; India Debentures, 100¾. Prices were on the advance on Wednesday. Consols, for Money, sold at 92⅝; Ditto, for Account, 92⅞; Reduced and New Three per Cents, 92⅜; Bank Stock, 236 to 238; India Stock, 226 to 228; Ditto, New, 108 to 108½; New Two-and-a-Half per Cents, 77; Long Annuities, 14 15-16; Red Sea Annuities, 21 1-16 ex div.; India Five per Cents, 108½ 108; Ditto Four per Cent Rupee Paper, 98½ 98; Ditto Five per Cent, 107½; Ditto Five-and-a-Half per Cent, 116⅝; Exchequer Bills, par to 3s. prem. On Thursday the market exhibited more firmness. Consols, for the Account, realised 92⅝; for Money, 92⅝; Reduced and New Three per Cents, 92⅝ to 93; and Exchequer Bills, par to 3s. prem. India Five per Cent Stock sold at 107⅞ to 108½.

Indian Securities have been somewhat firmer in price. Erie Shares have realised 64; Illinois Central 100-dollar Shares, 26½ dis.; and Pennsylvania, second mortgage, 85½.

The market for Foreign Securities has been very flat. Greek Bonds, Spanish Passive Stock, Mexican Stock, and Confederate Scrip have given way in price, and the value of nearly all other descriptions has had a downward tendency:—Brazilian Four-and-a-Half per Cents have marked 93; Chilian Six per Cents, 102; Danish Five per Cents, 1863, 99½; Egyptian, 103½; Greek, 33½; Ditto Coupons, 15; Italian Railway, 79½ ex div.; Mexican Three per Cents, 37½; New Grenada, Deferred, 9½; Peruvian Four-and-a-Half per Cents, 1862, 87 ex div.; Portuguese Old Three per Cents, 47⅞ ex div.; Russian Old Five per Cents, 95; Ditto, 1863, 93; Sardinian Five per Cents, 90½; Spanish Three per Cents, 54 ex div.; Ditto, Passive, 3½; Ditto, Certificates 12½; Turkish Old Six per Cents, 93½; Ditto, 1858, 70; Ditto, 1862, 67½; Ditto, Four per Cents, 103½; Venezuela Three per Cents, 24½ ex div.; Dutch Four per Cents, 102½; and Italian Five per Cents, 70⅜ ex div.; Italian Scrip has sold at ⅞ prem. ex div.; and Confederate at from 5 to 3½ dis.

The fluctuations in the value of Joint-stock Bank Shares have been trifling. The dealings in the market have been to a fair average extent, and the following are the leading quotations:—Alliance, 37; Australasia, 77½; Ditto, New, 31½; Bank of Egypt, 28; Chartered of India, Australia, and China, 30; Chartered Mercantile of India, London, and China, 54; English, Scottish, and Australian Chartered, 24; Imperial, 22; Imperial Ottoman, 18⅞; London, Buenos Ayres, and River Plate, 34; London Chartered of Australia, 28; London and Colonial, 2⅝; London and South-Western, 9½; London and Westminster, 76½ ex div.; National Provincial of England, New, 52½; Oriental, 56½; Provincial of Ireland, 89; Standard of British South Africa, 17½; Union of Australia, 53 ex div.

There has been a steady demand for Colonial Government Securities:—Canada Six per Cents have sold at 105½; Ditto, Five per Cents, 96½; Ceylon Six per Cents, 1873, 114; Mauritius Six per Cents, 108½; Natal Six per Cents, 110; New South Wales Six per Cents, 102; and Victoria Six per Cents, 112½.

A fair average business has been transacted in Miscellaneous Securities. Australian Agricultural have been done at 21; Bombay Gas, 2⅞; Ceylon Company, 5½; Crystal Palace, 38½; English and Australian Copper, 11½; General Credit and Finance of London, 3; International Financial Society, 9½; Italian Irrigation, Six per Cent Bonds, 57; Joint-Stock Discount, 6½; Madras Irrigation and Canal, 3½; Peninsular and Oriental Steam, New, 67½; Rio de Janeiro City Improvements, 26½; Ditto, 4½; Royal Mail Steam, 67; Grand Junction Canal, 75 ex div.; Chelsea Waterworks, 29; East London, 128½ ex div.; and West Middlesex, 111½ ex div.

Prices of Railway Shares have fluctuated with Consols. The market, generally, has been somewhat inactive. Annexed are Thursday's official closing quotations:—

Ordinary Shares and Stocks.—Caledonian, 121; Great Eastern, 53⅞; Ditto, East Anglian, 2½; Great Northern, 129; Great Western, 66½; Lancashire and Yorkshire, 113⅞; London and Blackwall, 77⅞; London and Brighton, 117½; London and Chatham, 44½; London and North-Western, 102; London and South-Western, 106½; Manchester, Sheffield, and Lincolnshire, 44½; Metropolitan, 12½; Midland, 128⅞; Ditto, New, 1½ prem.; North-Eastern, 103; Ditto, Leeds, 60; Ditto, York, 90½; North Staffordshire, 16½; South-Eastern, 92; West Midland—Oxford, 46.

Preference Shares.—Great Eastern Six per Cent, 132½; London and Brighton Five per Cent, No. 2, 117; Manchester, Sheffield, and Lincolnshire, 127; North British, 111½.

British Possessions.—Bombay, Baroda, and Central India, 107½; Eastern Bengal, 103½; East Indian, 107⅞; Great Indian Peninsula, 108½; Great Western of Canada, 11½; Madras Five per Cent, 107½; Scinde, 107⅞ ex new; and Punjaub, 107½.

Foreign.—Namur and Liege Six per Cent, 21; San Paulo, 9½; Ditto, 21⅛; South Austrian and Lombardo-Venetian, 22; Turin and Savona, 2⅝.

The return of the Bank of England for the week ending July 22 shows the following results, when compared with the preceding statement:—

An increase of circulation of	£35,616	A decrease of other securities of ..	£1,036,747
An increase of public deposits of ..	438,490	A decrease of bullion of	199,004
A decrease of other deposits of	1,706,289	An increase of rest of	26,432
A decrease of Govt. securities of	40,000	A decrease of reserve of	193,294

The total circulation is £22,230,612; public deposits amount to £5,336,948, and private deposits to £14,675,625; securities are £30,975,776; and the stock of bullion is £14,620,872.

ILLUSTRATIONS OF THE WIMBLEDON RIFLE-MEETING.

THE MATCH BETWEEN THE LORDS AND THE COMMONS.

THE match between eleven members of the House of Lords and eleven of the House of Commons came off on Monday week. The presence of the Prince and Princess of Wales gave an additional zest to the proceedings. Her Royal Highness, who had never before witnessed a rifle-match, watched the operations with great interest. The firing was at the targets numbered 4 and 6, in any position, with any rifle, the distance being only 200 yards and the targets double the pool size. When the firing at this range was finished the Royal party moved to the 500-yards range, where there was another marquee erected. Here the Lords and Commons were again pitted, with the following result—a reversal of that of last year, when the Peers won :—

LORDS.	200 Yds.	500 Yds.	Total.
Earl Ducie	24	26	50
Marquis of Abercorn..	24	25	49
Lord Airlie	21	13	34
Lord Boston	23	23	46
Lord Suffield	19	15	34
Lord Dunmore.. ..	22	21	43
Lord Dufferin.. ..	18	11	29
Duke of Marlborough	14	16	30
Lord Granard	17	6	23
Lord Londesborough..	15	19	34
Lord Wharncliffe ..	25	26	51
	222	201	423

COMMONS	200 Yds.	500 Yds.	Total.
Lord Bury	26	24	50
Mr. Duncombe	26	24	50
Mr. Dillwyn	23	21	44
Sir P. Egerton	20	19	39
Mr. Forster	17	18	35
Earl Grosvenor	25	22	47
Mr. Humberston	20	17	37
Mr. Talbot	17	19	36
Mr. Vivian	23	25	48
Mr. Wemyss	21	9	30
Lord Elcho	24	20	44
	242	218	460

Last year, when the Lords beat the Commons, Lord Elcho proposed "Three cheers for the licking we'll give them next year," and the Commons have kept his Lordship's word. When the firing at the 500 yards was about half over the Prince and Princess took their departure, and, driving to a tent close to the windmill, partook of refreshments there provided by the council; after which, at ten minutes to six o'clock, they left the inclosure and proceeded to London. Before leaving, the Prince intimated to Lord Elcho his intention of becoming a member of the Wimbledon Rifle Club.

THE CAMP MEETING.—MIDNIGHT RIFLE PARLIAMENT.

The camp fire and night meeting of the volunteers at Wimbledon was certainly the most picturesque spectacle to which the volunteer movement has given rise, and furnishes food for wholesome reflection in a social sense. Here were duchesses and highborn ladies, gentlemen soldiers and private soldiers, volunteers of all classes, and even the shoeblacks and suttlers of the camp, gathered together in convivial intercourse, in which, while it was free enough to permit of the cordial and unrestrained enjoyment of all, was yet so well ordered that not a syllable was uttered or a gesture was indulged in which could offend the most delicate-minded. Years ago no one could have dreamed that such a meeting could take place, and even now we believe that in no country in the world save our own could such a scene pass over without a single untoward incident or unpleasant reminiscence. The scene which our Artist has illustrated is thus described by the London correspondent of the *Manchester Guardian* :—"Imagine an irregular horseshoe of high ground grown over with fern and furze, and broken into

THE RUNNING DEER.

THE NATIONAL RIFLE ASSOCIATION PRIZE MEETING ON WIMBLEDON-COMMON: GENERAL VIEW OF THE BUTTS FROM THE VICTORIA CAMP.

bold irregular declivities by scarped gravel banks, occupied by some 1200 or 1400 volunteers, some in mufti, some in uniform, but chiefly undress, standing, sitting, lounging, lying, singly and in knots, grouped in every variety of action or repose, and lighted fitfully by the red glare of a huge pile of furze and faggots, a solid cube of some 30 ft. or 40 ft., fed by red-coated sappers. Not far from the fire, round a table, and in chairs brought from the marquees of the association, a picturesque group of ladies fair and noble—Lady Elcho, Lady Grosvenor, Lady Bury, and others; and near them the handsome stalwart figure of Lord Elcho addressing the assembled volunteers. Nor should I forget the huge punch cauldron so liberally provided and filled by the Victorias—who are the very Camachos of camp life, and seem to keep open tent for all comers. Not the least pleasing feature of the scene was the good humour, good feeling, and gentlemanly bearing of all this crowd."

The *Times* gives the following account of the "camp-meeting" on the 16th inst. :—"About ten o'clock the meeting round the camp fire for purposes of discussion and conviviality, which has grown into an institution in connection with these annual gatherings at Wimbledon, was held. The scene was such as artists would delight to sketch—if, indeed, any pencil could have caught and done justice to its varied features. The large flickering bonfir reflected its alternate glare and shadow on an assembly of most diverse dress and composition. In what may be called the more influential portion of the assembly were included Lord and Lady Ducie, Lord and Lady Anne Elcho, Earl Grosvenor and Lady Constance Grosvenor, Lord Fielding, Lord and Lady Bury, Lady Rose Fane, Lady Gwendolena Anson, Colonel and Mrs. Lloyd Lindsay, Count de Gendres, Mrs. Otto Goldschmidt, &c. The proceedings opened, according to precedent, under the auspices of a Master of the Revels; after which Lord Elcho, as president of the assembly for business purposes, told the volunteers that the council had come there to be shot at with any complaints which they might wish to level at them. The assembly cordially endorsed the compliments which Lord Elcho felt it due to Colonel Luard and Major Buxton to pass upon the camp administration, and did not supplement in any way the complaint which his Lordship said was the only one made to him on this subject—that of a gentleman who had discovered three earwigs in his hut. They further expressed their approval audibly when the commissariat arrangements were mentioned; but a full burst of enthusiasm was elicited when Lady Elcho was incidentally referred to as 'an enthusiastic volunteer.' The meeting, which before sat comfortably watching the blaze or listening to the remarks of Lord Elcho, found its feet and its voice at exactly the same moment. A more animated or prettier tableau than the semicircle presented at that moment it would be difficult to imagine. The festive element asserted itself for a time. Afterwards the suggestions which had been invited by the chairman began to flow in pretty freely upon the council. These were mainly to the effect that, when the number of entries was unusually great, additional prizes should be given; that all the purely volunteer prizes, including the Queen's prize, should be shot off on the opening days of the meeting, if possible on the first or second day; that the prizes for small bores, universally regarded as the weapons of the man of leisure, should be postponed till afterwards; that measures should be taken for preventing over-crowding at the firing-points; and that the competitors, wherever practicable, should be squadded and told off to targets in every case, as in the shooting for the Queen's prize. Lord Elcho replied at some length to the different suggestions which had been made. He left to Captain Page the task of explaining the intricacies of the arrangements at the firing-points. He could call the exertions of that officer—which were entirely unremunerative—nothing less than herculean. Only that day he had worked at these details for eight hours consecutively. The question of prizes to be offered by the association was simply a question of money, and he thought it a disgrace to the people of England that a national institution, essential to the progress and even to the stability of rifle-shooting, should be dependent for its existence upon receipts from chance entries, pool and sighting targets. Somebody in the crowd ventured a suggestion that the association was 'not popular,' an assertion which was met by an indignant storm of dissentient voices, which stifled that question in a manner as effectually as that in which a previous attempt to excite discussion on 'the dismissal clause' of the Volunteers Bill had been got rid of. The meeting felt that the council was taking an open and manly step in consulting their views and eliciting their opinions, and they were not disposed to tolerate the introduction of purely vexatious topics. An equally conclusive and conciliatory speech on the part of Captain Page followed with regard to the great details which had been touched upon. The festivities were prolonged to a somewhat advanced hour, 'tattoo' being abolished, for that night only, by special request."

THE NATIONAL RIFLE ASSOCIATION PRIZE MEETING ON WIMBLEDON-COMMON.

Mdme. Otto Goldschmidt having in the kindest manner expressed her desire to manifest sympathy with the objects of the meeting at Wimbledon, the camp fire was on Thursday se'nnight deserted for the clubroom, where a soirée musicale was held. Mdme. Goldschmidt was enthusiastically received, and the programme, including several of her most brilliant pieces, was performed with entire success. M. Goldschmidt and Mr. Blagrove rendered valuable assistance to the instrumental portions of the concert.

On the night of yesterday week the last camp meeting was held, under the presidency of Lord Elcho; and the proceedings, which were of the pleasantest description, were brought to a close by the singing of the National Anthem.

SERGEANT ROBERTS.

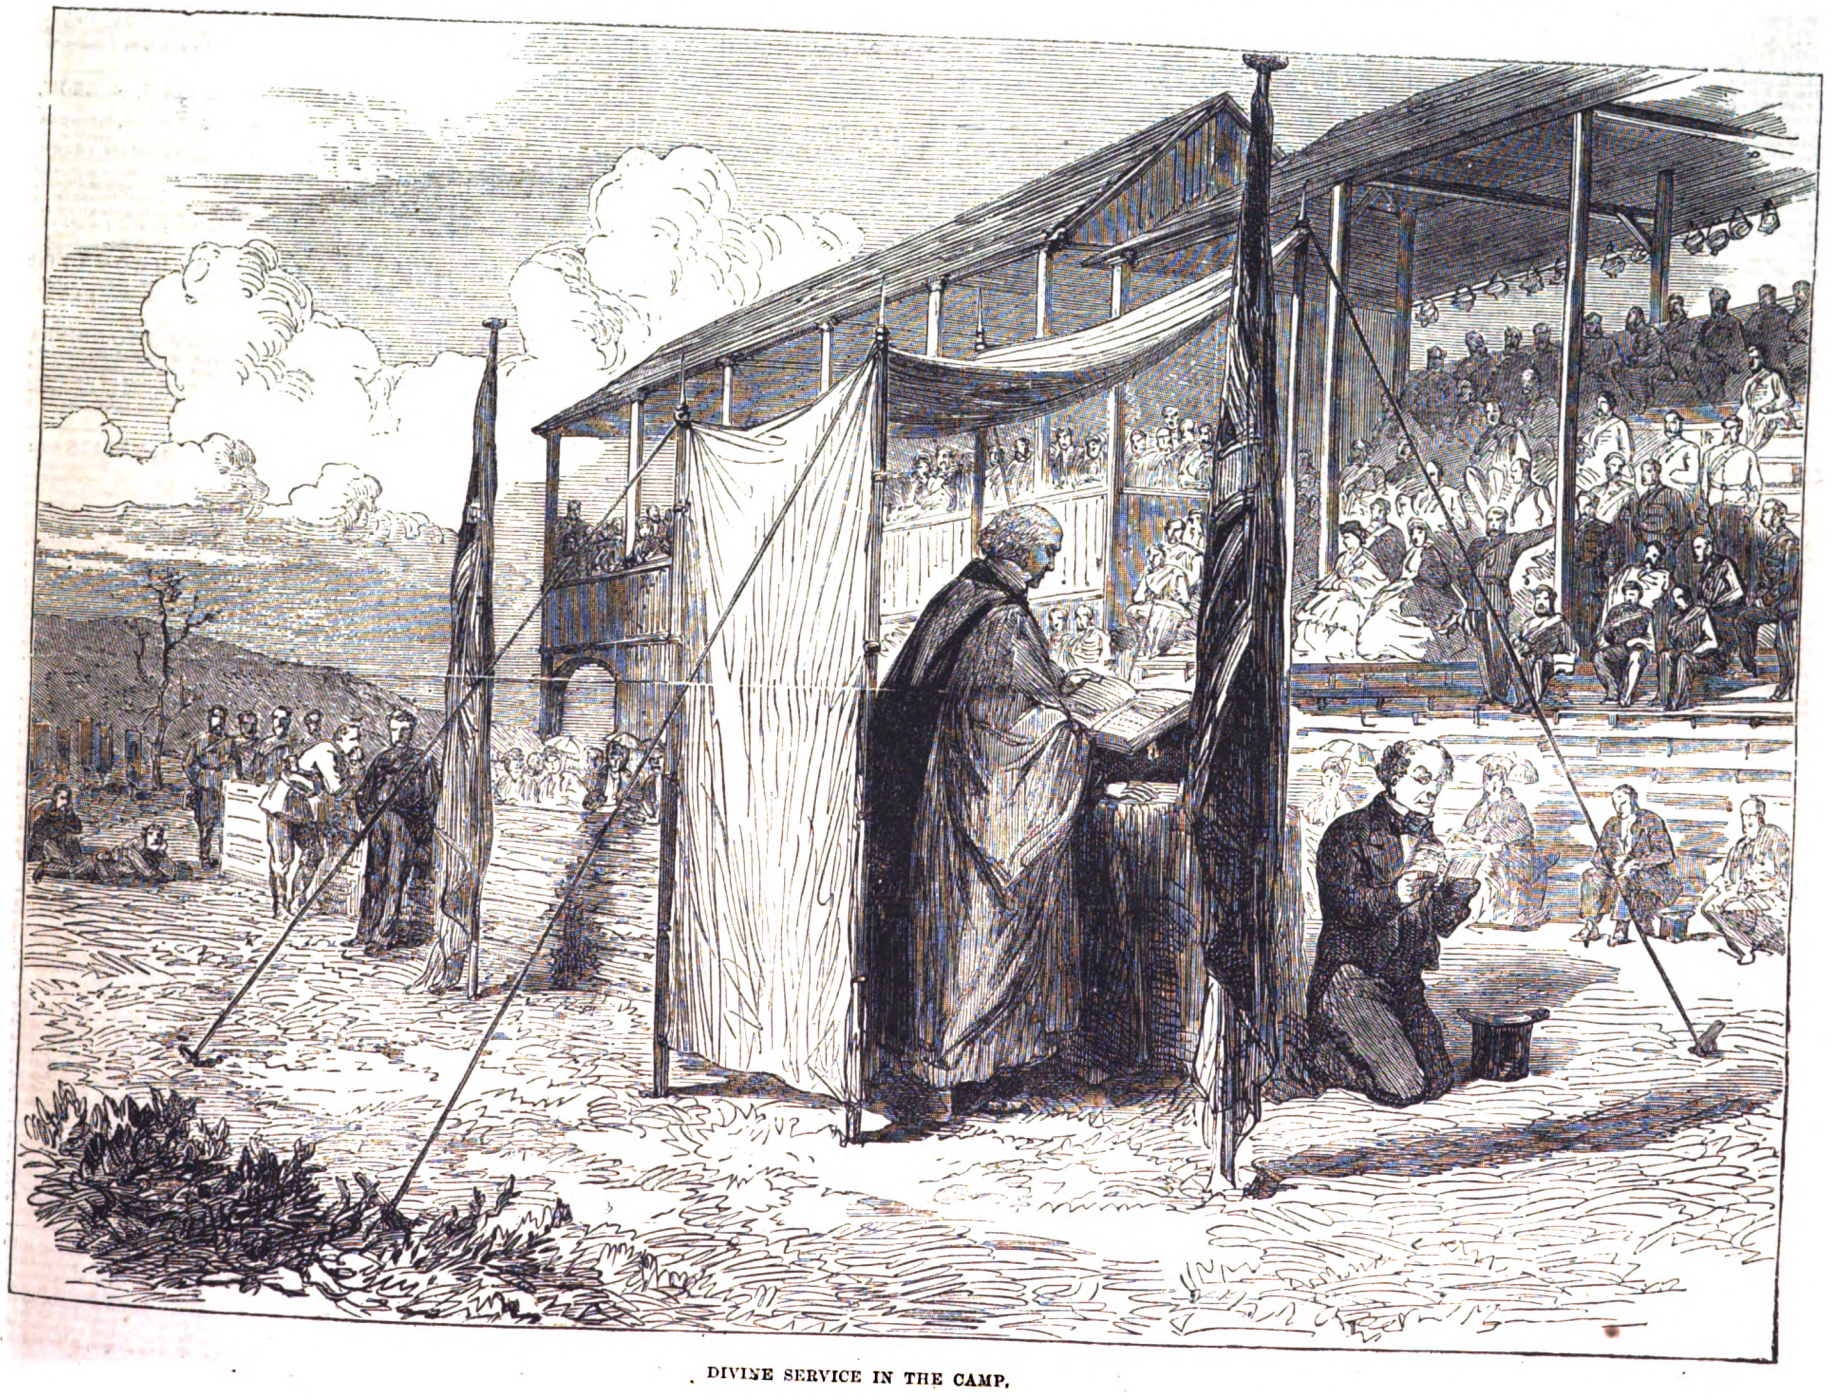
Mr. James Roberts was born at Tilstock, in Shropshire, Jan. 6, 1831, and at present resides at Wem, near Shrewsbury. He has been a member of the 12th Shropshire Rifles, of which corps he is now a Sergeant, from its enrolment. He went to Hythe in April, 1861, for a short course of instruction in musketry under General Hay, where he obtained the marksman's badge and sectional prize. In the same year he contended for the Shropshire county prize, at the seat of Viscount Hill, Hawkstone Park, when he obtained the third prize. At the county competition in 1862 he succeeded in carrying off the challenge cup. It is a remarkable circumstance that Mr. Roberts has not been accustomed to shoot with the Whitworth rifle (with which he has just gained the Queen's prize at Wimbledon), nor at a longer range than six hundred yards. Sergeant Roberts is an independent gentleman of good property, residing at Wem. Our Portrait is from a photograph by Mr. Herbert Watkins, of Regent-street.

SERGEANT ROBERTS, OF THE WEM CORPS, 12TH SHROPSHIRE RIFLE VOLUNTEERS, WINNER OF THE QUEEN'S PRIZE.

DIVINE SERVICE IN THE CAMP.

On the morning of Sunday week Divine service was performed for those who were in camp; but it was not entirely restricted to them, for there was a large congregation of persons of all ranks from the surrounding villages. One of the shooting-screens erected on the grass in front of the grand stand formed a canopy over a common table, covered with a "union jack," which served as reading-desk and pulpit. First to arrive were the police-constables, 150 in number, who took their seats in the left compartment of the grand stand. They were shortly followed by the Guards and men from Hythe, who occupied seats at the right-hand side of the grand stand. Next came six men of the London Rifle Brigade. By this time the civilian portion of the congregation began to assemble, amongst whom were Lord and Lady Elcho, Lord and Lady Ducie, and Captains Mildmay and Page. The Victorias numbered over 120 men, and the whole of the other volunteers present might have been five times that number. The novelty of the scene was complete when the ten boys of the Shoeblack Brigade had put in an appearance. At the commencement of the service the Morning Hymn was sung by the whole congregation to the accompaniment by the band of the G and A Reserve Divisions of Police. The service was conducted by the Rev. T. Hanly Ball, lecturer of St. Mary's, Wimbledon, who selected for his text part of the First Lesson for the day, the 12th chapter of the 2nd Book of Samuel, 7th verse, "Thou art the man." Having given a brief historical description of David's fall, the preacher pointed out the practical lessons to be deduced from the circumstance. First, the danger of allowing conscience to slumber; second, conviction of sin precedes conversion; third, pardon of sin is simultaneous with sincere repentance. He concluded a discourse that was listened to throughout with profound attention, in these words:—

"I cannot look upon this annual meeting of this National Association without viewing it in another light than that for which it is ostensibly and legitimately assembled. Coming, as you do, from different parts of the nation—different parishes in the nation I should say—you are, to my mind, not only representatives of the military *physique* of these parishes, if I may so speak, but also of the *morale*—of the practical Christianity of these parishes. The parish of each of you—no matter how remote that parish may be—possesses, thanks to our excellent Constitution, the blessings of an Established Church, which secures to you not only the teaching of a spiritual pastor, but the teaching of God's pure and holy Word, no matter how careless or incompetent that pastor should unfortunately be. For the most part, however, you are under the teaching of one who is himself under the teaching of God's Holy Spirit; and you are here the representatives of that moral training and teaching which you regularly receive at your own beloved homes. You will not disgrace your Christian profession nor pain your Christian minister by any moral delinquency here. Wimbledon, I need scarcely tell you, is naturally very beautiful; it is, I am proud to tell you, as morally beautiful, if not more so, than other parishes of a similar population. The Incumbent of this parish and his clergy are painfully anxious to preserve this moral beauty—nay, more, to increase and improve it. You have it in your power to assist or to hinder our efforts. And, whether you may be here or elsewhere, learn this lesson from David's fall—his sin was calculated, from its very nature, to throw a greater discredit upon the profession of religion than the sins of those who were not so remarkable as he was for having previously walked with God. It is now as it was then—the transgression, the deviation, of the professing Christian is more grievous, and the more so in proportion to the eminence he has attained, than the deviation of those ordinary mortals that make, perhaps, no profession at all, and who, like Gallio, 'care for none of these things;' that which you take no notice of, or notice as a matter of course, in another, you take serious notice of in a Christian. Here, then, is a powerful reason why those who profess the name of Jesus should 'depart from iniquity.' The world, believe me, will not judge of you so much by your opinions as by your actions. Oh, I would have that said of each of you which Lord Hardinge said of one of our greatest heroes—a soldier of whom England may well be proud—a soldier from whose bier a sorrowing country has yet scarcely lifted up her head—a soldier who, just before he expired, said to his companion in arms, that distinguished General to whom Westminster Abbey has so recently given a resting-place—'Outram, for more than forty years I have so ruled my life that when death should come I could meet it face to face without fear.' Then, turning to his son, he said, 'See, my son, how a Christian man can die.' And so he died, confidently, happily, triumphantly, relying on the merits of Jesus, receiving the end of his faith and the salvation of his soul. Of him it was once said to Lord Hardinge, after some victory achieved, 'Havelock, my Lord, is every inch a soldier.' 'Every inch a soldier,' said the veteran General; 'Yes, Havelock is every inch a soldier; but he is more, and he is better, he is every inch a Christian.' May this be said of each of you I have this morning the honour, the pleasure, and the privilege to address—'He is not only every inch a Soldier, but he is every inch a Christian.'"



DIVINE SERVICE IN THE CAMP.

CRAMER'S PIANOFORTE GALLERY offers peculiar advantages for the choice of a first-rate Pianoforte. There is a profusion of every description, from the smallest Pianette to the largest and finest Grand, and by all the eminent makers of England and the Continent. Nothing but the very best instruments are selected from the factories, all that are deficient in tone being carefully avoided. Purchasers from CRAMER and CO. may therefore rely on having placed in their hands whatever may be reasonably expected from a selection made with competent practical skill.

Cash purchasers will receive the usual discount.

Every Instrument fully guaranteed.

Cramer and Co. deliver their Pianofortes at any railway station in the kingdom without risk to the purchaser, and at a very trifling cost.

Cramer and Co.'s Pianoforte Gallery (the largest in Europe), 207 and 209, Regent-street.

CRAMER'S ENGLISH PIANETTE, 22 guineas. Cramer and Co. manufacture this capital small instrument. It has all the requisites of the best Pianoforte—check action, solid touch, agreeable tone. The case is of polished ash or pine. In practising on this Pianoforte the fingers of the player will be strengthened much more rapidly than on an old instrument, loose in the key and worn in the hammer. In rosewood, 25 guineas; in walnut, 26 guineas.

Purchasers are particularly requested to observe that this instrument has not the common or single action, but the double or check action; and that Cramer and Co. are the only manufacturers of it in England.—207 and 209, Regent-street.

CRAMER'S INDIAN PIANETTE, in solid Mahogany, for warm climates. The most portable Pianoforte yet made. Price 25 guineas. 207 and 209, Regent-street.

THALBERG'S GRAND PIANOFORTES. These magnificent instruments, manufactured by Messrs. J. and P. Erard, and selected by M. Thalberg for his London concerts, have been purchased by CRAMER and CO., and are universally admitted to be the most exquisite Pianofortes ever finished by these distinguished manufacturers, combining in an extraordinary degree all their peculiar excellences; the tone has great volume, together with a charmingly vocal quality. The cases are in walnut and rosewood. Prices, 230 and 240 guineas.—207 and 209, Regent-street.

PIANOFORTE RENOVATION.—CRAMER and CO. have organised a separate staff of the most skilful workmen for the repairing and renewing of the mechanism of pianofortes worn out by years of constant practice. Cramer and Co. do not pretend (as is very commonly done) to make the instrument "equal to new," but they guarantee that, if originally good, it will be restored to great freshness of tone, and in other respects made to be perfectly satisfactory. Cramer and Co. give estimates of 5s. at, and say whether the instrument be worth the outlay.—Pianoforte Gallery (the largest in Europe), 207 and 209, Regent-street.

CRAMER'S CONCERTINAS—PRIZE MEDAL. Prices, 2, 3, 4, 5, 6, 8, 10, 12, 16, and 18 guineas. 201, Regent-street.

DECALCOMANIE.—The new art of instantly transferring designs to any material. Instructions post-free, 6d.; complete boxes of materials, 10s. 6d. STAINED WINDOWS (Diaphanie). Instructions post-free, 8 stamps.—WM. BARNARD, Artistic Repository, 50, Connaught-terrace, London, W.

THE CELEBRATED MECHANICAL HORSE, invented by Colonel DE HAMEL, of the Wurtemberg Cavalry, EXHIBITED DAILY at MASON'S COMMISSION STABLES, 129, PICCADILLY. Admission, 1s. 6d.; from Ten to One, and from Two to Eight p.m. His Royal Highness the Prince of Wales has been pleased to visit it, and expressed his approbation of its general usefulness.

GUNS.—E. M. REILLY and CO. invite attention to their extensive stock of double guns and double rifles, breech and muzzle loading. Secondhand guns at reduced prices, &c.—315 and 502, Oxford-street, London.

"RECONNOIT'RER" GLASS.

"RECONNOIT'RER" GLASS, 9s. 6d.! Weighs 8 oz., is achromatic, and so strong that ships, houses, trees, &c., ten miles off; Jupiter's Moons, &c., are distinctly seen by it; and when used as a landscape glass is valuable on a twenty-five mile radius. "I think the Reconnoiterer very good."—The Marquis of Carmarthen. "I never before met an article that so completely answered its maker's recommendation."—F. H. Fawkes, Esq., Farsley, Otley. "Regarding the glasses supplied by Messrs. Salom, I am well pleased with them."—From a report by the Head Gamekeeper of the Marquis of Breadalbane. "The economy of price is not secured at the cost of efficiency. We have carefully tried it at an 800-yard rifle-range against all the glasses possessed by the members of the corps, and found it fully equal to any, although they had cost more than four times its price."—The Field. Post-free, 10s. 10d. The Hythe Glass, showing bullet marks at 1200 yards, 21s. 6d. These Glasses are only to be had direct from SALOM and CO., 98, Princes-street, Edinburgh, who have no agents.

FIELD GLASSES.—W. and J. BURROW, Malvern. London: ARNOLD, 72, Baker-st.; WALES and CO., 55, Cheapside.

GOODWOOD RACES.—RACE-GLASSES, matchless for great magnifying power and sharpness of definition. Warranted perfectly achromatic. Prices from 30s. each, at CALLAGHAN'S, 23a, New Bond-street (corner of Conduit-street), sole agent to Voigtländer, Vienna. The new Aluminium Glass (as made for H.R.H. the Prince of Wales), though of the largest size, weighs but a few ounces.

THE PATENT ACHROMATIC BINOCULAR READING-GLASS, or Carte de Visite Magnifier.—SMITH, BECK, and BECK, 31, Cornhill, E.C. (late 6, Coleman-street).

KEYZOR and BENDON'S TWO-GUINEA BINOCULAR FIELD, RIFLE, or OPERA GLASS.—The extraordinary power of this instrument renders it adapted to define objects distinctly at ten miles' distance—suitable for the theatre, racecourse, target practice, sportsmen, tourists, and general outdoor observation. Illustrated Price Lists of Optical Instruments for 2 stamps.—60, High Holborn, London.

THE PLANETS and DOUBLE STARS seen distinctly by a NEW TELESCOPE, for £5.—Testimonial:—"Branston Lodge, Grantham, April 25, 1863.—Sirs,—Agreeably to your request, I write to give the result of observations made last Wednesday evening. Two hours before sunset, I saw the vane on Newark Church steeple (which is twenty miles off) very distinctly; the driver and fireman of an express saw the red signal put up thirteen miles distant. I should know a person, if well acquainted, from five to six miles off; a sheep's face, under favourable circumstances, may be seen five miles distant. I have only used it at 1400 yards for target practice, but should say an object might be seen over two miles; a hit on the centre, one mile. I have a splendid view from my residence, across the vale of Belvoir, for Lincoln, Nottingham, and Derby; in fact, above thirty miles. I shall be happy to give you further results if desired. There has been a haze for some time; when it clears I expect a treat. I am, Sirs, yours truly, WILLIAM STAFFORD."—S. and B. SOLOMONS, sole makers, 39, Albemarle-street, Piccadilly.

OPERA, Race, Field, and General Out-door Day and Night GLASSES, with an improvement which renders them much more portable and powerful, they being suited to the waistcoat pocket. It has always been a great drawback to the general use of field-glasses on account of their weights and large size; but as Messrs. S. have overcome this difficulty a more rapid sale is expected, which induces them to reduce the prices, which range from 20s.—S. and B. SOLOMONS, Opticians, 39, Albemarle-st., Piccadilly.

SPECTACLES.—The Patent Newly-invented TINTED SPECTACLES are patronised by the majority of the nobility, including Viscount Palmerston. They give extraordinary relief by day and night to weak, dim, and defective vision. S. and B. SOLOMONS, 39, Albemarle-street, Piccadilly.

DEAFNESS.—The SOUND MAGNIFIER and INVISIBLE VOICE CONDUCTOR, a newly-invented instrument for cases of Deafness. It fits into the ear not perceptible; removes singing noises in the head, and enables deaf persons to hear distinctly at church and at public assemblies.—S. and B. SOLOMONS, 39, Albemarle-street, Piccadilly (opposite the York Hotel).

LADIES NURSING.—Mr. ELAM respectfully invites the attention of all mothers to the following unrivalled specialities:—His FEEDING BOTTLES, Nursing Shields, Milk Receivers or Dress Preservers, Breast Pumps, improved Enemas, Abdominal Supporters, Umbilical Bands for Infants, Medicine Spoons, Invalid Cups, Nursery Night-lamps, Indiarubber Tops for Feeding Bottles, Waterproof Sheeting and Lawn, Bed Protectors, Nursery Aprons, Bath Thermometers, prepared Fuller's Earth, &c.—196 Oxford-street.

OIL OF HORSE-CHESTNUTS, applied externally, gives immediate relief and quickly cures gout, rheumatism, neuralgia, lumbago, bunions, corns, boils, sprains, bruises, &c. Every family should possess a bottle of this invaluable oil.—Genuine only by RIDGE and CO., 295, Regent-st., London. In bottles, at 2s. 6d., 4s. 6d., and 10s. 6d., free by post, on receipt of stamps.

TOURISTS.—Travellers journeying into

CRYSTAL PALACE ART-UNION.

IMPORTANT SALE OF SUMMER GOODS.
GRANT AND GASK,
being about to make extensive alterations which will necessitate the closing of their Mantle, Shawl, and Made-up Skirt Rooms, for several weeks, beg to announce that the whole of their extensive STOCK in these departments is now being offered for Sale, at GREATLY REDUCED PRICES.
A large portion of the Summer Stock of MANTLES and OPERA CLOAKS will be sold at 12s. 9d., previous'y sold at 2 guineas; and the richest quality of Mantles and real Lace Shawls at a proportionate reduction.
The Summer Stock of Embroidered Grenadine Silk Shawls will be sold at 15s 9d., being less than half their former price. Rich Made-up Silk Skirts, Alpaca, and other Fancy Made-up Dresses, suitable for the country and seaside, will also be sold at a very great reduction in price.
In connection with the above sale, GRANT and GASK have resolved upon clearing out their
SUMMER STOCK OF ORGANDIE MUSLINS, GRENADINES, POPLINS DE SOIE, ETC.
A large portion of the Muslins de Soie and Muslin Poplinettes will be sold at 1s. 2½d. per yard; previously sold at 2s. 6d. per yard. French Organdie Muslins, from 6½d. per yard.
A Manufacturer's Stock of White Worked Muslin Robes, from 10s. 6d. to 28s. 6d. Some of them are a little soiled, and were sold as high as 6 guinea each.
A quantity of the Best Paris Kid gloves, in light colours, at 1s. 6½d. per pair.
Patterns forwarded free.
58, 59, 60, 61, 62, Oxford-street; 3, 4, and 5, Wells-street.

LADIES' WATERPROOF TWEED CLOAKS and RIDING-JACKETS, Gentlemen's Overcoats and Inverness Capes. Patterns of materials and prices sent post-free.
J. E. and W. PHILLIPS, 57, High-street, Shrewsbury.

SHIRTS. — FORD'S EUREKA SHIRTS. The superior fit and quality of these Shirts are well known. Six for 30s., 36s., and 42s. A measure and instructions for measurement sent post-free. R. Ford and Co., Patentees, No. 38, Poultry, E.C.

SHIRTS.—FORD'S COLOURED EUREKA SHIRTS. Gentlemen are solicited to inspect the new Spring Patterns. Six superior Shirts, made to order, for 33s.
THE FRENCH COLOURED SHIRTINGS are celebrated for their fineness and durability. Six Shirts made expressly to measure for 45s. Patterns of the newest designs sent on receipt of three stamps.—R. Ford and Co., Patentees, No. 38, Poultry, E.C.

THE IRON AGE! STEEL COLLARS! Perfect Whiteness! Perfect Comfort! Ladies' or Gentlemen's Collars, 1s. 6d. each; a Pair of Cuffs, 2s. 6d.; by post, 4d. each extra. Sold by Mr. YEATMAN, 158, Lendenhall-street, E.C.; and 91, Regent-street, W.

ROUND SHOULDERS, Stooping Habits, and Deformities are cured by CHANDLER'S IMPROVED CHEST-EXPANDING BRACES, for both sexes. They are especially recommended to children for assisting the growth and producing a symmetrical figure.—66, Berners-street, W. Pamphlets forwarded.

GLYCERINE, which very simple tests show to be impure, is being sold on the statement that it is in every respect "equal to Price's." Most medical men prescribe "PRICE'S Glycerine" where purity is of importance. Patients can ensure it by desiring to have their glycerine in one pound, 8, 4, or 2oz. bottles with capsules over the stoppers, marked "Price's Patent."
Belmont, Vauxhall.

STARCH MANUFACTURERS
TO H.R.H. THE PRINCESS OF WALES.
GLENFIELD PATENT STARCH used in the Royal Laundry, and awarded the Prize Medal, 1862.

DINNEFORD'S FLUID MAGNESIA is an excellent remedy for Acidity of the Stomach, Heartburn, Headache, Gout, and Indigestion, and as a mild aperient for delicate constitutions. 172, New Bond-street, London; and all Chemists.

DR. DE JONGH'S
(Knight of the Order of Leopold of Belgium)
LIGHT-BROWN COD-LIVER OIL,
prescribed by the most eminent Medical Men throughout the world as the safest, speediest, and most effectual remedy for
CONSUMPTION, CHRONIC BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GOUT, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS,
is incomparably superior to every other variety.

SELECT MEDICAL OPINIONS.
Sir HENRY MARSH, Bart., M.D.,
Physician in Ordinary to the Queen in Ireland.
"I consider DR. DE JONGH'S Light-Brown Cod Liver Oil to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

DR. GRANVILLE, F.R.S.,
Author of the "Spas of Germany."
"Dr. Granville has found that DR. DE JONGH'S Light-brown Cod-liver Oil produces the desired effect in a shorter time than other kinds, and that it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oil."

EDWIN CANTON, Esq., F.R.C.S.,
President of the Medical Society of London, &c., &c.
"For several years past I have been in the habit of prescribing DR. DE JONGH'S Light-brown Cod-liver Oil, and find it to be much more efficacious than other varieties of the same medicine which I have also employed with a view to test their relative superiority."

DR. DE JONGH'S LIGHT-BROWN COD-LIVER OIL is sold only in Imperial half-pints, 2s. 6d.; pints, 4s. 9d.; quarts, 9s.; capsuled and labelled with his stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists and Druggists.
SOLE CONSIGNEES,
ANSAR HARFORD and CO., 77, STRAND LONDON, W.C.

MELISSUS.—The Medical Profession in Germany have been in the habit of using for more than half a century DR. LANG'S ESSENTIAL SPIRIT OF MELISSUS. This REMEDY for DEBILITY continues to be prepared by his son. It is a cure for Indigestion and unequalled as a preventive of Miasma. Sold in 1s. 6d. and 3s. bottles, wholesale and retail, by Butler and Crispe

Grand Selection for Military Band, arranged by Godfrey .. 15 0

CHAPPELL and CO., 50, New Bond-street.

SECONDHAND PIANOFORTES. CHAPPELL and CO. have a large Stock of SECONDHAND PIANOFORTES for Sale, by BROADWOOD, COLLARD, ERARD, &c., &c., at very reduced prices. Also, new Instruments of every description.—Chappell and Co., 50, New Bond-street.

PIANOFORTES at CHAPPELL'S.—The largest Stock in London, by Broadwood, Collard, Erard, &c., for Sale or Hire.—50, New Bond-street.

CHAPPELL'S FOREIGN PIANINO (the only Pianino to which the Prize Medal was awarded).—A very elegant Pianoforte, of small size, the full compass, check action, and most perfect touch, admirably adapted to small rooms, yachts, boudoirs, &c. Warranted to keep in tune, and to be the best and cheapest Pianoforte, with check action and all the latest improvements.

Price, in mahogany, rosewood, or walnut, 25 and 26 guineas. A great variety may be seen at

Chappell and Co.'s, 50, New Bond-street.

CHAPPELL and CO.'S ENGLISH MODEL COTTAGE PIANOFORTE.—To amateurs preferring the pure English tone of the Broadwood or Collard quality, the English Model will be found the most perfectly satisfactory instrument, at amoderate price. The action is of the same simple description as the above makers', and therefore especially adapted to the country, where the more complicated actions are objectionable to many of the tuners. In elegant rosewood case, with full fret, similar in every respect to other instruments at 50 guineas, price 35 guineas; in walnut, 40 guineas.

Chappell and Co., 50, New Bond-street.

CHAPPELL'S FOREIGN MODEL PIANOFORTE, price 50 guineas in rosewood; or in walnut, 60 guineas. This Instrument has Three Strings and the fullest grand compass of Seven Octaves. It is strengthened by every possible means to endure the greatest amount of wear, and to stand perfectly in any climate. The workmanship is of the best description; the tone is round, full, and rich; and the power equal to that of a Bishord Grand. The touch is elastic, and the repetition very rapid. No pianoforte, in all respects comparable, has hitherto been made in England at the same price. Every instrument will be warranted, and (if desired) exchanged within six months of the purchase.

Chappell and Co., 50, New Bond-street.

BROADWOOD, COLLARD, and ERARD. The best Pianofortes of every description, including all the newest kinds by these celebrated makers, may be tried side by side (and hired with option of purchase) at the new Showrooms of CHAPPELL and CO., 50, New Bond-street.

ALEXANDRE'S DRAWING-ROOM MODEL HARMONIUM, the best that can be made, price 60 guineas; other varieties at 25 and 35 guineas. Illustrated Catalogues of Pianofortes and Harmoniums upon application to CHAPPELL and CO., 50, New Bond-street.

SIX-GUINEA HARMONIUM by ALEXANDRE, with five octaves, two footboards, and in oak case. These instruments are lower in price and superior to all other cheap harmoniums. Descriptive lists on application to CHAPPELL and CO., 50, New Bond-street.

SECONDHAND HARMONIUMS, by ALEXANDRE, nearly (if not quite) as good as new, at greatly-reduced prices, at CHAPPELL'S, 50, New Bond-street.

ALEXANDRE'S PRIZE EXHIBITION MODEL HARMONIUM, for the CHURCH, 13 stops, 4 rows of vibrators, and Venetian swell, worked by the heel of the right foot, in oak case, 22 guineas. A large assortment may be always seen at CHAPPELL and CO.'S, 50, New Bond-street.

THE SILVER BELL ROMANCE for PIANO. By Miss OLIVER. 3s.

All Among the Barley. Waltz, 3s. 6d.; Galop, 2s. 6d.

Sydney Smith's Tarantella, Mountain Stream, Lily of the Valley, Freischütz, Cascade, Village Festival, and Mazurka des Ulans, ea. 4s.

AUGENER and CO., 86, Newgate-street.

AUGENER and CO.'S CIRCULATING MUSICAL LIBRARY. Annual Subscription, Two guineas. London: 86, Newgate-street, and 4A, Tottenham-court-road. Brighton: 5, New-road. Prospectuses on application.

NEW VALSE.—THE ANGLO-DANISH VALSE. By E. L. HIME. Solo or Duet. Price 4s. (Sent at half-price.) This Valse, so universally admired, may now be had as a Solo or Duet for Pianoforte, and in Parts for Septet or full Orchestra.—DUFF and HODGSON, 20, Oxford-street.

NEW SONG—BIRD OF THE WILDERNESS. Composed by EDWARD LAND; Sung by Mr. KENNEDY. Price 2s. 6d. (Sent at half-price.) This graceful Song is the conspicuous favourite in the Entertainment on the Songs of Scotland.—DUFF and HODGSON 20, Oxford-street.

NEW SONG—THE WELCOME AT THE DOOR. Composed by STEPHEN GLOVER. Price 2s. 6d. (Sent at Half-price.) Sequel to the celebrated Song, "The Good-by at the Door." Popular as the latter has been, "The Welcome" will be equally successful.—DUFF and HODGSON, 20, Oxford-street.

NEW MUSIC.

HERR SCHACHNER'S ORATORIO,

ISRAEL'S RETURN FROM BABYLON. BOOSEY and SONS have much pleasure in announcing that they have purchased the copyright of Herr Schachner's Grand Oratorio, "Israel's Return from Babylon," which was performed with such eminent success a short time since at Exeter Hall, with the aid of Mdlle. Titiens and Mr. Sims Reeves. It is about to be reproduced at the Worcester Festival on a scale of very great magnificence, and the publishers are glad to announce that the complete work will be ready for sale in time for this important performance. The Pianoforte Score will be published in a handsome volume, complete, price One Guinea, several hundred copies having already been subscribed for. The separate Vocal Pieces will also be published at the usual prices. With the view of assisting the numerous choral societies in the production of a work that cannot fail to attain a high and permanent position in the grandest school of sacred music, the publishers have determined to publish the Orchestral Score, and the separate Orchestral and Vocal Parts, at the lowest possible price. These will shortly be ready for delivery, and orders may at once be forwarded to the publishers for copies.

The "Book of Words" (also the property of Boosey and Sons) may be had on moderate terms for public performances.
